A. Mission Description and Budget Item Justification

Air and Missile Defense Radar (AMDR): The AMDR suite is being developed to fulfill Integrated Air and Missile Defense requirements for multiple ship classes. This suite consists of an S-Band radar (AMDR-S), an X-band radar and a Radar Suite Controller (RSC). Funding in FY 13-17 will develop AMDR-S and RSC, and integrate these components with an available X band radar. AMDR will provide multi-mission capabilities, simultaneously supporting both long range, exoatmospheric detection, tracking and discrimination of ballistic missiles, as well as Area and Self Defense against air and surface threats. For the Ballistic Missile Defense capability, increased radar sensitivity and bandwidth over current radar systems are needed to detect, track and support engagements of advanced ballistic missile threats at the required ranges, concurrent with Area and Self Defense against Air and Surface threats. For the Area Air Defense and Self Defense capability, increased sensitivity and clutter capability is needed to detect, react to, and engage stressing Very Low Observable/Very Low Flyer (VLO/VLF) threats in the presence of heavy land, sea, and rain clutter. This effort provides for the development of an active phased array radar with the required capabilities to address the evolving threat. The AMDR suite will obtain performance and technology enhancements throughout its service life based upon an approach that includes modularity of hardware and software, a scalable design and Open Architecture (OA) compliance.

Periscope Detection: The CVN Periscope Detection Radar program, AN/SPS-74(V)2, develops and delivers the capability which provides automated detection and discrimination of submarine periscopes using advanced algorithms. This enables discrimination of periscopes from surface contacts, buoys, small boats, floating mines, etc. This effort was initially based on an advanced development model, developed in PE 0603553N, Surface Antisubmarine Warfare. System Engineering efforts under RDT&E funding will support the conversion of the Advanced Demonstration Model (ADM) variant currently installed to a production representative model that addresses manufacturability, supportability and reliability aspects as well as full system certification. In addition, funding will develop the Periscope Detection and Discrimination (PDD) Interface for AN/SPQ-9B Radar.

APPROPRIATION/BUDGET ACTIVITY 1319: <i>Research, Development, Test & Evaluation, Navy</i> BA 5: <i>Development & Demonstration (SDD)</i>	R-1 ITEM NOMENCLATURE PE 0604501N: <i>Advanced Above Water Sensors</i>
---	--

Dual-Band Radar (DBR) Upgrades: Funding is for Dual Band Radar (DBR) System upgrades to implement cost savings initiatives for Volume Search Radar (VSR) modifications, supportability analysis and associated logistics product updates; future upgrades/technology insertion efforts for Multi-Function Radar (MFR)/VSR as a part of the DBR suite on CVN 78 Class ships and the MFR on DDG 1000 Class ships. Funding is also required to resolve the hardware and software issues discovered during the various test events to include: DTB2-411, SDTS testing, Land Based Testing and pertinent At-Sea test events. The upgrades will include all aspects of the radar system/subsystems, including hardware and software. Specific subsystem areas include the Array, Transmit/Receive (T/R) module, Receiver/Exciter, Signal Data Processor, Radome, and power/cooling systems. Upgrades and technology insertions are required to maintain the level of force protection needed for ship defense against all threats envisioned in the littoral environment. The supportability analysis and logistic products associated with these upgrades will also be developed and updated.

DBR interface with Battle Force Tactical Trainer (BFTT): FY12-14 supports the design, development, and testing of an interface between the DBR and BFTT (AN/USQ-46) system that will provide training to enhance combat readiness for the CVN 78 crew. The DBR/BFTT interface development project initiates with the FY12 contract award and continues with validation testing in FY14.

DBR CVN 78 Testing and Certification: Funding in FY13-FY17 supports DBR At-Sea Test and Evaluation (T&E), Environmental Testing, DBR Surface Tracks through Cooperative Engagement Capability (CEC) and DBR Systems Certification in support of CVN 78.

Multi-Mission Signal Processor (MMSP): The development of Multi-Mission Signal Processor (MMSP) provides Anti-Air Warfare (AAW)/Ballistic Missile Defense (BMD) Multi-mission capability for DDG 51-78 as part of Aegis Modernization Program. This capability will be utilized for DDG 113 and follow new construction and Aegis Ashore. Modifies SPY-1D Transmitters to enable dual beam for reduced frame times and better reaction time, and provides stability for all D(V) waveforms and avoid operational degradation. The SPY-1 radar system detects, tracks and supports engagements of a broader range of threats. MMSP improves performance in littoral, ducted clutter environments, and in electronic attack (EA), and chaff environments and provides greater commonality in computer programs and equipment.

Improved Capabilities for SPY-1 Radar: These Reliability, Maintainability, and Availability (RM&A) improvements are intended to reduce cascading failures, mitigate obsolescence issues, and improve reliability in support of Anti-Air Warfare (AAW) and Ballistic Missile Defense (BMD) missions; while still providing AN/SPY-1 Radar Total Ownership Cost Reductions. Improvements will yield reductions in annual fleet maintenance costs.

Advanced Radar Innovation Fund: Funds the development and integration of existing and new technologies into the Navy's sensors to enhance performance and ensure sensor operations and sustainment throughout the lifecycle of the sensor and platforms on which installed.

A. Mission Description and Budget Item Justification

Periscope Detection: The CVN Periscope Detection Radar program, AN/SPS-74(V)2, develops and delivers the capability which provides automated detection and discrimination of submarine periscopes using advanced algorithms. This enables discrimination of periscopes from surface contacts, buoys, small boats, floating mines, etc. This effort was initially based on an advanced development model, developed in PE 0603553N, Surface Antisubmarine Warfare. System Engineering efforts under RDT&E funding will support the conversion of the Advanced Demonstration Model (ADM) variant currently installed to a production representative model that addresses manufacturability, supportability and reliability aspects as well as full system certification. In addition, funding will develop the Periscope Detection and Discrimination (PDD) Interface for AN/SPQ-9B Radar.

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2011	FY 2012	FY 2013
Title: Periscope Detection	3.238	14.509	1.730
Articles:	0	0	0
FY 2011 Accomplishments: Continued design and development of AN/SPS-74(V)2 and conducted Critical Design Review (CDR).			
FY 2012 Plans: Begin First Article Testing for AN/SPS-74(V)2 to include Environmental Qualification Testing (EQT) and below deck shock testing. Begin AN/SPQ-9B Radar PDD interface development and testing. Begin planning for Independent Operational Test and Evaluation (IOT&E).			
FY 2013 Plans: Complete First Article Testing for AN/SPS-74(V)2, install Land Based Test Site system, perform software verification, conduct Factory Acceptance Test (FAT), and conduct Independent Operational Test and Evaluation (IOT&E). Complete AN/SPQ-9B Radar PDD interface development and testing.			
Accomplishments/Planned Programs Subtotals	3.238	14.509	1.730

A. Mission Description and Budget Item Justification

Dual-Band Radar (DBR) Upgrades: Funding is for Dual Band Radar (DBR) System upgrades to implement cost savings initiatives for Volume Search Radar (VSR) modifications, supportability analysis and associated logistics product updates; future upgrades/technology insertion efforts for Multi-Function Radar (MFR)/VSR as a part of the DBR suite on CVN 78 Class ships and the MFR on DDG 1000 Class ships. Funding is also required to resolve the hardware and software issues discovered during the various test events to include: DTB2-411, SDTS testing, Land Based Testing and pertinent At-Sea test events. The upgrades will include all aspects of the radar system/subsystems, including hardware and software. Specific subsystem areas include the Array, Transmit/Receive (T/R) module, Receiver/Exciter, Signal Data Processor, Radome, and power/cooling systems. Upgrades and technology insertions are required to maintain the level of force protection needed for ship defense against all threats envisioned in the littoral environment. The supportability analysis and logistic products associated with these upgrades will also be developed and updated.

DBR interface with Battle Force Tactical Trainer (BFTT): FY12-14 supports the design, development, and testing of an interface between the DBR and BFTT (AN/USQ-46) system that will provide training to enhance combat readiness for the CVN 78 crew. The DBR/BFTT interface development project initiates with the FY12 contract award and continues with validation testing in FY14.

DBR CVN 78 Testing and Certification: Funding in FY13-FY17 supports DBR At-Sea Test and Evaluation (T&E), Environmental Testing, DBR Surface Tracks through Cooperative Engagement Capability (CEC) and DBR Systems Certification in support of CVN 78.

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2011	FY 2012	FY 2013
Title: RADAR UPGRADES TECHNOLOGY INSERTION	5.736	7.954	8.288
Articles:	0	0	0
FY 2011 Accomplishments:			
- Continued Volume Search Radar (VSR) radome development and testing efforts. Initiated material procurement and drawing updates.			
- Provided integration support and defined requirements for specification changes.			
- Provided systems, software and hardware engineering support for combat system integration and integration with TPX-42.			
- Conducted DBR Common Array Power System (CAPS) study to determine design model modifications needed to make the power system compatible with system specifications.			
FY 2012 Plans:			
- Finalize VSR development and testing.

D. Acquisition Strategy
Radar Upgrades and logistic products will be developed to address lessons learned and technology refresh for DBR systems on multiple ship classes.

- E. Performance Metrics**
- Complete upgrade studies and analyses each fiscal year to determine efficiencies for H/W and S/W upgrades and to determine appropriate logistics product updates
 - Complete co-site and off-ship EMI analysis testing
 - Complete VSR Radome development and determine opportunities to improve configuration and performance
 - Complete upgrade technology insertion
 - Complete development of logistics products
 - Implement supportability analysis to improve supportability and reduce overall lifecycle cost
 - Complete DBR At-Sea Test and Evaluation (T&E)

A. Mission Description and Budget Item Justification

Multi-Mission Signal Processor (MMSP): The development of Multi-Mission Signal Processor (MMSP) provides Anti-Air Warfare (AAW)/Ballistic Missile Defense (BMD) Multi-mission capability for DDG 51-78 as part of AEGIS Modernization Program. This capability will be utilized for DDG 113 and follow new construction and AEGIS Ashore. Modifies SPY-1D Transmitters to enable dual beam for reduced frame times and better reaction time, and provides stability for all D(V) waveforms and avoid operational degradation. The SPY-1 radar system detects, tracks and supports engagements of a broader range of threats. MMSP improves performance in littoral, ducted clutter environments, and in electronic attack (EA), and chaff environments and provides greater commonality in computer programs and equipment.

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2011	FY 2012	FY 2013
Title: SYSTEMS ENGINEERING	32.624	32.360	14.617
Articles:	0	0	0
FY 2011 Accomplishments:			
<ul style="list-style-type: none"> - Preparation for and completion of Engineering Exercises - Continued MMSP design and development - Supported MMSP integration testing with ACB-12 to address all MMSP related issues - Completed transmitter modification development - Maintained alignment with the Ballistic Missile Defense Program and the associated Ballistic Missile Defense Signal Processor (BSP) Adjunct to incorporate BMD capability within MMSP during AEGIS Modernization - Initiated cruiser variant engineering and design 			
FY 2012 Plans:			
<ul style="list-style-type: none"> - Preparation for the Multi-Mission Exercise and Qualification Testing - Continue to support MMSP integration testing with ACB-12 to address all MMSP related issues - Installation of Transmitter Modification at CSEDS - Continue to maintain alignment with the Ballistic Missile Defense Program and the associated Ballistic Missile Defense Signal Processor (BSP) adjunct to incorporate BMD capability within MMSP during AEGIS Modernization 			
FY 2013 Plans:			
<ul style="list-style-type: none"> - Support of Combat System Ship Qualification Trials (CSSQT) testing - Continue to support MMSP integration testing with ACB-12 to address all MMSP related issues

D. Acquisition Strategy
Multi-Mission Signal Processor (MMSP) provides AAW/BMD Multi-mission capability for AEGIS Modernization Program and leverages BMD 4.0.1 and SPY-1D(V) designs. This MMSP development efforts support integration of BMD 5.0 signal processing, and will lead to the OPN/SCN procurement for shore sites and shipsets.

- E. Performance Metrics**
- Complete DDG Advanced Capability Build 12 (ACB 12) In-Process Review (IPR) #5
 - Complete DDG SPY-1D(V) Engineering Exercise (EE) #1
 - Complete DDG Jamex #2
 - Complete DDG SPY-1D(V) Engineering Exercise (EE) #2
 - Complete DDG Qualification Testing
 - Complete DDG ACB 12 Multi-Mission Exercise
 - Complete DDG Delivery
 - Complete DDG Aegis Light Off (ALO)
 - Complete DDG Combat System Ship Qualification Trials (CSSQT)
 - Complete DDG Final Certification
 - Complete DDG Commercial Off The Shelf (COTS) Refresh - Engineering Change Proposal (ECP)

 - Complete CG ACB 12 System Readiness Review (SRR)
 - Complete CG ACB 12 Focus Day

A. Mission Description and Budget Item Justification

Improved Capabilities for SPY-1 Radar: These Reliability, Maintainability, and Availability (RM&A) improvements are intended to reduce cascading failures, mitigate obsolescence issues, and improve reliability in support of Anti-Air Warfare (AAW) and Ballistic Missile Defense (BMD) missions while still providing AN/SPY-1 Radar Total Ownership Cost Reductions. Improvements will yield reductions in annual fleet maintenance costs.

Title: Improved Capabilities SPY-1 Radar	3.481	3.629	3.506
Articles:	0	0	0
FY 2011 Accomplishments:			
- Initiated requirements development and design of 10KW Traveling Wave Tube (TWT) and Continuous Wave Illuminator (CWI) Microwave Tubes			
- Initiated design and development of sidewall capacitor monitoring circuit for Transmitter High Voltage Power Supply (HVPS)			
- Initiated design and development and environmental testing for 10kW TWT			
- Initiated improvements to design of Cathode for MK 99 CWI TWT			
FY 2012 Plans:			
- Continue design and development of Sidewall Capacitor monitoring circuit for HVPS			
- Continue design, development, Environmental Testing for 10kW TWT			
- Initiate design improvements to filament for Switch Tube			
FY 2013 Plans:			
- Finalize design and development of Sidewall Capacitor monitoring circuit for HVPS			
- Finalize design and development of 10kW TWT			
- Continue design improvements to filament for Switch Tube			
- Initiate design and development of Cross Fielded Amplifier Microwave Tube
