FINAL REPORT

Report Prepared by: Lorene L. Rogers  Date: 6 July 1954
For Period 15 June 1949 to 14 May 1954

NR: 120-906
CONTRACT: No. N9onr-93900
ANNUAL RATE: $4,500.00

CONTRACTOR: The University of Texas, Austin, Texas

PRINCIPAL INVESTIGATOR: Roger J. Williams, Professor of Chemistry; Director, Biochemical Institute, The University of Texas

TITLE OF PROJECT: Research on Metabolic Traits in Relation to Alcoholism and Mental Disease.

Objectives: The accumulation of data which would contribute to the determination of the etiology of alcoholism, mental disease, feeble-mindedness, and obesity. Such information would in turn be used in efforts to develop schemes for predicting susceptibility of an individual to these conditions.
ABSTRACT OF RESULTS:

Contract N9onr-93900 was initially awarded to the Contractor for the purpose of gaining "an acquaintance with the individual metabolic patterns which people possess and to classify and relate these patterns to the incidence of alcoholism and mental disease." An extended outline of the background and basis for this work was given in the original application, and a request was made for a sum of $44,090.00 for this work. The amount awarded by the contract was $4,500.00 for the period 15 June 1949 - 14 May 1950. A like amount has been granted each succeeding year, the final period being 15 May 1953 - 14 May 1954. Because of the limited funds available from this contract, they were used as supplementary to other funds received from other sources for similar purposes.

The urine, blood, saliva, phagocytic indices, and taste thresholds of alcoholics and non-alcoholics were studied over a period of one month. A considerable number of the items studied in the alcoholics seemed to be highly distinctive for this group. The data seem to indicate strongly that alcoholism has a fundamental physiological basis. (This work is reported in the first publication listed below.) A similar study has since been carried out on twenty-six alcoholics and twenty-six non-alcoholic controls, and this material is now being readied for publication. A more extended study is in the planning stage, and an effort will be made to determine once and for all whether there is a typical metabolic pattern for alcoholics and whether such a pattern is a cause or an effect of the disease.

More than sixty metabolic factors have been studied in more than forty individuals, of whom a portion were healthy subjects and the remainder either mental patients, compulsive drinkers, feebleminded children, or overweight or underweight individuals. In the process of this work a number of new experimental techniques were developed. Details of these techniques, as well as detailed data obtained from this study, are reported in publications 2 - 23 listed below.

A compilation has been made of all data on metabolic patterns collected in this laboratory. Urinary excretion data for nearly four hundred men, women, and children have been summarized and distribution curves and percentile ranks have been prepared. This study is reported in paper 24.

Work is still in progress on the isolation and identification of a growth factor which has shown some evidence of being involved in alcohol consumption. Also the study on blood levels of eleven
concentrations in several individuals is not yet complete.

We are now preparing for publication a series of papers which will be combined under the title Biochemical Institute Studies VI and which will include some of the data accumulated during the period of this grant. We shall be happy to distribute copies of this volume to you when it is published.

SCIENTIFIC PERSONNEL:

In accordance with provisions of Contract N9onr-93900, it is hereby certified that the following personnel have been employed on the contract from 15 June 1949 to 14 May 1954.

Dr. Roger J. Williams has been Technical Director without compensation from ONR during the entire period of the contract, assisted by Dr. L. L. Rogers, Research Scientist V, Biochemical Institute.

The following part-time graduate students have been employed during the contract period at the salaries and fractions of time indicated:

**Research Scientist I**
