
The views, opinions and/or findings contained in this report are those of the author(s) and should not contrived as an official Department of the Army position, policy or decision, unless so designated by other documentation.
Major Goals: This project had three interconnected goals:

- To collect empirical evidence on how Russian, Ukrainian, and Georgian citizens participate in bureaucratic corruption (everyday) and on a range of related attitudes and behaviors.
- To provide a novel, theoretically grounded and empirically supported account of the relationships among participation in the informal economy, public support for the political regime, and political values more broadly.
- To understand and compare the dynamics and on-the-ground implications of anti-corruption work by governmental and non-governmental agencies in Russia, Ukraine, and Georgia.

Accomplishments: Our data collection is complete. The mass public surveys in all three countries are complete, and we have been analyzing the data since fall 2015. Also completed are the interviews with governmental and nongovernmental anti-corruption experts in the same three countries. In Georgia, our partner firm was only able to conduct 19 expert interviews instead of the 20 planned.

The papers written so far provide scholars with a deeper understanding of the antecedents to participation in the informal economy, and the impact of this participation on public support for the political regime as well as voting decisions. Because no previous surveys have probed both citizens’ behaviors and attitudes relevant to corruption in the way we do, we were able to correct the overly general and inaccurate assumptions that are common in the literature, such as the propositions that corruption is ubiquitous and undifferentiated in high-corruption societies or that citizens across and within such societies have similar pathways to corruption and face the same consequences of corruption participation.

First, we were able to confirm that engagement in corruption by individuals is influenced by individual-level determinants of need and opportunity, as posited in the literature. We also showed, however, important differences in how those determinants operate between countries with institutional stability and those lacking such stability. In
stable settings (i.e. places that have not experienced frequent regime change and have not been affected by conflict), overall participation in corruption is lower, the determinants explain more of the variance in individual behavior, and views about whether corruption is acceptable are less critical. In less institutionally stable societies, need and opportunity are harder to assess, so normative views play a larger role and corruption is more common. Moreover, we find that citizens’ engagement in corruption is closely linked to their political beliefs: instead of reflecting individual criminality, everyday corrupt behavior is closely associated with people’s ideas about their government. Our analyses also tackled the consequences of petty bribery by connecting it to lower attitudinal support for the country’s political leadership as well as a reduced likelihood of voting for an incumbent political leader.

Our analyses of expert interviews indicate that international efforts to combat corruption, when they turn into reform efforts in different countries, assume strikingly different forms on the ground. They have distinct foci and strategies and are pursue with different levels of intensity. Based on our qualitative data from Russia and Ukraine, we have delineated “mechanisms of decoupling,” showing how standard prescriptions of the global anti-corruption regime become unique on-the-ground outcomes. We document as well that the decoupling occurs through different mechanisms because of dissimilar distributions of power among local governance actors as they contend for the resources that anti-corruptionism provides. These actors include incumbent politicians, members of the political opposition, international NGO leaders, and domestic activists.

Training Opportunities: Over the grant period, we worked with four doctoral students and four undergraduate students. For two of the graduate students and one of the undergraduate students, their participation led to co-authorship credit on articles published or under review. All the undergraduate students completed research projects under our supervision, and two presented them as posters at a university research festival.

Results Dissemination: Published articles from the project to date are:
Zaloznaya, Marina, William M. Reisinger and Vicki Hesli Claypool. 2018. “When Civil Engagement is Part of the Problem: Flawed Anti-Corruptionism in Russia and Ukraine,” Communist and Post-Communist Studies 51 #3 (September), 245-255.

Our team has co-authored 12 papers employing data gathered from this project. These papers were presented at the annual conferences of the American Sociological Association, Association for Slavic, East European and Eurasian Studies, International Studies Association, Law and Society Association, Midwest Law and Society Retreat, and Midwest Political Science Association, as well as via presentations at Northwestern University, the University of Gothenburg, George Washington University, the University of Wisconsin, and the Institute for Corruption Studies.
Reisinger and Zaloznaya delivered a report on our findings to an audience of the Iowa City Foreign Relations Council in September 2016. In May 2017, they presented an overview of our findings to scholarly audiences in Russia and Ukraine. In Russia, their talks were at the Social Sciences Faculty of the Research University Higher School of Economics in Moscow. In Ukraine, they presented at the annual meeting of the Ukrainian Sociological Association.
A book manuscript is to be completed in 2020 and submitted to a university press.
