# CONTENTS

**PART ONE: SUBJECT REFERENCES**

## I. THE BEACH AND NEARSHORE

### A. Coastal Morphology
- 1. General
- 2. Beach Ridges
- 3. Coastal and Beach Dunes
- 4. Inlets
- 5. Storm Induced Changes

### B. Beach Morphology
- 1. General
- 2. Beach-face Configuration
- 3. Nearshore Bottom Configuration
- 4. Primary Structures and Minor Features

### C. Measurement Techniques
- 1. Beach (Sub-aerial)
- 2. Nearshore (Submarine)

### D. Sediment Properties and Transport
- 1. Sediment Characteristics
  - a. General
  - b. Measurements
  - c. Sampling
- 2. Sediment Transport
  - a. General
  - b. Transport by Waves
  - c. Littoral Drift
  - d. Other Methods of Transport
  - e. Tracer Studies

## II. BEACH AND NEARSHORE PROCESSES

### A. General Wave Theory

### B. Shoaling and Breaking Waves
1. General 31
2. Wave Refraction 34
3. Littoral Currents 35
C. Tides and Tidal Currents 35
D. Storms and Hurricanes 36
E. Aeolian Processes 37
F. Measurement Techniques 38

III. COASTAL ENGINEERING 39
A. General Coastal and Beach Engineering 39
B. Specific Engineering Problems 43

IV. QUANTITATIVE ANALYSIS OF DATA 47
A. Directly Related to Beaches or Coasts 47
B. Indirect Application to Beaches or Coasts 48

V. BIBLIOGRAPHIES AND OTHER SOURCE MATERIALS 50
A. Reference Books 50
B. Other Bibliographies 51
C. Periodicals 52
D. Miscellaneous 53

PART TWO: AUTHORS 55
I. Alphabetical Index of Authors 55
SELECTED BIBLIOGRAPHY

ON BEACH FEATURES AND RELATED NEARSHORE PROCESSES

Compiled by

Robert Dolan and James McCloy

This bibliography is intended to make available to those interested in beach and coastal research references acquired by the authors during the past several years. Specific fields covered are outlined in the table of contents. In addition to being restricted to these topics, this listing is selective in that it is based principally on (a) materials available in the libraries of Coastal Studies Institute and Louisiana State University, and (b) references considered most relevant by the compilers.

Although no attempt was made to time-restrict the materials considered, about 80 per cent of the references are post-1940. This reflects not only the lack of beach process research before World War II, but also the descriptive character of most earlier work. Several general sources for the pre-1940 literature are included in the section headed "Bibliographies and Other Source Materials," for example D. W. Johnson's (1919) Shore Processes and Shoreline Development.

A number of the general papers could be listed under more than a single subject heading; consequently, their classification is based upon the authors' evaluation of their principal content. Some reference materials which were not available have been included according to title only if they seemed to be applicable to the subject of beach and coastal research. Accuracy of entries was checked, but since this was not an exercise in bibliographic research, some irregularities are to be expected.

This bibliography is believed to contain approximately 75 per cent of the most pertinent literature on the subjects under consideration. Many of the references not included here are cited within the entries listed under "Bibliographies and Other Source Materials."

The general organization of the bibliography follows that used by G. T. McGill (1960) Selected Bibliography of Coastal Geomorphology of the World. Style for the individual citations is a slight alteration of that recommended in Suggestions to Authors of Reports of the United States Geological Survey.

Preparation of this bibliography was made possible through financial support of the Geography Branch, Office of Naval Research, Contract N onr 1575 (03) NR 388 002, United States Coast and Geodetic Survey; and the Cape Hatteras National Seashore Recreation Area of the National Park Service.
It is recognized that bibliographies of this nature sometimes omit important references. This initial compilation should, therefore, be considered in terms of a working bibliography, subject to changes. Suggestions and additions are solicited and when sufficient materials have accumulated, a supplement will be issued.

ACKNOWLEDGEMENTS: Special appreciation is extended to Dr. James Plumer Morgan who suggested that the bibliography be compiled and made his personal library available. We also wish to thank the following Coastal Studies Institute personnel for making their reference material available: Mr. James M. Coleman, Mr. Rodney B. Adams, and Mr. S. M. Gagliano. The authors also acknowledge the assistance of Mr. P. B. Larimore in preparation of the final report, and Mrs. Grace Fitzgerald in the tedious job of typing the final draft.

Dinard /Ille-et-Vilaine/, France
**Selected Bibliography on Beach Features and Related Nearshore Processes**

**Abstract**
This bibliography is believed to contain approximately 75 per cent of the most pertinent literature on the subject of beach features and related nearshore processes. Specific fields covered are outlined in the table of contents. The material is listed by subject and by name of author. The fact that about 80 per cent of the references are post-1940 reflects a lack of beach process research prior to World War II. A number of the general papers could be listed under more than one subject heading, so the authors' evaluation of their principal content determined their classification.
Bibliography on Beach Features and Related Nearshore Processes
