TOPICAL HAZARD EVALUATION PROGRAM
OF CANDIDATE INSECT REPELLENT AI3-33575-b
BUTYL DECANOATE
STUDY NO. 51-0857-78
MARCH 1976 - JULY 1977

Approved for public release; distribution unlimited.

US ARMY
ENVIRONMENTAL HYGIENE AGENCY
ABERDEEN PROVING GROUND, MD 21010
A summary of the pertinent findings and recommendations of the inclosed report follows:

A preliminary hazard evaluation of A13-33573-b was performed by means of laboratory animal studies using rats, rabbits, and guinea pigs. The technical grade compound did not produce skin or eye irritation or photochemical irritation in rabbits, did not sensitize guinea pigs and did not demonstrate an acute ingestion hazard. It is recommended that A13-33573-b, butyl decanoate be approved for further testing as a candidate insect repellent.

20. ABSTRACT (Continue on reverse side if necessary and identify by block number)
   A preliminary hazard evaluation of A13-33573-b was performed by means of laboratory animal studies using rats, rabbits, and guinea pigs. The technical grade compound did not produce skin or eye irritation or photochemical irritation in rabbits, did not sensitize guinea pigs and did not demonstrate an acute ingestion hazard. It is recommended that A13-33573-b, butyl decanoate, be approved for further testing as a candidate insect repellent.
TOPICAL HAZARD EVALUATION PROGRAM
OF CANDIDATE INSECT REPELLENT AI3-33575-b
BUTYL DECANOATE
STUDY NO. 51-0857-78
MARCH 1976 - JULY 1977

1. AUTHORITY.
   b. Memorandum of Understanding between the Department of the Army, Office of The Surgeon General; the US Army Health Services Command; the US Army Environmental Hygiene Agency; the Armed Forces Pest Control Board; and the US Department of Agriculture, effective 1970 with Amendment No. 1, effective August 1974.

3. PURPOSE. The purpose of this program is to provide guidance for further entomological testing of the candidate insect repellent AI3-33573-b, butyl decanoate.

4. SUMMARY OF FINDINGS. A hazard evaluation of the candidate repellent AI3-33573-b, butyl decanoate, was conducted by this Agency using New Zealand White rabbits for skin and eye studies, Hartley guinea pigs for a skin sensitization study and Sprague-Dawley, Wistar-derived rats for determination of oral toxicity. A tabular presentation of animal toxicity data developed in this Agency follows.*†

† The experiments reported herein were performed in animal facilities, fully accredited by the American Association for Accreditation of Laboratory Animal Care.

PHOTOCHEMICAL SKIN IRRITATION STUDIES

Rabbits

A single application (0.05 ml) of a 25-percent (w/v) solution of the compound (AI3-33573-b) and of a 10 percent (w/v) oil of Bergamot solution (positive control) in 95 percent ethyl alcohol, were applied to the intact skin of six rabbits. Five minutes after application, the rabbits were exposed to UV light 365 nm for 30 minutes at a distance of 10-15 cm.

Control

Following UV exposure of the rabbits 0.05 ml of test compound, positive control and diluent were applied to additional skin areas to serve as unirradiated control sites. Application areas were checked for skin irritation reactions at 24, 48 and 72 hours.

A 25-percent solution of AI3-33573-b in ethanol did not cause a photochemical irritation reaction under test conditions. Positive control application with irradiation caused greater irritant effects than in unirradiated skin areas.

Ethanol solutions of AI3-33573-b caused a very slight irritation reaction on both UV and non-UV irradiated skin sites.

Compound AI3-33573-b did not cause a photochemical irritation reaction under test conditions and is not expected to cause a photochemical irritation in humans.

* A known skin sensitizer.
5. CONCLUSION. Technical grade compound AI3-33573-b presents no acute hazard from eye, skin, photochemical or sensitization contact or from acute ingestion.

6. RECOMMENDATION. Under the provisions of the Memorandum of Understanding (para 1b), it is recommended that AI3-33573-b (butyl decanoate) be approved for further testing as a candidate insect repellent.

APPENDIX

TOPICAL HAZARD EVALUATION PROGRAM
DEFINITIONS OF CATEGORIES OF COMPOUNDS BEING
CONSIDERED FOR ACUTE SKIN APPLICATION

CATEGORY I - Compounds producing no primary irritation of the intact skin or
no greater than mild primary irritation of the skin surrounding an abrasion.
(INTERPRETATION: No restriction for acute application to the human skin.)

CATEGORY II - Compounds producing mild primary irritation of the intact skin
and the skin surrounding an abrasion. (INTERPRETATION: Should be used only
on human skin found by examination to have no abrasions or may be used as a
clothing impregnant.)

CATEGORY III - Compounds producing moderate primary irritation of the intact
skin and the skin surrounding an abrasion. (INTERPRETATION: Should not be
used directly on the skin without a prophetic patch test having been
conducted on humans to determine irritation potential to human skin. May be
used without patch testing, with extreme caution, as clothing impregnants.
Compound should be resubmitted in the form and at the intended use
concentration so that its irritation potential can be reexamined using other
test techniques on animals.)

CATEGORY IV - Compounds producing moderate to severe primary irritation of
the intact skin and of the skin surrounding an abrasion, and, in addition,
producing necrosis, vesiculation and/or eschars. (INTERPRETATION: Should be
resubmitted for testing in the form and at the intended use concentration.
Upon resubmission, its irritation potential will be reexamined using other
test techniques on animals. prior to possible prophetic patch testing in
humans, at concentrations which have been shown not to produce primary
irritation in animals.)

CATEGORY V - Compounds impossible to classify because of staining of the skin
or other masking effects owing to physical properties of the compound.
(INTERPRETATION: Not suitable for use on humans.)

EYE CATEGORIES:

A. Compounds noninjurious to the eye. INTERPRETATION: Irritation of
human eyes is not expected if the compound should accidentally get into the
eyes, provided it is washed out as soon as possible.

B. Compounds producing mild injury to the cornea. INTERPRETATION:
Should be used with caution around the eyes.
Study No. 51-0857-78, Mar 76 - Jul 77

C. Compounds producing mild injury to the cornea, and in addition some injury to the conjunctiva. INTERPRETATION: Should be used with caution around the eyes and mucosa.

D. Compounds producing moderate injury to the cornea. INTERPRETATION: Should be used with extreme caution around the eyes.

E. Compounds producing moderate injury to the cornea, and in addition producing some injury to the conjunctiva. INTERPRETATION: Should be used with extreme caution around the eyes and mucosa.

F. Compounds producing severe injury to the cornea and to the conjunctiva. INTERPRETATION: Should be used with extreme caution. It is recommended that use be restricted to areas other than the face.
