A hazard evaluation of AI3-33514-a, was performed by means of laboratory studies using New Zealand White rabbits. The technical grade compound caused moderate skin irritation. It is recommended the AI3-33514-a, US Department of Agriculture Proprietary Compound, not be approved for further testing as a candidate insect repellent. However, if this compound shows pest repellent properties that are a significant improvement over currently available compounds, it is requested that this compound or its modified formulation by submitted for further toxicological evaluation at its proposed use formulation and/or concentration.

A summary of the pertinent findings and recommendations of the enclosed report follows:

A hazard evaluation of A13-33514-a, was performed by means of laboratory studies using New Zealand White rabbits. The technical grade compound caused moderate skin irritation. It is recommended the A13-33514-a, US Department of Agriculture Proprietary Compound, not be approved for further testing as a candidate insect repellent. However, if this compound shows pest repellent properties that are a significant improvement over currently available compounds, it is requested that this compound or its modified formulation be submitted for further toxicological evaluation at its proposed use formulation and/or concentration.

TOPICAL HAZARD EVALUATION PROGRAM
OF CANDIDATE INSECT REPELLENT A13-33514-a
US DEPARTMENT OF AGRICULTURE PROPRIETARY COMPOUND
STUDY NO. 51-0871-78
MAY 1976 - NOVEMBER 1977

1. AUTHORITY.
   b. Memorandum of Understanding between the Department of the Army, Office of The Surgeon General; the US Army Health Services Command; the US Army Environmental Hygiene Agency; the Armed Forces Pest Control Board; and the US Department of Agriculture, effective 1970 with Amendment No. 1, effective August 1974.

3. PURPOSE. The purpose of this program is to provide guidance for further entomological testing of the candidate insect repellent A13-33514-a.

4. SUMMARY OF FINDINGS. A hazard evaluation of the candidate insect repellent A13-33514-a, US Department of Agriculture (USDA) Proprietary Compound was conducted by this Agency using New Zealand White rabbits for a skin irritation study. A tabular presentation of animal toxicity data developed in this Agency follows:

† The experiments reported herein were performed in animal facilities fully accredited by the American Association for Accreditation of Laboratory Animal Care.

Approved for public release; distribution unlimited
Study No. 51-0871-78, May 76 - Nov 77

5. CONCLUSION. The candidate insect repellent AI3-33514-a, has a potential for causing moderate skin irritation to intact and abraded skin and does not qualify as a nonhazardous insect repellent.

6. RECOMMENDATIONS. Under the provisions of the Memorandum of Understanding (paragraph 1), it is recommended that AI3-33514-a, USDA Proprietary Compound not be approved as a candidate insect repellent. However, if the compound shows pest repellent properties that are a significant improvement over currently available compounds, it is requested that this compound or its modified formulations and/or concentrations be submitted for further toxicological evaluation.

APPENDIX

TOPICAL HAZARD EVALUATION PROGRAM
DEFINITIONS OF CATEGORIES OF COMPOUNDS BEING CONSIDERED FOR ACUTE SKIN APPLICATION

CATEGORY I - Compounds producing no primary irritation of the intact skin or no greater than mild primary irritation of the skin surrounding an abrasion. (INTERPRETATION: No restriction for acute application to the human skin.)

CATEGORY II - Compounds producing mild primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should be used only on human skin found by examination to have no abrasions or may be used as a clothing impregnant.)

CATEGORY III - Compounds producing moderate primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should not be used directly on the skin without a prophetic patch test having been conducted on humans to determine irritation potential to human skin. May be used without patch testing, with extreme caution, as clothing impregnants. Compound should be resubmitted in the form and at the intended use concentration so that its irritation potential can be reexamined using other test techniques on animals.)

CATEGORY IV - Compounds producing moderate to severe primary irritation of the intact skin and of the skin surrounding an abrasion and, in addition, producing necrosis, vesication and/or eschars. (INTERPRETATION: Should be resubmitted for testing in the form and at the intended use concentration. Upon resubmission, its irritation potential will be reexamined using other test techniques on animals. Prior to possible prophetic patch testing in humans, at concentrations which have been shown not to produce primary irritation in animals.)

CATEGORY V - Compounds impossible to classify because of staining of the skin or other masking effects owing to physical properties of the compound. (INTERPRETATION: Not suitable for use on humans.)

EYE CATEGORIES:

A. Compounds noninjurious to the eye. INTERPRETATION: Irritation of human eyes is not expected if the compound should accidentally get into the eyes, provided it is washed out as soon as possible.

B. Compounds producing mild injury to the cornea. INTERPRETATION: Should be used with caution around the eyes.

C. Compounds producing mild injury to the cornea, and in addition some injury to the conjunctiva. INTERPRETATION: Should be used with caution around the eyes and mucosa.
D. Compounds producing moderate injury to the cornea. **INTERPRETATION:**
Should be used with extreme caution around the eyes.

E. Compounds producing moderate injury to the cornea, and in addition
producing some injury to the conjunctiva. **INTERPRETATION:** Should be used
with extreme caution around the eyes and mucosa.

F. Compounds producing severe injury to the cornea and to the
conjunctiva. **INTERPRETATION:** Should be used with extreme caution. It is
recommended that use be restricted to areas other than the face.
