USAEHA-51-0844-78
TOPICAL HAZARD EVALUATION OF
CANDIDATE INSECT REPELLENT A13-36541-aGa
USDA PROPRIETARY COMPOUND
STUDY NO. 51-0844-78
JANUARY 1976-OCTOBER 1977

Approved for public release; distribution unlimited.
**Topical Hazard Evaluation of Candidate Insect Repellent A13-36541-aGa, USDA Proprietary Compound**

A preliminary hazard evaluation of A13-36541-aGa was performed by means of laboratory studies using rats, rabbits, and guinea pigs. The technical grade compound caused only mild eye and skin irritation but did not produce photoc-chemical irritation in rabbits, did not sensitize guinea pigs and did not demonstrate an acute ingestion hazard. It is recommended that A13-36541-aGa be approved for further testing as a candidate insect repellent. It should, however, be used with caution around the eyes and mucosa.
SUBJECT: Topical Hazard Evaluation of Candidate Insect Repellent
AI3-36541-aGa, USDA Proprietary Compound, Study No. 51-0844-78,
January 1976-October 1977

A summary of the pertinent findings and recommendations of the inclosed
report follows:

A preliminary hazard evaluation of AI3-36541-aGa was performed by means of
laboratory studies using rats, rabbits, and guinea pigs. The technical grade
compound caused only mild eye and skin irritation but did not produce
photochemical irritation in rabbits, did not sensitize guinea pigs and did
not demonstrate an acute ingestion hazard. It is recommended that
AI3-36541-aGa be approved for further testing as a candidate insect
repellent. It should, however, be used with caution around the eyes and
mucosa.

FOR THE COMMANDER:

BRENDAN E. JOYCE, Ph.D.
LTC, MSC
Director, Laboratory Services

1. AUTHORITY.

   b. Memorandum of Understanding between the Department of the Army, Office of The Surgeon General; the US Army Health Services Command; the US Army Environmental Hygiene Agency; the Armed Forces Pest Control Board; and the US Department of Agriculture, effective 1970 with Amendment No. 1 effective August 1974.

3. PURPOSE. The purpose of this program is to provide guidance for further entomological testing of the candidate insect repellent AI3-36541-aGa, USDA Proprietary Compound.

4. SUMMARY OF FINDINGS. A hazard evaluation of the candidate repellent AI3-36541-aGa was conducted by this Agency using New Zealand White rabbits for skin and eye studies, Hartley guinea pigs for a skin sensitization study and Sprague-Dawley rats for determination of oral toxicity. A tabular presentation of animal toxicity data developed in this Agency follows.*

† The experiments reported herein were performed in animal facilities, fully accredited by the American Association of Accreditation of Laboratory Animal Care.

Approved for public release; distribution unlimited.

**PHOTOCHEMICAL SKIN IRRITATION STUDIES**

**Rabbits**

A single application (0.05 ml) of a 25 percent (w/v) solution of A13-36541-aGa in 95 percent ethyl alcohol, a 10 percent (w/v) oil of Bergamot solution (positive control) in 95 percent ethyl alcohol were applied to the intact skin of six rabbits. Five minutes after application, the rabbits were exposed to UV light (365 nm) for 30 minutes at a distance of 10-15 cm.

</tr>
</tbody>
</table>

Following UV exposure, 0.05 ml of the test compound, and positive control were applied to additional skin area of the rabbits. Ethanol solutions of test compound applied without subsequent irradiation caused no skin irritation reaction. Compound A13-36541-aGa did not cause a photochemical irritation reaction under test conditions. Positive control application and irradiation caused greater irritant reaction than in unirradiated areas. Compound A13-36541-aGa did not cause a photochemical irritation reaction under test conditions and is not expected to cause photochemical irritation reactions in humans.
5. CONCLUSIONS. The candidate insect repellent AI3-36541-aGa (USDA Proprietary) caused a mild skin and eye irritant reaction but presents no acute hazard from photochemical or sensitization contact or from acute ingestion.

6. RECOMMENDATIONS. Under the provisions of the Memorandum of Understanding (paragraph 1b), it is recommended that AI3-36541-aGa (USDA Proprietary Compound) be approved for further testing as a candidate insect repellent. Eye irritation may result from accidental contact. It should be used with caution around the eyes and muscosa and washed out immediately if it should contact those areas.

APPENDIX

TOPICAL HAZARD EVALUATION PROGRAM
DEFINITIONS OF CATEGORIES OF COMPOUNDS BEING CONSIDERED FOR ACUTE SKIN APPLICATION

CATEGORY I - Compounds producing no primary irritation of the intact skin or no greater than mild primary irritation of the skin surrounding an abrasion. (INTERPRETATION: No restriction for acute application to the human skin.)

CATEGORY II - Compounds producing mild primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should be used only on human skin found by examination to have no abrasions or may be used as a clothing impregnant.)

CATEGORY III - Compounds producing moderate primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should not be used directly on the skin without a prophetic patch test having been conducted on humans to determine irritation potential to human skin. May be used without patch testing, with extreme caution, as clothing impregnants. Compound should be resubmitted in the form and at the intended use concentration so that its irritation potential can be reexamined using other test techniques on animals.)

CATEGORY IV - Compounds producing moderate to severe primary irritation of the intact skin and of the skin surrounding an abrasion and, in addition, producing necrosis, vesiculation and/or eschars. (INTERPRETATION: Should be resubmitted for testing in the form and at the intended use concentration. Upon resubmission, its irritation potential will be reexamined using other test techniques on animals. prior to possible prophetic patch testing in humans, at concentrations which have been shown not to produce primary irritation in animals.)

CATEGORY V - Compounds impossible to classify because of staining of the skin or other masking effects owing to physical properties of the compound. (INTERPRETATION: Not suitable for use on humans.)

EYE CATEGORIES:

A. Compounds noninjurious to the eye. INTERPRETATION: Irritation of human eyes is not expected if the compound should accidentally get into the eyes, provided it is washed out as soon as possible.

B. Compounds producing mild injury to the cornea. INTERPRETATION: Should be used with caution around the eyes.

C. Compounds producing mild injury to the cornea, and in addition some injury to the conjunctiva. INTERPRETATION: Should be used with caution around the eyes and mucosa.
D. Compounds producing moderate injury to the cornea. INTERPRETATION: Should be used with extreme caution around the eyes.

E. Compounds producing moderate injury to the cornea, and in addition producing some injury to the conjunctiva. INTERPRETATION: Should be used with extreme caution around the eyes and mucosa.

F. Compounds producing severe injury to the cornea and to the conjunctiva. INTERPRETATION: Should be used with extreme caution. It is recommended that use be restricted to areas other than the face.
