TOPICAL HAZARD EVALUATION PROGRAM
OF CANDIDATE INSECT REPELLENT AI3-36416
US DEPARTMENT OF AGRICULTURE PROPRIETARY
CHEMICAL-AMIDE
STUDY NO. 75-51-0887-79
MAY 1976 - FEBRUARY 1978

Approved for public release; distribution unlimited.
A preliminary hazard evaluation of A13-36416 was performed by means of laboratory animal studies using rats, rabbits and guinea pigs. The technical grade compound did not produce eye or skin irritation, or cause a photochemical irritation in rabbits, did not sensitize guinea pigs and did not demonstrate an acute ingestion hazard. It was recommended that A13-36416 be approved for further testing as a candidate insect repellent.

A summary of the pertinent findings and recommendations of the inclosed report follows:

A preliminary hazard evaluation of AI3-36416 was performed by means of laboratory animal studies using rats, rabbits, and guinea pigs. The technical grade compound did not produce eye or skin irritation, or cause a photochemical irritation in rabbits, did not sensitize guinea pigs and did not demonstrate an acute ingestion hazard. It was recommended that AI3-36416 be approved for further testing as a candidate insect repellent.

FOR THE COMMANDER:

BRENDAN E. JOYCE, Ph.D.
LTC, MSC
Director, Laboratory Services

CF:
HQDA (DASG-PSP)
Cdr, HSC (HSPA-P)
Dir, Advisory Ctr on Tox, NRC
Supt, AHS (HSA-IHE)
USDA, ARS (Dr. Terrence McGovern)

Approved for public release; distribution unlimited.
1. AUTHORITY.

   b. Memorandum of Understanding between the Department of the Army; Office of The Surgeon General; the US Army Health Services Command; the Armed Forces Pest Control Board; and the US Department of Agriculture, effective 1970 with Amendment No. 1 effective August 1974.

3. PURPOSE. The purpose of this program is to provide guidance for further entomological testing of the candidate insect repellent A13-36416.

4. SUMMARY OF FINDINGS. A hazard evaluation of the candidate insect repellent A13-36416, US Department of Agriculture Proprietary Chemical-Amide, was conducted by this Agency using New Zealand White rabbits for skin and eye studies, Hartley guinea pigs for a skin sensitization study and Sprague-Dawley rats for determination of oral toxicity. A tabular presentation of animal toxicity data developed in this Agency follows.*

† The experiments reported herein were performed in animal facilities fully accredited by the American Association for the Accreditation of Laboratory Animal Care.

Approved for public release; distribution unlimited.

**SENSITIZATION STUDIES**

**Guinea Pigs (male)**

Intradermal injections of 0.1 ml of a 0.1 percent suspension (w/v) of AI3-36416 or of dinitrochlorobenzene (DNCB)* in a mixture containing 1 volume propylene glycol and 29 volumes of saline.

Ten test guinea pigs received and challenged with a 0.1 percent solution of AI3-36416. Challenge dose of test compound (last intradermal injection) did not produce a sensitization reaction.

Ten positive control guinea pigs received and challenged with a 0.1 percent suspension of DNCB. Positive control (DNCB) produced a marked sensitization reaction in 10 out of 10 guinea pigs.

Compound AI3-36416 did not produce a sensitization reaction under these test conditions and is not expected to cause a sensitization reaction in humans.

* A known skin sensitizer
5. CONCLUSION. Technical grade compound A13-36416 presents no acute hazard from eye, skin, photochemical or sensitization contact or from acute ingestion. Ethanol solutions of A13-36416 may cause irritation in sensitive individuals.

6. RECOMMENDATION. Under the provisions of the Memorandum of Understanding (paragraph 1b), it is recommended that A13-36416, USDA Proprietary Chemical-Amide, be approved for further testing as a candidate insect repellent. Ethanol solutions of this compound may cause skin irritation in sensitive individuals and, if experienced, the site should be washed with copious amounts of water.

APPENDIX

TOPICAL HAZARD EVALUATION PROGRAM
DEFINITIONS OF CATEGORIES OF COMPOUNDS BEING CONSIDERED FOR ACUTE SKIN APPLICATION

CATEGORY I - Compounds producing no primary irritation of the intact skin or no greater than mild primary irritation of the skin surrounding an abrasion. (INTERPRETATION: No restriction for acute application to the human skin.)

CATEGORY II - Compounds producing mild primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should be used only on human skin found by examination to have no abrasions or may be used as a clothing impregnant.)

CATEGORY III - Compounds producing moderate primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should not be used directly on the skin without a prophetic patch test having been conducted on humans to determine irritation potential to human skin. May be used without patch testing, with extreme caution, as clothing impregnants. Compound should be resubmitted in the form and at the intended use concentration so that its irritation potential can be reexamined using other test techniques on animals.)

CATEGORY IV - Compounds producing moderate to severe primary irritation of the intact skin and of the skin surrounding an abrasion and, in addition, producing necrosis, vesiculation and/or eschars. (INTERPRETATION: Should be resubmitted for testing in the form and at the intended use concentration. Upon resubmission, its irritation potential will be reexamined using other test techniques on animals, prior to possible prophetic patch testing in humans, at concentrations which have been shown not to produce primary irritation in animals.)

CATEGORY V - Compounds impossible to classify because of staining of the skin or other masking effects owing to physical properties of the compound. (INTERPRETATION: Not suitable for use on humans.)

EYE CATEGORIES:

A. Compounds noninjurious to the eye. INTERPRETATION: Irritation of human eyes is not expected if the compound should accidentally get into the eyes, provided it is washed out as soon as possible.

B. Compounds producing mild injury to the cornea. INTERPRETATION: Should be used with caution around the eyes.

C. Compounds producing mild injury to the cornea, and in addition some injury to the conjunctiva. INTERPRETATION: Should be used with caution around the eyes and mucosa.
D. Compounds producing moderate injury to the cornea. INTERPRETATION: Should be used with extreme caution around the eyes.

E. Compounds producing moderate injury to the cornea, and in addition producing some injury to the conjunctiva. INTERPRETATION: Should be used with extreme caution around the eyes and mucosa.

F. Compounds producing severe injury to the cornea and to the conjunctiva. INTERPRETATION: Should be used with extreme caution. It is recommended that use be restricted to areas other than the face.
