FOREWORD

The Defense Communications Engineering Center (DCEC) Technical Notes (TN's) are published to inform interested members of the defense community regarding technical activities of the Center, completed and in progress. They are intended to stimulate thinking and encourage information exchange; but they do not represent an approved position or policy of DCEC, and should not be used as authoritative guidance for related planning and/or further action.

Comments or technical inquiries concerning this document are welcome, and should be directed to:

I. INTRODUCTION

The AN/TTC-39 Switch Simulator was developed for DCA by GTE-SYLVANIA under contract No. DCA100-76-C-0068. The software was written in FORTRAN-IV for use on IBM System-360 or System-370. This manual describes the operation of the AN/TTC-39 Switch Simulation System as implemented on the DCEC Hybrid Simulation Center in Reston, Virginia. For a more detailed description of the simulator and instructions for the preparation of input data, the user is referred to the USER'S MANUAL (reference 1).
II. SYSTEM DESCRIPTION

The AN/TTC-39 Switch Simulator has been designed as an extension to the GASP-IV Simulation System. Some GASP procedures have been modified. The system is executed in three distinct steps: the Traffic Generation, the Model Execution, and the Post Simulation Analysis. Although the system can be operated in the batch mode (see Appendix B) it can more expediently be operated remotely from a TSO terminal. A command procedure library has been prepared that allows the TSO user to initiate each simulation step by entering a simple command. The command procedure will then generate the proper JCL cards and submit the job for background execution. Before any of these steps can be executed the three FORTRAN source modules must be compiled, and the link-edited load modules placed into dataset SYS9.TTC39.LOAD. A special TSO command has been provided for this task. While all steps can be executed in the background by the SUBMIT command the Traffic Generation step may also be executed in the foreground. A summary of all TSO commands is given in Figure 1 which also shows the input and intermediate datasets of each step.
Figure 1. The TSO Command System
III. SYSTEM INITIALIZATION

To achieve good flexibility of the Simulation System the input/output data sets must be established on disc memory. This is automatically done whenever the SETUP command is executed. All necessary datasets that do not exist will then be created and cataloged. The SETUP command has the following format:

SETUP SYS9.TTC39

This command will also concatenate all special TTC39 commands contained in partitioned dataset 'SYS9.TTC39.CLIST' with the regular TSO command list in dataset 'SYS1.CMDPROC'. The system will then respond with the following message:

* THE TTC39 SIMULATION SYSTEM HAS BEEN INVOKED *
*
* THE HSF INSTALLATION PROVIDES THE FOLLOWING COMMANDS FOR THE EXECUTION OF THE SYSTEM *
* TTC39CMP - TO COMPILE A MEMBER IN TTC39.FORT *
* TTC39TRF - TO GENERATE THE TRAFFIC FILE (BACKGROUND) *
* TTC39TRA - TO GENERATE THE TRAFFIC FILE (FOREGROUND) *
* TTC39RUN - TO EXECUTE THE MODEL (BACKGROUND) *
* TTC39PST - TO INVOKE POST ANALYSIS PROGRAM (BACKGROUND)*
* TTC39SIM - TO INVOKE ALL SIMULATION STEPS (BACKGROUND) *
* TTC39HLP - TO PROVIDE MORE INFORMATION ON EACH COMMAND *
* TTC39.DATA HAS BEEN CREATED *

The last line is displayed only when the partitioned dataset TTC39.DATA is being generated. If the dataset had been catalogued previously, it will not be regenerated. This dataset accommodates the user prepared input data. Member TRAFINI contains input data for the Traffic Generator, GOINI input parameters for the GO step, and POSTIN input specifications for the report generation of the Post-Analysis step. For information concerning the preparation of these data the user is referred to the USER'S MANUAL (reference 1).
The associated command list is contained in member TTC39 of partitioned dataset SYS9.TTC39.CLIST and is shown in the following listing:

5
IV. EXECUTING THE JOB STEPS

For each simulation step, one distinct TSO command has been created which requires the user to enter up to four mandatory keywords. The user can override some processing parameters by the optional keywords which are listed as follows:

IN(<member of input data set TTC39.DATA>)
OUT(<output class>)
R(<region size>)
TIME(<CPU time for this step>)
NO(<one character job name modifier>)

The available optional keywords and applicable defaults are listed under the individual job steps. However, the following two options are available for all command lists which generate JCL for background execution:

JCL(X) - for (X = EDIT) the user may first check and modify the JCL which is available at the terminal in the EDIT mode. The user may then submit the job by entering 'SUB *'. The default is X for immediate submission.

ROUTE(LOCAL) - This option allows remote users to specify the printer for remote printing (default LOCAL).

Before the job is submitted for background execution, all dataset names are displayed at the terminal. Except for the Compile Step the user is then asked to check the names. If all names are correct he may continue processing by entering 'YES'.
1. THE COMPILe STEp

The following command has been provided to generate the JCL for compiling the Traffic Generator, the Simulator, and the Post Analysis Program by remote job entry (see Appendix C):

TTC39CMP <your name> <your id> <task no.> <module name>

The system will invoke the Fortran-G Compiler and will take the source input from partitioned dataset:

TTC39.FORT(<module name>)

After compilation and link-editing, the load module is placed as member <module name> into the data set SYS9.TTC39.LOAD. The system will respond with the following message to the terminal, if the model TTC39NEW is compiled:

TTC39 LOAD MODULE SYS9.TTC39.LOAD(TTC39NEW) BEING CREATED

The following optional keywords and defaults are provided:

OUT(A) - default A for printer output. X, Y, or Z would send SYSPRINT output to OUTPUT class X, Y, or Z.

NO(O) - Job number modifier (default 0)

The command list is contained in partitioned dataset 'SYS9.TTC39.CLIST(TTC39CMP)' and is listed below:

```
PROC 4,N ID TASK MODEL OUT(A) NO(O) R(180) TIME(300) JCL(X) ORG()
ROUTE(LOCAL) LINES(10) FRM() HASP()
EDIT 'SYS9.SOL.CLIST(DUMMY)' CNTL
10 //&ID.C&NO. JOB (&TASK.,&ORG.,&TIME.,&LINES.,&R.,&FRM.,&HASP.),&N.,
20 // MSGLEVEL=(1,1),NOTIFY=&ID.,MSGCLASS=Q
30 /*ROUTE PRINT &ROUTE.
40 // EXEC FORTGCL,PARM.FORT='SOURCE,XREF,ID',REGION.FORT=&R.K,
50 // REGION.LKED=130K
60 //FORT.SYSPRINT DD SYSOUT=&OUT.

TPRINT '**********************************************************************************'
IF (&JCL. EQ EDIT) GO TO LABEL 9
SUB
END LIST
LABEL 9
TPRINT 'EDIT'
```
2. THE TRAFFIC GENERATION STEP

The Traffic Generator will be invoked by the following command:

```
TTC39TRF <yourname> <your id> <task no.>
```

The following optional keywords and default are available:

- **NO(1)** - Job Id Modifier (Default 1)
- **OUT(A)** - Output Class (Default A for printer)
- **TIME(5)** - CPU time requested (Default 5 minutes)
- **TRAFIN(TRAFIN)** - Input dataset specification (default TRAFIN)

The input data must be contained in a member of partitioned dataset TTC39.DATA. Its name is concatenated by the optional keywords TRAFIN and NO. The default name is TRAFIN1. The output dataset name is TTC39.TRAFFIC#, where # represents the number specified by optional keyword NO. The Command list contained in SYS9.TTC39.CLIST(TTC39TRF) is as follows:

```plaintext

READY
SETUP SYS9.TTC39 (CR)
SYS9.TTC39.CLIST NOW CONCATENATED TO SYS1.CMDPROC

THE AN/TTC-39 SIMULATION SYSTEM HAS BEEN INVOLED

THE HSF INSTALLATION PROVIDES THE FOLLOWING

- COMMANDS FOR THE EXECUTION OF THE SYSTEM
- TTC39CMP - TO COMPILE TTC39 LOAD MODULES
- TTC39TRA - TO GENERATE THE TRAFFIC FILE (FOREGROUND)
- TTC39TRF - TO GENERATE THE TRAFFIC FILE (BACKGROUND)
- TTC39RUN - TO EXECUTE THE MODEL
- TTC39PST - TO INVOKE THE POST ANALYSIS PROGRAM
- TTC39TRF - TO GENERATE THE TRAFFIC FILE (BACKGROUND)
- TTC39SIM - TO INVOKE ALL SIMULATION STEPS (BACKGROUND)
- TTC39HLP - TO PROVIDE MORE INFORMATION ON EACH COMMAND

TTC39.DAT HAS BEEN CREATED

READY
TTC39HLP (CR)
TO INITIATE THE AN/TTC39 SIMULATION SYSTEM USE THE COMMAND:

TTC39

FOREGROUND EXECUTION:

TTC39TRA - TO INVOKE THE TRAFFIC GENERATOR

FOREGROUND INITIATED BACKGROUND JOBS:

TTC39CMP - TO COMPILE TTC39 LOAD MODULES
TTC39TRF - TO GENERATE THE TRAFFIC FILE
TTC39RUN - TO EXECUTE THE MODEL
TTC39PST - TO INVOKE THE POST ANALYSIS PROGRAM
TTC39SIM - TO INVOKE ALL SIMULATION STEPS (BACKGROUND)

TO GET MORE INFORMATION ABOUT THE COMMANDS ENTER:
TTC39HLP C(<COMMAND NAME>)

READY
FUNCTION - TO INVOKE THE FORT compiler. The FORT source code contained in your temporary dataset <MODEL>.FORT is compiled and link-edited. The load module is placed into systems dataset SYS9.TTC39.LOAD as the member (<MODEL>).

OPERANDS -

<NAME> YOUR NAME, AS TO APPEAR IN JCL.
<ID> YOUR BADGE NUMBER WITH PREFIX.
<TASK> A VALID TASK NUMBER.
<MODEL> THE NAME OF YOUR MODEL, AS USED IN COMPILE STEP.
OUT(X) OPTIONAL, USED TO SPECIFY OUTPUT CLASS. YOU MAY SPECIFY "Y", "Z", OR "A". DEFAULT IS "X".
OUT(A) - SYSPRINT OUTPUT IS SENT TO PRINTER.
OUT(X),OUT(Y),OUT(Z) - SYSPRINT OUTPUT IS SENT TO OUTPUT CLASS X, Y, OR Z, AND MAY BE SCANNED AND SAVED BY THE OUTPUT FUNCTION. FOR HELP ENTER "HELP OUTPUT"

NO(1) OPTIONAL, THE ONE CHARACTER SYMBOL IN PARENTHESIS IS ASSIGNED AS THE LAST LETTER TO THE JOB NUMBER. DEFAULT IS "1". THE JOB NUMBER OF ABOVE EXAMPLE WOULD THEN BE "T8003C0".

JCL(X) OPTIONAL, THIS KEYWORD ALLOWS YOU TO SPECIFY THAT YOU WANT THE JCL GENERATED BY THIS COMMAND PLACED INTO THE EDIT MODE FOR FURTHER EDITING. JCL(EDIT) WILL ACCOMPLISH THIS. THE DEFAULT IS JCL(X) FOR DIRECT SUBMISSION. TO EXECUTE IN THE EDIT MODE SIMPLY ENTER "RJE *"

ROUTE(X) ALLOWS PRINTER OUTPUT TO BE ROUTED TO A REMOTE PRINTER LOCATION ASSOCIATED WITH THE KEYWORD PARAMETER X.
X = LOCAL.... LOCAL PRINTER IS USED
X = REMOTE3.... PRINTER ASSOCIATED WITH REMOTE3
DEFAULT IS X = LOCAL

APPENDIX C

SYSTEM INSTALLATION

The following instructions have been prepared to help the user in installing the AN/TTC-39 Simulation System. The simulator is usually delivered on an unlabeled magnetic tape which contains three partitioned datasets.

TTC39.FORT with the FORTRAN source modules:
TRAPGEN, the traffic generator
TTC39NEW, the simulator
POSTSIM, the post-analysis program.

TTC39.DATA with a variety of traffic generator and simulation step input data.ram.

TTC39.CLIST with special clists for the execution of the simulation steps.

These datasets can be loaded from this tape to disk using a JCL setup similar to the following:

```plaintext
//T8003TD JOB (10321240,,10,,60,,),ULFERS,MSGLEVEL=(1,1),
//NOTIFY=T8003,MSGCLASS=Q
/*MESSAGE JOB REQUIRES TAPE SER NO 001228 FOR INPUT*****/
/COPYPDS EXEC PGM=IEHPMOVE
//SYSPRINT DD SYSOUT=A
//SYSUT1 DD UNIT=3330,DISP=OLD,VOL=SER=TSOWK2
//DD1 DD UNIT=3330,DISP=OLD,VOL=SER=TSOWK4
//T1 DD DSN=TTC39.FINAL,DISP=(OLD,KEEP),UNIT=TAPE9,
//DCB=(LRECL=80,BLKSIZE=800,RECFM=FB),VOL=(,RETAIN,SER=001228),
//LABEL=(,NL)
//SYSIN DD *
COPY PDS=T8003.TTC39.FORT,FROM=TAPE9=(001228,1),TO=3330=TSOWK4,
COPY PDS=SYS9.TTC39.CLIST,FROM=TAPE9=(001228,2),TO=3330=TSOWK4,
COPY PDS=T8003.TTC39.DATA,FROM=TAPE9=(001228,3),TO=3330=TSOWK4,
/*CATALOG EXEC PGM=IEHPROGM
//SYSPRINT DD SYSOUT=A
//SYSUT1 DD UNIT=3330,DISP=OLD,VOL=SER=TSOWK4
//SYSIN DD *
CATLG DSNAME=T8003.TTC39.FORT,VOL=3330=TSOWK4
CATLG DSNAME=SYS9.TTC39.CLIST,VOL=3330=TSOWK4
CATLG DSNAME=T8003.TTC39.DATA,VOL=3330=TSOWK4
*/
```
A permanent partitioned load module dataset with the name SYS9.TTC39.LOAD must be established to receive the three load modules of the simulation system. The compiling and link-editing of the traffic generator, the simulator, and the post-analysis program may be accomplished by executing the command list 'TTC39CMP' in dataset TTC39.CLIST for each of the three compilations. Each execution of this list will create a background job and place the load module into the dataset SYS9.TTC39.LOAD. The simulation system is then operational.
