FORT SILL, OKLAHOMA

The

Subject Headings of the Morris Swett Library, USAFAS,

Revised

by

Mrs. Martha H. C. Relph

15 May 1980
**The Subject Headings of the Morris Swett Library, USAFAS**

**A. M. Carlin**

The Subject Headings of the Morris Swett Library have been developed over the past seventy-five years. Headings have been devised/adopted from various library thesauruses, USAFAS subject specialists, and from librarian experience.
FOREWORD

This dictionary catalog of Morris Swett Library subject headings comprises the fifth in our series of indexes which have been developed by personnel of this library. As was the case with two other entries, this guide was originally devised by Master Sergeant Morris Swett, the library's namesake and the Field Artillery School's first full-time librarian. Something of his modus operandi is suggested by how entries were formulated for this work. His approach was to select entries for their pragmatic application, during the period from 1915 through 1954 when he was supervisory librarian. Much of his style has been carried-on by subsequent catalogers.

The cataloging product has been reworked and upgraded by Mrs. Martha Relph, the present librarian (cataloger). The result is primarily designed for this facility and can be used in conjunction with Morris Swett's "U' Military Science Classification System." These library tools have general utility whenever one wishes to localize and define the depth of subject content, identify corporate authorship, or as aids for locating materials in a special library, atuned to our system. Recognition is also extended to Mrs. Connie Lee Holmes and Mrs. Linda Marburger of the staff for their kind assistance in developing this project.

Any such list is a working draft as additions or deletions may be incorporated on a regular basis from sources as diverse as the Library of Congress, Sears List of Subject Headings, thesauruses, USAFAS subject specialists, or from the librarian's understanding. Coverage in these subject headings is not confined to purely artillery terms as the collection contains materials of general subject relevance. Artillery is often a subject in books of a historical, technical, and scientific nature. Too, today's practitioner of the artillery art is required to be conversant with many subjects outside of military science.

Subject headings may be stated directly or can be inverted if the user favors the use of the noun over the adjective. Subdivisions requiring marks of punctuation (commas, dashes, parens) also influence arrangement and may hinder ready access. Whole categories of material may also be lumped into general classes in the belief that no more materials are to be added on that subject.

The intention of this summary is to illustrate individualized practices which require further explanation. This ready-made study is an attempt toward making the file system more predictable while recognizing that no single filing method ever devised has ever been completely satisfactory.
Inclusion of an item or omission does not imply USAFAS indorsement or sanction of the compiler's point-of-view nor does it guarantee accuracy of content. These headings are intended to provide highlights and point-out key features which distinguish this library's methodology. Comment and criticism concerning this list is solicited.

LESTER L. MILLER, JR.
Supervisory Librarian
INTRODUCTION

This list of subject headings is used at the Morris Swett Library. It has been compiled by past and present librarians as well as library staffs. Some subject headings have been taken directly from Library of Congress headings. They have been added to and adjusted to meet artillery needs. This product represents a consensus of agreement between artillery specialists and librarians as to the best terminology to use.

The subjects are alphabetically listed in order, according to LC filing rules, as well as the order that "subject cards" are filed in the Morris Swett Library subject catalog card file. This library uses the "U" military science classification scheme which is also a variation of the LC system. The numbers which appear in parenthesis in this list suggest the areas used for that particular subject in the "U" or any other LC class. These numbers can also be used when the subject is not in the "U" classification, e.g.: Nuclear explosion (QC795). These suggested numbers represent cataloging decisions made at this library.

It is hoped that this subject list will be of help to other military libraries.

MRS. MARTHA H. C. RELPH
Librarian (Cataloger)
