Eye Irritation USDA Proprietary Chemical
Skin Irritation

Abstract:
Preliminary hazard evaluations of AI3-38100a, AI3-38101a, and AI3-38102a were performed by means of laboratory animal studies using rats, rabbits, and guinea pigs. The technical grade chemicals did not cause skin or photo-irritation. They produced mild injury to the cornea and, in addition, some injury to the conjunctiva. They did not prove to be skin sensitizers or to be acutely toxic by ingestion. It was recommended that the chemicals be approved for further testing as candidate insect repellents.

EXECUTIVE SUMMARY

The purpose, essential findings and recommendations of the inclosed report follow:

a. Purpose. The purpose of this program is to provide guidance for further entomological testing of candidate insect repellents A13-38100a, A13-38101a, and A13-38102a by means of laboratory animal studies using rats, rabbits, and guinea pigs.

b. Essential Findings. The technical grade chemicals did not cause skin- or photo-irritation. They produced mild injury to the cornea and, in addition, some injury to the conjunctiva. They did not prove to be skin sensitizers or to be acutely toxic by ingestion.

c. Major Recommendations. It was recommended that the chemicals be approved for further testing as candidate insect repellents.

TOPICAL HAZARD EVALUATION PROGRAM
OF CANDIDATE INSECT REPELLENTS
A13-38100a, A13-38101a, and A13-38102a
US DEPARTMENT OF AGRICULTURE PROPRIETARY CHEMICALS
STUDY NOS. 75-51-0288-82 THRU 75-51-0290-82
FEBRUARY 1981 - FEBRUARY 1982

1. AUTHORITY.
   a. Letter, US Department of Agriculture - Agricultural Research Service,
      Southern Region, Insects Affecting Man and Animals Research Laboratory,

      b. Memorandum of Understanding between the US Army Environmental Hygiene
         Agency; the US Army Health Services Command; the Department of the Army,
         Office of The Surgeon General; the Armed Forces Pest Control Board; and the
         US Department of Agriculture, Agricultural Research, Science and Education
         Administration, titled, Coordination of Biological and Toxicological Testing

2. REFERENCE. Toxicology Division Standing Operating Procedures, US Army
   Environmental Hygiene Agency (USAEM), 1981.

3. PURPOSE. The purpose of this program is to provide guidance for further
   entomological testing of the candidate insect repellents A13-38100a,
   A13-38101a, and A13-38102a.

4. SUMMARY OF FINDINGS. Hazard evaluations of the candidate repellents
   A13-38100a, A13-38101a, and A13-38102a were conducted by this Agency using
   New Zealand White rabbits for skin and eye studies, Hartley guinea pigs for a
   skin sensitization study and Sprague-Dawley rats for determination of oral
   toxicity. A tabular presentation of animal toxicity data developed in this
   Agency follows:*†

* In conducting the studies described in this report, the investigators
  adhered to the "Guide for the Care and Use of Laboratory Animals," US
  Department of Health, Education and Welfare Publication No. (NIH) 80-23,
  revised 1978.
† The studies reported herein were performed in animal facilities fully
  accredited by the American Association for the Accreditation of Laboratory
  Animal Care.

Approved for public release, distribution unlimited.

**SENSITIZATION STUDIES**

**Guinea Pigs (Male)**

Intradermal injections of 0.1 mL of a 0.1 percent solution (w/v) of the tested chemicals or of dinitrochlorobenzene (DNCB)* in a mixture containing 1 volume of propylene glycol and 29 volumes of saline.

Ten test guinea pigs for each chemical were given 10 sensitizing doses over a 3-week period. After 2 weeks rest, they were challenged with ID injections of each test chemical.

Challenge doses of the tested chemical did not produce a sensitization reaction. The tested chemicals did not produce sensitization reactions under test conditions and are not expected to produce sensitization reactions in man.

Ten positive control guinea pigs were sensitized over 3 weeks with DNCB. After 2 weeks rest, they were challenged with ID injections of DNCB.

Challenge dose of DNCB in positive control guinea pigs produced a marked sensitization reaction in 10 out of 10 guinea pigs. DNCB produced a marked reaction, indicating the guinea pigs respond to sensitizing agents.

---

* A known skin sensitizer
Study Nos. 75-51-0288-82 thru 75-51-0290-82, Feb 81 - Feb 82

5. CONCLUSION. Technical grade chemicals A13-38100a, A13-38101a, and A13-38102a did not cause skin or photoirritation, no sensitization reaction, and did not prove to be an acute ingestion hazard. The chemicals did produce mild injury to the cornea and conjunctiva.

6. RECOMMENDATIONS. Under the provisions of the Memorandum of Understanding (paragraph 1b), it is recommended that A13-38100a, A13-38101a, and A13-38102a be approved for further testing as candidate insect repellents.

APPENDIX A

TOPICAL HAZARD EVALUATION PROGRAM
DEFINITIONS OF CATEGORIES OF COMPOUNDS BEING CONSIDERED FOR ACUTE SKIN APPLICATION

CATEGORY I - Compounds producing no primary irritation of the intact skin or no greater than mild primary irritation of the skin surrounding an abrasion. (INTERPRETATION: No restriction for acute application to the human skin.)

CATEGORY II - Compounds producing mild primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should be used only on human skin found by examination to have no abrasions or may be used as a clothing impregnant.)

CATEGORY III - Compounds producing moderate primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should not be used directly on the skin without a prophetic patch test having been conducted on humans to determine irritation potential to human skin. May be used without patch testing, with extreme caution, as clothing impregnants. Compound should be resubmitted in the form and at the intended use concentration so that its irritation potential can be reexamined using other test techniques on animals.

CATEGORY IV - Compounds producing moderate to severe primary irritation of the intact skin and of the skin surrounding an abrasion and, in addition, producing necrosis, vesiculation and/or eschars. (INTERPRETATION: Should be resubmitted for testing in the form and at the intended use concentration. Upon resubmission, its irritation potential will be reexamined using other test techniques on animals. prior to possible prophetic patch testing in humans, at concentrations which have been shown not to produce primary irritation in animals.)

CATEGORY V - Compounds impossible to classify because of staining of the skin or other masking effects owing to physical properties of the compound. (INTERPRETATION: Not suitable for use on humans.)

EYE CATEGORIES:

A. Compounds noninjurious to the eye. INTERPRETATION: Irritation of human eyes is not expected if the compound should accidentally get into the eyes, provided it is washed out as soon as possible.

B. Compounds producing mild injury to the cornea. INTERPRETATION: Should be used with caution around the eyes.

C. Compounds producing mild injury to the cornea, and in addition some injury to the conjunctiva. INTERPRETATION: Should be used with caution around the eyes and mucosa.

D. Compounds producing moderate injury to the cornea. INTERPRETATION: Should be used with extreme caution around the eyes.

E. Compounds producing moderate injury to the cornea, and in addition producing some injury to the conjunctiva. INTERPRETATION: Should be used with extreme caution around the eyes and mucosa.

F. Compounds producing severe injury to the cornea and to the conjunctiva. INTERPRETATION: Should be used with extreme caution. It is recommended that use be restricted to areas other than the face.

ANALYTICAL QUALITY ASSURANCE

The Analytical Quality Assurance Office certifies the following with regard to this study:

a. This study was conducted in accordance with:

(1) Standing Operating Procedures developed by the Toxicology Division, USAEHA.

b. Facilities were inspected during its operational phase to insure compliance with paragraph a above.

c. The information presented in this report accurately reflects the raw data generated during the course of conducting the study.

PAUL V. SNEERINGER, Ph.D.
Chief, Analytical Quality Assurance Office
