NOTICE

When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data, is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may in any way be related thereto.

This report has been reviewed by the Office of Public Affairs (ASD/PA) and is releasable to the National Technical Information Service (NTIS). At NTIS, it will be available to the general public, including foreign nations.

This technical report has been reviewed and is approved for publication.

R. P. Stewart, ASD/ENFEM
Mechanical Branch
Aeronautical Systems Division
Wright-Patterson Air Force Base, Ohio 45433

FOR THE COMMANDER

PETER J. BUTKEWICZ, COL, USAF
Director
Flight Systems Engineering

If your address has changed, if you wish to be removed from our mailing list, or if the addressee is no longer employed by your organization, please notify ASD/ENFEM, WPAFB, OH 45433 to help us maintain a current mailing list.

Copies of this report should not be returned unless return is required by security considerations, contractual obligations, or notice on a special document.

The Aeromechanical Fastener Requirements Group (AMFRG) composed of the Air Force, Navy, Army, prime aerospace manufacturers, and fastener manufacturers was reorganized in 1976 to efficiently prepare and maintain MIL-STD-1515, Fastener Systems for Aerospace Applications. Twice yearly meetings were arranged, attended, technical support provided, and minutes prepared and distributed. MIL-STD-1515 was completely revised and two change notices to the revised document were completed and published. Research programs involving stress corrosion, fatigue

FOREWORD

This report was prepared by Battelle's Columbus Laboratories, Columbus, Ohio, under Contract F33615-76-C-0803. The effort reported herein was administered under the direction of the Mechanical Branch, Aeronautical Systems Division, Wright-Patterson Air Force Base, Ohio, by Mr. Richard P. Stewart, ASD/ENFEM.

This final report covers work performed from June 1976 to March 1982. The report was submitted by the authors on March 4, 1982.

BACKGROUND AND INTRODUCTION	1
SUMMARY	1
CONCLUSIONS AND RECOMMENDATIONS	2
TABLE 1. MAJOR OPERATIONAL ACTIVITIES	3

BACKGROUND AND INTRODUCTION

Conservative estimates indicate that 20 to 30 percent of the cost of primary aircraft structure can be attributed to the procurement and installation of mechanical fastening systems. This percentage does not reflect the increased cost of maintenance, inventory, redesign, and retrofit brought about by having similar but nonequivalent fastening systems in the procuring agency's fleet. Obviously a contractual document that controls the use, selection, kinds, styles, associated tooling, and related areas of mechanical fastening can result in considerable cost savings. In recognition of the need for such a document, the Air Force, as agent for the Department of Defense, initiated at Battelle first a study plan and second a contract to implement the plan, to provide technical and secretariat support to a group organized to prepare and maintain a control or standardization document.

The group, called the Aeromechanical Fastener Requirements Group (AMFRG), is composed of various representatives from the Air Force, Navy, Army, other Department of Defense organizations, representatives from prime aerospace manufacturers, and representatives from the various fastener manufacturers.

The standardization document is MIL-STD-1515, "Fastener Systems for Aerospace Applications". The stated purpose of this document is to establish standardization in the selection, development, and use of aerospace fastening systems, including hole characteristics and inspection criteria. The primary objectives of the standard are "to document selection and application information for approved fastening systems and procedures so the designer can achieve an optimum balance of performance, reliability, and exchangeability with minimum cost, logistic inventory, and maintenance". The standard is authorized under Department of Defense Project 5300-0039 with the Air Force as preparing activity.

SUMMARY

A technical and secretariat contract was implemented at Battelle on June 30, 1976. The purpose of the effort was to provide support in the preparation and maintenance of MIL-STD-1515, "Fastener Systems for Aerospace Applications".

The study plan previously mentioned (published as ASD/TR-75-32, Military Standard 1515 Development Plan) was used as the guide for the technical and secretariat support effort. It was revised and published as the "AMFRG Manual on Organization and Operations of the Aeromechanical Fastener Requirements Group" and distributed to each member of the group. It outlines the duties and responsibilities of participating organizations and is the operating guide of the AMFRG.

Major operational activities associated with the support effort are listed in chronological order in Table 1. These do not include normal day-to-day activities such as coordinating task group activities, responding to industry and government technical inquiries, and maintaining awareness of current fastener technology, and other standardization efforts.

CONCLUSIONS AND RECOMMENDATIONS

Since the reorganization of the Aeromechanical Fastener Requirements Group, brought about by the technical and secretariat support effort, MIL-STD-1515 has become a more useful and viable document. Considerable progress has been made, as evidenced by the number and content of requirements now published in the standard (12 since 1976) and the number of requirements presently in work (17). However, with the renewed awareness in fastening technology, much of the proposed document is yet to be prepared. With the advent of new design requirements, new material developments, and increased load requirements for advanced weapons systems, it is of prime importance that MIL-STD-1515 be continually updated. In addition only 2 of the 7 chapters have been started. Chapters 300, Nonstructural, and 400, Propulsion Systems Fastener Requirements, should be started in the next 12 months in order to maintain momentum. Technical and secretariat support to the preparation, maintenance, and current awareness of the MIL-STD-1515 standardization document should be a continuing contractual effort.

TABLE 1. MAJOR OPERATIONAL ACTIVITIES

Activity	Date Accomplished
<u>1976 Activities</u>	
MCG Meeting (Attended and Provided Technical and Secretariat Support)	June 30 - July 1
12th AMFRG Meeting (Attended and Provided Technical and Secretariat Support)	July 12-16
