SCOPE OF WORK AND TECHNICAL PROPOSAL AND COST
Overview of Work Tasks for Preparation of Technical Reports in Response to the 17 February 1981 Advertisement in the Commerce Business Daily for an Archeological Field Survey for the Pembina River Project

STEP ONE OF TWO STEP FORMAL ADVERTISING

GENERAL INTRODUCTION

The St. Paul District, Corps of Engineers, requires an archeological reconnaissance level cultural resources survey for the Pembina River Project in northeastern North Dakota.

Section I of this Request for Technical Proposal (RFTP) provides background information on the Pembina River Project. Section II describes the objectives and requirements of the reconnaissance field survey, and provides guidance for preparation of the technical proposals, and outlines the specific contract requirements. Section III describes and presents the evaluation criteria that will be used to assess each technical proposal. Section IV outlines the technical proposal format.

I. BACKGROUND

A. Introduction

The Corps of Engineers Pembina River Project is primarily designed to assess the flood control problems and needs on the main stem of the Pembina River in northeastern North Dakota. Secondary goals are to assess the project area's water supply, irrigation, hydroelectric, and recreation problems and needs. The study area generally encompasses the area between the Pembina River and the Canadian border (Plate 1).

B. Alternatives

Presently one non-structural alternative (will not be surveyed) and five structural alternatives are being evaluated to alleviate the flood control problems:

1. **Alternative 1:** The Pembilier Dam and reservoir alternative would be located about 2 miles upstream from Walhalla. The reservoir would provide for flood control, water supply, and recreation. The permanent conservation pool would extend upstream about 9.5 miles, at an elevation of 1010, and the flood pool would extend upstream about 21.0 miles, at an elevation of 1080 (see inclosed Map 1).

2. **Alternative 2:** The Pembilier dry dam alternative would be located at the same physical site as Alternative 1. There would be no permanent conservation pool, and water would be stored only as needed to prevent or minimize downstream flooding during high flows (see inclosed Map 1). The flood pool elevation is the same as in Alternative 1.
3. **Alternative 3:** The Pembilier Dam with marsh alternative resembles Alternative 1, but the permanent conservation pool would be reduced in size to provide water depths suitable for development of a marsh (see inclosed Map 1). The flood pool elevation is the same as in Alternative 1.

4. **Alternative 4:** The boundary floodway alternative, located about 3 miles downstream from Walhalla, would consist of a small diversion dam, with flood flows diverted into a floodway. The floodway would proceed north to the international boundary and then directly east for a distance of about 30 miles to the junction with the Red River of the North just downstream from Pembina (see inclosed Maps 2 and 3).

5. **Alternative 5:** This boundary floodway alternative would be located just upstream from Neche, and would have a similar design as Alternative 4. The floodway would proceed north from the diversion structure to the international boundary and then directly east for a distance of about 22 miles to the junction with the Red River of the North just downstream from Pembina (see inclosed Maps 4 and 5). This floodway would be used in conjunction with a reduced size Pembilier Dam as in Alternative 1. The permanent conservation pool elevation will probably remain the same, and the flood pool elevation may drop to 1070.

C. **Project Schedule**

The Stage 2 Documentation Report is scheduled to be completed by April 1982. Since the information from this contract will be used to prepare this report, the deadline for submitting the draft contract report is 31 December 1981. The information submitted in the draft contract report can be used to begin assimilating information for the Stage 2 report. The deadline for the final contract report will be 30 days after receipt of comments on the draft contract report. The draft Phase I report and EIS are scheduled to be completed in November 1982, and the final Phase I report and EIS are scheduled to be completed in June 1983.

D. **Corps of Engineers Documents**

Three documents have been produced by the Corps of Engineers, St. Paul District, for the Pembina River project; and three cultural resource contract reports have been produced by various contracting institutions. All of these documents are listed in the reference section of this RFTP.

E. **Environment/Physiography**

The project area encompasses portions of the Red River Valley, Pembina Delta, and Drift Prairie.

The Pembina River Valley is the location of Alternatives 1, 2, and 3. Contained within the Drift Prairie, the valley is characterized by steep wooded valley walls rising 200 to 400 feet above the river channel and varies in width from 1-2 miles. The Pembina River Valley has four major natural ecosystems: Bottomland Hardwood Forest, Upland Mixed Hardwood Forest, Upland Oak Savanna Woodland, and Tall-Grass Prairie.
Alternatives 4 and 5 are located in the Red River Valley. This valley once was the bottom of glacial Lake Agassiz, and is now characterized by a flat plain with minimal elevation changes. The Pembina floodplain is for the most part all cropland of high quality. The principal crops in Pembina County in terms of acres cultivated are wheat, barley, and sugar beets. Sunflower seeds, oats, flax, and potatoes are also grown. Approximately 95 percent of the project area is privately owned.

F. Previous Archaeological Work

Extremely little field work or cultural resources assessment has been conducted in the Pembina River area.

1. Literature and Records Research

Two literature reviews have been conducted in the project area. Schneider and Franke (1976) briefly reviewed the previously recorded prehistoric sites in Pembina County, and compiled an inventory of the historic resources for an area one mile on either side of the Pembina River between Neche and Pembina. Good, Dahlberg, and Sprunk (1980) conducted a more complete literature and records search for Cavalier County, the dam alternatives (1-3), and a regional overview on the prehistory and history of the surrounding area.

2. Pembina Valley Field Work

Ames (1975), under contract with the St. Paul District, Corps of Engineers, conducted a reconnaissance level field survey of portions of the project area encompassing the dam alternatives (1-3). A surface survey, and testing of two sites, was conducted by a crew of six over a 14-day period. No shovel testing or surface collections were done. Nineteen sites were located. All the sites were located in plowed fields, 8-18 meters (20-60 feet) above the present flood plain, and usually on the first terrace which corresponds in much of the valley to the 1050-foot elevation line. All sites consisted of lithic scatters revealing lithic cores and flakes, and occasionally a biface and a scraper. Three side-notched projectile points and one rim sherd were also found. One site contained a house foundation, which was not described or dated by Ames. Two sites were formally tested by excavating 1x2 meter units in arbitrary 10-centimeter levels.

Test excavations in four units (1x2 m) at 32Cv204 revealed 10 artifacts, including a large chert biface, cores, core fragments, and one endscraper. Test excavations in four 1x2 meter units at 32Cv201 recovered two basally indented arrowhead tang fragments, a beaked scraper, and other unidentified lithic material.

3. Boundary Floodway Field Work

No fieldwork has been conducted within the boundary floodway alternative areas (4-5).
G. National Register Sites

To date, only one recorded site in the project area is listed on the National Register of Historic Places. The Gingras House and Trading Post is located approximately one and one-half miles northeast of Walhalla in the NW<sup>4</sup>, SE<sup>4</sup>, Section 16, T163N, R56W. The house and trading post are not physically located within a direct impact zone; however, indirect impacts on either the structures or direct impacts on possible nearby associated cultural materials are possible.

II. CONTRACT OBJECTIVES AND RESPONSIBILITIES

A. General Contract Objectives

Introduction

At the present level of planning (Phase I, Stage 2 modified reformulation study), field data is gathered at the reconnaissance level, and enough information concerning the area's cultural resources must be collected to provide assessment of the impact of all project alternatives on the cultural resources. The data acquired through this contract and all former contracts will be assessed and provided as input in the Stage 2 documentation report, the draft EIS, and the final EIS, as well as used to establish the baseline for future Phase II studies in the project area (intensive survey level and complete assessment of National Register significance of all sites).

Contract Objectives

Because at least some field work has been conducted in the Pembina Valley (Alternatives 1-3), the priority of this contract's field work will be on the boundary floodway area (Alternatives 4-5). Technical proposals should prioritize their research with the following ranked order of topics:

1. Reconnaissance level field survey of portions of Alternatives 4 and 5 in the boundary floodway, with a records review for Pembina County, and a literature search of specific topics (to be discussed below).

2. Additional reconnaissance level field work in the Pembina River Valley, and possible relocation and surface collection of Pembina Valley sites recorded by Ames (1975).

Each technical proposal will be required to address the theoretical, methodological, contractual, and logistic aspects of how these prioritized topics will be incorporated in the study. Given probable time and cost constraints, the number of topics included in the research design and the degree of concentration given a topic will have to be carefully assessed. The technical proposals should address the amount of attention that the topics will need in order to provide an adequate amount of information for the Corps of Engineers to use in their assessments of the alternatives. Since up to two technical proposals can be submitted by any firm responding to this RFTP, several research designs can be developed, taking into account the priorities, time and cost constraints, and a variety of theoretical, methodological, and logistic orientations. However, it should be kept in mind that specific pricing information cannot be mentioned in the technical proposal.
Each of the above topics will be briefly discussed below with a presentation on sampling needs, and areas that need further work within the general topics. The following discussion of research topics should not prevent the technical proposals from addressing different topics or areas that are also felt to need research at this study level, or from expanding on the topics that will be addressed.

1. **Boundary Floodway**

   a. **Records Review**

   A records review for Cavalier County was conducted by Good, Dahlberg, and Sprunk (1980). A site records review for the areas of Alternatives 4 and 5, located in Pembina County, will be required. A records review for the entire county is necessary to enhance a regional understanding of the number and nature of previously recorded archaeological and historic sites. A records review on the site, date range, number of graves, and potential significance of the Hyde Park Cemetery is also necessary. The Hyde Park Cemetery is located in the NE1, NE1, Section 30, T164N, R54W.

   b. **Literature Search and Review**

   As previously mentioned, Good et al. (1980) have completed a literature search and records review of specific portions of the project area, which includes a regional perspective.

   A review of literature pertaining to Alternatives 4 and 5 that may not have been previously covered by Good et al. is necessary. Research that the offeror determines may provide information essential to understanding the area's archaeology and history, and/or may have a bearing on the degree of impact of one or more project alternatives on cultural resources, should be undertaken.

   The Gingras House and Trading Post structures are physically located outside the direct impact zone for Alternative 4 (approximately .3 mile to the northeast). However, associated cultural materials (e.g., outhouses, garbage dumps, camps, oxcart trails) may be located within the surrounding project area. Consideration should be given to researching this topic, based on the level of our current knowledge of Gingras and the related history of the area.

   c. **Field Survey**

   (1) **Alternative 4:** This alternative consists of a diversion structure, flood-pool, and a floodway channel (see inclosed Maps 2 and 3). The proposed diversion structure location and an alternative area for this location are shown on Map 3. The floodpool area, indicated on Map 3, is not scheduled to be relocated.

   The proposed floodway channel will be approximately 300 feet wide and will be located within an approximately 650-foot band between the international border and 650 feet to the south. The approximate location of the floodway channel band is indicated on the map.

   As previously mentioned, the amount of research needed for the Gingras area will have to be assessed. Potential field survey needs should also be evaluated.
Photographs should be taken of the Hyde Park Cemetery.

(2) **Alternative 5:** This alternative consists of a diversion structure, floodpool, and a floodway channel in conjunction with a reduced-size dam (see inclosed Maps 4 and 5). The diversion structure, floodpool, and floodway channel specifications are the same as those of Alternative 4; although, since the majority of the floodway channel will be surveyed under Alternative 4, the only portion of the floodway channel to be surveyed under this alternative would include the diversion structure area and would extend to the international border (see inclosed Map 5).

A reconnaissance level field survey, based on a statistically valid sample, should be conducted, to include portions of all of the above project location areas. The offeror will be responsible for developing the goals of the survey, sample size, sampling design, survey strategy, field methods and techniques, etc. in accordance with proposed time and cost ranges, and needed work. Any recommendations for surveying specific areas (e.g., possible fur post location, oxcart trail) should be justified in the research design.

2. **Pembina River Valley Fieldwork**

   a. **Literature Search and Records Review**

   An initial review of the history and operations of the Mayo Brick Plant, in relation to other plants of the period, is necessary, with possible informant research, in order to begin establishing the significance of the site and to assess future literature, informant, and field research needs. The plant is located in the SWk, NWk, Section 34, T163N, R57W; however, the exact location and size of the plant are not known. The plant will probably be directly impacted by Alternatives 1-3.

   b. **Field Work**

   As previously mentioned, Ames (1975) surveyed portions of the Pembina Valley. No shovel testing was conducted and all the sites were located in plowed fields. No surface collections were made from any of the sites, and none of the sites were measured or mapped. Research consideration should be given to acquiring new survey/site information from the valley, or gathering information from some of the existing recorded sites such as relocation, mapping, and/or surface collections.

   The Mayo Brick Plant has never been field checked or surveyed by a professional archaeologist. The exact location, extent, condition, etc., of the plant need to be assessed, as well as initially assessing the significance of, and impacts upon, the site. Photographs and preliminary mapping of the site (size, relationship to elevation contours) should also be undertaken.

   The technical proposals should develop literature search, records review, and survey methodologies that would provide the Corps of Engineers with enough data (in conjunction with Ames and Good et al.) to adequately assess the impact of Alternatives 1-3 on the valley's cultural resources and to provide assessments on site potential, size, and density for the valley area.
B. Research Design Format and Content

Introduction

Because the accepted technical proposal will also function as the scope of work, without any changes or additions, and because negotiations will not be part of the procurement process, it is essential that each technical proposal submitted contain a format and content that can be used for evaluating an offeror's qualifications/proposal as well as providing a scope of work to which the offeror and the Corps of Engineers will be legally bound for the length of the contract. After a proposal has been submitted, no changes can be made in content or format unless specifically requested by the Corps of Engineers. If further clarification or supplemental information is needed, the Corps of Engineers may contact the offeror by phone and ask that the point(s) be clarified, but this contact will be solely limited to proposals that are on the border of being acceptable, where clarification of a point may raise the offeror's evaluation rating into an acceptable range. Proposals will not be returned to the offeror with requests for modifications or revisions. The technical proposals must contain all of the required information stated in this RFTP, and must also contain extensive detail on all aspects of the research design, contract specifications, and report content and format. Each of these areas will be discussed below, with required information and areas for contracting freedom outlined.

If there are any questions concerning what is required in the technical proposals or what offeror responsibilities are, or if there is disagreement about a particular section of the RFTP, the offeror should immediately contact the Corps of Engineers and discuss questions or disagreements before the technical proposals are submitted.

Format and Content Specifications

The research design section of each technical proposal is required to contain certain categories of information. The offeror should discuss and expand upon each category to develop a complete research design. Additional categories or information may be included. These required categories are not meant to limit the creativity of research development of an offeror, but merely act as a skeleton guideline for minimum acceptability of a research design. The required categories that will be discussed are as follows:

1. Theoretical Orientation: This section should include archeological/historical, anthropological, or other theoretical information forming the backbone for the proposed research. This information could include theoretical principles, research questions, hypotheses to be tested, cultural/behavioral patterns to be elicited from the research, various technical methodologies (e.g., shovel testing versus augering), to be tested or compared. The theoretical orientation of the study should be based on a thorough knowledge of the study and regional area, and should be designed to elicit information that can be used by the archaeological/anthropological/scientific community, as well as the Corps of Engineers. A full range of theoretical orientations and questions are possible to draw from, but they should be feasible and within the time, cost, and management range and needs of the Corps project. This section should include a justification for selection of the research goals.
The section should also include a concise review of any environmental or cultural resource information that has a bearing on the theoretical orientation chosen. This information might include period of occupation, cultural affiliation, relationship and significance of the project area to the concerned environmental and cultural regions, and deficiencies in the knowledge of the area.

2. **Methodological Orientation:** This section should include detailed methodological information on how the study will be conducted, and the methodological implementation of the research questions to be addressed in the study. This should minimally include field methods (sampling strategy, locations, acres/miles to be surveyed, survey intervals, testing techniques, recording techniques, collection techniques, mapping/location recording techniques, etc.), literature search and records review (how and where the work will be done, and what sources will be reviewed), and lab analysis methods (time, techniques, recording techniques, person-days/hours, goals, labeling procedures, curation arrangements, etc.).

3. **Management Goals:** This section should address how the study/report will serve the goals and needs of the Corps of Engineers. Information may include assessing potential site significance, assessing impacts of alternatives on the cultural resources, relating the theoretical/methodological orientation of the study to the management needs of this agency, and recommending a management approach if no cultural resources are previously recorded or are discovered during the study.

4. **Contract Specifications:** Information to be addressed should include: detailed specifications on how every aspect of the contract/study will be undertaken, which should include study and field preparations; equipment to be used/needed, time assigned to each task, person-days/hours allocated to each task, travel time/locations/distances, housing specifications, number of crew and their responsibilities/duties, various report formats and content goals (field, popular, draft/final reports); and contract specifications that do not fall into any specific category (meetings with the Corps of Engineers, information desired from the Corps of Engineers to implement the contract, certain legal aspects of the contract, drafting/typing needs, a timetable for the completion of the work including report submission, etc.). Some of this information may be incorporated into other sections of the proposal if appropriate.

At this stage of the project, the Corps of Engineers does not have a list of landowners available. These tasks should be discussed in the proposal, with consideration being given to time and cost estimates (not to be included in the RFTP). It will be necessary for the contractor to gather all landowner names and to receive all the necessary permits and landowner permission for the fieldwork.

It should be again reiterated that no prices or specific pricing information can be mentioned in any of the technical proposals; however, the contractor will have to develop a research design/technical proposal that addresses related contract specifications (e.g., person-days/hours, travel time, etc.) that are directly related to contract costs, but the actual budgetary costs will not be outlined in the technical proposals. Inclusion of this type of contract information is necessary so that the proposal can be completely evaluated in terms of the needs of the Corps of Engineers and, if the proposal is accepted, so that the exact contract specifications and costs can be bid upon. The submittal of pricing information in any proposal will automatically disqualify the proposal from further consideration.

Reports Required

Three types of contract reports will be required for submission to complete the contract: (1) a brief field report, (2) a draft and final contract report, and (3) a popular report.

1. Field Report

A brief field report to be submitted 30 days after completion of the field work will summarize the work, project/field limitations, methodology used, time utilized, and survey results.

2. Draft and Final Contract Reports

Ten copies of the draft contract report will be submitted ____ days after contract award, and will be reviewed by the Corps of Engineers and the State Historic Preservation Officer, the State Archeologist, and Heritage Conservation and Recreation Service. One copy of the project field notes will be submitted at the time of the draft report. An original and 15 copies of the final contract report will be submitted 30 days after the Corps of Engineers comments on the draft report are received by the offeror. The final report will incorporate all the comments made on the draft report.

3. Popular Report

A draft popular report will be submitted with the draft contract report, and will be reviewed by the Corps of Engineers. Twenty copies of the final popular report will be submitted with the final contract report. The popular report should be a condensed version of the contract report that would be of interest to the general public. The report should provide an overview of the archeology, protohistory, and history of the project area and region; a brief review of the work conducted in the area and the reasons (both archeological and managerial) why the work was conducted; and the results of the completed study. Exact site locations will not be reported in the popular report.

Report Format Specifications

The draft and final contract reports will be submitted according to the following general content category outline. Some of the following categories do not need to be separate sections in the report. Sections discussing similar topics can be grouped together.

Title Page: The title page should provide the following information: the type of investigation undertaken; the cultural resources which were assessed (archaeological, historical, and architectural); the project name and location (county and State); the date of the report; the Contractor's name; the contract number; the name of the author(s) and/or Principal Investigator; the signature of the Principal Investigator; and the agency for which the report is being prepared.
Abstract: An abstract of findings, conclusions, and recommendations. This should not be an annotation.

Management Summary: A concise summary of the study, which will contain all essential data for using the document in the Corps of Engineers management of the project. This information will minimally include: why the work was undertaken and who the sponsor is, a brief summary of the scope of work and budget, summary of the study (field work; lab analysis; literature search and records review, including the National Register and dates checked), study limitations, study results, significance, recommendations and the repository of all pertinent records and artifacts.

Table of Contents
List of Figures
List of Plates

Introduction: Identify the sponsor (Corps of Engineers) and the sponsor's reason for the study; an overview of the sponsor's project and the alternatives with the alternatives located on USGS quad maps; provide an overview of the archeological/historical study to be undertaken; define the location and boundaries of the study area (with regional and area-specific maps); define the study area within its cultural, regional, and environmental context; reference the scope of work and budget (both of which should be in the appendix); identify the institution that did the work, the number of people involved in the study, the number of person-days/hours utilized during the study; identify the dates when the various types of work were completed; identify the repository of records and artifacts; and provide a brief overview or outline of how the study report will proceed, and an overview of the major goals that the study/study report will accomplish.

Previous Archeological and Historical Studies: This section should provide a summary and evaluation of previous archeological and historical studies of the region, including the date, extent, adequacy of the past work, and cultural/behavioral inferences derived from the research.

Environmental Background: Description of the study area and regional environment, including the following categories: geology, vegetation, fauna, climate, topography, physiography, and soils, with reference to prehistoric, historic, ethno-graphic, and contemporary periods. Any information available on the relationship of the environmental setting to the area's prehistory/history should be included. This section should be of a length commensurate with other report sections.

Regional Prehistory and History: Discussions should include regional cultural developments spatially and chronologically; environmental adaptations; subsistence, resource procurement, and settlement patterns; site/population density and size; and any other pertinent information on the prehistory, proto-history, and history of the study area and region.
Theoretical and Methodological Overview: This section should include a description or statement of the goals of the Corps of Engineers and the study researcher, the theoretical and methodological orientation of the study, and the research strategies that were applied in achieving the stated goals.

Literature Search and Records Review: This section should detail the methodology and sources used for the literature search and records review as well as a description and evaluation of all information and data recovered. For each reference discussed, the author, date and page numbers should be cited.

Field Methods: This section will describe specific archaeological activities that were undertaken to achieve the stated theoretical and methodological goals, which should include all field methods, techniques, and strategies; and a detailed, complete description of the research.

Analysis: This section will describe specific analytic methods and techniques; describe and discuss the qualitative and quantitative manipulation of the data and data classification if appropriate. It will also discuss limitations or problems with the analysis based on the data collection results.

Investigation Results: This section will describe the data recovered during the research, and any other data pertinent to a complete understanding of the resources within the study area. This section should include enough empirical data that the research results can be independently assessed. The description of the data should minimally include: a complete detailed description of the field work (survey conditions, topographic/physiographic features, vegetation conditions, soil types, stratigraphy, survey limitations, and survey testing results with shovel test profile forms to be included as an appendix). A description of the site, amounts and type of material remains recovered, relation of the site or sites to physiographic features, vegetation, and soil types, and project alternatives or impact areas, analysis of the data (culture historical aspects, cultural/behavioral inferences or patterns), and location and size information (elevation, quad map source; legal description; address if appropriate) should also be included. The information should be presented in a manner that can be used easily and efficiently by the Corps of Engineers.

This site information should be presented with each site being discussed on a separate page/pages with the site location indicated on a USGS map. If a site location has not been field-verified, indicate the approximate area on the map, and indicate that it has not been verified, or give an explanation why the site cannot be located on a map. An example of this site description format follows:

Site Number and Site Name

Complete Legal Description: Township, Range, Section, County or Address, if appropriate. Indicate if the site has been field-verified or not, when and by whom.

Complete USGS Quadrangle Reference: Quad name, Quad size, all Quad dates.
Report Figure/Map/Plate Reference

Accession Numbers

Site Type, Site Reports, Investigations of Dates

Cultural Affiliation (with dates or date estimates)

Environmental Description: Briefly, to include topography, physiography, soils, and vegetation.

Site Description

Present Site Condition: Disturbed, undisturbed, vegetation, soils, and surface material.

Site Significance: As reported by others or your own evaluation, including an evaluation of previous conclusions.

Project Impacts: Evaluate the direct and/or indirect impacts of the project upon the site.

Recommendations: Management recommendations, future archaeological/historic work recommendations.

Remarks: For comments with no other category.

Pertinent Bibliographic References

A paragraph before the site descriptions should indicate that, if no information is available for a specific category, this category will not be included in the listing.

The location of all sites and other features discussed in the text will be shown on a legibly photocopied USGS map and will be bound into the report. Maps shall also be included showing the relationship of sites to the project areas and which areas were surveyed. In addition, the project map will show those areas that have been eliminated from survey due to unacceptable survey conditions. Maps should also show the type of survey method employed for each area surveyed (for example, pedestrian walkover, shovel tests). All maps will be labeled with a caption/description, a north arrow, a scale bar, township, range, quad map size, and quad dates (on USGS maps only), and the map source (e.g., the USGS quad name or published source) and will have proper margins.

Evaluation of Research: This section should discuss the reliability of the data; relate results of the analysis to the stated study goals; identify changes, if any, in the research data goals; synthesize and compare the results of the analysis; integrate ancillary data; and identify and discuss cultural/behavioral patterns and processes that are inferred from the study results.
Evaluation of Cultural Resources: This section should discuss site location, density, size, condition and distribution; evaluate the significance of the cultural resources in relation to the regional archaeology and history; and, in relation to the project alternatives, identify and discuss the potential for future research.

Recommendations: This section should discuss the direct and indirect impacts of all the project alternatives on the area's cultural resources with specific management recommendations on all previously recorded and discovered sites; discuss the significance of all sites to the extent permitted by the study level in relation to the research goals established in the study and recommendations on the eligibility of the sites to the National Register of Historic Places; recommend future intensive level research priorities needs and make suggestions with regard to the Corps of Engineers planning goals and project alternatives.

References: Provide standard bibliographic references (American Antiquity format) for every publication cited in the report.

Appendix: This section should include the scope of work portion of the technical proposal; resumes of all personnel involved; all data-related correspondence derived from the study; all State site forms; all shovel test forms and any other pertinent report information referenced in the text as being included in the appendix.

Other Required Contract or Report Specifications

1. The contractor shall submit the photographic negatives to the Contracting Officer for all black and white photographs which appear in the final report.

2. Neither the contractor nor his representative shall release any sketch, photograph, report, or other material of any nature obtained or prepared under the contract without specific written approval of the Contracting Officer prior to the acceptance of the final report by the Government.

3. All text materials will be typed, single-spaced (the draft reports should be space-and-one-half or double-spaced), on good quality bond paper, 8.5 inches by 11.0 inches, with a 1.5-inch binding margin on the left, 1-inch margins on the top and right, and a 1.5-inch margin at the bottom, and will be printed on both sides of the paper.

4. Information will be presented in textual, tabular, and graphic forms, whichever are most appropriate, effective, or advantageous to communicate the necessary information.

5. All figures and maps must be clear, legible, self-explanatory, and of high enough quality to be readily reproducible by standard xerographic equipment, and will have margins as defined above in category 3.

6. The final report cover letter should include a budget of the project.

7. Cost estimates for future recommended work will be submitted as deliverables.
8. The draft and final reports will be divided into easily discernable chapters, with appropriate page separation and headings.

9. The contractor will utilize a systematic, interdisciplinary approach in conducting the study. During the course of the study, the contractor will provide specialized knowledge and skills to include expertise in archaeology and other social and natural sciences as required.

10. The extent and character of the work to be accomplished by the contractor will be subject to the general supervision, direction, control, and approval of the Contracting Officer.

11. Techniques and methodologies that the contractor uses during the investigation shall be representative of the current state of knowledge for their respective disciplines.

12. The contractor shall keep standard field and lab records which shall include, but not be limited to, field notebooks, site survey forms, field maps, photographs, and lab forms.

13. The tested areas will be returned as closely as practical to presurvey conditions by the contractor.

14. The contractor shall provide all expertise, materials, and equipment that may be necessary to expeditiously perform those services required of the study.

15. The recommended professional treatment of recovered materials is curation and storage of the artifacts at an institution that can properly insure their preservation and that will make them available for research and public view. If such materials are not in Federal ownership, the consent of the owner must be obtained, in accordance with applicable law, concerning the disposition of the materials after completion of the report. The contractor will be responsible for making curatorial arrangements for any collections which are obtained. Such arrangements must be coordinated with the appropriate officials of North Dakota and approved by the Contracting Officer.

III. TECHNICAL PROPOSAL EVALUATION CRITERIA

All proposals will be evaluated, as follows, in descending order of importance:

1. Experience and Expertise

Experience and expertise of the offeror in related areas of research and in the particular geographic area.

2. Knowledge of Study Area

Familiarity with the prehistory, protohistory, history, environment, appropriate field methodology, appropriate literature and records review, and appropriate artifact analysis of the study area.

Familiarity with the theoretical, methodological, and practical aspects of cultural resource management.
4. Theoretical and Methodological Orientation of the Technical Proposal

Development of a research design that incorporates a problem-oriented theoretical and methodological orientation specifically relating to research questions of the study and regional area, or those which are applicable generally to the field of archaeology and history.

5. Management Orientation of the Technical Proposal

Development of a technical proposal which will meet the needs of the Corps of Engineers in relation to their goals and project alternatives.

6. Technical Proposal Development

Submission of a technical proposal which contains the information required in the RFTP. Development of a proposal that uses creative and technically sound approaches to accomplish research and management goals within the identified time and financial constraints.

7. Scheduled Completion Timetable

The offeror will provide a timetable of the scheduled completion of field work and reports.

8. Willingness of Offeror to Acquire All Necessary Personnel and Equipment

The offeror is willing to acquire all necessary personnel and equipment if they do not already have them (e.g., if a historian or archaeologist is needed for the study but the offeror does not have one on staff, the offeror will be willing to obtain such services). This includes personnel, expertise, equipment, etc.

IV. TECHNICAL PROPOSAL FORMAT

In order to standardize the technical proposals and assist in their efficient review, a particular proposal format will be required. An index of the evaluation criteria and the proposal page numbers on which they will be addressed will also be required at the beginning of each technical proposal. Each technical proposal will be submitted in the following format:

A. Index

B. Qualifications:

The resumes of all personnel who will be involved with the contract will be submitted. Resumes of field crew members should also be included if they are presently on staff, or available. Each resume should include the categories of information listed below.

1. Experience
2. Expertise
3. Knowledge of Study Area
C. Research Design: Presentation of a research design following the format and contract criteria outlined in the RFTP.

D. Contract Specifications: Presentation of all required report and other contract information outlined in the RFTP, as well as any other contract specifications developed by the offeror, with consideration of applicable evaluation criteria.

A PROPOSAL FOR HISTORIC AND PREHISTORIC CULTURAL RESOURCE INVESTIGATIONS
PENBINA RIVER PROJECT, NORTH DAKOTA
(July 20, 1981 to March 31, 1982)

I. APPLICANT INSTITUTION:
The University of South Dakota Archaeology Laboratory, Vermillion, South Dakota.

II. SUBMITTED TO:
Department of the Army, St. Paul District, Corps of Engineers, St. Paul, Minnesota.

III. TECHNICAL PROPOSAL EVALUATION CRITERIA:

1. Experience and Expertise
   Experience and expertise of the offeror in related areas of research and in the particular geographic area.

2. Knowledge of Study Area
   Familiarity with the prehistory, protohistory, history, environment, appropriate field methodology, appropriate literature and records review, and appropriate artifact analysis of the study area.

   Familiarity with the theoretical methodological, and practical aspects of cultural resource management.

4. Theoretical and Methodological Orientation of the Technical Proposal
   Development of a research design that incorporates a problem-oriented theoretical and methodological orientation specifically relating to research questions of the study and regional area, or those which are applicable generally to the field of archaeology and history.

5. Management Orientation of the Technical Proposal
   Development of a technical proposal which will meet the needs of the Corps of Engineers in relation to their goals and project alternatives.

6. Technical Proposal Development
   Submission of a technical proposal which contains the information required in the RFTP. Development of a proposal that uses creative and technically sound approaches to accomplish research and management goals within the identified time and financial constraints.

7. Scheduled Completion Timetable
   The offeror will provide a timetable of the scheduled completion of field work and reports.
8. Willingness of Offeror to Acquire All Necessary Personnel
and Equipment
The offeror is willing to acquire all necessary personnel and equipment if they do not already have them (e.g., if a historian or archaeologist is needed for the study but the offeror does not have one on staff, the offeror will be willing to obtain such services). This includes personnel, expertise, equipment, etc.

IV. ARCHAEOLOGY LABORATORY QUALIFICATIONS:
The following attachments are: (1) qualifications of the Archaeology Laboratory for performing cultural resource management projects; and (2) a complete bibliography of all cultural resource investigations performed by the Archaeology Laboratory.

Part 1: History and Purpose
Chartered in 1977 as a non-profit university-related research institute, The University of South Dakota Archaeology Laboratory (USDAL) is one of the most active cultural resource management organizations in the Northern Plains. The major goals of the USDAL are to investigate and preserve the prehistoric and historic cultural resources of the region. To this end the USDAL has undertaken more than one hundred cultural resource surveys in South Dakota, North Dakota, Iowa, and Missouri (Contract Completion Studies listed in Part 2, see attachment).

USDAL Activities
Although the major focus of all USDAL activities may be found in the active investigation and preservation of Northern Plains cultural resources, the Laboratory is also involved in many other adjunct activities. Public education in the worth and value of America's cultural resources is an important concern for the staff; and the USDAL jointly operates an archaeological field school at Mitchell, South Dakota; and also edits South Dakota's archaeological publications (South Dakota Archaeology, and Occasional Publications). The Laboratory is also responsible for maintaining the computerized site inventory for the state (CRIDS: Cultural Resource Inventory Data System), in conjunction with the State Office of Historic Preservation.

Description of Facilities
USDAL facilities are located in East Hall of The University of South Dakota. East Hall is a stone building, and all laboratories are further protected from fire by a sprinkler system.

More than 3,000 square feet of space were specifically renovated and designed for archaeological laboratories in this building. Facilities include a complete drafting and cartography section; a darkroom and photography section; a computer and statistics section; as well as facilities for lithics, ceramics, soils, floral and faunal analyses.

Comparative collections of Northern Plains lithics and ceramics are available from USDAL's Permanent Curation Rooms (c. 1,000 square feet); as well as from the closely related W.H. Over Museum (Vermillion), and South Dakota Office of State Archaeologist (Ft. Meade).
The USDAL is particularly well experienced in the recovery, analysis, and curation of human remains. In combination with consultants from the USD Medical School, the USDAL is quickly becoming one of the nation's major centers for this kind of research. An extensive comparative faunal collection is currently being developed and the laboratory has been given State and Federal Scientific Collector's permits for acquisition and curation of all migratory fowl, raptors, and endangered species.

Equipment
The Archaeology Laboratory has equipment to supply three reconnaissance survey projects simultaneously, with at least 50 personnel in the field. Equipment includes: shovels, trowels, brushes, wheelbarrows, soil screens, cooking utensils, cameras, transits, compasses, mauls, hand augers, soil probes, and a gasoline powered post-hole auger.

Permanent Staff
The permanent staff of the USDAL includes the following:

Dr. Lawrence Bradley (Ph.D., University of Kansas); Director of Laboratory
Dr. Larry Zimmerman (Ph.D., University of Kansas); Research Associate
Dr. Dona Davis (Ph.D., University of North Carolina, Chapel Hill); Research Associate
Mr. Kenneth Brown (ABD, University of Kansas); Research Associate, and Director of Contract Services
Mr. Richard Whitten (ABD, University of Wisconsin); Research Associate
Ms. Judith Apley (BA, University of South Dakota); Laboratory Supervisor
Mr. Philip Lanum (BA, University of Wyoming); Computational Services
Ms. Marianne Schuld (BFA, University of South Dakota); Illustrator
Ms. Lucille Stewart (MS, Ft. Hays State University); Administrative Assistant
Ms. Gail Erickson (MM, University of South Dakota); Staff Assistant
Mr. Darrel Fulmer (MA, University of Iowa); Director of South Dakota Archaeological Field School, Mitchell, South Dakota

The USDAL also maintains a number of short term employees both as laboratory assistants and as field crew members. According to a resolution passed by the South Dakota Council of Professional Archaeologists, all archaeological field crew members must have either a season of experience at an archaeological field school or its equivalent. USDAL's guide in hiring personnel follows this resolution as well as all federal and state Equal Opportunity and Affirmative Action statutes.

Correspondence
All correspondence with the USDAL should be addressed to:

Director
The University of South Dakota Archaeology Laboratory
East Hall
University of South Dakota
Vermillion, SD 57069

Telephone
In Vermillion the USDAL telephone number is (605) 677-5896 or -5401
Staffing Plan

The University of South Dakota Archaeology Laboratory feels it has an excellent staff selected to conduct this project. All the personnel have extensive experience and specific expertise in all necessary research areas and topics.

Mr. Kenneth L. Brown will be Principal Investigator for the project. Mr. Brown, Ph.D. candidate, Museum of Anthropology, University of Kansas, is in charge of Contract Research at The University of South Dakota Archaeology Laboratory, and has experience in research design, administration, and performance of cultural resource management projects in all phases from reconnaissance through data recovery. Mr. Brown has specific expertise in lithic analysis, ceramic analysis, faunal identification, Great Plains historical archeology, prehistoric cultural ecology, statistics and mapping, and computer applications. Mr. Brown will have overall responsibility for the design and conduct of the project in both field and laboratory phases. He will coordinate the archeological field survey and the historical investigations of the project. He will meet with the appropriate U.S. Army Corps of Engineers personnel and North Dakota State Historical Preservation Office personnel prior to the field work to coordinate the research design with these governmental agencies. He will edit the final report and co-author the archeological field reconnaissance investigations.

The Co-principal investigator will be Mr. Richard G. Whitten, Ph.D. candidate, University of Wisconsin. Mr. Whitten has extensive experience in research design, administration, and performance of cultural resource management projects. He has expertise in Great Plains historic and prehistoric site archeology as well as in paleoclimatology, ceramic analysis, and prehistoric tropical agriculture. Mr. Whitten will provide invaluable aid in the areas of design and management and will direct the archeological field survey and reconnaissance.

The Archaeologist Field and Laboratory Assistant will be Mrs. Marie E. Brown, M.A. candidate, Museum of Anthropology, University of Kansas. Mrs. Brown, who has extensive supervisory experience in the excavation of Northwest and Great Plains prehistoric sites, will provide supervision of the archeological field crew under the direction of Mr. Whitten. She has expertise in Great Plains prehistory, faunal identification and analysis, prehistoric cultural ecology and subsistence patterns. This experience and expertise will provide an invaluable asset to the project.

The Historian will be Mrs. Karen P. Zimmerman, who has extensive experience in the use of library and museum archival collections. She has participated in several literature and historical records searches for cultural resource management projects. Her educational background in English, Library Science, and History will provide an invaluable asset to the development of a regional historical perspective of the project area.

Additional archeological field assistants have not yet been selected. A number of applicants are being considered to fill these two positions.

The Scientific Illustrator will be Ms. Marianne R. Schuld. She has extensive experience in technical illustration of artifacts and cartography for professional archeological reports and journals. Her artistic experience will provide a valuable asset to the production of the report for the project.

The Administrative Assistant I will be Mrs. Lucille C. Stewart. She has extensive bookkeeping and administrative experience for cultural resource management.
projects. Her educational and teaching experience in English, in addition to her education in anthropology, will be invaluable in the editing of the final report for the project.

The Staff Assistant will be Ms. Gail A. Erickson. She has experience in the use of data processing equipment. She is knowledgeable in the use of word processors, which will be used in the typing of the report for the project.

Consultants during the project will include Dr. Larry J. Zimmerman, Director of the Anthropology Program at The University of South Dakota, and Dr. Lawrence Bradley, Director of the Archaeology Laboratory at The University of South Dakota. Both Dr. Zimmerman and Dr. Bradley have extensive experience in managing cultural resource projects. They have expertise in Great Plains archaeology and computer applications to archeological research. Their consultations will be invaluable during the project.

The following attachments are personnel vitae.
Part 2

Bibliography

Zimmerman, L. J.

Zimmerman, L. J.
1976 A Cultural Resources Survey of the Proposed Oahe Unit M and I Water Facilities for Aberdeen, Redfield, Cresbard, and Miller, South Dakota.

Zimmerman, L. J.
1976 A Cultural Resources Survey of the Proposed Hornick, Iowa, Wastewater Treatment Facilities.

Zimmerman, L. J.
1976 A Cultural Resources Survey of the Proposed Washta, Iowa, Wastewater Treatment Facilities.

Zimmerman, L. J.
1976 A Cultural Resources Survey of the Proposed Salix, Iowa, Wastewater Treatment Facilities.

Zimmerman, L. J.
1976 A Cultural Resources Survey of the Proposed Water Pollution Control Facility Site for Sibley, Iowa.

Zimmerman, L. J.
1976 A Cultural Resources Survey of Sites for Proposed Alterations in the Wastewater Treatment Facilities for Beresford, South Dakota.

Zimmerman, L. J. and L. A. Hannus
1976 Cultural Resources Reconnaissance of a Proposed Pumpback Hydro-Power Storage Site Located in Gregory County, South Dakota.

Zimmerman, L. J. and Jeff Buechler
1976 Cultural Resources Surveys of Proposed Alterations or New Sites for Wastewater Treatment Facilities in Seven Northwestern Iowa Cities.

Buechler, J. V.

Zimmerman, L. J.
1976 A Cultural Resources Survey of Sites for Proposed Alterations in the Wastewater Treatment Facilities for Beresford, South Dakota.

Lass, Barbara and Renee Boen
1976 A Cultural Resources Survey of the Proposed Wastewater Treatment Facilities Site for Brookings, South Dakota.
Zimmerman, L. J.
1976 A Cultural Resources Survey of the Proposed Site for the Moorhead, Iowa, Sanitary Sewer System.

Alex, L. M. and L. J. Zimmerman
1977 A Cultural Resources Survey of Reach 1 of Highmore Canal, Sully and Hyde Counties, South Dakota.

Boen, R. M. and J. V. Buechler

Zimmerman, L. J. and J. V. Buechler
1976 A Cultural Resources Reconnaissance of the Vermillion River Chute Area, South Dakota and the Brooky Bottom Road Area, Nebraska.

Buechler, J. V.
1976 A Cultural Resources Reconnaissance Survey of the Proposed Brandon City Park Development in Brandon, South Dakota.

Buechler, J. V.
1976 A Cultural Resources Reconnaissance Survey of the Proposed Wastewater Treatment Facility for Iroquois, South Dakota.

Boen, R. M. and Gene Murray
1977 A Cultural Resources Survey of the Proposed Well Site, Water Storage Site, and Water Main Extensions for Rock Valley, Iowa.

Zimmerman, L. J.
1977 A Cultural Resources Survey of the Proposed Site for the Wastewater Treatment Facility, Persia, Iowa.

Buechler, J. V. and L. J. Zimmerman
1977 A Cultural Resources Survey of the Proposed Sites for the Water Pollution Control Facilities, Storm Lake, Iowa.

Buechler, J. V. and Caryn Miller

Buechler, J. V.
1977 A Cultural Resources Survey of Mr. Gene Trust's Proposed Irrigation Project, Hughes County, South Dakota.
Buechler, J. V. and S. A. Symes
1977 A Cultural Resources Survey of the Proposed Expansion of the Wastewater Treatment Facilities for the City of Aberdeen, South Dakota.

Zimmerman, L. J.
1977 A Cultural Resources Survey of Proposed Construction Areas Within the Oneota Little Sioux Access, Clay County, Iowa.

Hanenberger, Ned and James Tudehope
1977 A Cultural Resources Survey of the Proposed Northern States Power Substation in Minnehaha County, South Dakota.

Tudehope, James, Ned Hanenberger, and L. J. Zimmerman
1977 A Cultural Resources Survey along Proposed Electrical Cable Routes in Minnehaha, Moody, Brookings, and Lake Counties, South Dakota.

Burns, Patte
1977 A Cultural Resources Survey of the Proposed Site for the Mission, South Dakota, Wastewater Treatment Facilities.

Zimmerman, L. J.
1977 A Cultural Resources Survey of Proposed Developments in the Silver Sioux Recreation Area, Cherokee County, Iowa.

Burns, Patte and James Tudehope

Burns, Patte and James Tudehope
1977 A Cultural Resources Survey of the Proposed Waste and Sewer System Improvements of Chester, South Dakota.

Burns, Patte and James Tudehope

Buechler, J. V.
1977 A Cultural Resources Survey of the Proposed Underground Cable Route Across Oak Creek Bay, Corson County, South Dakota.

Burns, Patte and James Tudehope
Boen, R. M. and Jim Tudehope
1977 A Cultural Resources Survey of the Proposed George Neal Station Unit No. 4 Construction Site and 345 KV Transmission Line for the Iowa Public Service Company.

Boen, R. M. and J. V. Buechler
1977 A Cultural Resources Survey of the Proposed Vocational Training Project for the Sisseton-Wahpeton Sioux Tribe of the Lake Traverse Reservation, Roberts County, South Dakota.

Zimmerman, L. J. and Patricia Burns
1977 A Cultural Resources Reconnaissance of Five Missouri River Bank Sites near Vermillion, South Dakota.

Boen, R. M. and J. V. Buechler
1977 A Cultural Resources Survey of the Proposed Wastewater Treatment Facilities for the City of Westport, South Dakota.

Boen, R. M. and J. V. Buechler
1977 A Cultural Resources Survey of Proposed Wastewater Treatment Facilities for Redfield, South Dakota.

Buechler, J. V. and L. J. Zimmerman
1977 A Cultural Resources Survey of Developments in Hillview Park, Plymouth County, Iowa.

Boen, R. M. and J. V. Buechler

Zimmerman, L. J., J. V. Buechler, and Steven Symes
1977 A Cultural Resources Reconnaissance of Eight Proposed Bank Stabilization Sites in Central North Dakota.

Zimmerman, L. J.
1977 A Cultural Resources Survey of the Proposed Hillcrest Homes Subdivision in Atlantic, Iowa.

Zimmerman, L. J.

Zimmerman, L. J.
1977 A Cultural Resources Survey of HUD Project #IA35-3024-007, an Apartment Complex in Cherokee, Iowa.

Symes, Steve and J. V. Buechler
Burns, Patte and James Tudehope
1977 A Cultural Resource Survey of the Proposed Wastewater Treatment Plant for White, South Dakota.

Burns, Patte and James Tudehope

Hanenberger, Ned and James Tudehope

Burns, Patte
1977 A Cultural Resources Survey of the Proposed Substation Site at Bruce, South Dakota.

Hanenberger, Ned and L. J. Zimmerman
1977 A Cultural Resources Survey of the Proposed Regional Solid Wastes Disposal Site for the City of Milbank, Grant County, South Dakota.

Hanenberger, Ned and L. J. Zimmerman
1977 A Cultural Resources Survey of the Proposed Water Treatment Plant, Reservoir and Pipeline for the City of Sisseton, Roberts County, South Dakota.

Hanenberger, Ned and L. J. Zimmerman
1977 A Cultural Resources Survey of the Proposed Water Distribution Improvements in the City of Clear Lake, Deuel County, South Dakota.

Hanenberger, Ned and L. J. Zimmerman
1977 A Cultural Resources Survey of the Proposed Tennis Courts Location in the City of Clear Lake, Deuel County, South Dakota.

Hanenberger, Ned and L. J. Zimmerman
1977 A Cultural Resources Survey of the Proposed Highway Maintenance Garage Location in Grant County, South Dakota.

Hanenberger, Ned and Lori Park
1977 A Cultural Resources Survey of the Proposed Solid Waste Disposal Facility for the City of Milbank, Grant County, South Dakota.

Hanenberger, Ned and Lori Park
1977 A Cultural Resources Survey of the Proposed Sisseton-Wahpeton-Sioux Rehabilitation Center in Roberts County, South Dakota.
Buechler, J. V.
1977 A Cultural Resources Survey of the Proposed Wastewater Treatment Facility Expansion for Oyens, Iowa.

Burns, Patte
1977 Test Excavation of 39BK6, White, South Dakota.

Hanenberger, Ned, James Tudehope and L. J. Zimmerman

Emerson, J. A. and T. E. Emerson
1978 A Cultural Resources Survey of the Proposed Richland Park Subdivision in the City of Brandon, Minnehaha County, South Dakota.

Emerson, J. A. and T. E. Emerson
1978 A Cultural Resources Survey of the Proposed Two-Cell Addition to the Parkston Stabilization Pond Near Parkston, Hutchinson County, South Dakota.

Zimmerman, L. J., Patricia Burns, and Barbara Lass
1978 A Cultural Resources Survey of Proposed Sewage Lagoon, Highmore, Hyde County, South Dakota.

Burns, Patricia and Barbara Lass
1978 A Cultural Resources Survey of the Proposed Bonilla Substation, Beadle County, South Dakota.

Burns, Patricia and Barbara Lass
1978 A Cultural Resources Survey of the Proposed Turkey Ridge Substation, Turner County, South Dakota.

1978 Literature Search and Records Inventory for Cultural Resources Along the East Side of the Missouri River, Miles 498.03 - 732.31.

Emerson, T. E.
1978 A Phase II Evaluation of the 39C055 Site.

Zimmerman, L. J., Patricia Burns, and Barbara Lass
1978 A Cultural Resources Survey of a Proposed Sewage Lagoon for Farnhamville, Calhoun County, Iowa.

Emerson, T. E.
1978 Cultural Resource Reconnaissance at Spring Creek; Missouri River Mile 1088.35, Hughes County, South Dakota.

Emerson, T. E. and J. A. Emerson
1978 A Cultural Resources Survey of the Proposed Fort Randall Microwave Tower Site Near Pickstown, Charles Mix County, South Dakota.
Zimmerman, L. J., Rory Moe, and Renee Boen
1978 A Cultural Resource Survey of the Three Proposed Building Sites in Fort Thompson, South Dakota.

Emerson, J. A. and T. E. Emerson
1978 A Cultural Resources Survey of Two Building Sites Near Greenwood, Charles Mix County, South Dakota.

Zimmerman, L. J.
1978 A Cultural Resources Reconnaissance of the Proposed Big Sioux Recreation Area, Minnehaha County, South Dakota.

Zimmerman, L. J. and L. E. Bradley
1978 Cultural Resources Reconnaissance Along the Lewis and Clark Road Project, Yankton County, South Dakota.

Emerson, J. A. and L. J. Zimmerman
1978 A Cultural Resources Reconnaissance of the Pelican Lake Recreation Area, Codington County, South Dakota.

Zimmerman, L. J.

Emerson, J. A. and T. E. Emerson
1978 A Cultural Resources Survey of the Proposed J. E. Rasmussen Substation Near Junction City, Union County, South Dakota.

Zimmerman, L. J.

Lass, Barbara
1978 A Cultural Resources Survey of Proposed Sewage Lagoons, Freeman, Hutchinson County, South Dakota.

Lass, Barbara
1978 A Cultural Resources Survey of Proposed Sewage Lagoons, Garretson, Minnehaha County, South Dakota.

Emerson, J. A. and T. E. Emerson
1978 A Cultural Resources Survey of the Proposed Hedary Substation Site and Associated Transmission Line Route Near the City of Brookings, Brookings County, South Dakota.
Emerson, T. E.

Emerson, T. E.
1978 A Cultural Resources Survey of the Proposed Zell Microwave Tower Site in Spink County, South Dakota.

Emerson, T. E.
1978 A Cultural Resources Survey and Testing of the Proposed Orient Microwave Sites in Hand and Faulk Counties, South Dakota.

Hanenberger, N. H.
1978 A Phase II Evaluation of the 39SP16 Site.

Buechler, J. V., Dayton Bard, and Roger Williams
1978 A Cultural Resources Survey of the Proposed Strip Mining Activities of the McConville Coal Co., Marion County, Iowa.

Emerson, J. A. and T. E. Emerson

Buechler, J. V.
1979 A Cultural Resources Survey of the Proposed Expansion and Improvement of the Municipal Airport at Springfield, Bon Homme County, South Dakota.

Buechler, J. V.
1979 A Cultural Resources Survey of the Proposed Bridge Construction Over the White River, Tripp and Lyman Counties, South Dakota.

Buechler, J. V.
1979 An Archeological Survey of the Proposed Industrial Park for the City of Remsen, Plymouth County, Iowa.

Buechler, J. V.
1979 A Cultural Resources Survey of the Proposed Expansion and Improvement of the Spencer Municipal Airport, Clay County, Iowa.

Buechler, J. V.
1979 A Cultural Resources Survey of Proposed Wastewater Treatment Facilities for Atlantic, Cass County, Iowa.

Buechler, J. V.
1979 A Cultural Resources Survey of the Proposed Bridge Construction Over the Big Sioux River, Union County, South Dakota.
Buechler, J. V.
1979 A Cultural Resources Survey of the Proposed Bridge Over the Big Sioux River, Hamlin County, South Dakota.

Buechler, J. V.
1979 A Cultural Resources Survey of the Proposed EROI Sphere, Sioux Falls, Minnehaha County, South Dakota.

Lanum, Philip
1979 Field Survey of Cultural Resources for Phase III, Kingbrook Rural Water System.

Westover, A. R.

Apley, Judith, and Roger Williams

Apley, Judith
1979 A Cultural Resources Survey of the Proposed Burkmere Substation and Associated 41,000 Volt Transmission Line Route in Faulk County, South Dakota.

Bradley, L. E.
1977 A Proposed Program With the Kansas City District Corps of Engineers to Conduct an Archeological Survey and Testing in Rathbun Reservoir, South Central Iowa.

Zimmerman, L. J.
1977 Field Examination of Human Skeletal Remains Discovered at the Sioux City, Iowa, Sanitary Landfill.

Lanum, Philip
1979 Field Examination of Human Skeletal Remains Discovered in Kennebec Township, Monona County, Iowa.

Zimmerman, L. J.
1975 Preliminary Archeological Reconnaissance of the Black Hills Scouting Center at Medicine Mountain Ranch, Pennington County, South Dakota.

Zimmerman, L. J.
1979 A Proposed Program Between the U.S. EPA and the University of South Dakota to Conduct National Register Testing of a Construction Site on Oakwood Lake, Brookings County, South Dakota.

-14-

-451-
Zimmerman, L. J.
1977 A Records Search Conducted by University of South Dakota Archeology Laboratory Personnel for the Minnehaha County Rural Water.

Lanum, Philip
1980 A Cultural Resources Survey of the Proposed Wastewater Projects in Brandon, Canton, and Scotland, South Dakota.

OFFICE ADDRESS
Archaeology Laboratory, University of South Dakota, Vermillion, South Dakota, 57069. Phone: 605-677-5401.

HOME ADDRESS
221 N. Pine, Vermillion, South Dakota, 57069. Phone: 605-624-6416.

EDUCATION
1980 M.Phil. Anthropology, University of Kansas.
1977 M.A. Anthropology, University of Kansas.
1974 B.A. Anthropology (with honors) and Sociology, University of Kansas.
1972 A.A. Kansas City Metropolitan Junior College.
1970 Liberty High School, Liberty, Missouri.

ARCHAEOLOGICAL FIELD EXPERIENCE
1980 Archaeological Field Mapper, Luther College, (October), the mapping of the Blood Run site, Northwestern Iowa.
1980 Archaeological Field Supervisor, University of South Dakota, (June-August), the survey and testing of prehistoric sites in Brushy Creek State Park, Iowa.
1979 Archaeological Field Assistant, University of Kansas, (July-August), in the El Dorado Lake Project, Southeastern Kansas. Testing and excavating historic sites.
1978 Archaeological Field Supervisor, University of Kansas, (June-August), in Kansas City, Missouri. Excavating Late Archaic and Late Woodland sites along the Little Blue River.
1977 Archaeological Field Supervisor, University of Kansas, (June-August), in Kansas City, Missouri. Excavating Early Woodland and Late Woodland sites along the Little Blue River.
1976 Archaeological Survey Supervisor, University of Kansas, (June-August), in Kansas City, Missouri. Testing Late Archaic to Mississippian sites along the Little Blue River.
1975 Archaeological Survey Supervisor, University of Kansas, (June-August), in the Cimarron National Grassland, Southwestern Kansas.
1975 Archaeological Survey Assistant, University of Kansas, (April-May), Little Blue River, Kansas City, Missouri.
1975 Archaeological Surveyor, University of Kansas (January), Cimarron National Grassland, Southwestern Kansas.
1974 Archaeological Survey Assistant, University of Kansas (August), in Anderson and Linn Counties, Southeastern Kansas.

1974 Archaeological Field Laboratory Assistant, University of Kansas, (June-August), Coffey Site, Manhattan, Kansas. A Middle Plains Archaic and Late Archaic hunting and gathering camp.

ORGANIZATIONS

Society for American Archaeology
Plains Conference
South Dakota Archaeological Society

Graduate Student Vice-President, Graduate Student Colloquium in Anthropology, University of Kansas, January 1976 - September 1976.

Graduate Student Representative, Graduate Student Colloquium in Anthropology, University of Kansas, September 1974 - September 1977.

PAPER PRESENTATIONS

1977 35th Plains Conference, Lincoln, Nebraska, "Late Prehistoric Settlement Patterns in Southwestern Kansas".

1978 36th Plains Conference, Denver, Colorado, "Archaeological Excavations at the Seven Acres Site, 23JA115, Jackson County, Missouri".

1979 37th Plains Conference, Kansas City, Missouri, "A New Archaeological Complex in the Kansas City Locality: The Maybrook Phase".

PUBLICATIONS (articles)

1976 A Search for Patterns in the Horizontal and Vertical Distribution of Artifacts in the Kansas City Hopewell Component at the Young Site, (23PL4). Ed. by A.E. Johnson, University of Kansas Publications in Anthropology, No. 8, Lawrence.

in (with Robert Ziegler) Nebo Hill Settlement Patterns in North-western Missouri. Missouri Archaeologist.
CONTRACT ARCHAEOLOGY PUBLICATIONS

1979 (with Byron Dixon and Susan Richards). Historic and Prehistoric Cultural Resources Along the Proposed Channel of West Fire Prairie Creek, Jackson County, Missouri. Report submitted to the U.S. Army Corps of Engineers, Kansas City District.

TEACHING EXPERIENCE

1980  Spring, Assistant Instructor, University of Kansas, North American Archaeology, Anthropology 504.

1979  Fall, Assistant Instructor, University of Kansas, Introduction to Physical Anthropology, Anthropology 304.

1979  Spring, Instructor (with Robert Ziegler). An Invitation to Great Plains Archaeology. A six week adult education class sponsored by Museums Associates, Museum of Natural History, University of Kansas.

Papers Presented:

1972 Excavations at a Late Archaic Site in South Central Kansas. Plains Conference.

MEMBERSHIP IN PROFESSIONAL SOCIETIES:

- American Anthropological Association
- Council of South Dakota Archaeologists
- Iowa Academy of Science - Anthropology Section
- Plains Anthropological Association

UNIVERSITY/COMMUNITY/STATE ACTIVITIES:

- Member, Department of Social Behavior Library Committee, 1978
- Member, Department of Social Behavior Curriculum and Instruction Committee, 1979
- Advisor, National Science Foundation Student Originated Study, Department of Social Behavior 1980
- Editor, South Dakota Archaeology, JOURNAL & NEWSLETTER 1980
V. RESEARCH DESIGN:

Theoretical Orientation
The areas of proposed undertaking are within Pembina and Cavalier Counties, North Dakota. The five structural alternative plans to alleviate the flood control problems along the Pembina River are within the Drift Prairie, Pembina Delta, and Red River Valley. The project area is within the bottom-land hardwood forest, upland mixed hardwood forest, upland oak savanna woodland, and tall-grass prairie ecosystems. Elevations range between approximately 1100 and 800 feet above mean sea level.

The objectives of the project are to identify, record, research, and provide a preliminary evaluation of historic and prehistoric cultural resources that may be affected by the five structural alternative plans to alleviate flood control problems along the Pembina River. The following outline of USDAL's research objectives and goals focuses on identifying, recording, and evaluating historic and prehistoric cultural resources which may be found within the areas of proposed undertakings.

The objectives are fourfold:
1. to conduct a reconnaissance level field survey, based on a statistically valid sample of portions of Alternatives 4 and 5 in the boundary floodway;
2. to conduct additional reconnaissance level field work in the Pembina River Valley with possible relocation and surface collecting of previously recorded sites;
3. to conduct a records review for Pembina County;
4. to conduct a literature search and field reconnaissance of Hyde Park Cemetery, the Gingras House and Trading Post, the Mayo Brick Plant and the community named Brickmine (Good et al. 1980:47), and the hamlet known as Valmont, located in the Pembina River Valley near the Canadian border (Good et al. 1980:46).

The goals are twofold:
1. Culture History--to affirm the cultural identification of sites found and to refine their chronological and cultural assignment by means of the recovery and analysis of culturally and/or temporally diagnostic evidence.
2. Cultural Ecology and Process--to record site locations and their floral and faunal context in order to determine the local resources which were available to the sites' occupants and to establish criteria for assessing the scientific and historical value of each site within its environmental and historical context.

Problem Statement
Proposed flood control structures on the Pembina River in northeastern North Dakota will or may adversely affect historic and prehistoric cultural resources within 3045 hectares (7520 acres). There are five structural alternative plans being evaluated to alleviate the flood control problems along the Pembina River.

1. Alternative 1: The Pembiller Dam and reservoir alternative would be located about two miles upstream from Walhalla. The reservoir would provide for flood control, water supply, and recreation. The permanent conservation pool would extend upstream about 15.3 kilometers (9.5 miles), at an elevation of 10:0 feet
above mean sea level, and the flood pool would extend upstream approximately 34 kilometers (21 miles), at an elevation of 1080 feet above mean sea level (SOW).

2. Alternative 2: The Pembilier dry dam alternative would be located at the same physical site as Alternative 1. There would be no permanent conservation pool, and water would be stored only as needed to prevent or minimize downstream flooding during high flows. The flood pool elevation is the same as in Alternative 1 (SOW).

3. Alternative 3: The Pembilier Dam with marsh alternative resembles Alternative 1, but the permanent conservation pool would be reduced in size to provide water depths suitable for development of a marsh. The flood pool elevation is the same as in Alternative 1 (SOW).

4. Alternative 4: The boundary floodway alternative, located about three miles downstream from Walhalla, would consist of a small diversion dam, with flood flows diverted into a floodway. The floodway would proceed north to the international boundary and then directly east for a distance of about 48 kilometers (30 miles) to the junction with the Red River of the North just downstream from Pembina (SOW).

5. Alternative 5: This boundary floodway alternative would be located just upstream from Neche, and would have a similar design as Alternative 4. The floodway would proceed north from the diversion structure to the international boundary and then directly east for a distance of about 22 miles to the junction with the Red River of the North just downstream from Pembina. This floodway would be used in conjunction with a reduced size Pembilier Dam as in Alternative 1. The permanent conservation pool elevation will probably remain the same, and the flood pool elevation may drop to 1070 feet above mean sea level (SOW).

A proposal to review existing sources of information on the cultural resources of the project area, to conduct a field survey of the areas of proposed undertaking, to prepare an inventory of located sites, to analyze the results of the investigations, and to prepare a cultural resource survey report and management plan has been requested. The research design and supporting data outlined here are a response to that request.

Culture History
Archeological investigations in the northeastern corner of North Dakota have been small in number and poorly reported (Good et al. 1980:24). Because of the absence of more specific prehistoric data from Pembina and Cavalier Counties, North Dakota, a more regional perspective of the Plains Indian cultural region, defined by Wedel (1961) as the Northeastern Periphery Region, will be presented to give the reader an overview of what types of archeological manifestations are present in northeastern North Dakota.

Culturally, the Northeastern Plains were occupied by band-level hunters and gatherers who shifted residence in response to available food resources. Areas of greater topographic relief would have been the most favorable for human occupation. Tool assemblages oftentimes lack temporally diagnostic tools. Projectile points and pottery (pottery occurs very late, temporally) provide the most information for assigning temporal placement of site occupation.

Research in the Northeastern Plains indicates the earliest occupants of the area had small hunting and gathering groups whose sites are characterized by
tools indicating specialized activities of short duration and low visibility. Little research has been devoted toward understanding these small sites. As Frison states:

We as Plains archaeologists have not paid enough attention to sites of low visibility. Until some methodology is developed so that we can detect their presence and understand their purposes, there is little chance of significant breakthroughs in studies of cultural systematics ... (Frison 1978:20).

Investigative goals, under this contract, are to help elucidate the culture history and cultural ecology and progress for the lower Pembina River valley.

Archeological investigations in eastern Manitoba and western Minnesota, compared to the small amount of work performed in northeastern North Dakota, provide a better understanding of potential prehistoric human manifestations along the lower Pembina River valley. The following is a brief summary of cultural complexes which may be found within the project area.

The Paleo-Indian Period (5000 B.C. and Earlier)
The Paleo-Indian period in the northern plains and northeastern periphery is characterized by three complexes. The earliest is the Clovis Complex. The Clovis Complex (10,000 B.C. to at least 9,000 B.C.) is not well represented in the northeastern periphery. This is based on the temporally diagnostic Clovis projectile point and its association with now extinct Pleistocene megafauna. To date, there have not been any systematically investigated Clovis sites within the Pembina River valley. However, the Pembina River valley and its immediate environs may have supported a mammoth herd during the terminal Pleistocene.

The second Paleo-Indian complex which is represented in the Pembina River valley is the Folsom Complex (9000 B.C. to 8000 B.C.). This is based on the temporally diagnostic Folsom and possibly Midland projectile points and their association with now extinct forms of bison. Folsom points have been found near the Manitoba communities of Treherne and Boissenan, 60 miles north and 110 miles northwest of the study area, respectively (Good et al. 1980:25).

The third Paleo-Indian complex which is represented in the Pembina River valley is the Plano Complex (8000 B.C. to 5000 B.C.). This is based on the temporally diagnostic Alberta, Hell Gap, Agate Basin, Scottsbluff, and Angostura projectile points and their association with the presently existing form of bison (Bison bison). Alberta projectile points have been found near the Manitoba towns of Manitou and Ninette, approximately 40 kilometers (25 miles) north and 121 kilometers (75 miles) northwest of the study area, respectively. A Hell Gap projectile point was found approximately 75 kilometers (45 miles) northwest of the study area. All of the above late Paleo-Indian find areas are located on or near the Pembina River (Good et al. 1980:25). In addition to the above sites, site DhLb-1, located in northwestern Minnesota, contains a late Paleo-Indian component which has been radiocarbon dated to 8000 to 7500 B.C. (Saylor 1975:241-251). Given the widespread occurrence of these Paleo-Indian complexes, it can be expected that investigations in the study area will yield remains of these early human occupations.

The Plains Archaic Period (5000 B.C. to 500 B.C.)
During the end of the late Paleo-Indian period a great variety of projectile point styles appear. The most fully reported of the Archaic complexes is the
McKean-Duncan-Hanna Complex (3000 B.C. to 600 B.C.). There is a concentration of McKean Complex projectile point finds on the shores of Rock Lake at the headwaters of the Pembina River (Good et al. 1980:26). The campsites are small and were briefly occupied by small groups of nomadic bands of hunters and gatherers relying upon bison hunting as their main subsistence pattern (Joyes 1970).

A second Archaic complex, which followed the McKean-Duncan-Hanna Complex, is the Pelican Lake Phase (1000 B.C. to A.D. 1), which occurs over much of the northern Plains. The Pelican Lake Phase is represented by large corner-notched projectile points. Pelican Lake projectile points have been recovered from the Calf Mountain and Shewfelt sites in Manitoba, both of which are in the Pembina Mountains 30 miles north of the study area (Good et al. 1980:27). Campsites are small, indicative of small nomadic bands of hunters and gatherers who concentrated upon hunting bison and gathering wild plant foods. Large numbers of stone circles appear in the area at this time. These stone circles have been interpreted as having been constructed in conjunction with circular lodges or tipis (Frison 1978:51; Mulloy 1960:1-3). Some of the stone circles may be the remains of corral structures and other forms of animal traps (Malouf 1960:3-5; Moomaw 1960:5-9). The widespread occurrence of the Archaic complexes suggests that some of them will be present within the study area.

The Woodland Period (500 B.C. to A.D. 1000)
Following the Pelican Lake Phase is the Besant Phase (A.D. 1 to A.D. 800). This phase is characterized by side-notched projectile points of varying sizes. Pottery first appeared in the study area at this time. The association of Besant projectile points with secondary burials in log-covered chambers may indicate mound building in the early Besant Phase (Joyes 1970). The corded pottery and mound building characteristics suggest influence from Woodland cultures to the southeast. The Calf Mountain site, located 32 kilometers (20 miles) northwest of the study area, has a Besant component (Good et al. 1980:28). Besant campsites appear to represent lengthy or repeated occupations by nomadic bands who coalesced during communal bison hunts (Joyes 1970).

The Avonlea Phase, dating between A.D. 400 to A.D. 700, is partially contemporaneous with the Besant Phase. The Avonlea Phase is characterized by small, corner-notched and side-notched projectile points indicative of the use of the bow-and-arrow (Good et al. 1980:28), and fabric-impressed, bossed or punctated conoidal pottery vessels. The Avonlea Phase is represented at the Avery site, located along the headwaters of the Pembina River, in Manitoba. Campsites appear to be small, temporary camps of nomadic hunters and gatherers. Nomadic bands appear to have coalesced during communal bison hunts (Joyes 1970).

During the Woodland Period there is widespread construction of linear and circular mounds containing flexed and disarticulated primary and secondary bundle burials. Utilitarian and ornamental goods are associated with the burials. This mound complex has been defined as the Arvilla Complex, dating from A.D. 600 to A.D. 900 (Johnson 1973:66). The Lake Bronson site (2IKT1), located in northwestern Minnesota near the study area, has an Arvilla Complex component (Anfinson et al. 1978) containing Blackduck ceramics.

The Late Prehistoric Period (A.D. 1000 to A.D. 1600)
The Manitoba Phase first appears in Minnesota at approximately A.D. 800 and ends at A.D. 1400. It is characterized by Blackduck ceramic ware and small side-notched projectile points. It has been hypothesized that Blackduck ceramic ware and the Manitoba Phase represent the prehistoric Assiniboine (Wilford 1945;
MacNeish 1954). Lugenbeal (1978:45-68) hypothesized that Blackduck ceramic ware is an Algonkian, not Assinboine, culture in Minnesota. The Manitoba Phase is represented at the United Church site (MacNeish and Capes 1958) and at the Calf Mountain site (Joyes 1970), 80 kilometers (50 miles) and 32 kilometers (20 miles) northwest of the study area, respectively. Sites are usually small and appear to represent small bands of nomadic hunters and gatherers. Subsistence strategy included procurement of bison, deer, fish and mollusks. Mound building, grave goods and secondary burials are associated with the Manitoba Phase (Joyes 1970).

Following the Manitoba Phase is the Selkirk Phase (A.D. 1350 to A.D. 1750) which is characterized by fabric-impressed ceramic ware and small side-notched projectile points (MacNeish 1958). MacNeish (1958) hypothesizes the Selkirk Phase is the prehistoric and early historic Cree. Many sites having Selkirk Phase components have been reported near the study area. Sites are usually small, representing nomadic hunting and gathering bands which coalesced during communal bison hunts. Selkirk Phase sites in southeastern Manitoba contain deer, fish, and shellfish, but few bison (Good et al. 1980:30).

The Protohistoric Period (A.D. 1600 to A.D. 1800)

The introduction of the horse and gun brought about significant changes in the human groups within the Great Plains. The Protohistoric period is characterized by the occurrence of European trade goods, such as metal and beads. Several fur trading posts were established in the Pembina River valley during the late 18th Century and early and middle 19th Century (Good et al. 1980:Appendix 2).

The Historic Period (A.D. 1800 to the Present)

Four Native American Indian groups are reported to have occupied land in and around the Pembina River. The Cree inhabited much of the land in northeastern North Dakota at approximately A.D. 1750. The land to the west and north of the study area is reported to have been inhabited by the Assiniboine from at least the middle of the 18th Century (Good et al. 1980:33). The land south of the study area was inhabited since the middle of the 18th Century by the Yanktonai, a member tribe of the Dakota Sioux (Good et al. 1980:34). The most important Native American Indian group to the study area is the Plains Chippewa, also known as the Plains Ojibway. The Chippewa followed the European fur traders west from the woodlands of Michigan, Wisconsin, Minnesota, and Ontario. They settled along the Red River of the North, forming a loosely organized symbiotic relationship with the European fur traders. The Chippewa gained control of what is today northern North Dakota (Good et al. 1980:35).

The most thoroughly reported historic site near the study area is the Antoine Cringas House and Trading Post, located approximately one mile northeast of present day Walhalla. Several important historic structures and towns which will be investigated during this contract are located within the study area. Additional historic sites include the Mayo Brick Plant and the community of Brickmine, the hamlet of Valmont, and the Hyde Park Cemetery (Good et al. 1980:46-47).

In summary, archeological investigations within southeastern Manitoba, northeastern North Dakota, and northwestern Minnesota have yielded remains of human groups dating from 10,000 B.C. to the historic present (Symes 1977; Nicolai et al. 1978). Temporal placement of sites is dependent primarily upon the recovery of diagnostic projectile point styles and, much later, pottery. The variation in site types, and the activities performed at sites, can be expected to encompass a wide range of social activities, including procurement, butchering, burial.
activities, and maintenance tasks. Identification of diagnostic artifacts recovered during archeological investigations in the lower Pembina River valley will enable researchers to fit the sites into a cultural-temporal sequence for the Pembina River area.

Cultural Ecology and Process

Intensive archeological investigations along the Pembina River valley have, for the most part, been confined to the headwaters in Manitoba. The present project will enable researchers to investigate the lower portions of the Pembina River valley for the presence of prehistoric and historic cultural resources. The topography within the study area has formed a variety of ecological settings. Research in the Pembina River valley indicates a division of the topography into four vegetation zones, based on elevation and physiography, and allows the formulation of inferences about prehistoric subsistence-settlement systems in the area. These zones are 1) the bottomland hardwood forest, 2) the upland mixed hardwood forest, 3) the upland oak savanna woodland, and 4) the tall-grass prairie. The project area is dissected by streams which have their origin in the Pembina Hills and the prairie-uplands. These streams provided ideal habitation areas. Ames' survey in 1975 located 16 sites (Ames 1975; Good et al. 1980:18) along the Pembina River in Cavalier County.

On the basis of archeological investigations in the Northeastern Plains Periphery, it is hypothesized that the prehistoric settlement model is one of seasonal transhumance where the social groups moved annually in search of resources. The elevational changes and regional topography provide a series of ecological systems which have important hydrological variability which affects plant maturation rates and the availability of large mammals. It is postulated that the size of the social groups varied from season to season, and would have been directly correlated with the level of cultural development and the types of resources being exploited.

According to the hypothesized scheduling in the seasonal settlement cycle, the social groups in the autumn season (Moodie and Ray 1976:45-51) probably engaged in bison hunting. The optimum time to drive bison successfully was when the rutting season was over. October was apparently the central month of communal bison procurement without the use of horses. The optimum time for bison drives coincides with the ripening of a variety of berries and other plant foods, which presented an ideal situation for social groups to coalesce for the communal bison drive and gathering of wild plant foods.

Many of the tipi ring sites have a large number of stone circles while others have only one or two stone circles. The seasonal procurement of selected food resources would determine the size of the social groups exploiting the resources. The differential size in the tipi ring sites tends to support the hypothesis of differential social group sizes during different seasons.

It is hypothesized that the more permanent campsites were situated on terraces of the river floodplains where a reliable supply of water and greater varieties of wild plant and animal foods were available. It is postulated that winter encampments would have been situated on the river terraces where the river bluffs would have provided protection from the severe winter winds. It is hypothesized that the upland sites, located in the oak savanna woodland and tall grass prairie, were used as ancillary hunting and gathering camps for small social groups.

Historically, the Chippewa, Cree, Sioux, and Assiniboine were the primary occupants of the Pembina River valley. The finding of European trade goods on sites
is evidence of these occupations (Ray 1978:26-34).

The data obtained will be examined from an ecological perspective and will be compared to that from other sites within the Northeastern Plains Periphery Region in order to determine to what extent the site occupations correspond to regional prehistoric settlement-subsistence patterns.

Methodological Orientation
Five structural alternatives, encompassing approximately 7500 acres, will be systematically investigated for prehistoric and historic cultural resources. Three survey intensity levels will be utilized during the project:

Level I - Overview
This level of inventory consists of a systematic search of existing records and interviewing local informants for cultural resources located within the project area. This level of inventory will be performed for all lands within the project area.

Level II - Sampling Survey
This level of inventory will involve a 25 percent sampling of approximately 1749 hectares (4320 acres) within proposed structural Alternatives 4 and 5 and will yield predictions of the cultural resources present.

Level III - Intensive Survey
This level of inventory is to relocate 16 prehistoric sites previously recorded in the Pembilier Lake and Dam structural alternative (Ames 1975). Additional areas to be intensively surveyed will include selected historic sites, such as the Hyde Park Cemetery, Gingras House and Trading Post, Mayo Brick Plant and any fur trading posts or ox trails which are reported to be in the area by local informants and archival research.

Field Investigations
Level I investigations of archeological resources will be performed by the Principal Investigator, the Co-principal Investigator, the Historian, and two assistants. Records will be examined at the State Historical Society of North Dakota for recorded archeological and historic sites, and at the local Pembina and Cavalier Counties Historical Societies for information on local amateur collectors and informants to be interviewed.

Local amateur collectors, informants and landowners will be contacted prior to any field work. It is imperative that a good rapport be established with the local residents within the project area. The successful completion of the cultural resource investigations outlined for this contract is dependent upon very good public relations with the local residents. After contacting local amateur collectors and informants, Level II inventory will begin.

Level II inventory will consist of a systematic, 25 percent sample of approximately 1749 hectares (4320 acres) within structural Alternatives 4 and 5. Since most of the lands to be investigated are within the floodway channel, which will be a corridor 198 meters (650 feet) wide and 53 kilometers (33 miles) long (Alternative 4), it is best to implement a systematic sampling strategy. The systematic sampling strategy will be statistically valid and will yield reliable results for constructing inferences about cultural resources within structural Alternatives 4 and 5.
Two procedures will be followed. First, for the floodway channel, the systematic 23 percent sample will be performed in the following manner: Beginning at the confluence of the floodway channel with the Red River of the North, down river from Pembina, every fourth section along the channel corridor will be intensively surveyed for archeological sites. Table 1 shows the sections to be intensively surveyed. Approximately 283 hectares (700 acres) will be intensively surveyed by two archeological field crews in a period of seven days or less.

Second, 25 percent of the floodpool areas for structural Alternatives 4 and 5 will be intensively surveyed for archeological sites. Each section within the proposed floodpool structures will be divided into quarter sections. The southeast quarter sections will be intensively surveyed. Table 1 shows the quarter sections to be intensively surveyed. A total of approximately 162 hectares (400 acres) will be intensively surveyed for the presence of archeological sites by two archeological crews in a period of 4 days.

Archeological field investigations will be performed by two crews, each consisting of two persons. Two citizen band radios will be used for communications between the two survey teams. All cultivated lands within the survey sample will be examined for surface remains by pedestrian reconnaissance. Crew members will traverse the fields along transects spaced approximately 30 meters apart. Within areas of low ground visibility, with permission of the landowners, a three to four bottom plow will be used to plow furrows along the channel corridor and within the selected floodpool areas, at approximately 50 meter intervals. This procedure will expose soils which, after a rain, will be examined by the survey teams for the presence of cultural remains. Where landowners' permission to plow is not acquired, shovel tests will be performed at 50 meter intervals along 30 to 50 meter transects.

In addition to strip-plowing and shovel testing, areas which appear to have more deeply buried alluvium, such as at the base of talus slopes and along river terraces, a gasoline powered auger will be used to dig 15.25 cm (six-inch) diameter, one-meter deep holes. Soils removed by the auger will be examined for the presence of cultural remains. Auger holes will be placed at intervals of 50 to 100 meters along 50 meter transects. Records will be kept concerning color and texture of subsurface soils. After disturbance by shovel testing or augering all digging (excavation) localities will be returned to their natural condition.

Level III inventory will begin after completing the 25 percent systematic sampling procedure outlined above. Archeological investigations in the Pembilier Lake and Dam (structural Alternatives 1, 2 and 3) will focus upon locating previously recorded sites within the impact area. Ames (1975) reported 16 sites (Good et al. 1980:18) during initial reconnaissance in 1975. Level III investigations will attempt, by means of intensive survey by the two crews, to relocate, conduct surface collections, and map the exact locations of these sites. In addition to the 16 sites reported, several historic sites will also be located and mapped. Included are the Mayo Brick Plant and the community of Brickmine, the Gringas House and Trading Post, Hyde Park Cemetery, and the hamlet called Valmont (Good et al. 1980:46-48). The two survey teams will use a Whites metal detector to help delimit the location and boundaries of historic sites which no longer have visible structural remains. The metal detector will be invaluable in locating possible historic loci. Level III inventory will be completed in nine days by the two survey teams.

During Level II and III archaeological inventories, the following procedures will be followed:

1. All reported sites will be plotted on 7.5" topographic maps, showing the extent of the site areas.

2. All reported sites will have North Dakota site inventory forms completed and sent to the appropriate authorities.

3. Surface collections will be conducted at each reported site. When surface remains are in great quantity, that is, one artifact per ten square meters, then a Cartesian Coordinate Grid will be superimposed over the site and a systematic collection will be conducted. More precise control over the location of artifacts may provide invaluable spatial information, particularly if the sites are multicomponent and are temporally separated spatially (Binford 1970; Logan 1979).

4. All reported sites will have permanent datum markers established which can be located on 7.5" topographic maps. Datums will consist of four-inch diameter white plastic pipe set into the ground. The plastic pipe will be five feet long, with three feet set into cement and two feet exposed above ground. The site number, name, and date of recording will be engraved into the plastic. The center of the pipe will be filled with cement. This type of datum marker is non-deteriorating, nonmagnetic for setting a transit over, and is very visible in dense underbrush. Most datums will be placed in fence rows so that they will not interfere with or be destroyed by farming activities.

5. All reported sites will be photographed and general site maps, showing boundaries, will be made. Historic sites, with intact foundations, will be measured and mapped.

Historical investigations, consisting of archival research at the North Dakota State Capital, the North Dakota State Historic Preservation Office, and the local courthouses and historical societies and libraries in Pembina and Cavalier Counties, and the I.D. Weeks Library at The University of South Dakota will provide the basis for a regional historic perspective of the impact area. Local informants will be interviewed. Pembina County and church records will be examined for information concerning Hyde Park Cemetery. All gravestones will be recorded and mapped within Hyde Park Cemetery. A literature search will be performed for the Mayo Brick Plant and similar type brick plants located in the Northeastern Plains. A regional synthesis will be forthcoming from the historic investigations conducted during this project.

Laboratory Analysis
Initial laboratory analysis will consist of detailed identification of all artifacts recovered during pedestrian reconnaissance. Each artifact or class of artifacts from each site will be assigned a unique catalogue number for curation and future reference. Recovered artifacts will be packed and transported to The University of South Dakota Archaeology Laboratory for analysis. Curated artifacts, maps and photographs will be stored in boxes marked "Property of the U.S. Army Corps of Engineers, St. Paul District."

Artifacts collected during previous surveys for the Pembina River Project will also be examined in detail in order to develop a more concise synthesis of prehistoric and historic occupation in the project area.
Identification of faunal remains will be performed by Marie E. Brown, a Research Associate knowledgeable in archeological faunal identifications and analysis. The University of South Dakota Archaeology Laboratory has comparative faunal collections which are indispensable for correct identification of archeological specimens. The identification of faunal materials will allow determination of historic and prehistoric subsistence patterns and may also provide data concerning the prehistoric and early historic environment of this part of the northeastern Plains.

Identification and analysis of lithic and ceramic remains will be performed by the Principal Investigators. Historic artifacts, which include glass, porcelain, and metal objects, will be described and analyzed by the Principal Investigators. Both are knowledgeable in prehistoric lithics, ceramics and historic artifacts.

A detailed, descriptive report will be written on the archeological investigations. A general synthesis will be written for the prehistory and history of the area. The present vacuum of detailed information concerning the prehistoric habitation of the project area should be partially filled during the present contract.

Management Goals

The objectives are fourfold:

1. to conduct a reconnaissance level field survey, based on a statistically valid sample of portions of structural Alternatives 4 and 5 in the boundary floodway, in order to predict the probable location, frequency and cultural affiliation of prehistoric and historic sites within the project area;
2. to conduct additional reconnaissance level field work in the Pembina River valley with possible relocation and surface collecting of previously recorded sites;
3. to conduct a records review for Pembina County;
4. to conduct a literature search and field reconnaissance of Hyde Park Cemetery, the Gringas House and Trading Post, the Mayo Brick Plant and the community named Brickmine, and the hamlet known as Valmont (Good et al. 1980:46-47).

Results of the field work and archival research will provide the necessary data to refine the chronological and cultural assignment of recorded sites. The floral and faunal context of site locations will allow the development of inferences concerning the local resources which were available to the sites' occupants and to establish criteria for assessing the scientific and historical value of each site within its environmental and historical context.

The significance of historical sites will be determined according to the criteria established for their eligibility for nomination to the National Register of Historic Places. The scientific value of prehistoric sites will be determined by assessing their cultural and temporal assignment in conjunction with their environmental context. The criteria for significance will be established when field work has been completed and the data analyzed.

Results of the proposed undertakings will provide the U.S. Army Corps of Engineers a recommended management plan for the construction of proposed flood
control alternatives and a plan to mitigate the effects of the proposed undertakings upon cultural resources.

Contract Specifications

Level of Effort:
The Principal Investigator, Kenneth L. Brown, will devote 132 full-time days during the project to the necessary design, administration, supervision, review and editing of the final report.

The Co-principal Investigator, Richard G. Whitten, will devote 4 percent of his time (5 days full-time equivalent) implementing the project design.

The Archeology Field Assistant, Marie E. Brown, will devote 132 full-time days, during the project supervising the field work and artifact analysis and report preparation.

The Historian, Karen P. Zimmerman, will devote 24 full-time days to the project: field work 14 days and report writing 10 days.

The Scientific Illustrator, Marianne Schuld, will devote 44 full-time days to the project: illustration of artifacts and cartography.

The Administrative Assistant I, Lucille Stewart, will devote one-third time (44 days full-time equivalent) to the bookkeeping and administrative paperwork for the project.

The Staff Assistant IV, Gail Erickson, will devote one-third time (44 days full-time equivalent) to typing the report and assisting in the administration of the project.

This cultural resource reconnaissance project will be completed in 184 calendar days; (132 work days) with a total of 84 man-days devoted to archeological field survey and reconnaissance; 14 man-days devoted to historic archival research; 10 man-days devoted to writing the historical report; 44 man-days devoted to scientific and cartographic illustrations; 88 man-days devoted to bookkeeping, administrative paperwork, and report typing; and 220 man-days devoted to the artifact analysis and writing of the archeological survey report.

Lodging and food will be provided for 118 man-days spent in the field. Mileage will be provided for the use of state vehicles to travel to and return from the project area. Mileage includes the visits to the North Dakota State Capital at Bismarck for historical archival research and visits to the North Dakota State Preservation Office and State Archeologists for prehistoric and historic literature and records searches.

Of the approximately 1746 hectares (4316 acres) within structural Alternatives 4 and 5, approximately 437 hectares (1079 acres) will be intensively surveyed by means of a 25 percent sampling design and an attempt will be made to relocate and conduct surface grab collections from 16 prehistoric sites previously reported within the Pembilier Lake and Dam alternative. Selected historic sites will also be intensively investigated to determine their significance and eligibility for nomination to the National Register of Historic Places.
Equipment purchases necessary for the completion of this project include two portable citizen band radios. The radios will be required for communication between the two field crew teams while conducting the field reconnaissance and survey and relocation of previously reported sites within the project area.

Facilities Available:
Field equipment, maps, surveying equipment, metal detector, cameras and camera equipment will be furnished by The University of South Dakota. Storage facilities for artifacts, maps, notes and photographs collected during field work will be supplied by The University of South Dakota Archaeology Laboratory. Final disposition of the data will be made in consultation with and agreement by the North Dakota Historic Preservation Officer and appropriate officials of the United States Army Corps of Engineers, St. Paul District. Facilities for curating artifacts in perpetuity are available at The University of South Dakota Archaeology Laboratory. Public display of artifacts is available at the W.H. Over Museum on The University of South Dakota campus. The storage facilities presently consist of approximately 1000 square feet with adequate shelving and an automatic water sprinkler system. Laboratory facilities for the preparation of the final report on the results of the survey and literature search will be supplied by The University of South Dakota.

Study Work Schedule:

Field survey and reconnaissance of archeological and historical sites as outlined in the field procedures.

August 17 - October 31, 1981
Laboratory analysis of recovered data. Writing of the historical report. Illustrations of artifacts and cartographic work for the project.

November 1, 1981 - December 31, 1981
Writing the results of the archeological survey and laboratory analyses of the project. Typing a rough draft of the report following the standards specified.

VI. CONTRACT REPORT FORMAT, CONTENT AND SPECIFICATIONS:

Reports Required
Three types of contract reports will be required for submission to complete the contract: (1) a brief field report, (2) a draft and final contract report, and (3) a popular report.

1. Field Report
A brief field report to be submitted 30 days after completion of the field work will summarize the work, project/field limitations, methodology used, time utilized, and survey results.

2. Draft and Final Contract Reports
Ten copies of the draft contract report will be submitted December 31, 1981, and will be reviewed by the Corps of Engineers and the State Historic Preservation Officer, the State Archeologist, and Heritage Conservation and Recreation Service. One copy of the project field notes will be submitted at the time of the draft report. An original and 15 copies of the final contract report will
be submitted 30 days after the Corps of Engineers' comments on the draft report are received by the offeror. The final report will incorporate all the comments made on the draft report.

3. Popular Report
A draft popular report will be submitted with the draft contract report, and will be reviewed by the Corps of Engineers. Twenty copies of the final popular report will be submitted with the final contract report. The popular report should be a condensed version of the contract report that would be of interest to the general public. The report should provide an overview of the archeology, protohistory, and history of the project area and region; a brief review of the work conducted in the area and the reasons (both archeological and managerial) why the work was conducted; and the results of the completed study. Exact site locations will not be reported in the popular report.

Report Format Specifications
The draft and final contract reports will be submitted according to the following general content category outline. Some of the following categories do not need to be separate sections in the report. Sections discussing similar topics can be grouped together.

Title Page: The title page should provide the following information: the type of investigation undertaken; the cultural resources which were assessed (archeological, historical, and architectural); the project name and location (county and state); the date of the report; the Contractor's name; the contract number; the name of the author(s) and/or Principal Investigator; the signature of the Principal Investigator; and the agency for which the report is being prepared.

Abstract: An abstract of findings, conclusions, and recommendations. This should not be an annotation.

Management Summary: A concise summary of the study, which will contain all essential data for using the document in the Corps of Engineers management of the project. This information will minimally include: why the work was undertaken and who the sponsor is, a brief summary of the scope of work and budget, summary of the study (field work; lab analysis; literature search and records review, including the National Register and dates checked), study limitations, study results, significance, recommendations and the repository of all pertinent records and artifacts.

Table of Contents

List of Figures

List of Plates

Introduction: Identify the sponsor (Corps of Engineers) and the sponsor's reason for the study; an overview of the sponsor's project and the alternatives with the alternatives located on USGS quad maps; provide an overview of the archeological/historical study to be undertaken; define the location and boundaries of the study area.
(with regional and area-specific maps); define the study area within its cultural, regional, and environmental context; reference the scope of work and budget (both of which should be in the appendix); identify the institution that did the work, the number of people involved in the study, the number of person-days/hours utilized during the study; identify the dates when the various types of work were completed; identify the repository of records and artifacts; and provide a brief overview or outline of how the study report will proceed, and an overview of the major goals that the study/study report will accomplish.

**Previous Archeological and Historical Studies:** This section should provide a summary and evaluation of previous archeological and historical studies of the region, including the date, extent, adequacy of the past work, and cultural/behavioral inferences derived from the research.

**Environmental Background:** Description of the study area and regional environment, including the following categories: geology, vegetation, fauna, climate, topography, physiography, and soils, with reference to prehistoric, historic, ethnographic, and contemporary periods. Any information available on the relationship of the environmental setting to the area's prehistory/history should be included. This section should be of a length commensurate with other report sections.

**Regional Prehistory and History:** Discussions should include regional cultural developments spatially and chronologically; environmental adaptations; subsistence, resource procurement, and settlement patterns; site/population density and size; and any other pertinent information on the prehistory, protohistory, and history of the study area and region.

**Theoretical and Methodological Overview:** This section should include a description or statement of the goals of the Corps of Engineers and the study researcher, the theoretical and methodological orientation of the study, and the research strategies that were applied in achieving the stated goals.

**Literature Search and Records Review:** This section should detail the methodology and sources used for the literature search and records review as well as a description and evaluation of all information and data recovered. For each reference discussed, the author, date and page numbers should be cited.

**Field Methods:** This section will describe specific archeological activities that were undertaken to achieve the stated theoretical and methodological goals, which should include all field methods, techniques, and strategies, and a detailed, complete description of the research.

**Analysis:** This section will describe specific analytic methods and techniques; describe and discuss the qualitative and quantitative manipulation of the data and data classification if appropriate. It will also discuss limitations or problems with the analysis based on the data collection results.

**Investigation Results:** This section will describe the data recovered during the research, and any other data pertinent to a complete understanding
of the resources within the study area. This section should include enough empirical data that the research can be independently assessed. The description of the data should minimally include: a complete detailed description of the field work (survey conditions, topographic/physiographic features, vegetation conditions, soil types, stratigraphy, survey limitations, and survey testing results with shovel test profile forms to be included as an appendix). A description of the site, amounts and type of material remains recovered, relation of the site or sites to physiographic features, vegetation, and soil types, and project alternatives or impact areas, analysis of the data (culture historical aspects, cultural/behavioral inferences or patterns), and location and size information (elevation, quad map sources; legal description; address if appropriate) should also be included. The information should be presented in a manner that can be used easily and efficiently by the Corps of Engineers.

This site information should be presented with each site being discussed on a separate page/pages with the site location indicated on a USGS map. If a site location has not been field-verified, indicate the approximate area on the map, and indicate that it has not been verified, or give an explanation why the site cannot be located on a map. An example of this site description format follows:

**Site Number and Site Name**

**Complete Legal Description:** Township, Range, Section, County or Address, if appropriate. Indicate if the site has been field-verified or not, when and by whom.

**Complete USGS Quadrangle Reference:** Quad name, Quad size, all Quad dates.

**Report Figure/Map/Plate Reference**

**Accession Numbers**

**Site Type, Site Reports, Investigations of Dates**

**Cultural Affiliation** (with dates or date estimates)

**Environmental Descriptions:** Briefly, to include topography, physiography, soils, and vegetation.

**Site Description**

**Present Site Condition:** Disturbed, undisturbed, vegetation, soils, and surface material.

**Site Significance:** As reported by others or your own evaluation, including an evaluation of previous conclusions.

**Project Impacts:** Evaluate the direct and/or indirect impacts of the project upon the site.

**Recommendations:** Management recommendations, future archeological/historic work recommendations.
Remarks: For comments with no other category.

Pertinent Bibliographic References

A paragraph before the site descriptions should indicate that, if no information is available for a specific category, this category will not be included in the listing.

The location of all sites and other features discussed in the text will be shown on a legibly photocopied USGS map and will be bound into the report. Maps shall also be included showing the relationship of sites to the project areas and which areas were surveyed. In addition, the project map will show those areas that have been eliminated from survey due to unacceptable survey conditions. Maps should also show the type of survey method employed for each area surveyed (for example, pedestrian walkover, shovel tests). All maps will be labeled with a caption/description, a north arrow, a scale bar, township, range, quad map size, and quad dates (on USGS maps only), and the map source (e.g., the USGS quad name or published source) and will have proper margins.

Evaluation of Research: This section should discuss the reliability of the data; relate results of the analysis to the stated study goals; identify changes, if any, in the research data goals; synthesize and compare the results of the analysis; integrate ancillary data; and identify and discuss cultural/behavioral patterns and processes that are inferred from the study results.

Evaluation of Cultural Resources: This section should discuss site location, density, size, condition and distribution, evaluate the significance of the cultural resources in relation to the regional archeology and history; and, in relation to the project alternatives, identify and discuss the potential for future research.

Recommendations: This section should discuss the direct and indirect impacts of all the project alternatives on the area's cultural resources with specific management recommendations on all previously recorded and discovered sites; discuss the significance of all sites to the extent permitted by the study level in relation to the research goals established in the study and recommendations on the eligibility of the sites to the National Register of Historic Places; recommend future intensive level research priorities needs and make suggestions with regard to the Corps of Engineers planning goals and project alternatives.

References: Provide standard bibliographic references (American Antiquity format) for every publication cited in the report.

Appendix: This section should include the scope of work portion of the technical proposal; resumes of all personnel involved; all data-related correspondence derived from the study; all State site forms; all shovel test forms and any other pertinent report information referenced in the text as being included in the appendix.

Other Required Contract or Report Specifications

1. The contractor shall submit the photographic negatives to the Contracting Officer for all black and white photographs which appear in the final report.
2. Neither the contractor nor his representative shall release any sketch, photograph, report, or other material of any nature obtained or prepared under the contract without specific written approval of the Contracting Officer prior to the acceptance of the final report by the Government.

3. All text materials will be typed, single-spaced (the draft reports should be space-and-one-half or double-spaced), on good quality bond paper, 8.5 inches by 11.0 inches, with a 1.5-inch binding margin on the left, 1-inch margins on the top and right, and and 1.5-inch margin at the bottom, and will be printed on both sides of the paper.

4. Information will be presented in textual, tabular, and graphic forms, whichever are most appropriate, effective, or advantageous to communicate the necessary information.

5. All figures and maps must be clear, legible, self-explanatory, and of high enough quality to be readily reproducible by standard xerographic equipment, and will have margins as defined above in category 3.

6. The final report cover letter should include a budget of the project.

7. Cost estimates for future recommended work will be submitted as deliverables.

8. The draft and final reports will be divided into easily discernable chapters, with appropriate page separation and headings.

9. The contractor will utilize a systematic, interdisciplinary approach in conducting the study. During the course of the study, the contractor will provide specialized knowledge and skills to include expertise in archeology and other social and natural sciences as required.

10. The extent and character of the work to be accomplished by the contractor will be subject to the general supervision, direction, control, and approval of the Contracting Officer.

11. Techniques and methodologies that the contractor uses during the investigation shall be representative of the current state of knowledge for their respective disciplines.

12. The contractor shall keep standard field and lab records which shall include, but not be limited to, field notebooks, site survey forms, field maps, photographs, and lab forms.

13. The tested areas will be returned as closely as practical to presurvey conditions by the contractor.

14. The contractor shall provide all expertise, materials, and equipment that may be necessary to expeditiously perform those services required of the study.

15. The recommended professional treatment of recovered materials is curation and storage of the artifacts at an institution that can properly insure their preservation and that will make them available for research and public view. If such materials are not in Federal ownership, the consent of the owner must be obtained, in accordance with applicable law, concerning the disposition of the materials after completion of the report. The contractor will be responsible
for making curatorial arrangements for any collections which are obtained. Such arrangements must be coordinated with the appropriate officials of North Dakota and approved by the Contracting Officer.

Mr. Ken Brown
The University of South Dakota
Archaeology Laboratory
East Hall
University of South Dakota
Vermillion, South Dakota 57069

Dear Mr. Brown:

Inclosed are our comments on the draft report Archaeological and Historical Reconnaissance and Literature Search of Cultural Resources within the Pembina River Project, Pembina and Cavalier Counties, North Dakota.

It was apparent from reading the report that an extensive amount of time had been put into the field and literature research, analysis, mapping, and write-up. The information from your research and report will form the basis for our project impact analysis here and will provide us with the necessary information to evaluate the National Register eligibility of all the sites. Further, your research has greatly extended our knowledge of the history and prehistory of the area. The report will be excellent when the comments are incorporated.

You and your staff should also be commended for the ease with which the contract flowed. The fact that our communication remained open and professional made this a contract we did not have to worry about as opposed to a contract that is a struggle every step of the way. Thank you.

We look forward to working with you in the future.

Sincerely,

WAYNE A. KNOTT
Chief, Environmental Resources Branch
Planning Division

Incl WAYNE A. KNOTT
As stated

-501-
1. Title page: The final report title page needs the signature of the Principal Investigator.

2. Please include a management summary as per Scope of Work Section II C "Contract Report Format Content and Specifications."

3. Maps: Please include a map (or maps) in the final report showing the project alternatives and all the specific areas surveyed or visited. Additionally all areas of the report where the reader would refer to these maps need to be referenced.

4. P. 4, para. 4: The sentence "This will be accomplished by the construction of one of five proposed alternatives" should be more tentatively reworded to indicate that 5 alternatives are currently being considered or studied. Within the Corps planning process the number and type of alternatives can always change, and none of the proposed alternatives that you investigated may ever be constructed.

5. P. 5, Alternative 2, last sentence: Provide a space between "1," and "329."

6. Pp. 5-6, Level of Effort: Please change all references to man-days or hours to person-days or hours.

7. Table 5: "Fanuary" should be "January."

8. Table 6, column 3: "Wendlan" should be "Wendland."

9. Environmental Background: The review of past climatic conditions is well done and enables the reader to envision the region in a less static manner than we usually do. Good job.

10. P. 39: At the North Dakota State Historical Society specifically which records were checked (site files, National Register file, etc.)?

11. Pp. 40-41, Field Reconnaissance, p. 68, Table 15:

   a. The information presented on page 68 (changes in procedures) should also be incorporated in the field reconnaissance discussion on page 40. That additional information explains how much was surveyed in excess of the 25 percent sample.

   b. P. 40: Please describe more thoroughly the "every fourth mile" survey sample (e.g., beginning at Section 28, R. 51 W., T. 164 N., and surveying every fourth mile until Section 26, R. 56 W., T. 164 N.)
c. Pp. 40-41: List the additional areas that were surveyed beyond the 25 percent sample.

d. P. 41: More thoroughly discuss the 1981 part of the valley survey. New areas that were surveyed should be mentioned and legal descriptions listed (or cite a map reference for locations). Please describe the field methodology during the valley survey more thoroughly. If shovel testing was not conducted, please state this.

e. P. 41, paras. 2-3: The number of sites relocated, newly recorded, and surface collected is not the same number as reported on page 1, paras. 2-3, or on page 70, para. 2. In these various sections also include the Pembina County sites that were confirmed and recorded outside the project area.

f. P. 41, para. 3, line 5: Add "1981" after "the."

g. P. 41, para. 4: At which specific sites were datums set up?

h. Field Methodology: The Pembina County sites (outside the project area) that were confirmed and recorded during the 1981 survey should be mentioned and the field methodology explained.

12. P. 65, para. 3, line 4: "discaded" should be "discarded."

13. P. 70, last para.: "avaible" should be "available."

14. P. 74, Table 16 cont.: This portion of Table 16 should be turned around so it matches Table 16 on page 73.

15. Historic Period:

a. General comment: A.J. Ray in *Indians in the Fur Trade* thoroughly discusses the causes and timing of Indian migration westward and southwestward into northeastern North Dakota. The book discusses tribal migration and resource exploitation both in terms of the seasonal round and from the period 1660 to 1870. There are numerous references to seasonal activities but the nature and season of those activities is not always given. This book is excellent and important to any history of Indians or Indian-White history in northeastern North Dakota.

b. General comment: The concept "dependence on European trade goods" has become a catch-all argument for Indian behavior during the historic period. Several problems arising from this concept are:

1. Historical process is lost: What exactly are they dependent upon, at what time, and to what degree?

2. Other arguments for tribal migration: The horse played a significant role in offering new opportunities to exploit the resources of the plains.

3. Indians are being portrayed as being motivated by western capitalist incentives and as giving up traditional concepts for the sake of "profit."

17. P. 81, para. 4: The wording of the last sentence gives the impression that the only material that will be found at historic Indian sites will be a light scatter from a campsite representing a temporary ephemeral occupation. While this may be the case with some sites, there are surely other sites which may have only been seasonally occupied over many years, or sites which were intensively occupied for only one season. The former seasonal sites could potentially yield abundant and important amounts of material, while the latter could yield potentially significant information extracted from the smaller more temporary sites. Further, isn't it unlikely that "anything other than campsite debris would remain" from any nomadic group, historic or prehistoric? The wording of the statement risks the implication that this type of historic site is not significant, but it further assumes that such a site may be considered potentially significant if it is prehistoric.

18. P. 84, para. 2: Did only the Metis use these kinds of pipes?

19. P. 84, para. 3, line 9: Should "the late 16th Century" be "the 17th Century?"

20. P. 85, para. 5, line 9: Please provide the date and page numbers for the Good et al. reference.

21. P. 87, para. 3: Is "Massacre at Seven Oaks" an official title for the incident? If so, maybe this could be stated. The term "appalling murder" should be set in quotes if it is directly from Robinson (1966) or rephrased in a more neutral tone. (See also comment 45C.)

22. P. 88, para. 4: The present location of the Kittson Post should be mentioned.

23. P. 89, para. 2, lines 2-3: The wording of the sentence "It had completely changed the ways of life of the Indian groups." seems to imply that they no longer retained any of their traditional beliefs and patterns.

24. P. 97, para. 4: The way you described the recent event at the Hyde Park Cemetery was good.

25. P. 100, para. 4, line 5: "bade" should be "blade."

26. P. 101, para. 4, line 3: Is "atesnd" supposed to be "and?"

27. P. 102, Site Density Patterns: For this discussion, please include the total number of sites used in the predictions, and if the 11 Pembina County sites recorded outside the project area were used, mention that as well.

28. P. 106: Lines 3-35 are repeated from page 105; P. 107: Lines 1-2 are repeated from page 106. It is assumed that page 107 should be page 106.
29. Table 19: Inclusion of the campsite suitability classification for each site would be helpful.

30. **Site Descriptions - General Comments:**

   a. Perhaps before the site descriptions are begun, a brief explanation on what determined the designation "find spot" and what determined assigning a site an official number can be given. Further, identify the N.D. State Historic Sites Register and N.R. or reference the discussion of these registers later in the report.

   b. Include site descriptions for the 11 Pembina County sites recorded outside the project alternative areas.

   c. For all site descriptions, please include the National Register or North Dakota State Historical Sites Register status of each site, and the recommendation for each site (e.g., is on the National Register, is eligible, is potentially eligible but needs further work, or is not eligible).

   d. For all site descriptions the potential significance or non-significance of each site could be elaborated on. When a site is determine non-significant and not eligible for the National Register a complete justification of this decision is necessary, including why this decision was made and the data the decision was based on. This also applies to assigning a cultural affiliation or activity/event to a site. How were those decisions made and what evidence are they based on?

   e. Whiteware analysis: Since whiteware sherds constitute a large portion of historic material recovered, it is important that the methodology employed in identifying and dating them be clearly described. In your methodology section (p. 53) on historic ceramics you place creamwares under whitewares. According to Edward U. Lofstrom, in his report entitled "A Seriation of Historic Ceramics in the Midwest 1780-1870," and Cynthia R. Price, in a monograph entitled "Type Descriptions and Proposed Ceramic Sequence, 1810-1870, for the Ozark Border Region of Southwest Missouri, Based on an Analysis of Refined Earthenware Assemblages from Archaeological Sites," creamwares are separate from whitewares. Citing Ivor Noel Hume, Lofstrom relates that "Creamware made its first appearance around 1762..." and "rapidly grew popular and remained so until about 1780, when another famous Wedgwood refinement of earthenware—pearlware—was introduced." (1976:5) Whitewares, he suggests, begin to appear as early as 1825, replacing pearlwares. There are many kinds of whitewares: handpainted; transferprinted; flow transferprinted; sponge/spatter; edge decorated; annular, and plain. Each of these variations was produced during a specific period of time and they can be good tools for dating historic sites. If all the whiteware fragments recovered during your survey were "plain," please indicate this in the report.

   f. Given the unusual quantity of brick fragments found, would it be possible to identify brick types? In particular, is it possible to distinguish Mayo Brick Company brick from types which do not contain shale? If this were possible, they may provide an excellent horizon marker.
g. With regard to the identification and dating of glass, upon what authority(ies) do you base your analysis and conclusions?

h. Many of the sites which you attribute to dump sites contain the same artifact assemblages as sites you say merit further testing. Can the material that is found in or near a ditch be attributed specifically to the ditch and to recent deposition?

i. For all site descriptions where the site is oriented to the Pembina River as "right side" or "left side," please add if this is the right or left descending bank of the river.

j. For the historic site descriptions where dates are given, indicate what evidence the dates rely on. Are the dates tentative or well supported?

31. P. 115, 32PB8: Please mention the historic component in the cultural affiliation category.

32. P. 118, 32PB9, para. 3, lines 4-5: Should "diagnostic" follow "temporary/ culturally?"

33. P. 125, 32PB12:
   a. Please add a cultural affiliation category.
   b. Pp. 126-127, Impacts and Recommendations: Please mention that about 1/2 of the site (or whatever percentage it is) is directly within the floodway channel area, and the rest of the site is outside the area. Indirect impacts could occur on this portion of the site, or could be directly impacted if the channel alternative moves south at all.

34. 32PB13:
   a. P. 128, para. 2: "south" should be "north."
   b. P. 130, Impacts and Recommendations, line 1: Remove "and channel."

35. 32PB14, P. 133, Impacts and Recommendations: Mention that the site is within the floodpool of Alternative 5, which explains why it will only be periodically inundated; what records and literature were searched?

36. 32PB15:
   a. What records and literature were searched? Justify why it is not significant that the site is on one of the early trail routes through the region (as per comment 30.d.); why is 32PB14 potentially significant and 32PB15 is not? What is the nature significance and route of the old trail mentioned? Upon what basis is this farmstead dated after 1900?
   b. P. 135, Impacts and Recommendations: The site is in the immediate vicinity of the proposed alternatives, but the site is not in the direct impact zone of the channel or diversion structure, unless the alignments change. There is potential for the site to be indirectly impacted by construction activities, or periodic flooding and erosion if floodwaters overtop the floodway channel.
37. 32PB16:

a. P. 136, para. 4: Perhaps "component" should be changed to site since not more than one component is represented. Is the 1884 atlas-Andreas (1884)7; discuss the probable age of the site; how deep is the site plowed?

b. Is there a significant relationship between the trail and the post office? Is the post office itself significant?

c. P. 137, Impacts and Recommendations: The site is in the vicinity of the proposed alternatives; however, it will not be directly or indirectly impacted by the construction alignments presently proposed. The site could be directly or indirectly impacted if the floodway alignments move to the east.

38. 32PB18:

a. P. 141, para. 2, last line: Should "south" be "east?"

b. Impacts and Recommendations: The site is in the vicinity of the proposed alignments; however, it is not in the direct or indirect impact zone unless the alignments are moved to the east.

39. 32PB19:

a. P. 144, para. 2: Indicate what records and literature were searched.

b. The aspect of this site you attribute to the Metis may be historic Indian. There is general agreement among scholars that a Metis site cannot be distinguished from a historic Indian site. Upon what do you base your determination?

c. Impacts and Recommendations: The site is in the vicinity of the proposed alignments; however, it is not in the direct or indirect impact zone unless the alignments are moved to the east.

40. P. 147, 32PB20: None of the site seems to be located in Section 29.

41. P. 153, 32PB26: Is it recommended that further work be conducted on both the prehistoric and historic components?

42. P. 158, 32PB31: Please discuss the impact, recommendations, and significance of the prehistoric component.

43. P. 159, 32PB32:

a. Legal location: "N, NW, NE" should be "N, NW, NE."

b. P. 161, Impacts and Recommendations: It should be mentioned that part of the site will be directly impacted by construction of the floodway channel, and the rest of the site may be indirectly impacted by the construction activities.
44. P. 163, 32PB34: It should be mentioned that the site is directly adjacent to the proposed floodway channel for Alternative 4, and probably would be impacted by construction activities. If the alignment of the channel is altered to the north at all, then the site will be directly in the path of the channel.

45. P. 164, 32PB37:
   a. Legal location: "N², SE², NE²" should be "NE², SE², NE²."
   b. How was the exact site location discovered when Ernestine Mager gave such a vague location?
   c. Although local sources may refer to the event as a "massacre," it would be best to reword all these references. The term massacre has the connotation of blood-thirsty barbaric killing for no reason at all. Unfortunately, the Indian point of view of these recorded events was either never collected, or is rarely reported. Discussions of Indian/White conflicts should attempt to understand and report the reasons for the event, and should try to remain neutral. Other terms throughout the report of this nature (e.g., renegade), should be reworded as well.
   d. Impacts and Recommendations: The site is extremely close to the floodpool boundary, but should not be affected unless floodwaters overtop and cause erosional problems.

46. P. 167, 32PB38: The site is in the vicinity of the proposed alignments; however, it is not in the direct or indirect impact zone, unless the alignments are moved to the east.

47. P. 172, Hyde Park School: The site description for 32PB32 should mention the J.C. Johnson farm, and the possible location of the log schoolhouse.

48. Pp. 181-182, USD-3: Explain in more detail why this was not designated a site, and explain in more detail how you define the phrase "Locus of significant cultural behavior." How does this find spot differ from other small sites found?

49. P. 183, USD-9:
   a. Add historic glass to "Type of Remains" category.
   b. Impacts and Recommendations: This find spot is located within the floodpool of Alternative 5, and will be periodically inundated.

50. Pp. 187-188, USD-11:
   a. Expand on how it was determined to be a "recent trash dump," and why it was not designated a site.
   b. Impacts and Recommendations: Rephrase lines 1-3 to read the same as USD-9 (comment No. 49.b.).
51. P. 196, USD-17: Find spot 17 is located within the floodpool of Alternative 4, and will be periodically inundated.

52. P. 198, USD-20: Find spot 20 is located next to the floodway channel alignment for Alternative 4. The find spot could be affected by construction activities, or directly affected if the channel alignment was moved to the west.

53. P. 200, USD-21: Find spot 21 is located right next to the floodway channel alignment for Alternative 4. The find spot could be affected by construction activities or if the alignment moved slightly to the east.

54. P. 202, USD-25: Find spot 25 is in the vicinity of the proposed alternative; however, it will not be directly or indirectly impacted by the construction alignments presently proposed. The find spot could be directly or indirectly impacted if the floodway alignments move to the east.

55. Pembina Valley site descriptions: Please indicate the site elevation in feet as well as meters, so the site elevation can be readily compared with the conservation pool, marsh, and floodpool elevations.

56. P. 203, 32CV2: Change first legal location from "E, SW, NW" to "E, SW, NE, NW."" 

57. P. 208, 32CV4: Add "SW, NW, SW, 29, 163, 57" to the legal location.

58. P. 213, 32CV5: Please provide recommendations for further study of the historic component.

59. P. 219, 32CV8: Add "SW, NE, NW, 33, 163, 57" and "SE, NW, NE, NW, 33, 163, 57" to the legal location.

60. P. 222, 32CV9:
   a. Legal location: change "- SW, NW" to "- SW, NE, NW, NW, NW."
   b. Explain more thoroughly where, and possibly why, the historic component occurs in two locations at the site. There was no evidence of the residence?

61. P. 226, 32CV11:
   a. Change legal location to "E, NE, NE, NE, NE, 33, 163, 57, 57, 57." and "SW, NW, NE, NW, 33, 163, 57, 57, 57."
   b. Add an impact and recommendations statement on the bridge. Should the bridge be designated as a site or historic structure?
   c. P. 281 lists 32CV11 as consisting of the plant, community, and bridge. The site description needs to specifically reflect this.
   d. Good history of the Mayo Brick Plant.
62. Pp. 236-239, 32CV12:

a. Does the legal location/site boundaries include only the structural remnants of the dam, canal, bridge footings and road-cut, or the area where other structures or cultural remains may be located as well? Was there any field evidence of the other historic structures or associated remains that were located there?

b. Please include an impact, significance, and recommendation statement for the area once occupied by the mill, hotel, and store.

c. P. 238, para. 2 mentions the probable significance of the fish trap site. Include your assessment of the site's significance and National Register eligibility in the impacts and recommendations section.

63. P. 241, 32CV201: Include a recommendation on the historic component.

64. P. 243, 32CV203:

a. Please also mention that the site is on the edge of the conservation pool and will be impacted from wave action and possible recreation activities.

b. If no further work will be necessary with the historic "component" plan state this in the recommendation section.

65. P. 244, 32CV204:

a. Change the first legal location from "SEk, NEk, NEk" to "SWk, NEk, NEk."

b. If specimen S-86 probably represents an oxbow point, this would suggest an Archaic component. This component should be discussed in relation to the late Woodland/Blackduck component, and mentioned in the Cultural Affiliation category.

c. The edge of 32CV204 will be within the conservation pool (permanent inundation) and the rest of the site is within the proposed floodpool. Adverse impacts to the site may occur from permanent and periodic inundation, and extensive erosion caused by wave action, water level fluctuations, and recreation activities.

66. P. 253, 32CV206: The site is completely within the proposed conservation pool for the reservoir and will be permanently inundated with Alternative 1.

67. P. 259, 32CV210: Please provide a more detailed description of the historic site (well, house, etc.), with a statement on how it was dated; its significance, and justification for why no further work should be conducted.

68. P. 267, 32CV215a:

a. Site 32CV215 and 32CV215a are located separately on the quad maps submitted with the report, and in Figure 28; yet, para. 2 (p. 267) and impacts and recommendations (p. 269) of the site description discuss only 32CV215 (Figure 79a is a photo of 215a). There is no separate site description for 32CV215. Either 32215 and 215a should be lumped and discussed together, or a separate site description should be developed for 215. An explanation of why there is a 215 and a 215a should also be added to the report. Other report tables (e.g., 29, 32) should be adjusted accordingly.
b. Provide more information on how it was determined the historic component is a farm residence dating between 1910 and 1975. Can the dating be more narrowly determined?

69. Information on site impacts, significance, recommendations, and National Register eligibility that is provided in Chapters 7-9 that was not mentioned in the site descriptions, should be included in the final report site descriptions.

70. Tables 23 and 24:

a. All of the prehistoric and some of the historic sites listed in the "no register value" category are recommended to be further tested in the site descriptions section. It seems that not enough information has been gathered on them to determine their National Register or other historic register status. Perhaps the tables can be redone to include a category for (1) potentially significant sites that need further testing, N.R. status: potentially eligible or unknown; (2) non-significant sites that do not need further testing - not eligible for the N.R.; (3) sites that have enough information to determine that they are eligible for the N.R.; and (4) sites that are currently on the N.R. (e.g., 32PB101).

It should be pointed out that recommendations concerning National Register eligibility and significance should be assessed carefully by the Contractor. Once a site has been determined not eligible or not significant a Federal agency does not have any responsibility to deal with that site anymore. This should be kept in mind before it is determined that sites are not eligible for the National Register. In the case of this office, we will independently assess what sites we feel are eligible or ineligible; however, we rely heavily on the Contractor's information and opinion. Other Federal agencies, especially those who do not employ archeologists, will take a Contractor's recommendations and sites that are not considered eligible will not be further studied.

b. Table 24: What does the asterisk next to 32PB101 signify?

71. Pp. 279-283, Register Justifications:

a. Please explain which Register each site would be eligible for. What are the requirements for the North Dakota State Register for historic sites? Define what the register is.

b. 32PB19, line 2: Can "18??" be pinned down more than that?

c. P. 280, 32PB37, see comment number 45.c.

d. 32PB101: The Gingras House and Trading Post is currently on the National Register.

e. 32CV11: Is the recommendation for the plant, community, and bridge to be on the register or just the plant?
72. P. 284, Alternative 3: "Pembileir" should be "Pembilier."

73. Pp. 285-200, Site Impacts: Mention which sites have been determined eligible for the N.R. or are potentially eligible.

74. Tables 25-29:
   a. After each site number please indicate whether the site is prehistoric and/or historic.
   b. Please asterisk which sites will be tested further.
   c. Table 25, "Probable erosion" category: 32CV217 is not listed although it is discussed under that category on page 287. Eight sites are mentioned and 8 sites are listed, but this does not include number 217.

75. P. 303, Alternative 1: Are the 3 bridges and several houses assessed elsewhere in the report, or included in the site descriptions? If so, maybe these should be more specifically listed as sites or reference the site description that identifies them.

76. Table 31: This does not include all the sites that are recommended for testing, so what is the significance of each site based on? Are these N.R. eligible? It is not clear what the purpose of the table is.

77. Table 32:
   a. The 11 Pembina County sites that are listed need to be discussed in the report (survey methods, results, site descriptions, number of sites located, impacts, etc.). Since they are outside the project area maybe they should be listed separately as needing further study, but will not be affected by the project alternatives.
   b. The "excavation (probably)" category needs further explanation on how and why those sites were chosen for predicting probable excavation. Is the excavation category mentioned as the recommended/proposed mitigation method? Perhaps the category could be changed to a mitigation category of avoidance, preservation, moving the site, unavoidable excavation, etc., as the most probable and possible fate for each site affected. Some sites will be able to be avoided, and some will be under water.

78. Please add a conclusions, "so what does this all mean," chapter to the report, as was discussed during the 639 contract fieldtrip.

79. Topo maps: Please add the township, range, and complete quad map reference for each map.
80. Report photographs: The draft report photographs are not very clear. Is there some way this can be remedied in the final report?

81. Scope of Work and Technical Proposal:
   a. The Scope of Work is missing some pages.
   b. Pages 499 and 500 of the technical proposal are out of order.

82. Popular Report: The report should also include a brief summary of the survey methodology, results, research evaluation, impacts, and recommendations. No site locations should be included in this report.
APPENDIX B

SITE LEADS IN THE PROJECT REGION
Site Leads

The following is a list of probable prehistoric and historic sites in the project region. The prehistoric site locations were provided by Mr. Carl Kartes of Walhalla and two historic log cabin locations were provided by Mr. Steve Young of the U.S. Department of the Interior, Fish and Wildlife Service in Bismarck, North Dakota. Additional historic sites with extant structures were photographed and recorded by the archeology field crew in 1981.

**Prehistoric Sites**

1. T162N, R57W, Section 3, SE, SW
2. T162N, R57W, Section 4, SE, NE
3. T162N, R57W, Section 4, SE, SE
4. T162N, R57W, Section 4, NE, SE
5. T162N, R56W, Section 6, NW, SW
6. T163N, R57W, Section 24, NE, NW
7. T163N, R57W, Section 13, SW, SW
8. T163N, R57W, Section 14, NW, NE
9. T163N, R57W, Section 11, NW, SW
10. T163N, R57W, Section 2, NW, NW

**Historic Sites**

1. Log Cabin
2. Log Cabin
3. Valmont
4. Numedahl Community
5. Clapboard House (Figure 80b)
6. Clapboard House (Figure 81b)
7. Clapboard House (Figure 81a)
8. Log Church with stucco (Figures 82b, 83a, 83b)
9. Log House with stucco (Figure 84b)
10. Log School with stucco (Figure 84a)
11. Log House with stucco (Figure 82a)
12. Bridge Over South Pembina River (Figure 86b)
13. Clapboard House and Hand Pump (Figure 85a, 85b)

Stone #95

MINNIE C. OTTEN
Birthdate: 1851
Deathdate: November, 1935
Birthplace: Wisconsin
Parents: Mr. & Mrs. Jacob Schultz(e)
Spouse: John A. Otten (#93)
Children: Hattie (#93), Edward (#92), Henry, John G., Ben, and Annie (Mrs. J.E. Neifeldt)
Other Information: Moved with parents from Wisconsin to Henderson, Minn. where she married Otten in 1870.
Sources: (Neche-Bathgate History Book Committee 1976:37; Chronotype Express 3-1-34:1; Chronotype Express 12-5-35:1)

Stone #92

EDDIE L. OTTEN
Birthdate: 1877
Deathdate: December 7, 1877
Birthplace: Hyde Park area
Parents: John A. Otten (#96) and Minnie C. Schultz(e) (#95)
Spouse:
Children:
Other Information:
Sources: (Neche-Bathgate History Book Committee 1976:37)
Stone #93

HATTIE OTTEN
Birthdate: 1875
Deathdate: December 12, 1877
Birthplace: Hyde Park area
Parents: John A. Otten (#96) and Minnie C. Schultz(e) (#95)
Spouse: 
Children: 
Other Information: 
Sources: (Neche-Bathgate History Book Committee 1976:37)

Stone #30

ANNA G. SANDERS
Birthdate: 1902
Deathdate: 1945
Birthplace: 
Parents: George and Agnes Guenther
Spouse: Philip Sanders
Children: 
Other Information: 
Sources: (Neche-Bathgate History Book Committee 1976:66)

Stone #82

MARY SHEARD (SHERARD)
Birthdate: May 11, 1854
Deathdate: November 8, 1938
Birthplace: Scotland
Parents: 
Spouse: George Sheard (Sherard) (#81)
Children: John (#80), Mrs. Oliver Hughes, Mrs. Oscar Foxen, Mrs. W.H. Johnson
Other Information: Moved with parents from Scotland to Singhampton, Ontario in 1855. Married in 1876 and homesteaded west of Neche.
Sources: (Chronotype Express 11-17-38:1)

Stone #81

GEORGE SHEARD (SHERARD)
Birthdate: November 15, 1844
Deathdate: September 17, 1919
Birthplace: 
Parents: 
Spouse: Mary (#82)
Children: John (#80), Mrs. Oliver Hughes, Mrs. Oscar Foxen, Mrs. W.H. Johnson
Other Information: Homesteaded 1876 west of Neche. Owned narrow strip of fractional sections along border north of Hyde Park cemetery.
Sources: (Chronotype Express 11-17-38:1; Ensign 1893:92-3)
Stone #10

MARGARET A. WATTS
Birthdate: February 26, 1863
Deathdate: April 28, 1923
Birthplace:
Parents: Mr. & Mrs. Blair
Spouse: Harry Watts (#11)
Children:
Other Information: Was David Blair's (#6) aunt.
Sources: (Neche-Bathgate History Book Committee 1976:65)

Stone #60

WILLIAM J. WATTS
Birthdate: March 31, 1849 (1848)
Deathdate: July 6, 1939
Birthplace: London, England
Parents: William Watts (#59) and Marie Ogle (#58)
Spouse: Mary Jane Johnson (#61)
Children: Herbert E., Ward E., Nora (Mrs. Mulqueeney)
Other Information: Moved with parents from England to Ontario. 1879 visited brother-in-law J.C. Johnson (#20) and filed homestead. 1897 erected modern house to replace log building. Assisted in organization of St. Joseph twp. & held several offices including clerk and county commissioner. Served in the state House of Representatives 1899-1903 and 1907-09. Owned SW¼ Section 34 R55W T164N.
Sources: (Neche-Bathgate History Book Committee 1976:71; Chronotype Express 7-6-39:1; WPA Interview n.d.:Watts; Ensign 1893:92-3)

Stone #61

MARY JANE WATTS
Birthdate: August, 1860
Deathdate: August 2, 1952
Birthplace: Minden, Ontario
Parents: Mr. & Mrs. William Johnson
Spouse: William J. Watts (#60)
Children: Herbert E., Ward E., Nora (Mrs. Mulqueeney)
Other Information: Sister of Isabella Gainer (#24), John C. Johnson (#20), and Albert Johnson (#18). Married W.J. Watts in Emerson, Manitoba July 12, 1881.
Sources: (Neche-Bathgate History Book Committee 1976:71; Chronotype Express 7-6-39:1)
Stone #59

WILLIAM WATTS
Birthdate: 1809
Deathdate: 1891
Birthplace:
Parents:
Spouse: Maria Ogle (#58)
Children: William J. Watts (#60)
Other Information: Moved from England to Ontario in 1859
Sources: (Chronotype Express 7-6-39:1)

Stone #58

MARIA WATTS
Birthdate: 1815
Deathdate: 1894
Birthplace:
Parents: Mr. & Mrs. Ogle
Spouse: William Watts (#59)
Children: William J. Watts (#60)
Other Information:
Sources: (Chronotype Express 7-6-39:1)

Stone #15

ORAN WATTS
Birthdate: 1914
Deathdate: 1977
Birthplace: Hyde Park
Parents: Herbert Watts and Gertrude Burt
Spouse:
Children:
Other Information:
Sources: (Neche-Bathgate History Book Committee 1976:72)

Stone #40

BENJAMIN WESSELS
Birthdate: 1857
Deathdate: 1923
Birthplace: Ontario
Parents: Owen and Sarah Wessels (#41,42)
Spouse: Mary Emily Drader (#39)
Children: Percy A., Grace Alma (Mrs. David Blair) (#7), Eva Mae (Mrs. James Howell)
Other Information: Moved to Hyde Park from Trenton, Ontario in 1887. Active in Hyde Park Presbyterian Church
Sources: (Neche-Bathgate History Book Committee 1976:72)
Stone #39

MARY WESSELS
Birthdate: 1859
Deathdate: August, 1938
Birthplace: Bellville, Ontario
Parents: Mr. Drader and Hannah Youmans (#72)
Spouse: Benjamin Wessels (#40)
Children: Percy A., Grace Alma (Mrs. David Blair) (#7), Eva Mae (Mrs. James Howell)
Other Information: Moved from Trenton, Ontario to join husband in 1888. Active in Hyde Park Presbyterian Church.
Sources: (Neche-Bathgate History Book Committee 1976:72; Chronotype Express 9-1-38:1)

Stone #42

OWEN WESSELS
Birthdate: 1827
Deathdate: 1904
Birthplace:
Parents:
Spouse: Sarah (#41)
Children: Benjamin Wessels (#40)
Other Information:
Sources: (Neche-Bathgate History Book Committee 1976:72)

Stone #41

SARAH WESSELS
Birthdate: 1832
Deathdate: 1915
Birthplace:
Parents:
Spouse: Owen Wessels (#42)
Children: Benjamin Wessels (#40)
Other Information:
Sources: (Neche-Bathgate History Book Committee 1976:72)

Stone #47

WILLIAM WRIGHT
Birthdate: 1806
Deathdate: 1898
Birthplace:
Parents:
Spouse: Catherine (#48)
Children: Rebecca Ann (Mrs. James Newell) (#46)
Other Information: One of the last homesteaders. Only land left was the fractional quarter sections 1.8 mi. wide and 2 mi. long.
Sources: (Neche-Bathgate History Book Committee 1976:70)
Stone #48

CATHERINE WRIGHT
Birthdate: 1817
Deathdate: 1898
Birthplace: 
Parents: 
Spouse: William Wright (#47)
Children: Rebecca Ann (Mrs. James Newell) (#46)
Other Information: 
Sources: (Neche-Bathgate History Book Committee 1976:70)

1. Access
   Access to the site is on county road 55, 1 mile west of Walhalla.
   turn south on a gravel section road at the correction turn on county road 55.
   go south to the end of the road, 1/2 miles south of county road 55. The site
   is to the west on a bluff top in a cultivated field.

2. Description of Site
   The site is located in a cultivated field on a bluff top. The prehistoric artifacts were found between a square shaped timbered
   area and the edge of the North Dakota State Fish and Game lands. The log
   cabin is located at the southwest edge of the squared-timbered area.

3. Description of Cultural Materials
   Numerous pieces of chipped stone were recovered. None are culturally diagnostic. Some fragments of bone were also recovered. This appears to be a large habitation site.

4. Artifact Repository
   University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing
   None

13. Other Published References
    None

14. Owner-Address of Collections Observed
    Karl Kartes, Walhalla

15. Statement of Integrity

16. Statement of Significance
    This site has a large prehistoric component, probably a permanent camp of some sort. Also, a standing log cabin is present, which was built originally without nails, but rather with wooden pegs. This site requires further investigation.

1. Access

Access to the site is 1 mile west of Walhalla on county road 55. then turn south onto a gravel section road, go south 1 mile, turn west, go west ½ mile, turn south onto dirt field road, go south until you reach a shelter belt and the edge of the bluff to the Pembina River. This is it.

2. Description of Site

The site is in a cultivated field. The site occurs on the west and east sides of a shelter belt. Most of the artifacts were recovered from east of the shelter belt. The site has an excellent view of the Pembina River Valley. A thin scatter of chipped stone artifacts and bone fragments were recovered.

3. Description of Cultural Materials

Several chipped stone tools, flakes, bone fragments were recovered. None are culturally diagnostic.

1. **Access**
   Access to the site is 6 miles west of Walhalla on county road 55, then southwest on a gravel road for about 1/3 mile. The site is east of the road in a cultivated field, on a large, long, bluff top.

2. **Description of Site**
   The site is in a cultivated field on a bluff top and slope. Artifacts are most dense near the north end of the bluff top and ridge, on a slight rise or hill. Prehistoric artifacts occur over the whole site, while historic artifacts occur near the road at the south and central portions of the site.

3. **Description of Cultural Materials**
   Prehistoric artifacts include flakes, cores, and chunks of chipped stone. No culturally diagnostic artifacts were recovered. Historic artifacts include ceramics and glass. No cultural features were observed.

4. **Artifact Repository**
   University of South Dakota Archaeology Laboratory

5. **Description of Subsurface Testing**
   None

1. **Access**

   Access to the site is south of Walhalla on highway no. 37. 3 miles south of Walhalla, then turn west onto a gravel section road, go west 3 miles, then turn north, go north on gravel and dirt road for about 4/5 mile. Site is in cultivated field by abandoned farm house.

2. **Description of Site**

   The site is in a cultivated field at the edge of a bluff top. A scatter of chipped stone tools, and bone fragments were recovered. Numerous glass and historic ceramics were found around the abandoned farm house. No culturally diagnostic, prehistoric tools were recovered.

3. **Description of Cultural Materials**

   Chipped stone and bone fragments were recovered from the whole site. Historic glass and ceramics were recovered from around the abandoned farm house. The farm house has four rooms, all of which are in a row connected by doorways.

Access

Access to the site is on county road 55, 4½ miles west of Walhalla, turn south onto a gravel road, go south and west on the gravel road for about 2½ miles until you come to a one room school house just south of the road. The site is north of the road about ½ mile, northeast of an abandoned farm house.

Description of Site

The site is in a cultivated field on a bluff top overlooking the Pembina River Valley. A thin scatter of chipped stone artifacts and some bone fragments were recovered from the surface of the ground. No cultural features were observed.

Description of Cultural Materials

A few chipped stone artifacts and bone fragments were recovered. None of the artifacts are culturally diagnostic.

1. Access  Access to the site is on county road 55, 4½ miles west of Walhalla, turn south onto a gravel road, go south and west on the gravel road for about 2½ miles until you come to a scenic overlook point on the east side of the road. The site is in the fields east and south of the overlook.

2. Description of Site  The site is located in a cultivated field along the bluff edge of the Little South Pembina River. The site extends only 150 to 200 meters back from the bluff edge. The site has an excellent view of the River valley. A rather heavy scatter of lithic and bone debris was recovered. Scrapers, cores, flakes, one piece of obsidian flake, etc., were recovered. No culturally diagnostic artifacts were recovered. No features were observed.

3. Description of Cultural Materials  A large quantity of chert and flint flakes, cores, chunks and some tools, bifaces, scrapers, etc., were collected. Some historic ceramics and glass was recovered. On knife river end scraper, one fragment of an obsidian flake, were recovered.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Crops

7. Owner's Name/Address  Carl Kartes, Russell and Lena Thompson

8. Vegetation  Crops

9. Cover (% of visible ground)  part 50%, cut wheat, most of site 100%, plowed

10. Man-hours spent on site  8

11. Project Title  Pembilier Dam and Flood Control  P.I.  Kenneth L. Brown

12. Report Title  Author  K and M Brown

13. Other Published References  None

14. Owner-Address of Collections Observed  Carl Kartes, Walhalla

15. Statement of Integrity

16. Statement of Significance  This is a very large habitation site, prehistoric. The size of the site, the large quantity of chipped stone artifacts, makes further investigations of this site necessary.

1. Access
Access to the site is 4½ miles west of Walhalla on county road 55, turn south onto a gravel road, go south to just before crossing the old bridge over the Pembina River, turn west into a cultivated field, follow a trail west for 3/4 mile. The site is located on a slope and around a dried slough.

2. Description of Site
The site is located on a slope, base of a bluff, and around and in a dried slough. A few chipped stone artifacts came from the base of the bluff slope, most of the bone came from around the dried slough.

3. Description of Cultural Materials
A few chipped stone artifacts were recovered. None are culturally diagnostic. A large quantity of bone, bison/cow size, were recovered from around the dried slough.

4. Artifact Repository

13. Other Published References
None

14. Owner-Address of Collections Observed
Carl Kartes, Walhalla

15. Statement of Integrity

16. Statement of Significance
The thin scatter of lithic debris, and the probable recent origin of the bones from around the slough, suggests the site has probably been eroded out, on the slope, and is not of much prehistoric significance concerning buried, in situ artifacts and features.

1. Access
Access to the site is 4½ miles west of Walhalla on highway 55, turn south onto a gravel road, go south for ¼ mile, site is on hill and slope west of the road.

2. Description of Site
The site is in a cultivated field on a bluff top and hill slope. The south and east and west boundaries of the site are bounded by steep slopes and timber. A thin scatter of chipped stone tools, bone, and historic artifacts of ceramics and glass were recovered from the surface of the ground. The historic artifacts came from the point on the bluff overlook and at a shallow ravine near the north end of the site. The prehistoric artifacts were from over the whole site.

3. Description of Cultural Materials
Fragments of bone and chipped stone artifacts were recovered. No culturally diagnostic artifacts were recovered.

The historic bottle necks suggest a date of late 19th century.

4. Artifact Repository
University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing
None

6. Current Use of Site
Crops

7. Owner's Name/Address
Leo Hornung

8. Vegetation
Crops

9. Cover (% of visible ground)
50%, cut wheat

10. Man-hours spent on site
4

11. Project Title
Pembilier Dam and Flood Control
P.I. Kenneth L. Brown

12. Report Title
Author K and M Brown

13. Other Published References
None

14. Owner-Address of Collections Observed
None

15. Statement of Integrity

16. Statement of Significance
The location of this site, with its excellent view of the Pembina River Valley, may have buried prehistoric materials.
The historic materials suggest a late 19th century occupation and should be checked (this is being done now)

1. Access: Access to the site is 6 miles west of Walhalla on highway 55, turn north onto a gravel road just before crossing the bridge over the Pembina River, follow the road to its end, which is about 3 miles, in a winding, northwesterly direction. The site is on the south side of the Pembina River.

2. Description of Site: The site is adjacent to the Pembina River, on its south side. The site is grown up in weeds and underbrush. In the north end of the site is a rock foundation, old wagon parts, metal, etc. This is an early farmstead which must date to the late 19th century. There has been a lot of s ale deposited on portions of the site, as evidenced by half-buried wagon wheels. The site is on North Dakota State Fish and Game Property.

3. Description of Cultural Materials: A rock foundation, metal wagon parts, wooden building remnants are visible in the weeds and brush. No cultural material was collected, since it was all too large to carry out on foot.

4. Artifact Repository: None

5. Description of Subsurface Testing: None

6. Current Use of Site: Wildlife Refuge

7. Owner's Name/Address: North Dakota Fish and Game Department

8. Vegetation: Weeds, brush

9. Cover (% of visible ground): 5%

10. Man-hours spent on site: 4

11. Project Title: Pembilier Dam and Flood Control
P.I. Kenneth L. Brown

12. Report Title: None
Author: K and M Brown

13. Other Published References: None

14. Owner-Address of Collections Observed: None

15. Statement of Integrity: 

16. Statement of Significance: This site is probably an early farmstead. There is currently being a literature and records search. Since the site probably dates to the mid or late 19th century, further investigations should be conducted at the site.

1. Access
   Access to the site is 4 1/2 miles west of Walhalla on highway 55, turn south onto a gravel road, go south 1 1/2 miles. This is the old Brickmine and factory. The site is on the east side of the road, before you cross the bridge over the Pembina River.

2. Description of Site
   The site is mostly weeds and timber. Some junked, old cars are scattered about the site. An old road, now grown over, leads to a cement foundation and ditch, part of the boilers or furnaces of the brick factory. Large quantities of deteriorating brick occur just below the surface at the bluff slope around the cement foundation.

3. Description of Cultural Materials
   A large quantity of brick fragments, historic glass and metal were collected. The brick factory has still intact cement foundations and a discernible road which is grown over with brush.

16. Statement of Significance
    This is the brick factory, and was an important factory at the turn of the 20th century. This site is now a well known local landmark. An in-depth literature and records search is being made of the Brickmine. Further investigations should be conducted here.

Access to the site is 6 miles west of Walhalla on highway 55, turn north onto a gravel road just before crossing the bridge over the Pembina River. Following the winding, dirt road for about 3/4 mile to 1 mile, turn into cultivated field and drive south to Pembina River.

This site is known as the Fishtrap, and has remnants of a rock dam, a canal ditch to run a grist mill, bridge pilings for a bridge across the Pembina River, and buried rock cellars to houses. Part of the site is in cultivation, the rest of the site is in timber and brush.

No cultural materials were collected. A rock dam, canal ditch, bridge pilings were observed and photographed.

1. **Access**
   On gravel road, 4 miles east of Neche, \( \frac{1}{2} \) mile south of International border, then north on dirt, section road to International border, then west \( \frac{1}{2} \) mile.

2. **Description of Site**
   Site is in a cultivated field called the "strip" by local farmers. The site lies near the south edge of the "strip", 100 meters south of the International border. The site used to be adjacent to a marsh which is now cultivated. Alot of bone fragments of bison/cow size were recovered. Possible kill site around an old marsh or bison wallow.

3. **Description of Cultural Materials**
   Alot of bones recovered from the site. Two projectile points, one lanceolate shaped with side notches (Archaic) and a smaller, triangular, corner-notched projectile point was recovered. This may be a kill site around a marsh or bison wallow.

4. **Artifact Repository**
   University of South Dakota Archaeology Laboratory

5. **Description of Subsurface Testing**
   None

6. **Current Use of Site**
   Crops

7. **Owner's Name/Address**
   Gordon Douville et. al.

8. **Vegetation**
   Crops, wheat

9. **Cover (% of visible ground)**
   100 %

10. **Man-hours spent on site**
    6

11. **Project Title**
    Pembilier Dam and Flood Control Project

12. **Report Title**
    P.I. Kenneth L. Brown

13. **Other Published References**
    None

14. **Owner-Address of Collections Observed**
    None

15. **Statement of Integrity**

16. **Statement of Significance**
    This site may be an upland bison kill, which was at one time located around a marsh or bison wallow. The projectile points and bones suggest an archaic and later component.

17. **Comments/References**
    This site should be avoided by future construction activities and/or investigated for deeply buried cultural deposits.

Recorded by Kenneth and Marie Brown Date 8/9/81

1. Access Access to the site is by gravel road, 5½ miles east of Neche, ½ mile south of the International border. An access road to a cultivated field north of the gravel road is taken, north, to the International border. The site is located east of the fence line and is 100 meters south of the International border.

2. Description of Site The site is in a cultivated field 100 meters south of the International border. The site is small in size, 20,000 sq. meters, and consists of a scatter of bones.

3. Description of Cultural Materials A light scatter of bones and a few chipped stone tool fragments were collected. No culturally diagnostic artifacts were recovered. The bones may be of recent origin.

4. Artifact Repository University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing None

6. Current Use of Site Crops

7. Owner's Name/Address Melvin and Elaine Lembke

8. Vegetation Crops

9. Cover (% of visible ground) 100% (plowed)

10. Man-hours spent on site 2

11. Project Title Pembilier Dam and Flood Control P.I. Kenneth L. Brown

12. Report Title ____________ Author K. & M. Brown

13. Other Published References None

14. Owner-Address of Collections Observed None

15. Statement of Integrity

16. Statement of Significance This site, located on the flatlands, warrants additional investigation for deeply buried cultural remains. The artifacts recovered do not indicate cultural affiliation, but do indicate human habitation of the area prehistorically.

1. Access
Access to the site is on a gravel road \( \frac{1}{2} \) mile south of the International border, 6 miles east of Neche. The site is in the north end of a large cultivated field northwest of a large radio tower. The site is situated on the Range 53 and Range 52 line boundary.

2. Description of Site
The site is in the north end of a large cultivated field. There are no good landmarks. The site is about 100 meters south of the International border and covers about 75,000 sq. meters.

3. Description of Cultural Materials
Several large bone fragments, bison/cow size were recovered and several pieces of brick and metal. No cultural features were discernible.

#### I. SITE I.D.

- **Site Number**: Site number of the archaeological site.
- **State**: The state where the site is located.
- **County**: The county where the site is located.
- **LTL**: Latitude.
- **Twp**: Township.
- **R**: Range.
- **Sec**: Section.
- **QQQ**: Quarter Quarter.
- **QQ**: Quarter.
- **Q**: Quarter.

#### II. SITE DESCRIPTION

- **SITE TYPE**: The type of site, such as Conical Timber Lodge or Bone (worked).
- **CULTURAL MATERIAL**: The cultural material found at the site, such as Ceramics (Native) or Charcoal.
- **Site Area**: The area of the site, measured in square meters.
- **Cultural Depth**: The cultural depth, indicating the depth of cultural materials found.
- **Depth Indicator**: The depth indicator, showing the level of the site.
- **CM Density**: The density of cultural materials at the site.
- **Basis for Dating**: The basis for dating the site.

#### III. ENVIRONMENT

- **Landform 1**: The first landform.
- **Landform 2**: The second landform.
- **Slope/Exposure View, degree**: The slope and exposure view of the site.
- **View, distance**: The view and distance of the site.
- **Elevation**: The elevation of the site.
- **Drainage System**: The drainage system of the site.
- **Perm Water Type**: The type of permanent water.
- **Dist Seas Water Type**: The distance from sea water.
- **Seas Water Type**: The type of seas water.
- **Ecosystem**: The ecosystem of the site.

#### IV. C.R.M.

- **Site Condition**: The condition of the site.
- **Collection**: The collection of the site.
- **Test Excavation**: The test excavation of the site.
- **Management Recommendation**: The recommendation for the management of the site.
- **Additional Information**: Any additional information about the site.

#### OFFICE USE ONLY

- **Soil Association**: The soil association of the site.
- **Ecozone**: The ecozone of the site.
- **Area Signf CR Type**: The area significance and cultural resource type.
- **Verified Site**: Whether the site is verified.
- **Non-Site**: Whether the site is not a site.
- **State Register**: The state register of the site.
- **National Register**: The national register of the site.
- **E C F T F**: The regulatory status of the site.
- **MS Number**: The MS number of the site.

---

**Coder**: The coder of the data.
**Date Coded**: The date the data was coded.
1. Access
Access to the site is on a gravel road ¼ mile south of the International border and 9 miles east of Neche. The site is north of the gravel road. A dirt section road is taken to the International border. The site is west of the dirt section road about 1/3 mile.

2. Description of Site
The site is in a cultivated field and is about 100 meters south of the International border. A very thin scatter of bones and historic ceramics and brick were recovered. The field is very flat and wet.

3. Description of Cultural Materials
Several pieces of bone and historic ceramics and brick were recovered. No absolute dates are obtainable. The thin scatter of historic materials and absence of discernible features does not warrant the site for further investigation.

4. Artifact Repository
University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing
None

1. Access Access to the site is by Interstate I-29 north of Pembina to the U.S. Port of Entry station. The site is east of the Port of Entry station and the old railroad tracks. The site is between the railroad tracks and the Red River of the North, and is along the International border.

2. Description of Site The site consists of a scatter of historic glass and ceramics, metal, etc. from the International border south for about 1/3 mile, and between the railroad tracks and the Red River of the North. This is the location of a small community and trading post in the early 19th century.

3. Description of Cultural Materials Historic glass, ceramics, metal and bones were recovered from the surface. No datable materials were recovered.

4. Artifact Repository University of South Dakota Archaeology Laboratory.

Access Access to the site is 2 miles north of Valhalla, then 11 miles east on Pembina 55, across the Pembina River, to a fence line and entrance to a cultivated field. The site is north of Pembina 55 highway, between the highway and the Pembina River.

Description of Site The site is in a cultivated field adjacent to and north of Pembina 55 highway to the Pembina River. The site measures about 50,000 sq. meters, paralleling the highway, east and west.

Description of Cultural Materials A scatter of bone and chipped stone artifacts were recovered from the surface of the ground. No culturally diagnostics were recovered.

Artifact Repository University of South Dakota Archaeology Laboratory

Description of Subsurface Testing None

Owner-Address of Collections Observed None

Statement of Integrity ______________

Statement of Significance This site, along the banks of the Pembina River on the flatlands, has possible buried, undisturbed cultural materials. The scatter of chipped stone tools, flakes and bones indicates the procurement and/or processing of animal foods. It is believed this site warrants further work.

1. **Access**
   Access to the site is 2 miles north of Walhalla to Pembina 55 highway, then 10 miles east on Pembina 55 highway. Take the gravel road north, just before the Pembina River bridge. Follow gravel road north for 1 mile, turn east on dirt section road, follow it to its end. This is the site area.

2. **Description of Site**
   The site is in a cultivated field located between two old channel scars of the Pembina River. The site is bounded on the north and the south by the Pembina River. No cultural features were observed.

3. **Description of Cultural Materials**
   A large quantity of bone, cow/bison size, historic ceramics, glass, metal, etc. were recovered. This is the location of an old farmstead.

1. Access  Access to the site is 1 mile north of Walhalla (1 mile north of airport), to a gravel road, turn east, go east for 1 3/4 mile. The site is north of the road and contains a number of old farm buildings.

2. Description of Site  The site is an old farmstead with standing outbuildings. The site covers approximately 12,500 sq. meters, with several barns standing. This is a historic site only.

3. Description of Cultural Materials  Quantities of historic ceramics, glass and brick were recovered from a cultivated field due east of the farm buildings.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Fallow ground, cultivated around it

7. Owner's Name/Address  Thomas Schurman, Emma Metelmann

8. Vegetation  Crops, weeds

9. Cover (% of visible ground)  Field east of buildings, 100%, plowed

10. Man-hours spent on site  1

11. Project Title  Pembilier Dam and Flood Control  P.I. Kenneth L. Eown

12. Report Title  Author K and M Brown

13. Other Published References  None

14. Owner-Address of Collections Observed  None

15. Statement of Integrity  

16. Statement of Significance  This historic site was recently abandoned, the house having possibly burned down. The standing structures are not of architectural or historical significance and therefore the site does not warrant further investigation.

Access

Access to the site is 2 miles north of Walhalla to Pembina 55 highway, turn east, go east for 3 miles, turn south onto gravel section road, go south ½ miles to end of section road, and continue south across cultivated field until you reach the Pembina River. Site is west on ridge top.

Description of Site

The site is in a cultivated field, located on top of a slight ridge top. Bones were found eroding out of the cut bank from along the Pembina River. These appear to be bison size. Small flecks of charcoal were recovered.

Description of Cultural Materials

Bison/cow size bones were recovered, charcoal flecks from the soil matrix surrounding the bones from along the cut river bank were recovered by flotation, and several chert flakes were recovered from the ridge top. The cut river bank indicates about 1 meter of soil deposits on top of the bones, and possibly the artifacts.

Statement of Integrity

The recovery of bison size bones, buried about one meter below the surface along a cut river bank, and recovery of chert flakes from the surface indicates a buried cultural component, prehistoric. The charcoal flecks and possible preservation of the site warrants further work.

1. Access  Access to the site is 2 miles north of Walhalla to Pembina 55
  highway. Turn east, go east for 3 miles, turn south onto gravel section
  road, go south 1½ miles to end of section road, and continue south across
  cultivated field until you reach the Pembina River. Site is west of this area.

2. Description of Site  The site is in a cultivated field adjacent to the Pembina
  River. A scatter of bone fragments and a few small pieces of chipped stone,
  i.e. flakes, were recovered from the ground surface. This site is considered
  an isolated find because of the paucity of cultural remains and unknown
  nature of the deposits.

3. Description of Cultural Materials  A scatter of bone fragments were recovered.
  Several small flakes of chert were recovered. No culturally diagnostic
  artifacts were recovered, nor was there any discernible cultural features.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Crops

7. Owner's Name/Address  Theodore Bjornstad

- **Management Recommendation**: [Redacted]

### OFFICE USE ONLY
- **Soil Association Ecozone Area Signf CR Type Verified Site Non-Site**: [Redacted]
- **State Register National Register E C F T F MS Number**: [Redacted]
1. **Access**

Access to the site is 3½ miles east of Walhalla on Pembina Highway, then north on a gravel driveway to a yellow house north of the highway. Follow the driveway, which turns into a dirt section road, for a little more than ½ mile north of no. 9 highway to edge of ridge. This is it.

2. **Description of Site**

The site is in a cultivated field situated on top of a ridge with a prominent lookout point. Historic and prehistoric artifacts are numerous at the east end of the site, while only prehistoric materials occur, less frequently, in the western portions of the site. The site follows the ridge for ½ mile to the west. There is an excellent view of the valley from this site.

3. **Description of Cultural Materials**

Numerous historic artifacts, glass, ceramics, metal, buttons, trade pipe, etc. were collected. The trade pipe and some of the bottle rims suggests a date of about 1850 or later. The prehistoric artifacts, chipped stone tools and a potsherd, are indicative of late prehistoric occupations at the site.

4. **Artifact Repository**

University of South Dakota Archaeology Laboratory

5. **Description of Subsurface Testing**

1. Access  
Access to the site is ½ mile south of the Walhalla cemetary on a high bluff overlooking the Pembina River Valley.

2. Description of Site  
The site is in a cultivated field on a high bluff overlooking the Pembina River Valley to the south. A thin scatter of bone, chipped stone, and historic ceramics were recovered from the surface of the ground.

3. Description of Cultural Materials  
A few fragments of bone, some chipped stone tools, flakes, were recovered. No culturally diagnostic artifacts were recovered. Some historic ceramics were recovered. No dates are obtainable.

4. Artifact Repository  
University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  
None

6. Current Use of Site  
Crops

7. Owner's Name/Address  
Thomas Schurman

8. Vegetation  
Crops

9. Cover (% of visible ground)  
50%, cut wheat

10. Man-hours spent on site

1. Access
Access to the site is 2½ miles southeast of Walhalla. Take county road 9 east of Walhalla ½ mile to the Johnson Farms silos and barns, turn south onto a gravel road. Go south and east on this road for 2½ miles, the site is north of the road at a sharp turn in the road.

2. Description of Site
The site is in a cultivated field adjacent to a gravel road. The site is a historic farmstead. No discernible features or buildings A large quantity of historic ceramics, glass, metal, bricks, etc. occur on the surface of the ground. The site, based upon a car license, dates to 1936. Since the site is farmed now, it is likely the farm was deserted in the 1930's.

3. Description of Cultural Materials
A large quantity of historic ceramics, glass, metal, etc. were recovered. A car license dating 1936 was recovered. Many of the bottle fragments indicate early dates of the late 19th century.

1. Access  Access to the site is 2½ miles southeast of Walhalla. Take county road 9 east of Walhalla ½ mile to the Johnson Farms silos and barns, turn south onto a gravel road. Go south and east on this road for 2½ miles, the site is north of the road near the bluff edge, 1/3 mile north of road.

2. Description of Site  The site is in a cultivated field near the edge of a high bluff. The site is on the highest portion of the bluff, a slight knoll. A scatter of bone fragments, chipped stone, and some historic ceramics and glass were recovered. No cultural features were observed.

3. Description of Cultural Materials  Numerous chipped stone flakes, chunks, and some scrapers were recovered. None are culturally diagnostic. Some historic ceramics and glass was recovered. This historic material is probably from the nearby historic farmstead, 1/3 mile south.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Crops

7. Owner's Name/Address  Albert and Lyle Johnson

8. Vegetation  Crops

9. Cover (% of visible ground)  50%, cut wheat

**Coder:** [Signature]

**Date Coded:** [Signature]
1. Access
   Access to the site is south of Walhalla. Take county highway 9 1/2 mile east of Walhalla to the Johnson Farms silos and barns. Turn onto a gravel road to the south, go south for about 1 mile, turn west onto a field, dirt trail, follow the trail to the top of a bluff, go north to the bluff edge.

2. Description of Site
   The site is in a cultivated field, on a high bluff overlooking the Pembina River Valley to the north and west. A large quantity of chipped stone, bone, and projectile point were recovered from the surface of the ground. The site has an excellent view of the valley.

3. Description of Cultural Materials
   A large quantity of bone, cow/bison size, chipped stone tools were recovered. One small, corner-notched arrow point of chert was recovered. The site appears to have been a large habitation site.

4. Artifact Repository
   University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing
   None

6. Current Use of Site
   Crops

7. Owner’s Name/Address
   Albert Johnson, Ellen Metelmann, Robert Tetrault

8. Vegetation
   Crops

9. Cover (% of visible ground)
   100%, plowed

10. Man-hours spent on site
    8

11. Project Title
    Pemblier Dam and Flood Control

12. Report Title
    Author

13. Other Published References
    None

14. Owner-Address of Collections Observed
    Jay Wessels, Walhalla

15. Statement of Integrity

16. Statement of Significance
    The huge quantity of bone and chipped stone artifacts recovered from this site by us and by Jay Wessels, a local collector, indicates this is a major prehistoric site in the county. This site requires further investigation.

1. **Access**
   Access to the site is 1 mile north on highway 32 of Walhalla, turn east onto a gravel road, first one north of the Walhalla airport, go east 1½ miles to the edge of a ridge, turn south onto a dirt field road at the end of a shelter belt. The site is on the ridge edge by the east end of the shelter belt.

2. **Description of Site**
   The site is in a cultivated field on a ridge overlooking the Pembina River Valley. A thin scatter of chipped stone debris and some tools, bone fragments were recovered from the surface of the site. Jay Wessels, a local collector, has a Clovis projectile point from this site.

3. **Description of Cultural Materials**
   Several bifaces and unifaces of chipped stone were recovered from the site. Several bone fragments were recovered. No diagnostic, culturally, artifacts were collected. Jay Wessels, a local collector has a Clovis projectile point from this site. Some historic ceramics, glass were recovered from around a silo.

4. **Artifact Repository**
   University of South Dakota Archaeology Laboratory

5. **Description of Subsurface Testing**
   None

6. **Current Use of Site**
   Crops

7. **Owner's Name/Address**
   Jay Wessels

8. **Vegetation**
   Crops

9. **Cover (% of visible ground)**
   50%, beans, cut wheat

10. **Man-hours spent on site**
    5

11. **Project Title**
    Pembilier Dam and Flood Control P.I. Kenneth L. Brown

12. **Report Title**
    Author
    K and M Brown

13. **Other Published References**
    None

14. **Owner-Address of Collections Observed**
    Jay Wessels, Walhalla

15. **Statement of Integrity**

16. **Statement of Significance**
    The recovery of a Clovis projectile point by Jay Wessels makes this an important site. There appears to be buried cultural deposits about 50 cm below the surface of the ground.

CODER - Date Coded
1. Access  Access to the site is 1 mile north of Walhalla on highway 32, turn east (1 mile north of airport) onto a gravel road, go east and south on this gravel road for 2½ miles. The site is on the north and south sides of the road.

2. Description of Site  The site is in a cultivated field on a ridge top overlooking the Pembina River Valley to the south. The portion of the site north of the road is bounded on the west by a shelter belt. The site is a thin scatter of chipped stone debris and bone fragments. No cultural features were discernible.

3. Description of Cultural Materials  Several chipped stone artifacts, non culturally diagnostic, were recovered. Some bone fragments were also recovered. Some historic ceramics and glass were also found.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Crops

7. Owner's Name/Address  Emma Metelmann and Theodore Bjornstad

8. Vegetation  Crops

9. Cover (% of visible ground)  50%, beans and cut wheat

10. Man-hours spent on site  3

11. Project Title  Pembilier Dam and Flood Control  P.I. Kenneth L. Brown

12. Report Title  Author  K and M Brown

13. Other Published References  None

14. Owner-Address of Collections Observed  Jay Wessels, Walhalla

15. Statement of Integrity

16. Statement of Significance  The quantity of artifacts collected from this site by Jay Wessels, a local collector, suggests its prehistoric importance. This site should have further investigations.

17. Comments/References

Recorded by  Kenneth and Marie Brown  Date  8/18/81
TOPO

Attach the portion of a 7.5' U.S.G.S. topographic quadrangle that shows the location of the site.

**Coded**  | **Date Coded**  |
1. Access  Access to the site is 2 miles north of Walhalla to county highway 53, then east 4 miles on county highway 55 and turn south onto a gravel section road, go south for 1/2 miles until you reach the edge of the ridge overlooking the Pembina River. The site is east of the road at the edge of the ridge.

2. Description of Site  The site is a historic site, with large quantities of historic ceramics, glass and metal present. The site is bounded on the west by the gravel road. No cultural features were observed.

3. Description of Cultural Materials  Large quantities of glass, ceramics, and metal were observed, some was collected. The historic materials suggests a date of the late 19th to early 20th century. This was probably an early farmstead.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Crops

7. Owner's Name/Address  James O'Keefe and Randall Melaas

8. Vegetation  Crops

9. Cover (% of visible ground)  100%, plowed

10. Man-hours spent on site  4

11. Project Title  Pembilier Dam and Flood Control  P.I., Kenneth L. Brown

12. Report Title  Author  K and M Brown

13. Other Published References  None

14. Owner-Address of Collections Observed  None

15. Statement of Integrity

16. Statement of Significance  The large quantities of historic artifacts dating to the 1800's indicates this may be an important historic location. This site should have further investigations.

1. **Access**
   Access to the site is 2 miles north of Leroy on county highway 12, turn west onto a gravel road, go west to the end of the road at the edge of a prominent ridge, about 1 mile west. The road bisects the site.

2. **Description of Site**
   The site is in a cultivated field, bisected by a dirt road. The site is situated on a ridge top with an excellent view of the lowlands. A thin scatter of chipped stone tools and artifacts were recovered. No cultural features were discernible. The projectile point, an arrow point, is late prehistoric.

3. **Description of Cultural Materials**
   Several pieces of chipped stone were collected. One projectile point, a small, notched form, was recovered. Small fragments of bone were collected also. No additional culturally diagnostic artifacts were collected. This is a late prehistoric site.

4. **Artifact Repository**
   University of South Dakota Archaeology Laboratory

5. **Description of Subsurface Testing**
   None

6. **Current Use of Site**
   Crops

7. **Owner's Name/Address**

1. Access  Access to the site is 1 mile north of Lerov on county highway 12, turn west, go west 2½ miles on a gravel road. The site is marked with a sign, Indian Mound. The site is on the south side of the road.

2. Description of Site  The site is a proposed Indian Mound. However, examination of the site indicates natural agents for its existence. Rumor has it that human skeletal material has been dug from the top of the mound. We did not observe any artifacts, bone, or otherwise.

3. Description of Cultural Materials  None

4. Artifact Repository  No artifacts recovered or observed

5. Description of Subsurface Testing  None

**Coder:** 58 59 60 61 | Date Coded: 1/21/81
1. Access

Access to the site is 5½ miles west of Neche. The site is southeast of Hyde Park Cemetery. One can take county highway 55 east of Walhalla to the bridge crossing the Pembina River. Just before the bridge, turn north, go north on a gravel section road 2 miles, turn east, go east about 3/4 mile, the site is about 1000 ft north of the road.

2. Description of Site

The site is in a cultivated field. This site is the location of Grant's Trading Post, which was built in 1860 and burned in 1880. A dense scatter of historic ceramics, glass and metal occurs on the surface of the ground. Grant's Trading Post and Hotel was an important stopping place for people traveling from Pembina to St. Joseph (now Walhalla).

3. Description of Cultural Materials

A large quantity of historic ceramics, glass and metal was recovered. A key to a door was found, molten glass (indicating intense heat), and several chipped stone artifacts. One rifle or musket size gun flint of dark chert or flint was also recovered.

15. Statement of Integrity

16. Statement of Significance

This site, Grant's Trading Post and Hotel, was an important stopping place for area travelers. Its location is at the juncture of several major trails used in the early and mid 19th century. This site played an important part in the local history of the region. This site should have further investigations conducted.

Coder Date Coded

1. Access  Access to the site is 5 miles west of Neche, 1/2 south of Hyde Park Cemetery. The site is between the gravel section road and the Pembina River.

2. Description of Site  The site is in a cultivated field, with old channel scars visible. A thin scatter of bone fragments, and a few chipped stone artifacts were recovered from the surface of the ground. Local farmers have collected old lead bullets (muzzle loading type) from around the area. The site is adjacent to the Pembina River and is just south of Grant's Trading Post, located 1/2 mile north. No cultural features were observed.

3. Description of Cultural Materials  Some bone fragments and some chipped stone artifacts were recovered. No culturally diagnostic artifacts were recovered.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Crops

7. Owner's Name/Address  Kathleen Kollack

8. Vegetation  Crops

9. Cover (% of visible ground)  50%, cut wheat

10. Man-hours spent on site  4

11. Project Title  Pembilier Dam and Flood Control  P.I. Kenneth L. Brown

12. Report Title  Author  K and M Brown

13. Other Published References  None

14. Owner-Address of Collections Observed  Jay Wessels, Walhalla

15. Statement of Integrity  

16. Statement of Significance  The site's location close to Grant's Trading Post and the finding of historic rifle bullets (muzzle loading type) makes this site worth further investigation. Local rumor has it that U.S. troops used to camp in this area on their travels from Pembina to St. Joseph (now Walhalla).

1. Access  
Access to the site is 3 miles south of Walhalla on highway 32, turn east onto county road (paved). Go east 3 3/4 mile, turn north onto a gravel road which intersects at an angle. Go north 1/2 mile. The site is on the west side of the road on the hill slope.

2. Description of Site  
The site is in a cultivated field located on a hill slope. A thin scatter of chipped stone and historic glass and ceramics were collected from the surface of the ground. The historic artifacts are concentrated at the north end of the site near a shallow ravine. The prehistoric chipped stone artifacts and bones were from the higher areas of the hill slope.

3. Description of Cultural Materials  
Bone fragments and some chipped stone artifacts were recovered. No culturally diagnostic artifacts were recovered. A large quantity of historic glass, ceramics and metal were recovered. The bottle necks indicate a late 19th century occupation.

13. Other Published References  
None

14. Owner-Address of Collections Observed  
Jay Wessels, Walhalla

15. Statement of Integrity

16. Statement of Significance  
A large collection of prehistoric artifacts in the collection of Jay Wessels, a local collector, indicates this may be an important prehistoric site. It appears to be late prehistoric. The historic artifacts indicate an early farmstead at the site. This should be checked out.

Access to the site is 2 miles north of Walhalla on highway 32, then turn east onto county highway 55, go east 2 miles, turn south onto a gravel section road, go south 3/4 mile to edge of ridge, site is on the east side of the road.

2. Description of Site The site is in a cultivated field on the edge of a ridge. A thin scatter of historic ceramics, glass, brick, plastic and bones were recovered. A single barn still stands as does a large shade tree. The site is a historic farmstead with no visible features other than one intact barn.

3. Description of Cultural Materials A large collection of glass, ceramics and brick was made. None provides an absolute date.

4. Artifact Repository University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing None

6. Current Use of Site Crops

7. Owner's Name/Address Emma Metelmann

8. Vegetation Crops

9. Cover (% of visible ground) 100%, plowed

1. Access  
Access to the site is west of Walhalla on highway 55, turn north onto the first gravel section road west of the Walhalla Inn, go north 3/4 mile, turn west onto gravel road, go west 1/2 mile. The site is on the north side of the road.

2. Description of Site  
The site is in a cultivated field at the base of a hill slope. There is an old slough on the north edge of the site. A scatter of chipped stone artifacts, bone fragments, and historic glass, ceramics and metal were collected. This appears to have been the site of a trading post, possibly one of Henry's trading posts.

3. Description of Cultural Materials  
Bone fragments, bison/cow size were recovered, chipped stone artifacts (local collectors have large quantities of points, etc), historic glass and ceramics, metal etc. Ted Dunnigan, a local collector has a brass trade medal which he found on the site.

1. Access Access to the site is 2 miles north of Walhalla to Pembina 55 highway, turn east, go east for 3 miles, turn south onto gravel section road, go south 1½ miles to end of section road, and continue south across cultivated field until you reach the Pembina River. Site is about 3/4 mile west.

2. Description of Site The site is in a cultivated field adjacent to the Pembina River. A thin scatter of bone fragments, glass, and a rifle cartridge were recovered from the surface of the ground. No cultural features were discernible.

3. Description of Cultural Materials Several bone fragments, broken historic glass and a rifle cartridge were recovered. No prehistoric materials, other than the bone, (possibly prehistoric), were recovered or observed. This appears to be a possible historic trash dumping site.

4. Artifact Repository University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing None

6. Current Use of Site Crops

7. Owner's Name/Address Theodore Bjornstad

8. Vegetation Crops

9. Cover (% of visible ground) 50%, beans

10. Man-hours spent on site 2

11. Project Title Pembilier Dam and Flood Control P.I.Kenneth L. Brown

12. Report Title __Author K and M Brown

13. Other Published References None

14. Owner-Address of Collections Observed None

15. Statement of Integrity

16. Statement of Significance This site is considered a find spot, which is likely to have been a historic trash dumping area. This site does not warrant further investigation.

Describe the present and original (if known) physical appearance

The Gingras Historic Site covers slightly less than one-half acre of land atop a grass covered knoll about a mile north of the Pembina River in northeastern North Dakota. Originally part of the long grass prairie region of the Great Plains, where gently rolling, grass covered landscapes stretched to the horizons and where trees were most limited to stream banks, marshy swales or isolated units scattered haphazardly about the region, the site is now surrounded by cultivated fields separated by planted shelterbelts. Occasional pockets of wind borne silt, deposited during the "Dust Bowl" era of the 1930's, can still be found especially near long time abandoned buildings. A township road passes the site along its northern boundary overlying a former ox cart trail that serviced the area during the mid-nineteenth Century. Two buildings stand on the site, the trading store and the home of Antoine Blanc Gingras, resident trader, and an important figure in the early history of the North Dakota-Minnesota-Canada border region. Despite the alterations of vegetative patterns cited above, the site maintains the, essentially, the character of its original condition. The topography still permits expansive vistas stimulating the sense of loneliness, solitude and quiet experienced by early day travelers and settlers.

When the State Historical Society of North Dakota acquired the site in 1971, the two buildings were found to be badly deteriorated and much altered. Intensive archaeological and historical investigation was started on the buildings in 1972 and resulted in a determination that not only was there sufficient integrity of fabric, design and materials to warrant restoration, but also that locally uncommon construction techniques, ex tant examples of innovative use of available materials, unexpected refinements of architectural detail and historical association with the history of the commerce, politics, settlement and growth of the region made preservation imperative.

Built during the 1840's, both the buildings are stylistically an amalgam of the classic American log cabin and the French/Canadian log cabin as adopted and adapted by the Métis culture in the international border region. Both are one and one-half stories high and are constructed of square hewn oak logs, dovetailed at the corners. Both were originally approximately 50' X 20' in size and both had a 26' X 20', three wall addition added to them, attached by means of mortise and tenon joints cut into vertical, hewn logs pinned to the main building with oak trenails. Trenail pinning is evident throughout the two structures. The buildings contained tongue and groove flooring on each level, laid on cedar joists on the first level and on oak joists on the second. Their roofs were supported without a ridgpole, but by rafters joined by tie beams. The lack of evidence of fireplaces suggests that the buildings were heated by stoves.

Sometime between the death of Gingras, in 1877, and 1914 when the buildings were occupied by the Allen Andrews family, the store, which had had two rooms on each level, was converted into a barn by closing off the former main entrance, which consisted of a large door flanked by a window on either side, and cutting new door and window openings and by adding barn appurtenances such as feed troughs and animal stalls. The building has since been archeologically recorded, dismantled and is presently being reconstructed on its original location using the original materials. Where replacement parts are necessary, every attempt has been made to substitute materials as close to the original as possible.

The house differs from the store by being much more elaborately finished. Five bays wide and two bays deep, the entire structure is sheathed with clapboard siding, finished with vertical corner boards and moldings around the doors and windows. The house has double hung windows with the exception of one slant, sash window at the western verge and two
slant, sash windows at the opposite verge overlooking the roof of the addition. The roof is high pitched and currently denuded of the original cedar shingles. The boxed cornices include a plain frieze and are enhanced by bargeboards on all sides, although some segments have fallen off or have been removed temporarily.

Interiorly, the house contained four rooms and a central hallway on the main level and had a closed stairway with a balustrade guardrail to the upper level. The walls were of plaster, applied to split willow laths, painted and finished with moldings at all joints. The ceilings, like the floors, were fitted tongue and groove boards. A half basement underlies the the house.

Preparatory to restoration, additional investigation will be undertaken, particularly in the upper levels of the house and its addition.

SPECIFIC DATES 1843-1877

STATEMENT OF SIGNIFICANCE

The Gingras Historic Site played a vitally important role, as did Antoine B. Gingras personally, in the commercial, political and settlement development of the North Dakota-Minnesota-Canada border region. Because of Gingras' activities, the former Hudson's Bay Company trade route was shifted from its northern route, through Fort Gary (Winnipeg) to a souther route through St. Paul, earning huge tariff revenues for the United States and firmly establishing U.S. economic and political control over the border region. Architecturally, the buildings on the Gingras site display locally uncommon construction techniques, extant examples of innovative use of available material, unexpected refinement of architectural details and maintain sufficient integrity of design, fabric and materials to warrant preservation.

The Gingras Historic Site consists of a trading store and house built, on this location and still standing, in the 1840's by a Metis fur trader, Antoine Blanc Gingras. The buildings on the site are among the few tangible remains of the fur trade era in the valley of the Red River of the North.

The 1840's were a period of intense competition between the American fur trading partnership of Norman Kittson and Henry Hastings Sibley and the British Hudson's Bay Company. The Metis, who had a sense of common cultural identity based on mixed Indian-European descent, a common language and a shared way of life, had traditionally fought the monopoly granted the Hudson's Bay Company by the British government. When Kittson and Sibley began competing with the British company, independent Metis fur traders such as Gingras and James Sinclair, joined with the Americans. The trade war that followed had repercussions far beyond the Red River Valley, influencing to some extent the foreign policies of both the United States and Great Britain.

One of the most important factors enabling Kittson, Sibley and the Metis to compete successfully with the Hudson's Bay Company was the reorientation of transportation routes they instituted. The American and Metis traders introduced the use of ox-cart brigades for transporting their furs to market at St. Paul, Minnesota Territory. The routing through St. Paul proved to be so much more efficient than the Hudson's Bay Company's route, by York boat to Hudson Bay and thence by sea to Europe, that, in the 1850's, the Hudson's Bay Company made arrangements with the United States Government to ship their goods through St. Paul also.

Antoine Gingras became both prominent and wealthy as a result of the part he played in these events. In 1852 and 1853, he served in the Minnesota Territorial Legislature, and by 1861, he was listed in the census as having goods and property valued at $60,000. By 1869, he had increased his holdings to include a chain of trading posts extending across northern North Dakota and southern Manitoba. Gingras also became involved in the Riel Rebellion (1869) on the Metis side. As did the other Metis participants, Gingras suffered
severe financial losses because of his involvement, but he made the necessary adjustments and later, participated in the chartering of the City of Winnipeg and the Winnipeg Board of Trade in 1873. Antoine B. Gingras died in 1877 and was buried at St. Joseph (now Walhalla), Dakota Territory.

The buildings on the Gingras site are architecturally significant for the information they might provide about the construction of both utilitarian and domestic log buildings, especially those built within the Red River Valley during the mid-1800's. Although both buildings are built of hewn oak logs in a manner consistent with other log buildings of the period, the house shows more careful workmanship and attention to finish details than the store. Historic records indicate that the major influence in the design of the house came from St. Paul, Minnesota. However, a comparison of this house with comparable buildings in Winnipeg and St. Paul might provide more detailed information about relative architectural influences on the Great Plains.

1. Access
Access to the site is on a gravel road, 3 miles east and north of
Yelch, 1 mile south of the International border. The site is 1 1/2 mile
north of the gravel road on a dirt section road. The site is about
150 meters west of the dirt section road and 200 meters south of the
International Border.

2. Description of Site
The site is in a cultivated field. The site
area is only about 10 meters in diameter and consists of a light scatter
of historic artifacts, glass and ceramics.

3. Description of Cultural Materials
Several broken pieces of historic ceramics were recovered from the site. No dates are
discernible from the remains.

1. Access  Access to the site is 2 miles north of Walhalla, then 10 miles east on Pembina 55 highway, across the Pembina River, and to the first open, cultivated field north of the highway, located within a recently dozed forest area. A lot of channel scars are present. The site is 1/8 mile north west of the highway.

2. Description of Site  The site is located between two old channel scars of the Pembina River. The site has recently been cleared of timber by dozing. It is within a cultivated field surrounded by timber on the south and west.

3. Description of Cultural Materials  A large quantity of bone fragments, bison/cow size, were recovered. None have any discernible butchering marks or cut marks. No other artifacts were recovered.

4. Artifact Repository  University of South Dakota Archeology Laboratory

5. Description of Subsurface Testing  None

Coder ___________________________ Date Coded ___________________________
1. Access  Access to the site is 2 miles north of Walhalla, then 10 miles east on Pembina 55 highway, across the Pembina River, to the first cultivated field north of the highway and east of the River. The site is located within a recently dozed field with numerous channel scars.

2. Description of Site  The site is located in a cultivated field which was recently dozed to clear the timber. The site is due north of Pembina 55 highway, about ½ mile. The site is between and within an old channel scar.

3. Description of Cultural Materials  Several pieces of bone fragments were recovered.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Crops, wheat

7. Owner's Name/Address  J M Guenther

8. Vegetation  Crops, wheat

9. Cover (% of visible ground)  50%, cut wheat

10. Man-hours spent on site  2

11. Project Title  Pembilier Dam and Flood Control  P.I. Kenneth L. Brown

12. Report Title  Author K and M Brown

13. Other Published References  None

14. Owner-Address of Collections Observed  None

15. Statement of Integrity  

16. Statement of Significance  The thin scatter of bones, and absence of cultural artifacts does not make this site warrant further investigations.

17. Comments/References

Descriptive Section

1. Access
   Access to the site is 2 miles north of Walhalla, then 1½ miles east on Pembina 55 highway, east of the Pembina River. A gravel road, 1½ miles east of the Pembina River bridge on highway 55, going north, following this road 1 mile north, then west for ½ mile, then north 3/4 mile. The site is adjacent to the Pembina River.

2. Description of Site
   The site is in a cultivated field in the northeast corner of a meander loop of the Pembina River. The site is located on very sandy, loam soil. There is a man-made levy on the north and east edge of the site.

3. Description of Cultural Materials
   Several pieces of bone fragment and several historic ceramic sherds were recovered from the surface of the ground. No other cultural remains were observed.

4. Artifact Repository
   University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing
   None

6. Current Use of Site
   Crops

**Office Use Only:**

- Coder Date Coded
1. Access
Access to the site is 2 miles north of Walhalla to Pembina 55 highway, then east on Pembina 55 highway 2 miles to a gravel section road, going north.
Go north on gravel section road for 1½ miles. The site is east of the road, ½ mile east of road in a cultivated field with shelter belts bordering its north, east and south sides. The site is near the eastern shelter belt.

2. Description of Site
The site is in a cultivated field with shelter belts on the north, east and south. The site is near the eastern shelter belt. The site is on very flat lands, no visible features.

3. Description of Cultural Materials
Only a few bone fragments and some historic ceramic sherds and metal fragments were recovered from the surface of the ground. The landowner reported finding small, triangular arrowheads at this location. We did not see any of these reported arrowheads.

4. Artifact Repository
University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing
None

15. Statement of Integrity

16. Statement of Significance
Since the landowner reports having found numerous arrowheads from this location, even though we did not find much cultural material, it is suggested that any future construction activities in the area should be delayed until further investigations are made at this location.

- Site
1. Access  Access to the site is 1 1/8 mile east of the Walhalla airport, northwest of Walhalla, due east of the Gingras House.

2. Description of Site  The site is in a cultivated field, on a low ridge top overlooking the Pembina River to the east and south. The site seems to be limited to the very top area of the low ridge. This is considered a find spot, due to low frequency of artifacts.

3. Description of Cultural Materials  Only a couple of pieces of chipped stone were recovered from the surface of the ground. No culturally diagnostic artifacts were recovered. No cultural features were discernible.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Crops

7. Owner's Name/Address  Alvah Tetrault

8. Vegetation  Crops

9. Cover (% of visible ground)  50%, cut wheat

10. Man-hours spent on site  2

11. Project Title  Pembilier Dam and Flood Control  P.I. Kenneth L. Brown

12. Report Title  None

13. Other Published References  None

14. Owner-Address of Collections Observed  None

15. Statement of Integrity  

16. Statement of Significance  The low frequency of chipped stone artifacts and the presence of modern cultivation practices on the site, ie erosion, plowing, this site does not warrant further investigations.

17. Comments/References  

Recorded by  Kenneth L. Brown  Date  8/12/81

1. Access  Access to the site is 2 miles north of Walhalla to Pembina 55 highway, turn east, go east for 3 miles, turn south onto gravel section road, go south 1½ miles to end of section road, and continue south across cultivated field until you reach the Pembina River. Site is ½ west.

2. Description of Site  The site is located in a cultivated field adjacent to the Pembina River. A thin scatter of bone fragments were recovered.

3. Description of Cultural Materials  A thin scatter of bone fragments were recovered from the surface of the ground. No other artifacts were recovered. No culturally diagnostic artifacts were recovered from the site.

4. Artifact Repository  University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing  None

6. Current Use of Site  Crops

7. Owner's Name/Address  Theodore Bjornstad

8. Vegetation  Crops

9. Cover (% of visible ground)  50%, beans

10. Man-hours spent on site  1

11. Project Title  Pembilier Dam and Flood Control  P.I. Kenneth L. Brown

12. Report Title  Author  K and M Brown

13. Other Published References  None

14. Owner-Address of Collections Observed  None

15. Statement of Integrity

16. Statement of Significance  The thin scatter of bone fragments, with an absence of any other artifacts does not warrant further investigations at this site. This is considered a find spot.

17. Comments/References

### OFFICE USE ONLY

| Coder | Date Coded |
1. Access Access to the site is 1½ miles west of Leroy on county highway 9, turn north onto a dirt field road. There is a prominent earthen mound about ¼ mile north of highway 9. The site is the mound area.

2. Description of Site This site is on a large earthen mound. The mound appears to be natural, not of human manufacture. Some bone fragments were recovered from the top and sides of the mound. No cultural artifacts were recovered or observed. No cultural features were discernible.

3. Description of Cultural Materials A few fragments of bone were recovered.

4. Artifact Repository University of South Dakota Archaeology Laboratory

5. Description of Subsurface Testing None

6. Current Use of Site Crops

7. Owner's Name/Address Timothy Eagan

8. Vegetation Crops

9. Cover (% of visible ground) 50%, wheat, cut

10. Man-hours spent on site 4

11. Project Title Pembilier Dam and Flood Control P.I. Kenneth L. Brown

12. Report Title None

13. Other Published References None

14. Owner-Address of Collections Observed None

15. Statement of Integrity

16. Statement of Significance This site is considered a find spot. No definite cultural material was observed or collected. The mound appears to be due to natural agents. This site does not require further investigation.

17. Comments/References

Recorded by Kenneth and Marie Brown Date 8/19/81
TOPO

Attach the portion of 7.5' U.S.G.S. topographic quadrangle that shows location of the site.
