CHAPTER I
THE CODING SYSTEM OF
AMBULATORY CARE NURSING ACTIVITIES

The Workload Management System for Nursing (WMSN) is a patient classification/staffing system operational in the inpatient areas of 36 Navy and 50 Army hospitals. The Ambulatory Care Project hopes to extend the WMSN into the emergency and outpatient departments of shore based Naval medical treatment facilities.

In preparation for work measurement studies the operational defining of direct care nursing activities nursing experts were consulted and a literature review was conducted (Calkin, Wallace, Chewning, & Gustafson, 1975; Jenkins & van de Leuv, 1978; Kukuk & Murphy, 1980; Sherrod, Rauch, & Twist, 1981; and Naval Medical Command, 1985). In addition, a survey of 567 registered nurses working in emergency and outpatient departments of Naval medical treatment facilities was conducted in FY 86 (Warren, Styer, & Sturm, 1987). The coding system was developed to simplify identification of activities for timing on laptop computers. The operational definitions are followed by a five or six digit code (S xxxx) or (S xxxx r) which corresponds to the code assigned by Sherrod in the Army WMSN inpatient nursing activity study (See Appendix A).
The four digit code refers to the clinical area (A - Z), the type of activity (1 - 9 plus 0 for Specialty procedures), and the alphabetized list of activities (1-99).

This manual consists of definitions of activities in the following clinical areas studied in FY 87:

- Emergency Department
- Gastroenterology Clinic
- Immunization/Allergy Clinic
- Internal Medicine Clinic
- Obstetrics/Gynecology Clinic
- Orthopedic Clinic
- Pediatric Clinic
- Primary Care Clinic (FPC, MSC, Acute Care)
- Surgery Clinic (Gen., Plastic)

Activities found only in specialized areas are defined in the manual under Specialty Procedures. Activities found commonly in several clinical areas are described in ten areas of responsibility:

- x100 - Log In/Out
- x200 - Weights/Measures
- x300 - Assessment
- x400 - Transport/Safety
- x500 - Gen Procedures/Trtmts
- x600 - Instruction/Teaching
- x700 - Diagnostic/Tests
- x800 - Medications/IV therapy
- x900 - Emergency Procedures
- x000 - Specialty Procedures
The activities to be timed are listed alphabetically and numbered consecutively under the general area of responsibility: eg., x101, x102, 103.... Observers enter the appropriate clinic letter in place of the "x:"

A000 - Aviation Medicine  
B000 - Blood Bank

Apply warm wet towels to the patient's breasts for a 5-10 minute period. Obtain baseline for FHT's and uterine baseline for contractions. Begin the test, monitoring intermittently for three FHR accelerations in response to three spontaneously induced uterine contractions within a ten minute period. Contact medical officer when test is ready for interpretation. When test is completed, detach patient from monitor.

APPENDIX A

The Sherrod Code identified at the end of the ambulatory care operational definitions (S xxxx) corresponds to activities previously defined in the Nursing Care Hour Standards Study (Sherrod, Rauch, & Twist, 1981). The letter "r" by this number code (S xxxx r) denotes a similar patient care activity title but a change or revision in definition.

The operational definitions in ambulatory care services will include many patient care activities that are timed in the Sherrod study. The operational definitions in the inpatient nursing care hours study were used to time nursing care activities that were "carried out in the presence of the patient" (Sherrod, 1981, p. 4). The code is referenced to allow comparisons between the data. However, the direct patient care activities timed in the ambulatory care services will not be confined to those aspects of direct care activities carried out in the presence of a patient. Times for patient care activities will be recorded on a laptop computer so that the activity time will document the preliminary paperwork, the preparation of medications, supplies, and equipment, the procedure itself, the documentation of the procedure, and cleanup of care site and materials.
