ABSTRACT

This thesis examines the design and development of an automated information system to support the records keeping and reporting functions for private messes afloat. A system life cycle methodology was used to develop the program, Private Mess Accounting System (PMAS). This program was then demonstrated for potential users and statistical information was gathered and analyzed on the program's potential impact.

I. INTRODUCTION

A. BACKGROUND

The dining facilities aboard naval vessels, generally referred to as messing facilities, are grouped into the two distinct categories of General Messes and Private Messes. This thesis is directed towards automating the transaction processing in the area of Private Messes and generally providing improved decision support to the Mess Treasurer. Officers and Chief Petty Officers are authorized to establish private messes and today every naval vessel maintains at least one and sometimes several private messes. The membership of these messes is restricted by regulation and the costs of operation are borne by the membership on a prorated basis. As will be discussed later, the methods for such prorating of costs can vary from one mess to another. The assets held by each mess can range in value from several hundred dollars in small messes to several thousand dollars in the larger ones. The financial management of the mess is performed by an elected Mess Treasurer, from within the membership of the mess. In some cases, however, enlisted personnel meeting regulatory requirements may be appointed.

B. PROBLEMS WITH THE CURRENT SYSTEM

On the vast majority of ships the position of Mess Treasurer is held as a collateral duty for officers already burdened with other responsibilities. Most officers assigned as Mess Treasurer also have responsibilities as division officers, underway and inport watchstanders, as well as professional
development requirements. The problem of maintaining accurate records has been further aggravated by the frequency with which the job is rotated and the time required to become proficient at performing the associated tasks. The financial records keeping function is currently based on a manual system requiring long hours of repetitious and tedious data entry followed by cumbersome report generation. The Mess Treasurer function involves many issues such as inventory management, procurement, billing, cash collection and disbursement of funds. In most cases the officer assigned to the function has little theoretical background or operational training in these areas resulting in inaccurate financial statements, improper safeguarding of assets and excessive time and energy spent in an effort to properly correct and maintain the financial records.

C. OBJECTIVES

This thesis examines in close detail the structure and design for an automated system that can be used to maintain the financial records of all private messes aboard ship. Issues concerning regulatory requirements and the technical publications describing procedures to accomplish those requirements were explored to determine the true nature of the system. Based upon a graphical representation of the system structure and functions as shown in Appendix A, decisions were made as to automation boundaries and development schedules. The proposed design, designated PMAs, was prototyped using database development language. The test and evaluation phase used this prototype to provide data necessary in answering the research questions and supporting the recommendations and conclusions.
D. THE RESEARCH QUESTIONS

The thesis research is directed at seven specific questions of interest and concern to the Mess Treasurer. These questions include:

- What information can be provided to support improved financial management? Is information available but not in a form usable to the Mess Treasurer?

- Can the level of expertise required to operate the system be significantly reduced. Will automation of some or all functions make the system more user friendly and easier to master?

- Is a significant level of improvement in the accuracy of the financial records attainable? Will the automation of some or all of the system increased reliability in the financial statements while providing an audit trail for error detection/correction?

- What are the automation boundaries in a proposed system? What functions should be automated and which should remain manual?

- Is management information provided in a more timely manner? Is the Mess Treasurer able to produce financial reports faster as well as produce information useful in decision making while it is still current?

- Will the proposed system provide support to menu planning? Will system output provide financial information useful to the mess caterer for planning purposes?

- Test the following null hypotheses to determine possible impact of the proposed system on the Mess Treasurer function:

  H1: Understanding of the current private mess records keeping system by the Mess Treasurer's is generally limited.

  H2: Performance of the Mess Treasurer task significantly impacts the Treasurer's primary duty.

  H3: Mess records turned over during the relieving process are not generally complete and inspection ready.

  H4: Mess Treasurers believe there are significant gains to be realized from automating the records keeping process.

  H5: Automating the records keeping process improve the Mess Treasurer disposition toward the required tasks.
H6: The automated system will produce significant savings of time for the Mess Treasurer.

H7: Use of the automated system will improve the accuracy and timeliness of report submission in the opinion of the treasurer.

H8: The automated system is easy to understand and not complicated to operate.

H9: PMAs will be of significant use to a Mess Treasurer.

E. SCOPE

This thesis is concerned with the development of an automated management information system for the financial reporting and record keeping functions required by private messes afloat. Within these boundaries a two phased approach was taken starting with system development and then moving into test and evaluation. In the development phase emphasis was placed on a three step approach starting with an analysis of the requirements as established by regulation then developing a design of the logical system without regard to possible methods of implementation and finally implementing the system in preparation for test and evaluation. This implementation was constrained by a development language requirement established by the thesis sponsor. The implementation must be accomplished through the use of FOXBASE data base development language. The second phase will be devoted to the system evaluation focusing on three primary areas of interest:

- Timeliness of information in support of management decision making.
- Level of technical expertise required to master the new system.
- Accuracy of records and reports as compared to the manual system.
F. RESEARCH METHODOLOGY

Within the development phase of the project a structured systems analysis and design methodology was utilized as the development model. To assist in developing system requirements interviews with appropriate personnel within the Navy Food Service Systems office and a review of applicable publications were performed. The use of questionnaires and interviews with afloat supply officers assisted in establishing a baseline against which the performance of the newly developed systems was measured. The second phase of the project was conducted as an iterative process to test, demonstrate, and incorporate recommended changes. Upon completion of this prototyping process, testing of the automated system against the old system was conducted to develop the statistics necessary to address the research questions.

G. SUMMARY OF FINDINGS

Upon completion of the development and evaluation phases the results were compared against the original questions to draw conclusions and make recommendations.

- Concerning additional financial information, the automated system generates a transaction listing to provide an audit trail and assist in error detection, a recommended mess bill and a meal price list for the next month. Additionally, the system produces a complete trial balance to assist in financial statement preparation.

- Data collected indicates that a significant amount of time will be saved using the automated system as compared to the manual system.

- To provide more conclusive evidence that improvements in accuracy result from implementing this system, more time than is available would be required. However, some conclusions can be drawn to support improved accuracy from the tests conducted.
As a preliminary evaluation the prototype system was tested among 25 individuals. The findings discussed in Chapter 4 indicate both a favorable and statistically significant result.

In all situations the improvements in timeliness and accuracy of report submission were anticipated to be significant.

H. ORGANIZATION OF STUDY

The main body of the thesis is divided into five chapters with the next three addressing the issues described above and ending with a fifth chapter for conclusions and recommendations. A brief description of these chapters is as follows: Chapter II—an in-depth description of the system as it exists in its logical form; Chapter III—the logical design of the proposed system to include the dataflow diagrams and module specifications for source code development; Chapter IV—a performance evaluation of the automated system as opposed to the manual system currently in use; and Chapter V—a discussion of findings and recommendations.
II. ANALYSIS

A. INTRODUCTION

The introductory chapter described, in general terms, the framework of the private mess information system project, establishing boundaries and defining system objectives. In this chapter, a more in-depth analysis of the system is conducted to develop a logical model of what the system accomplishes given the system inputs and outputs. This analysis focuses on what the system is to accomplish and not on the specifics of how it is to be accomplished. The system will be described in terms of data flow diagrams using a functional approach for the high level views and turning to a data driven approach for the analytical discussions at the data element level. This approach is based on structured analysis and design techniques and will take the data elements found in the system output and trace them back through the system to determine their origin. Along the way these data elements are examined to identify data stores, algorithms and input requirements. Upon completion of this phase of the system development, certain exit criteria were required to be met. These criteria consist of a graphical representation of the system presented in the form of data flow diagrams, a data dictionary identifying the data elements that occur in the system and a list of the algorithms used to generate the system output.
B. DATA FLOW DIAGRAM LEVELING

An examination of the system on a broad scope reveals two major functional areas. The first area to be considered was the recording of the daily transactions into the system. The mess treasurer is daily faced with a variety of transactions dealing with funds collection, funds disbursements, establishment of accounts receivables or payables, and changes in the mess membership. All the daily transactions must be properly recorded and posted to the appropriated accounts. These transactions represent the inputs to the system. The second major functional area is that of generating monthly operating statements. The mess is required by regulation to provide a monthly financial operating statement along with a variety of supporting documentation in the form of summary ledgers. These ledgers are prepared for the following accounts: (1) accounts receivable; (2) accounts payable; (3) record of expenditures; (4) record of collections; (5) a listing of current mess members; (6) mess bills owed by the members, etc. These reports generated by the financial system represent the outputs. The data flow diagram in Figure 1, illustrates the process of transactions entering the system and being assigned to data stores and then at the end of the month the financial reports are processed and distributed to the membership of the mess. Each of the major functional areas will be decomposed into its component parts in an effort to identify the processes necessary to accomplish the major functional objectives.
Figure 1. Level 1 DFD
C. FUNCTIONAL DECOMPOSITION

At this point it is still not clear as to exactly what the system is doing. To get a better feel for the system requirements it is necessary to break down the major function areas into more easily understood functions. The first major area of transaction processing actually represents several smaller functions as described below:

- Accounts receivable: the system must be able to account for amounts due from its members as well as any outside agencies.

- Accounts payable: the system must also track amounts owed by the mess for items such as provisions and supplies to support the mess operations.

- Cash collections: cash collected by the mess treasurer must be properly entered into the accounting system.

- Cash disbursements: cash disbursements made by the mess treasurer against mess obligations must also be posted into the system.

- Changes in membership: both additions and deletions from the membership rolls must be recorded accurately to ensure proper billing and/or refund.

- Handling non-members: from time to time non-members such as technical representatives will eat in the mess. The billing of these people must be addressed.

Figure 2 represents the decomposition of the transaction function.

The second major area for decomposition is the report generation function. This function can be broken down into six different sub-functions as described below.

- Financial Statement: The Navy Food Service Systems Manual requires that a NAVSUP Form 1368 be prepared monthly for all afloat private messes. This statement contains information on the cash accounts, balance sheet accounts, mess share value, provisions consumed, and cost per man calculation.
Figure 2. Decomposition of Transaction Functions
- **Statement of Accounts Receivable:** In support of the financial statement, a listing of all outstanding accounts receivable is to be prepared and attached.

- **Statement of Accounts Payable:** A list of all current accounts payable will also be attached to the financial statements.

- **Record of Collections:** A record of all cash collections made by the mess for the current month will be attached to the monthly financial statement.

- **Records of Expenditures:** Additionally a record of all disbursements made in the name of the mess for the current month will be attached to the financial statement.

- **Monthly Mess Bills:** At the end of every month the system must produce a mess bill for all members of the mess as well as any non-members subsisting out of the private mess.

- **Record of Mess Members:** Attached to the financial report package is to be a listing of all current mess members containing information as described below.

Figure 3 illustrates the decomposition of the report generation process.

D. **DATA DRIVEN ANALYSIS**

Now that the functions to be performed by the system have been identified and discussed, the emphasis is directed to analyzing the flow of data through the system from the point of system output back to the point of system input. This analysis is performed using a data driven approach. In this approach the output of the system is examined and the data elements are traced back to determine their origin and make up. Appendix B contains the results of this analysis. During this process the algorithms used to manipulate the data are identified, described, and recorded. All system output such as the financial statements and the monthly reports were
Figure 3. Decomposition of Report Generation Function
examined to identify all data elements and their source. This analysis represents all the data elements necessary for the system to function.

E. ALGORITHMS

In the case of many of the data elements identified above, the source is not necessarily a data store but rather is the result of a data manipulation process. To have a proper understanding of the system these algorithms must be identified. Appendix C contains the results of this process. This represents the first effort at identifying the systems algorithms. As the development process continues, other algorithms will be uncovered and incorporated into the development program.

F. CONCLUSION

Now that the system has been analyzed to determine the logical components and functions, certain generalizations about the system can be made. On a high level the input-process-output functions are represented by the transactions, report generation, and report distribution processes respectively. A decomposition of the transaction process shows the input to the system can come from many different sources such as bills for provisions bought both from the supply officer and outside vendors, bills for supplies such as plaques and pins, credit memo’s from suppliers, collection of receivables for both mess bills and other receipts, expenditures by the mess to pay its bills and finally changes in the mess membership over the course of time. The report generation process can be decomposed into seven different sub-functions to include the financial operating statement, record of collections, record of expenditures, accounts receivable, accounts payable,
record of mess members, and finally the monthly mess bills. Decomposing the major functional areas into sub-functions allows for a more detailed view of what processes are required to accomplish the system objectives. Additionally the individual data elements have been identified along with their source. By considering what data is required at the output point of the system and tracing each element back to its origin data stores and required algorithms are identified. By the application of the above technique in an iterative manner the vast majority of necessary data is believed to have been identified. At this point, the development effort can proceed to the design phase for the development, coding, and testing of the proposed system.
III. DESIGN

A. INTRODUCTION

Moving from the analysis phase into the design phase is one of moving from discussing what is to be done to a discussion of how to implement the proposed system. Chapter II provided a view of the logical system for private messes afloat. This chapter will be concerned with the developing of the physical design of the proposed system and the designing of an evaluation mechanism to address the thesis hypotheses stated in Chapter I. The system design situation is one of applying the information gathered in the analysis phase to a physical design within the constraints established by the thesis sponsor. This transition will involve developing physical data flow diagrams to represent the data flow in the proposed system, module boundaries/specification, structure charts, and file structures. These tools help illustrate the manner in which the system was implemented. The system design phase also addresses issues of human interference and ergonomic principles as discussed below. In designing the evaluation mechanism the decision was made to administer a questionnaire to as many mess treasurers as possible. The design of the questionnaire was concerned with measuring the Mess Treasurer's opinion of the environment and of the proposed system.
B. DESIGN APPROACH

The development of this system was based on the adoption of certain design philosophies leading to the implementation of a system providing the maximum amount of training in the input environment that requires selection of alternatives as opposed to direct input of commands and data. Although this limits the flexibility of the system, it was a conscious decision based on the low level of experience and short duration of the assignment to the position of mess treasurer. By allowing the system to perform all calculations and a large amount of data input the opportunity for error or improper data entry is reduced to a minimum. All requests for data made by the system are accompanied by an opportunity for error correction in the form of screen verification. A major design goal was to develop a system that would allow an individual with a minimum understanding of the private mess accounting system and micro computers to successfully operate the system and generate the required reports. This reduction in required technical expertise should improve the overall quality of the financial records. Another design consideration was to allow for error correction when generating the end of the month reports. This is to be accomplished through a trial balance system that allows as many opportunities as necessary to generate accurate end of the month reports. The possibility of paper reduction was also a consideration in the design of the system. The mess treasurer will no longer maintain manual ledgers and records necessary to the generation of the required reports. This information will be system generated when it is required.
C. SYSTEM DESIGN

The design of the system was constrained by several restrictions imposed by the sponsor. The system must be developed using FOXBASE+ database development language to interface with other food service system programs and the system must operate in the MS-DOS environment to be compatible with the equipment provided to the Mess Treasurers. With these constraints in mind the basic structure of the system was developed breaking down the major functions into the three broad areas of utilities transactions and report generation. Figure 4 represents this first level structure.

![Diagram of first level structure]

Figure 4. First Level Structure
D. UTILITIES

The utilities modules are not identified in the analysis phase since they represent functions not specifically provided for in the manual system. These are functions that now need to be addressed.

1. SETUP

Private messes operate in several different manners. Some subsist from general mess while others prorate costs equally over the membership. Additionally, there are several types of messes afloat such as wardroom, CPO, Commanding Officer, and others. To allow the system to be generic, and at the same time permit customization to each situation, these several other parameters must be captured. The SETUP module accomplishes these tasks.

2. JUMP

When a private mess attempts to convert from a manual system to this automated system a vehicle must be provided to facilitate the transfer to the new system. The current operating statistics such as accounts receivable/payable, the current membership roster, and others must be properly installed to ensure a smooth transition. The JUMP series of programs guides the user through all the necessary steps.

3. NEWPASS

The move to an automated system raises issues concerning security of the financial information. This system is equipped with password protection to reduce the risk of unauthorized access to the records. With this scheme comes a requirement to be able to change the password
at regular intervals to further reduce these risks. The NEWPASS module uses an algorithm to scramble the new password and store it in a data file.

4. **RECOVERY**

The possibility always exists that a power outage or other system failure could occur. The RECOVERY module is designed to deal with these contingencies and provide a means to reconstruct the system as it was at the beginning of the current session. The archives disk is accessed and all database structures and records are rebuilt.

5. **PRT-FILE**

At different times throughout the month questions will arise as to whether a given transaction has been entered. The PRT-FILE module prints out the current contents of the transaction file and members file for diagnostic purposes. Figure 5 shows the structure of the utilities functions within the system design.

E. **TRANSACTIONS**

A major design consideration in the transaction area was to combine all transactions into one file and use type codes to identify which transactions are accounts receivable, which are collections, and so on. This improved performance and greatly simplified the transaction processing functions. Data elements used as record identifiers are entered into the transaction base only one time to ensure data integrity. As with the utilities functions the transactions functions are divided into several subfunctional areas.
1. **TRANSREC**
   Accounts receivable are recorded into the transactions file and identified as a type 'AR' for future processing. This module automatically inputs many of the data elements automatically.

2. **TRANPAY**
   Accounts payable are recorded into the transaction file as type 'AP' for future processing. This module also inputs the purpose of the transaction for the user to insure the input is correct.

3. **TRANSCOL**
   Recording collections in the system requires a matching receivable. The type code is verified then the purpose codes are matched, and finally the receivable entry in the transaction file is converted into a collection by changing the type to 'CL' and adding a date paid.
4. **TRANEXP**

Expenditures are handled in the same fashion as collections. A matching account payable must be in the file prior to making an expenditure. The expenditure module asks the user for data to match against a specific payable and then the conversion is made.

5. **TRANSMBR**

Through the life of the mess, members will join and depart on a regular basis. Upon joining the mess the member may be assessed a partial mess bill and/or a mess share. This module considers the type of private mess by examining the setup information and creates the appropriate transactions. Likewise when a member departs certain charges and/or refunds may be required. These transactions are created through an interactive dialog with the user. The member is not removed from the file until all debts have been settled.

6. **SRIDER**

It is a common occurrence on all ships for non-members to eat occasional meals in the private mess for which they must pay. Technical representatives are a good example of this situation. The system provides this module to handle this situation and ensure bills are prepared and collections recorded. An interactive dialog assists the treasurer through the required transactions. Figure 6 shows the relationship of all the transaction modules and submodules.
F. REPORT GENERATION

This major functional area transitions from the menu-driven format to a query based format. As the reports are being generated information will be requested from the Treasurer. As with the menu approach, all entries have input verification/correction capabilities on the screen. A major design consideration was to allow the Treasurer to produce a trial set of reports to verify for accuracy. Correcting entries may then be made and another trial performed. This process continues until the correct reports are produced and then the smooth final reports are generated. The two major processes in this functional area are the TRIAL module and the EOM module.
1. **TRIAL**

The system examines the transaction file and segregates all the transactions into their appropriate financial statement headings. No alternations are made to the source entries rather temporary files are established pending the final smooth reports. Sub-functions include generation of mess bills, accounting for members on leave, and determining any special assessments to be charged.

2. **EOM**

Once the treasurer is satisfied with the financial reports the system generates smooth reports with the appropriate headings and dates. This module is additionally responsible for resetting all the database files to start the new month. All collection and expenditure transactions are dropped and the accounts receivables and payables are coded as prior month transactions. Members who have detached the mess are deleted and all temporary holding files are set to null positions. Figure 7 shows the major process in the report generation area. The primary design goals were to provide a user friendly system to the Mess Treasurer that required a minimum amount of input and a minimum amount of technical expertise. To this end an ergonomics study was conducted on the system to evaluate this criteria. Appendix D is a copy of the study. The conclusions of the report suggest that while user friendliness was achieved, improvements in the area of help screens and error correction would enhance the usability of the program for novice users.
G. EVALUATION DESIGN

The design of the questionnaire involved developing questions that would provide data to examine and evaluate the original thesis hypotheses. Each was considered and a corresponding null hypothesis was developed. The set of null hypotheses are as follows:

H1: Understanding of the private mess records-keeping system by a Mess Treasurer is comprehensive.

H2: Performance of the Mess Treasurer's duties does not impact the treasurer's primary duties.

H3: Mess records turned over during the relieving process are complete and inspection-ready.

H4: The Mess Treasurer believes there is nothing to be gained from automating the records-keeping process.
H5: Automating the records-keeping process will not increase the Mess Treasurer's job satisfaction.

H6: The automated system produces no significant savings of time for the Mess Treasurer.

H7: Use of the automated system will not improve the accuracy and timeliness of submission of mess records in the opinion of the Mess Treasurer.

H8: The automated system is difficult to understand and complicated to use.

H9: PMAS will be of no use to the Mess Treasurer.

From these nine null hypotheses the questionnaire in Appendix E was developed.

H. CONCLUSION

The implementation of this automated system within the design criteria described above when accomplished, provided a functioning system capable of addressing all operational requirements. In addition to performing these requirements, the system provides features not available in the manual system. The Mess Treasurer is not responsible for any calculations and must input only the minimum amount of data. All reports are generated automatically, reducing the risk of transposition type errors. Improvements in security are provided in the form of password protection, and all data is archived at the close of each session. Appendix E is a listing of the source code for this system and Appendix F is the user's manual that supports the system.
IV. EVALUATION

A. INTRODUCTION

The system design discussed in Chapter III was used to develop a functional system that models the Private Mess Accounting System for afloat units. With the completion of this phase, attention was turned to evaluating the usefulness of the system in a shipboard environment. To accomplish this, a target group of individuals was identified to participate in the evaluation and provide feedback data for system improvements. This data was used to evaluate the null hypotheses and draw conclusions and make recommendations about the system. A random sample of 25 individuals working in the Private Mess Accounting System participated in the evaluation and the responses were statistically analyzed using the statistical analysis program. Table 1 provides a summary of the results.

B. HYPOTHESIS TESTING

Prior to the actual shipboard testing, it appeared that the proposed system would, in fact, be of significant value to the afloat Mess Treasurer. As can be seen in the design of the original hypotheses, this was a presumption from the beginning.

1. Research Setting

It was considered essential that all testing be performed in the environment in which it must function if adopted for general use. With the assistance of Commander Surface Forces Pacific Fleet, a number of ships in the Northern California area were made available for testing of the
TABLE 1. SUMMARY OF RESULTS

| H1: Each Mess Treasurer has a comprehensive understanding of the current private mess accounting system. | REJECTED |
| H2: Performing the Mess Treasurer's functions does not impact on the Treasurer's primary duty. | REJECTED |
| H3: Mess records turned over during the relieving process are complete and inspection ready. | REJECTED |
| H4: Mess Treasurers are indifferent as to automating the current manual accounting system. | REJECTED |
| H5: Automating the records-keeping process will not increase the Mess Treasurers job satisfaction. | REJECTED |
| H6: The automated system produces no significant savings of time for the Mess Treasurer. | REJECTED |
| H7: Use of the automated system will not improve the accuracy and timeliness of report submission. | REJECTED |
| H8: The automation system is difficult to understand and complicated to operate. | REJECTED |
| H9: The automated system will be of no use to the Mess Treasurer. | REJECTED |

proposed system and data gathering. All tests were performed under typical shipboard conditions. The environmental factors such as excessive noise, repeated interruptions, and competing priorities for the Mess Treasurer's time were all experienced and therefore played a part in the evaluation. The questionnaire used in the evaluation phase consisted of 16 questions related
to the data gathering. A five point Likert Scale ranging from zero to four was used to quantify the participants responses in evaluating the null hypotheses.

2. Subjects

The subjects selected to participate in running the demonstration program and completing the questionnaire were individuals currently serving as a Mess Treasurer or had served in that position earlier in their career. This experience and familiarity with the domain was considered essential for evaluating the automated system in a thorough manner.

3. Statistical Testing

The statistical analysis was conducted after making certain assumptions. For instance the hypothesis testing was done using a one-tailed test. That is, it was presumed that the automated system would only serve to improve and not impair the mess treasure function. A two-tailed test would be concerned with both improvement and impairment. The null hypotheses were assigned the extreme value of possible responses that would best represent that view. All tests were conducted using a 90% confidence interval and an alpha value of .01. Since the sample size was less than 30 the T-statistic was used to accept or reject the null hypothesis.

4. Tasks

The test subjects were requested to complete the first part of the questionnaire followed by the running of a sample demonstration of the proposed automated system using a simulated database of mess members. During the testing the subjects were directed to perform utility functions to tailor the system to their particular ship. After completion of this, a series of
normal transactions were performed in the areas of accounts receivable, accounts payable, collections, and expenditures. Additionally, several new members were added to the database and several others were deleted. All transactions followed the script provided in Appendix G. When all the transactions were finished a complete set of financial returns were generated by the test subject using the automated system.

5. **Results and Conclusions**

The results of the hypothesis testing summarized in Table 1 overwhelmingly suggest that the proposed system is viewed by the test subjects in a very positive manner. All nine of the null hypotheses are rejected and in most cases by a significant amount. Using the survey questionnaire in Appendix F as a reference, the following conclusions can be made about the original hypotheses:

**H1:** The sample data indicates that the understanding level of a Mess Treasurer ranged from limited (1 on the Likert Scale) to basic (2 on the scale). The average level was 2.6 on the scale. The 95% confidence interval was between 2.08 and 3.12 and the T-statistic was -5.56, leading to a rejection of the null hypothesis. Figure 8 contains all pertinent data. Thus it is apparent that a system requiring less technical understanding of the system would be of benefit.

**H2:** The sample data show that the impact of the Mess Treasurer's tasks ranged from some impact (2 on the scale) to noticeable impact (3 on the scale). The average response was 2.6 on the scale and the 95% confidence interval was from 2.31 to 2.73 with a T-statistic of 24.7, leading to a rejection of the null hypothesis. Thus the Mess Treasurer function has an impact on the Treasurers primary duty and thereby reducing their overall productivity. Figure 9 provides the statistical data.

H8: This hypothesis was concerned with user friendliness. The survey indicated that the system was viewed as both understandable and easy to operate. The average response was 3.4 on the scale indicating a high degree of user friendliness. The 95% confidence interval was 3.13 and 3.67 with a T-statistic of 26.34, suggesting rejection of the null hypothesis. Figure 15 provides the supporting
H9: The automated system was viewed as having great potential and was perceived as being very useful in the financial management of a private mess. The position was supported by an average response of 3.48 on the scale. The 95% confidence interval was 3.24 with a T-statistic of 29.70, resulting in the rejection of the null hypothesis. Figure 16 provides the supporting data.

Figure 16. Statistics for Null H9
C. CORRELATION TESTING

In addition to hypothesis testing, correlations were performed on all the variables to look for any significant interrelationships. The eight variables used were understanding (of the system), waste (of Treasurers time), impact (on Treasurer's primary duties), condition (of the records), acceptability (of the new system), bearable (job satisfaction), savings (in time and effort), timeliness and accuracy (of report submission), ease (of running the new system), and usefulness (of the new system). No strong correlations appeared between any of the variables. This would indicate that no questions overlapped and no significant relationships exist among them. It appears all the subjects felt the automated system would be a better method for financial records-keeping. The perceived savings in time and effort was not tied to prior computer experience, suggesting that computers are generally viewed as providing a positive impact on most manually operated systems.

D. CONCLUSIONS

The evaluation of the proposed system conducted in the normal operating environment by those most familiar with the system suggests its potential. Not only the responses to the questionnaire, but the attitude and comments of the participants indicated a strong desire to have this system available to assist in maintaining the private mess financial records. In all areas of interest the statistical testing process indicates the system is seen as helpful to the Treasurer to better utilize his time. The responses also suggest that reports could be both more timely in submission and accurate in content with the use of this system.
V. CONCLUSIONS AND RECOMMENDATIONS

A. CONCLUSIONS

With the completion of the statistical analysis it is time to direct attention to the conclusions that can be drawn from this project. The focus is now directed back to the original thesis questions to make appropriate comments concerning the impact made by the proposed system. The first question was concerned with what information can be provided to support improved financial management. The system will provide transactions listings at any time and a complete financial picture can also be generated at any time by performing a trial balance. The next issue involved reducing the level of expertise required to operate the system. The statistical analysis indicates that the level can in fact be reduced by the implementation of the automated system. The third thesis question addressed the possibility of a significant level of improvement in the accuracy of the financial records. The Mess Treasurers involved in the testing expressed an opinion that not only would improvements be realized but they would also be quite significant. The next area to be addressed is one of defining the automation boundaries. The system was designed such that the boundaries start at the transaction input process and continue through to the report generation process. The fifth thesis question was aimed at providing management information in a more timely manner. This would appear to be influenced both by the system and the time frame in which the Mess Treasurer utilizes the system. Given the same starting time, the automated system is significantly faster in
transaction processing and report generation. An area of interest was the possibility of the system providing support to menu planning. This support occurs only to the extent that the mess' financial position can be determined at any time. This information could be used to determine whether a cut back in meal costs or increase is necessary to maintain the desired financial position. Some additional conclusions concerning the project are also presented for consideration. It was interesting to note that to be a user of the system did not imply an understanding of how the system performed the required tasks. It was common to find Mess Treasurers who had a very limited understanding of the basic assumptions behind the manual system, however managed to maintain a set of financial records. In the area of project management, estimating the project size was a more difficult task than originally expected. All phases of the project took much longer than originally anticipated. The design and development phase was originally expected to last approximately six weeks. This phase, however, in fact took 80% longer, lasting almost ten weeks. Also, developing a test plan revealed the difficulty in providing a complete system test. This phase also expanded in time by 50% and was reduced in scope as it became evident that a comprehensive test plan to test every system function for proper execution could take many months. Finally, it was noted that a significant saving in manpower can be realized with the implementation of this system. The questionnaire indicated that an average of 8.1 hours per month were expended in the maintenance of the financial records. Although military personnel are not paid on an hourly basis, a monetary value can be attached.
to this savings in time. When this is calculated across the total number of private messes the savings would be significant.

B. RECOMMENDATIONS

Based on the responses provided by the questionnaire and the statistical evaluation of those responses it appears that the proposed system should be pursued for shipboard use. A second recommendation is to consider developing a system to assist the Mess Caterer and interface with PMAS. This would automate the entire private mess system and interface with the automated food service system. It is also recommended that the automated system be implemented on a test group of ships to provide the necessary testing prior to full distribution. Along with this, provide future enhancements such as help screens and improved error correction capabilities. Finally, this system should be certified for shipboard use as soon as practicable.

The Automated Private Mess Accounting System, when implemented, will provide significant improvements to the current manual system of records-keeping.

APPENDIX D

COGNITIVE ERGONOMICS
A STUDY IN
USER FRIENDLINESS

PRESENTED BY:
JEFFERY P. BENNETT
DECEMBER 8, 1987
"Congratulations, you are the wardroom's new Mess Treasurer." Few collateral duties, within the shipboard environment are more dreaded and susceptible to failure. Can a computer come to the rescue? A current thesis proposal undertakes to automate the reports and record keeping requirements of the Mess Treasurer.

As early as 1970 professionals in the computer industry predicted the lack of understanding of psychological processes would be the main impediment to future interactive computer program development.¹ An analysis of the interactive program, designed for this thesis, was conducted in terms of cognitive ergonomics or "user friendliness". In computer programing, user friendliness is anything that improves the quality of the interaction, reduces the probability of catastrophic mistakes or makes it easier for users to obtain help from the system.² The human factors guidelines for this paper were taken from a German research paper published in Lecture Notes in Computer Science, Vol 110. Specifically, the human-machine interface was evaluated in terms of five objectives:

1. Dialogue Flexibility
2. Transparency
3. Ease of Learning
4. Ease of Use
5. Reliability

MISSION DEFINITION

The computer program, Accounting Systems for Private Messes Afloat, was developed following guidelines established by the
Navy Food Service Systems Office (thesis sponsors) and Navy Supply Publication 486, volume 2. The program will ultimately be used by all ship types on a hard disk configured micro computer. Rapid turnover of Mess Treasurers and the lack of any formal training dictated a computer program that would be both easy to understand and operate.

With this background, the goal during software development was to write a program that could both handle any one of the seven different authorized accounting methods and be operated by a truly naive user. This type of user usually seeks to minimize the amount of learning, time, and effort devoted to using a computer program and assumes the system is fool proof. Additionally, the user was projected as not having a deep knowledge of accounting practices, Supply Corps terminology, or computer technology.

**DIALOGUE FLEXIBILITY**

The system does not behave in a rigid and unchangeable way but it considers different needs and skills of the user.

The program interacts with the user through a series of menus. Selection of activities through menus when working with data bases is the preferred programming method over such others as form filling, question and answer, and prompting methods. It does not require users to generate commands from memory, an important consideration.
Program activities are selected by entering a number called the selection code and system response is immediate. The enter or return key does not have to follow. The program consists of three basic types of screens: menus, data input, and information. Examples of these screen formats are provided in Illustrations 1, 2, and 3.

An important aspect of dialogue flexibility is to ensure system activities are determined by the user. This was accomplished by having at least two alternatives on each menu. Additionally all menus have seven or fewer alternatives, staying within the upper limit of short term memory.

ARE YOU SURE YOU WANT TO CHANGE THIS FILE? (Y,N)

ILLUSTRATION 3
The ability to adapt to a user's skill level is an important area of dialogue flexibility that was not incorporated into this software package. The use of menu formatting does not facilitate this, as it is slow to use for people who can specify precisely what they want without being led through a series of explicit choices.

**RECOMMENDATION:** No changes in terms of dialogue flexibility are recommended. The program is designed to offer a fixed set of activities. The premise that over the long run the program will be used by a novice is a good one. This negates the need for a system with extension functions that will offer different modes of input, user initiated modification of program structure, or screen output in different levels of detail.

**TRANSPARENCY**

The program requires input of a minimal amount of information relating to financial transactions. From there records are updated and reports generated. Each user response or input produces the next set of options. The user does not have to specify such things as what reports the information is for or what records should be updated.

The treatment of ship riders that become temporary members of the wardroom (eat their meals in the wardroom) is an effective use of program transparency. The Mess Treasure is only concerned with these individuals when they are about to depart and must pay
their Mess Bill. Concurrently the program does not require any actions concerning ship riders until they are ready to depart. Menu screens are used that are similar to those for adding new mess members and generating monthly bills. This standardized interface, showing equal behavior in equal situations, is typical throughout the program and contributes to system predictability.

One difficulty in transparency experienced during testing was immediately corrected by the program developers. The confusion occurred at the end of the utility program. After completing the last task in the "set up program parameters" option, the program automatically returned to the main menu. No indication was provided that the input was successful or set up completed. This part of the program was changed to display a message screen which advises the user that the "set up program is complete" (Illustration 4).

SETUP PROGRAM COMPLETE

PRESS ANY KEY TO CONTINUE...

ILLUSTRATION 4
An important aspect of transparency is knowing or having the ability to find your location in the program at any time. The program uses an identification number in the top left corner of each screen (M-0 in Illustration 1). Although this does not completely identify to the user their exact location, it provides a coding system for location in a user's manual or flow chart.

**RECOMMENDATION:** The use of a more descriptive, plain language, format for screen identifications (in the top left corner) would allow the program to better identify its location.

**EASE OF LEARNING**

TO OPERATE THE SYSTEM IS EASY TO LEARN AND REQUIRES NO ADDITIONAL MEANS -- THE USER CAN LEARN IT BY USING THE SYSTEM. SIMPLE TASKS REQUIRE NO SPECIAL QUALIFICATIONS OF THE USER.

Program operation extremely easy to learn. The program steps a user through each option, requesting all the necessary information. No special knowledge or introductory courses should be required for a first time user. The system supports learning by doing.

Additional expert help for the program will be available through Navy Food Management Teams. This assistance is envisioned as being provided primarily over the telephone, requiring only problem symptoms and appropriate screen numbers.

**RECOMMENDATION:** Provide a practice set for the first time user. This should contain sample data input opportunities and be completed before assuming Mess Treasurer duties.
RECOMMENDATION: Offer online access to the user manual.

EASE OF USE

THE SYSTEM IS A PRACTICAL TOOL FOR THE USER WHICH DOES NOT FRUSTRATE. IT IS DESIGNED IN A WAY THAT IT CAN BE HANDLED ACCORDING TO NEEDS AND QUALIFICATION; IT PROVIDES HELP AND REACTS TOLERANTLY TO USER MISTAKES.

Ease of use encompasses both ease of program operation and the tolerance of errors. The difference between this category and the previous, Ease of Learning, is most important. Frustration can occur at both ends of program structure. A program that is too simplistic can be as frustrating as one that is too complicated. This program remains simplistic, it does not evolve with the user as he gains experience in operating the system. This simplicity, though likely to frustrate advanced users, is a necessity for a user population projected to be constantly changing and always with fewer than six months experience.

Help menus, a critical function when considering software for novice users, were being developed and not available for testing. This feature is an additional requirement to online access to the user's manual.

The program does not force the user into hasty actions. The computer tells the user when it is their turn by changing to a new screen. Every data input is followed by a request for command confirmation. The question "IS THE ABOVE INPUT CORRECT? (Y/N)" is displayed at the bottom of the input screen, in a
different color and requires a response. Default keys (any key other than Y or N) register "No". The use of command confirmations and default keys to "undo" mistakes enhance the programs usability. Illustrations 5 and 6 demonstrate a typical sequence of command confirmation screen displays.

Error prevention and recognition were also stimulated by using previous input on the next display screen. The matching of social security numbers to name is an example of this transparent and effective error protection feature. All Mess member transactions were initiated by social security numbers. After social security number input and verification the next screen would contain the members name or both the social security number and the members name.

In analyzing program response to errors against the current state of the art, this program does not assume responsibility for errors, as may be found in more sophisticated software. Some very helpful error messages are provided. These include messages that prevent overpayment of Mess Bills and warnings of data base deletion during program set up. Errors that are not detected by command confirmation and enter the data base can be very difficult to correct. The program does not attempt to use artificial intelligence or some other state of the art system to overcome garbage in, garbage out.

RECOMMENDATION: Complete development of help menus for each screen and include explanations for both general problems and situation dependent problems.

RECOMMENDATION: Provide a way to correct numeric errors. If incorrect data passes command confirmation, corrections can only

57
be made by a counter balancing entry or by erasing all inputs during that session. This was done to protect the data base however, it will likely cause unnecessary work for the user who desires error free records or frustrate the user who does not have an accounting background.

RECOMMENDATION: Include hints for correction in error messages.

RELIABILITY

THE SYSTEM IS DESIGNED IN A WAY THAT THE USER CAN DO HIS WORK WITH IT IN A RELIABLE MANNER.9

During testing unexpected tasks or results were not encountered. The use of a micro computer, instead of time sharing on a ships main frame, should provide the independence necessary to maintain acceptable user availability. Response time for the most part was very good, though certain functions took up to 30 seconds.

Reliability can also be measured by the amount of security and data protection provided by the program. Pass word entry, shown in Illustration 7, is used during program start-up. Data protection is offered in many ways, several which have already been presented (command confirmation, default keys, etc.). In addition data bases cannot be changed after final monthly reports are generated. Another feature that significantly improves system reliability is the automatic back-up of all data onto a floppy disk at the end of each session, shown in Illustration 8.

RECOMMENDATION: No changes in terms of reliability are recommended.
PHYSICAL INTERFACE

Physical interface refers to the media by which information is passed between the user and the computer. On the computer's side are such things as keyboards, printer, and visual displays. On the user's side are, primarily, eyes, ears, and fingers. Cognitive ergonomics and physical interface are not independent functions. The "user friendliness" of a program can be significantly influenced by the visual displays it has.

Although an in-depth study was not conducted on physical interface, three aspects of visual displays were noted and a brief discussion follows:

LETTERING - Studies have shown that lower case lettering is more legible than texts printed all in capitals. In an elaborate research program it was found that text printed in capitals was read on average about 14% more slowly than lower case text. All upper case lettering was used in this program. However, the
programers felt double spaced, capital lettering would be more readable in the underway shipboard environment.

COLORS - With color monitors installed in most of the shipboard systems, decisions on which color combinations to use had to be made. The use of opposite ends of the color wavelength spectrum in blue and red were good decisions for two reasons. First, the obvious contrast of these two colors, using two different cones, achieves the instant recognition desired for a highlighted area and these colors are discernable by those with color blindness. The use of yellow lettering to record input over a solid red background does not provide a contrast and is difficult to read.

RECOMMENDATION: Change the input lettering to a dark color.

TEXT DISPLAY - Text is centered on the screen and the user's eyes tend to fall in that area when each new screen appears. Display of input differs between the "two finger typist" and the experienced typist. Location of typed input to minimize head movement for the "two finger typist" would be at the bottom of the screen (keyboard to monitor movement) while the design eye position would favor the experienced typist. The program favors an experienced typist and no changes are recommended.

SUMMARY

Even though the five objectives used to evaluate the cognitive ergonomics of this program were not originally considered by the programers, userfriendliness was achieved. The programmers took their ideas from other programs they felt were user-friendly.

Help screens are the one feature, not yet available but under development, that current literature specifies must be incorporated into software when programming for the novice user.

When evaluating this program against the standards available from current technology, some deficiencies exist. However, when considering the projected typical user, the latest in extension functions and multiple modes of input would do little to improve "user friendliness".

Welcome to the Private Mess Accounting System (PMAS). This software application was designed to automate most aspects of the shipboard mess treasurer’s tasks. This program is a full featured database application that allows mess member tracking, mess bill preparation and full monthly financial reporting. The program is menu driven and assumes limited experience on the part of the user in mess treasurer duties.

1. **EQUIPMENT REQUIRED**

This application was designed to run on the following equipment:

IBM AT, ZENITH 248, HONEYWELL PC microcomputer or equivalent with:

+ MS-DOS 2.11 operating system or later version.
+ 1 360K disk drive
+ 1 20 megabyte hard disk
+ clock/calendar card
+ color monitor (monochrome acceptable)
+ printer capable of handling 8 1/2 X 11 inch tractor feed paper.
+ 640K RAM space

* use of the program on less than an IBM AT or equivalent will lead to a noticeable decrease in system response

2. **GENERAL BACKGROUND INFORMATION**

There is some general background information on specific features and requirements of PMAS that you need to know prior to working with PMAS.

2.1 **AUTOMATIC ARCHIVING**

First, PMAS has an automatic archiving feature that is activated when you select QUIT from the MAIN MENU. This feature takes the current data contained in the data bases on the hard disk and copies it to a floppy disk in the A drive. This procedure ensures that you will always have a current copy of your data bases in the event of a hard disk failure.
2.1.a CREATING DATA BACKUP DISKS

To facilitate the archiving process you need to take two, new, blank floppy disks and label them with the name of the mess. Next, label one DATA BACKUP A and the other DATA BACKUP B. Write on floppy disk labels with a felt tip pen. Since these disks are new they must be formatted. To format a disk put it in the A drive and at the C> type:

```
FORMAT A: <cr>
```

Every time you start a session with PMAS put one of the disks in the A drive. Alternate between the DATA BACKUP A disk and DATA BACKUP B disk each time you use PMAS. By rotating between two disks you will always have a current copy of your databases and a copy of the data as of the end of the previous session.

2.2 PRINTER WARNING

Ensure that your printer is loaded with plenty of paper and remains powered on during a session with PMAS. Anything that interferes with printer operation may cause the program to run erratically.

2.3 ERROR CHECKING USER INPUT

Great pains have been taken to ensure the user has the opportunity to review his/her input prior to finalization. After you input information, you will always be asked if it is correct. This will be your chance to correct errors prior to database acceptance.

2.4 SCREEN NUMBERING

Every data input screen is numbered in the upper left hand corner. These numbers will be used in this manual to help the user identify what section of the manual applies to what screen. These numbers can also be referred to by the user when requesting assistance over the phone or by naval message.

2.5 PASSWORD PROTECTION

Access to the PMAS databases is protected by a user chosen password. Immediately after the PMAS initialization screen, you will be requested to provide your password. You will
have three opportunities to enter the correct password before the program dumps you back out to the operating system. The program was shipped with a preset password. This password will be required the very first time you enter PMAS. The preloaded password is FORBIN.

2.5.a CHANGING THE PASSWORD

It is recommended that at a minimum the system password should be changed when mess treasurer turnover occurs. Changing the password is a simple process. From the MAIN MENU select code 1 - SYSTEM UTILITIES. You will now see the UTILITY PROGRAMS MENU. From that menu select code 3 - CHANGE PASSWORD. You will then be prompted to enter a new password of up to ten alphanumeric characters. Do not use passwords that can be easily determined. (e.g., your birthday, your spouse’s name or your Social Security Number)

3. PMAS INSTALLATION PROCEDURES

To have input accepted during, either, the installation or use of PMAS, the ENTER or RETURN key may have to be hit. In places where hitting this key is required the symbol <cr> will be used in this manual.

When using a computer equipped with a hard drive, the operating system is normally resident on that drive. When you turn on your computer and a C> appears, you can be fairly certain that MS-DOS is resident and your computer is correctly booted up. If you are prompted to insert a systems disk or there is indication that no system is present, read your computer’s users manual and determine how to boot your computer from the hard drive. Your computer must boot from the hard disk (normally the C drive) before you continue!

3.1 SYSTEM CONFIGURATION

Your operating system by default allows only eight files to be open at the same time. In order to run PMAS efficiently and without error, MS-DOS must be configured to open twenty files simultaneously. To accomplish this configuration we need to create a CONFIG.SYS file.

First, we need to check to see if a CONFIG.SYS file already exists. At the C> type:
DIR/W

You should now see all the files contained on your C drive. If a CONFIG.SYS file already exists start with STEP 1, if no CONFIG.SYS file exists, begin with STEP 2.

**STEP 1.** In order to view the contents of the current CONFIG.SYS file type the following at the system prompt:

```
TYPE CONFIG.SYS <cr>
```

The contents of the file should now be displayed. If the file contains the commands FILES=20 and BUFFERS=20, then your system is already properly configured and there is no reason to do STEP 2. Otherwise, on a separate sheet of paper, copy the contents of that file exactly as it appears on the screen.

**STEP 2.** To create a new CONFIG.SYS file enter at the system prompt:

```
COPY CON:CONFIG.SYS <cr>
```

then type:

```
FILES=20 <cr>
BUFFERS=20 <cr>
```

If required, add the commands that were copied to the separate sheet of paper during STEP 1. Do not add any other FILES= or BUFFERS= commands to this new file. Remember, one command per line and follow it with a <cr>. When you are done building the new CONFIG.SYS file, finish by typing:

```
'Z <cr> (note ' = CTRL key)
```

Now turn off your computer, then turn it back on. This last action will put the new CONFIG.SYS file into effect. Once this file is built there is no need to repeat the above procedure. The CONFIG.SYS will automatically be in effect when the computer is turned on.

### 3.2 NEED FOR SUBDIRECTORIES

The PMAS software application must be run from your computer's hard disk. The program has designed into it the ability to handle several different types of messes. (e.g.
Wardroom, CPO, Flag or Captain's mess) In order to maintain the financial record of several different messes on the same microcomputer, a copy of PMAS must be installed in each of several different subdirectories. Your C: is also known as a root directory. Under this root directory you need to create several subdirectories. These subdirectories will contain the individual copies of PMAS that will be required for each type of mess. The following names are suggested for subdirectory titles:

- CPO
- WARRANT
- WARDROOM
- CAPTAIN
- UNIT
- FLAG

These titles will be used throughout the manual and it would be to your advantage to adopt them also. To help in understanding the subdirectory concept refer to Figure 1 below.

---

Only create the number of subdirectories that are required for your type of ship. For example, there may be no requirement to maintain mess records for a unit commander or flag mess aboard your ship.

3.3 CREATING SUBDIRECTORIES

To create a subdirectory type the following at the C>:

```
MKDIR <PATH> <cr>
```

where <PATH> is one of the previously given set of names for subdirectories. For example, if you need to create three subdirectories to contain the copies of PMAS required to
handle the records for the Captain's, Officer's and Chief's messes then at the C> type:

MKDIR CAPTAIN <cr>
MKDIR WARDROOM <cr>
MKDIR CPO <cr>

You can view the subdirectories you have just created by typing DIR/W at the C>.

3.4 LOADING SUBDIRECTORIES WITH PMAS

Once the subdirectories have been created on the hard disk, PMAS can be copied into them. For discussion purposes, we will assume we have created a WARDROOM subdirectory and now are going to load it. With this user's manual you should have also received two 5 1/4 inch floppy disks, one labeled #1 and the other labeled #2. Put the disk labeled #1 into the A drive of the computer. At the C> type: A: <cr>. The system prompt on the screen should now read A>. At the A> type:

COPY *.* C:\<PATH> <cr>

where <PATH> is the desired subdirectory destination. Continuing our wardroom example, the exact command would be:

COPY *.* C:\WARDROOM <cr>

At this time you should receive an indication that files are being copied to the hard disk. Next remove disk #1 from the A drive and replace it with disk #2. At the A> type the same command that was used to load disk #1. To repeat type:

COPY *.* C:\WARDROOM <cr>

When the file transfer is complete, the process of loading PMAS to your system's hard disk for a specific subdirectory is complete. Repeat the process of loading subdirectories for every subdirectory that you have created.

3.5 STARTING THE PROGRAM

When you first turn on your computer it should come up in the root directory for the C drive. To operate PMAS we need to be in the subdirectory for the mess for which we want to transact business. To move from the root directory to the proper subdirectory, you need to issue a change directory command at the C>. Use the following command:
CD <PATH> <cr>

where <PATH> is the desired subdirectory destination. Continuing our wardroom example, the command would be:

CD WARDROOM

Once this command is issued, you are now operating solely within the subdirectory named WARDROOM. To return to the root directory after a session with PMAS type:

CD .. <cr>

Once you are in the proper subdirectory (e.g. WARDROOM), just type MESS at the system prompt to access PMAS. The next thing you will see is the PMAS initialization screen.

4. TAILORING PMAS TO YOUR MESS

PMAS needs to be provided information about your ship and the type of mess you operate. This information is only required once as it is stored by PMAS for future reference. This information should be entered the first time you use the program or in the event that certain facts about the mess change. To tailor PMAS to your mess select code 1 - SYSTEM UTILITIES from the MAIN MENU. You will now see the UTILITY PROGRAMS MENU. From this menu, select code 1 - SET UP PROGRAM PARAMETERS. Input screen UT-002 will now be before you. Most of the questions on this screen and the remaining input screens for parameter establishment are self-explanatory. The next few paragraphs provide background information on the inputs that were anticipated to raise some questions. (NOTE: you may not be asked all of the questions for which background information is provided.)

4.1 SUBSISTING FROM THE GENERAL MESS. SCREEN UT-002

Some Officer messes, due to lack of proper facilities or other constraints, buy individually prepared meals from the Food Service Officer. This type of mess is generally found on newer and (or) smaller ships of the fleet. Messes that buy bulk provisions and prepare their meals in wardroom facilities do not subsist from the general mess.

4.2 STANDARD MEAL PRICES. SCREEN UT-003

Messes that subsist from the general mess buy individual meals at a Navy standard price. These prices are published
4.3 MAINTAINING MESS SHARE AT SPECIFIED LEVEL. SCREEN UT-005

This screen will ask you to input the value at which you desire to maintain the mess share. PMAS, by referring to your input, will automatically maintain the mess share at your specified level by making adjustments to mess member's mess bills. This feature prevents wild fluctuations in the mess share from month to month. A word of caution, when entering a value for this screen, you must take into account the value of the mess share as it was calculated on the last financial statement. For example, if the last calculated mess share was $38.00 and you set the mess share to be maintained at $50.00, the mess bills at the end of the current month would be increased to meet the new mess share goal. If such a large jump in the mess share was desired, it is best to accomplished this goal over a couple of months. Additionally, remember that during any one month certain transactions that affect net worth also have their impact on the mess share. When in doubt, do not vary the amount entered on this screen, unless an intentional decrement or increment is desired, from the mess share found on the last financial statement.

4.4 METHOD FOR CHARGING MEMBERS FOR MEALS. SCREEN UT-004

Messes that do not subsist from the general mess have two basic options for charging mess members for meals. The first method consists of distributing the cost of running the mess equally among all members. This option is by far the most prevalent among messes afloat. Second, these messes have the option of charging on a per meal basis. This per meal option can only be used if the mess was operated in port for the entire month. See NAVSUP PUB. 486 VOL. II para. 3111 for further details.

4.5 MEAL PRICES FOR NON-MEMBERS. SCREEN UT-004

Messes that subsist from the general mess will charge the standard meal price for meals sold to non-member. In the case of a non-subsisting mess, meal prices have to be determined. These meal prices are determined by reviewing the food cost and total meals eaten for a particular month.
When PMAS is first activated for a particular mess, it has no means of determining historic costs; therefore, the user must enter prices for breakfast, lunch, supper and holiday meals. After the first month of mess operations under PMAS, the program will automatically provide suggested meal prices and use them in calculating non-member mess bills.

4.6 ENLISTED BASIC ALLOWANCE FOR SUBSISTENCE. SCREEN UT-006

In a mess that does not subsist from the general mess, enlisted personnel consume provisions purchased by the mess. The mess is therefore due reimbursement based on a formula that requires the enlisted BAS rate. The current rate can be obtained from the Disbursing Officer.

5. CONVERTING MESS RECORDS FROM MANUAL TO PMAS

PMAS needs to be informed about the present financial situation of your mess. PMAS has included a specific utility program to assist you in the conversion process. The key factor to the conversion process is that the manual records must be in balance before transferring the information to PMAS. Consequently, the best time to convert to PMAS is right after the monthly close out of accounts and the preparation of the Monthly Financial Operating Statement.

5.1 BEGINNING THE PROCESS

From the MAIN MENU select code 1 - SYSTEM UTILITIES. You will now see the UTILITIES PROGRAMS menu. From this menu select code 2 - INITIALIZE DATABASES. Next you will see a short paragraph explaining the process. [WARNING: Once you pass this point all databases except the database containing mess member information will be erased!!!]

5.1.a SYSTEM INITIALIZATION VALUE SCREEN. SCREEN UT-007

If you have decided to continue, screen UT-007 will now be on the monitor. You will be prompted to provide the value of the inventory brought forward, the amount of cash brought forward and the value of the mess share brought forward. This information can be found in blocks titled, INVENTORY OF PROVISIONS, CASH ON HAND END OF MONTH, MESS SHARE END OF MONTH, respectively, on the Monthly Financial Operating Statement.
5.1.b SUGGESTED MESS BILL. SCREEN UT-012

This information can be obtained from block titled RECOMMENDED MESS BILL FOR NEXT MONTH on the Monthly Financial Operating Statement. When this amount has been entered you will then be asked if you have any outstanding accounts receivable to enter. Depending on your situation enter Y for YES or N for NO.

5.1.c ACCOUNTS RECEIVABLE ENTRY SCREEN. SCREEN UT-008

By referring to the RECORD of ACCOUNTS RECEIVABLE, finalized during the monthly close out process, you should have a complete list of all OUTSTANDING accounts receivable. Each one of the entries on this record must be entered into the computer. Do not batch post mess bill for a particular month. Outstanding mess bill amounts must be posted for each member. Note: the first block on the screen asks for the name/entity owing money to the mess. The input into this block is left to the user's discretion with one exception. If the money is owed by a mess member (or ship-rider) that block MUST be filled in with his/her social security number. The input format for the social security number is 9 digits; use no spaces or dashes. Social security numbers are required because they are a convenient unique identifier of a mess member (or ship-rider). You will be required to enter the date on which the transaction occurred. Use MM/DD/YY format. On that same screen you will see a small menu of selections describing the purpose of the outstanding accounts receivable. Choose one. If you choose the caption OTHER you will be provided a small memo field to enter your own purpose. Do not forget to include the amount of the transaction in the block provided. The program will allow you to continue making entries until you choose not to. You will then be asked if you have any outstanding accounts payable to enter. Depending on your situation enter Y for YES or N for NO.

5.1.d ACCOUNTS PAYABLE ENTRY SCREEN. SCREEN UT-010

By referring to the RECORD of ACCOUNTS PAYABLE, finalized during the monthly close out process, you should have a complete list of all OUTSTANDING accounts payable. Each one of the entries on this record must be entered into the computer. Do not batch post any entries. Note: the first block on the screen asks to whom the money is owed. The input into this block is left to the user's discretion with one exception. If the money is owed to a mess member (or ship-rider) that block MUST be filled in with his/her social security number; use no spaces or dashes. The input format for the social security number is 9 digits; use no spaces or dashes. Social security numbers are required because they are a convenient unique identifier of a mess member (or ship-rider). You will be required to enter the date on which the transaction occurred. Use MM/DD/YY format. On that same screen you will see a small menu of selections describing the purpose of the outstanding accounts payable. Choose one. If you choose the caption OTHER you will be provided a small memo field to enter your own purpose. Do not forget to include the amount of the transaction in the block provided. The program will allow you to continue making entries until you choose not to. You will then be asked if you have any outstanding accounts payable to enter. Depending on your situation enter Y for YES or N for NO.
security number. The input format for the social security number is 9 digits; use no spaces or dashes. Social security numbers are required because they are a convenient unique identifier of a mess member (or visitor). You will be required to enter the date on which the transaction occurred. Use MM/DD/YY format. On that same screen you will see a small menu of selections describing the purpose of the outstanding accounts payable. Choose one.

Purpose E - MEALS PURCHASED FROM THE GALLEY should only be selected by messes that subsist from the galley and buy individual meals from the food service officer. If OTHER is chosen, you will be provided a short memo field in which to record your own purpose. The requisition number entry is provided to record the serial number of provision documents from the food service officer. Do not forget to enter the amount of the transaction. You may continue to enter accounts payable as long as required. Next you will be asked if you desire to enter information concerning mess membership. Since you are initiating PMAS for the first time you will answer Y for YES.

5.1.e MESS MEMBER/USER ENTRY SCREEN. SCREEN TR-012

Before you actually begin to enter member information, you must be aware of who to enter. Enter members who have paid a mess share in the past or those who have been entered in accordance with section 5.1.c as owing a mess share. In other words, if someone checks during the conversion process do not add him/her at this point. There is another process for new member check-in!!! If you are a mess that receives COMRATS payments for enlisted members assigned to subsist and work in the mess, you must also add these enlisted personnel to the computer database. When entering the social security number, enter only 9 digits; no dashes or spaces are allowed. In the STATUS block enter M, if the person is a mess member or E if the person is an enlisted member assigned to work the mess. When the last entry is made and verified to this screen (TR-012), screen UT-011 will appear on the monitor. This new screen will ask you to record the mess share the member paid upon joining the mess. It may be impossible to determine from manual records the amount the member had paid. If this is the case leave blank. You may continue to enter members as required. When you have completed entering your mess members and users, the conversion process to PMAS is complete. Further entries into PMAS will be as the result of everyday transactions and monthly financial processing, which are explained later in this manual.

6. MORE ON THE UTILITY PROGRAMS MENU

11
So far in this manual we have explained UTILITY PROGRAMS MENU options 1, 2 and 3. (SET UP PROGRAM PARAMETERS, INITIALIZE DATABASES AND CHANGE PASSWORD). Some discussion on the remaining two options are in order before we begin to use PMAS extensively.

6.1 PRINT CURRENT DATA FILES

From the MAIN MENU select code 1 - SYSTEM UTILITIES. You will now be viewing the UTILITY PROGRAMS MENU. From this menu select code 4 - PRINT CURRENT DATA FILES. When this selection is made, the current contents of the Transaction and Mess Member databases are sent to the printer. You may exercise this option at any time you desire to check the contents of these databases.

6.2 DATA FILE RECOVERY

By exercising this option you can return your databases to the condition they were in as of the last data archive. In section 2.1 of this manual it was stated that the PMAS databases on your hard disk were copied to your Data Backup Disk every time you exited PMAS. (ended a session with PMAS). If an unrecoverable error was generated during the current session with PMAS it is possible to restore your databases to the condition they were in prior to the current session. If you were following the procedures as laid out in section 2.1.a, you have a DATA Backup Disk A and a Data Backup Disk B. It is important for you to use the data disk in which the hard disk databases were most recently copied to. Insert that disk into your A drive and complete the following. From the MAIN MENU select code 1 - SYSTEM UTILITIES. You will now be viewing the UTILITY PROGRAMS MENU. From this menu select code 5 - DATA FILE RECOVERY. When the process is complete you will be returned to the current menu.

Upon completion of this process your databases will be restored to contain the data that they held as of the last archive. At this point, it would be wise to print the current data files (code 4 on the UTILITY PROGRAMS MENU) to see the current entries in the Transaction and Mess Member databases. You will note there are no entries from the session you were working on prior to executing data recovery. Reenter the transactions as required.

6.3 CATASTROPHIC RECOVERY

Sometimes having the ability to return the databases to a previous session’s condition, as described above, may not be enough. If you find yourself in a situation where simple
data recovery is insufficient or where a counterbalancing entry is not appropriate for correcting an error, there is a way out. Using the procedure outlined in section 5 of this manual, you could "restart" the recordskeeping process. First, you would have to return to the last correct Monthly Financial Operating Statement and use the data contained on that form as the initial input into PMAS. From there you would have to reenter all transactions required to bring you back to the present. If your last accurate financial statement was two months ago, it is easy to see that a lot of reconstructive work would have to be done. There is one feature of this type of restart procedure that differs from those procedures outlined in section 5. When you are asked if you desire to add mess members and you know that the members database was error free prior to the restart, answer N for NO. As mentioned in section 5.1, the mess member database will only be deleted if you elect to build a new database. If you respond to the prompt with an 'N' for NO, then the mess member database will remain as is. Remember, although this procedure is available, it should only be exercised in the most extreme of circumstances.

7. TRANSACTION PROCESSING

Once you have tailored PMAS to your mess (Section 4) and converted from manual recordskeeping (Section 5), you are ready to conduct mess recordskeeping business using PMAS. Under the manual recordskeeping system, an event triggers an action from the mess treasurer. These events are such things as the receipt of a provisions bill from the Food Service Officer, the checking in of a new mess member or a mess member paying his/her bill. These same events can also be handled by PMAS. The remainder of this manual will show you how to handle these events within your new automated recordskeeping environment.

7.1 TRANSACTION PROCESSING CONCEPTS

PMAS transaction processing was designed with one basic concept in mind. This concept is simple. You can not pay a bill or collect money unless PMAS knows a bill exists or that money is due the mess. In some cases it will be your specific responsibility to make sure PMAS is aware of amounts owed by the mess (accounts payable) or is aware of amounts due the mess (accounts receivable). In other cases, PMAS creates the accounts payable or receivable based on your responses to certain questions. This concept will become clearer to you as begin to work with PMAS.
7.2 HOW TO PROCESS A TRANSACTION

When you desire to process a transaction, select code 2-PROCESS TRANSACTIONS from the MAIN MENU. You will now see screen M-02 TRANSACTION INPUT MENU before you. Based on the type of transaction you are trying to process select one of the six choices on the menu.

In order to best explain how to handle a specific transaction, the rest of this section of the manual will be organized by the specific events that confront mess treasurers. All directions given in this section will assume that the user is already at screen M-02, TRANSACTION INPUT MENU.
7.2.a NEW MEMBER CHECK-IN

DISCUSSION. Certain transactions must occur when a new member checks into the mess. Normally a mess treasurer will assess a new member a mess share (except in C.P.O. messes) and a prorated mess bill (except in C.P.O. and subsisting messes). Based on the information entered to establish program parameters, (Section 4) PMAS will automatically perform and record all the necessary assessments.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 5 - ADD/DELETE MESS USERS. Screen M-025 ADD/DELETE MESS USERS menu will now be on the screen. From this menu select code 1 - ADD A MESS USER. Input screen TR-012 NEW MEMBER INFORMATION will appear.

Enter the information on the screen as required. Ensure the member’s SSN is entered accurately. All future transactions with this member will be keyed through his/her SSN.

Input for the entry STATUS should be M. M stands for member.

If PMAS determines that the new member owes a partial mess bill, screen TR-010 will appear next. You will then be requested to provide the number of days the new member was attached to the ship during his/her check-in month and the total number of days in that month.

Once you have reached the screen that asks if you desire to add another new member, PMAS has, if appropriate, completed the following:

- Enrolled the individual as a member of the mess.
- Assessed the member a mess share.
- Assessed the member a partial mess bill.

Any money owed by the member, as a result of being checked in, will be automatically recorded to the database. These amounts due will be reflected on the monthly mess bill. If it is necessary to know these amounts immediately, you can print out the database contents in accordance with section 6.1.
7.2.b ADDING ENLISTED PERSONNEL TO THE DATABASE

DISCUSSION. Messes that are true private messes; that is, messes that do not subsist from the main galley, must include Mess Specialists and Mess Cooks assigned to work the mess in their database. Enlisted personnel are included so the mess can receive credit for their food costs in the form of Commuted Rations. Messes that subsist from the galley should not include enlisted personnel in their database.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 5 - ADD/DELETE MESS USERS. Screen M-025 ADD/DELETE MESS USERS menu will now be on the monitor. From this menu select code 1 - ADD A MESS USER. Input screen TR-012 NEW MEMBER INFORMATION will appear.

Enter the enlisted person's name, SSN and rate. Input for the entry STATUS should be E for Enlisted. The status code E prevents the calculations of mess shares and mess bills for enlisted personnel assigned to the mess.

Upon completion of screen TR-012, you will be asked if there are any more members/users to enter. Respond Yes or No accordingly.
7.2.c PREPARING FINAL BILL FOR DETACHING MESS MEMBER

DISCUSSION. Depending on the type of mess, mess members may be due mess share refunds, mess bill refunds or members may owe partial mess bills. PMAS will automatically determined, based on program parameters (Section 4), what combination of the above is appropriate for a detaching member. PMAS will request specific information in order to perform the required calculation. In the case of a subsisting mess, the procedure below should only be utilized to prepare a final bill for a detaching member if the monthly mess bill provided during the end of month financial process is not sufficient to cover all meals that should be charged to the member's account. PMAS will review the database and determine any previous amounts still owed to or owed by the member. The bill produced is truly a final bill. Use of this procedure will produce a hardcopy bill on your printer.

If members are anticipated to check out early in the month (say on the 1st), plan to complete your end of month financial reporting for the previous month in a timely manner so as to facilitate the member's check out. It is important to remember that you can not check departing members out during a current month prior to closing out your record for a previous month.

This procedure sets up a mess member to be deleted from the database. To actually close out a members account refer to section 7.2.d.

HOW TO. From the TRANSACTION INPUT MENU (M-02) select code 5 - ADD/DELETE MESS USER. M-025 ADD/DELETE MESS USER will now be on the screen. Select code 2 - PREPARE A DETACHING BILL. You will be asked to enter the SSN for the detaching member. Enter 9 digits with no spaces or dashes.

If you are a subsisting mess, screen TR-011 will appear requesting you provide the number of breakfast, lunch, dinner and holiday meals chargeable during the detaching month. If you are preparing the member's final bill a day or so before he/she detaches, you should ask what meals he/she plans to eat before departure. Include them in the final count. Additionally, ensure that those meals are recorded as chargeable, so your records and the Food Service Officer's record agree.

If you are a non-subsisting mess, you will be asked if the member has gone on leave during his/her detaching month. The leave you are concerned with here is leave taken before the detaching date. If you respond with Y for YES, you will be requested to provide the number of days leave taken and the total number of days in the month. Next screen TR-010 will appear. You will be required to enter the number of days the
member was attached to the ship in his/her detaching month. Leave taken has no effect on how you respond to this question. If a member was detached from the ship on the 20th of the month and had taken 5 days leave, you would enter that he/she had been assigned 20 days during the month.
7.2.d CLOSING OUT A MEMBER’S ACCOUNT

DISCUSSION. If the procedures outlined in section 7.2.c have been used to prepare a final bill or the monthly mess bill sufficiently covers a member’s account and the mess has settled with that member, use the procedures below to close out the member’s account. Only close out the member’s account if it has been settled in full. This procedure allows no provisions for partial payments to or partial collections from the member. Once this procedure has been exercised, the member will be marked for deletion from the database.

HOW TO. From the TRANSACTION INPUT MENU (M-02) select code 5 - ADD/DELETE MEMBERS. Screen M-025 ADD/DELETE MESS USERS menu will appear next. Select code 3 - CLOSE OUT MEMBER’S ACCOUNT.

You will first be asked to provide the SSN for the member whose account you wish to close out. The database will then be searched and the name and financial summary for that SSN will be displayed. You will then be asked to confirm that the member displayed is indeed the correct individual. If you respond with Y for YES, PMAS assumes that you have already made the appropriate collections (or payments) from (to) the individual. In other words, there is no need to take any further actions to notify PMAS of collection from or payment to the detached member. The member is then marked for deletion.
7.2.e PREPARING A BILL FOR A SHIP-RIDER

DISCUSSION. From time to time, messes provide meals to non-members of the mess. These non-members may be civilian technical representatives, shipyard personnel or members from other commands. If these personnel are not specifically guests of the mess or the guest of a member of the mess they will be required to pay for their meals.

The procedure below should be used to calculate a final bill for a departing ship-rider or in the case of extended visits a monthly mess bill. For example, let's suppose that a ship-rider reported aboard 25 June and his anticipated departure was 6 July. In this case you would want a bill prepared for the meals chargeable for the period 25 through 30 June. This procedure would request the number and type of meals chargeable, perform the required calculations and then produce a bill. The ship-rider could then pay a monthly mess bill as would the members of the mess. When it came time for the ship-rider to depart on 6 July, you would, again, utilize the procedure below to prepare a final bill. Again, the procedure will require you to enter the number and type of meals the ship-rider should be charged for. Of course, you would only enter information on meals chargeable for the period 1 through 6 July. PMAS would then print a departing bill summarizing all outstanding amounts owed by the ship-rider. If the ship-rider had failed to pay his 30 June mess bill, PMAS will automatically include that on the final bill.

PMAS uses either the Navy standard price (subsisting messes) or meal prices derived from the monthly food costs (non-subsisting messes) to calculate a ship-rider's bill.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 6 - PREPARE FINAL BILL FOR SHIP-RIDER. You will then be asked to provide the name and SSN for the departing ship-rider. The entry for the SSN should contain only 9 digits; use no spaces or dashes. Keep a record of the ship-rider's SSN; as it will be required to post the cash collection. After you provide the count of breakfast, lunch, dinner and holiday meals, a bill will be produced on your printer.
DISCUSSION. Messes that do not subsist from the galley, provide meals to the enlisted personnel assign to work the mess. The meals provided to these enlisted personnel are prepared from provisions purchased by the mess. The mess is therefore due reimbursement for those costs associated with feeding enlisted personnel. When enlisted personnel are finished with their assignment they should be removed from the database.

HOW TO. From the TRANSACTION INPUT MENU (M-02) select code 5 - ADD/DELETE MEMBERS. Screen M-025 ADD/DELETE MESS USERS menu will appear next. Select code 3 - CLOSE OUT MEMBER’S ACCOUNT. (NEVER select code 2 - PREPARE A DETACHING BILL when deleting Mess Specialist and Mess Cooks from the database.) Once code 3 is selected you will be required to enter the SSN for the enlisted person you desire to delete. When entering the SSN, use no spaces or dashes. You will receive name confirmation of the person whose SSN you have entered. If you indicate that this is indeed the person you wish to delete, that person is marked for deletion.
7.2.g POST RECEIPT OF PROVISIONS BILL FROM FSO

DISCUSSION. The Food Service Officer will, on a periodic basis, bill the mess for the bulk provision that your mess has received from his/her organization. In PMAS all bills must be entered into the database before they can be paid.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 2 - RECORD AMOUNTS OWED BY THE MESS. Once code 2 is selected, a data input screen will appear on the monitor. You will be requested to provide to whom the bill is owed, the amount of the bill and for what purpose. On the screen will be a small menu which will allow you to choose the option that best describes your transaction. Since we are trying to enter a provisions bill from the FSO, choose A. When A is chosen, you will be asked to provide the last three digits of the bill's requisitions number. This screen (TR-003) was included to accommodate a future change to the NAVSUP Publication 486 Volume II. Until that change is promulgated, enter any number you desire. You have properly informed PMAS that a bill exists and can now take the required steps to pay the bill. Section 7.2.j refers.
7.2.h POST RECEIPT OF PROVISIONS BILL FROM VENDOR

DISCUSSION. Private messes periodically buy provisions from outside sources. These outside sources can be anything from the local supermarket to the base commissary. PMAS requires all bills to be posted to the computer before they can be paid. For example, suppose that you went to the local supermarket and purchased $20.00 worth of groceries for the mess. Even though this was a cash transaction, you would first follow the instructions below to enter that $20.00 as an amount owed by the mess. Now that PMAS is aware that a bill exists, it can now be paid in accordance with section 7.2.k.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 2 - RECORD AMOUNTS OWED BY THE MESS. Once code 2 is selected a data input screen will appear on the monitor. You will be required to enter to whom the bill is owed, the amount of the bill and the purpose of the account payable. Since we are posting the receipt of a vendor bill, select choice B. You have now properly informed PMAS that a bill exists and can now take the required steps to pay that bill. Section 7.2.k refers.
7.2.i POST RECEIPT OF A MISCELLANEOUS BILL

DISCUSSION. The mess may on occasion purchase items other than provisions. These "other" items can range from going away mementoes for departing members to flowers for a family member of a member of the mess. PMAS can handle these type of purchases. Even though these purchases may be handled on a cash bases, PMAS must be informed of the amount owed by utilizing the procedures below. Once PMAS is aware that a bill exists, the bill can be paid in accordance with section 7.2.m.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 2 - RECORD AMOUNTS OWED BY THE MESS. Once code 2 is selected an input screen will appear on the monitor. You will be requested to provide to whom the bill is owed, the amount of the bill and the purpose of the purchase. Since we are posting the receipt of a miscellaneous bill, select, C. Once you have entered C, screen TR-004 will appear providing an input space for you to describe the purpose of the transaction. The information you enter on this screen will assist you in easy recall of what the money was spent for.
7.2.j POST PAYMENT OF PROVISIONS BILL FROM FSO

DISCUSSION. If you have previously "informed" PMAS of an amount owed for a provision bill from the Food Service Officer in accordance with section 7.2.g, you may post the expenditure of funds used to cover that bill utilizing the procedure below.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 4 - POST CASH EXPENDITURES. You will now see the POST PAYMENT FOR menu. From this menu select code 1 - PROVISIONS BILL FROM FSO. This will then activate a database search for all outstanding FSO bills. The bills, as they are encountered in the database, are displayed on screen TR-005. At the bottom of this screen you will be asked to confirm whether or not this is the correct transaction. If you answer Y for Yes, then the bill being displayed will be marked as paid and you will be returned to the menu. If you want to pay more bills start the procedure over again. If you answer N for NO, the next bill in the database, if any, will be displayed and you again will be asked to confirm whether or not this is the bill you want to pay.

If you reach the end of file designation without finding the bill you wanted to pay, refer to section 7.2.g.
7.2.k POST PAYMENT OF A PROVISIONS BILL FROM A VENDOR

DISCUSSION. If you have previously "informed" PMAS of an amount owed for a provision bill from a vendor in accordance with section 7.2.h, you may post the expenditure of funds used to cover that bill utilizing the procedure below.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 4 - POST CASH EXPENDITURE. You will now see the POST PAYMENT FOR menu. From this menu select code 2 - PROVISIONS BILL FROM A VENDOR. This will then activate a database search for all outstanding vendor provisions bills. The bills, as they are encountered in the database, are displayed on screen TR-005. At the bottom of this screen you will be asked to confirm whether or not this is the correct transaction. If you answer Y for Yes, then the bill being displayed will be marked as paid and you will be returned to the menu. If you want to pay more bills start the procedure over again. If you answer N for NO, the next bill in the database, if any, will be displayed and you again will be asked to confirm whether or not this is the bill you want to pay.

If you reach the end of file designation without finding the bill you wanted to pay, refer to section 7.2.h.
7.2.1 POST PAYMENT FOR MEALS PURCHASED FROM THE FSO

DISCUSSION. This option should only be exercised by messes that subsist from the galley. The amount due for meals purchased from the FSO is entered during the end of month financial reporting. PMAS assumes that the mess treasurer makes the payment after the current months financial processing is complete. (e.g., June's bill for meals purchased is paid in July).

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 4 - POST CASH EXPENDITURES. You will now see the POST PAYMENT FOR menu (M-024). From this menu select code 3 - MEALS PURCHASED FROM FSO. Selecting code 3 will initiate a database search for the correct bill. When the bill is located it will be displayed on screen TR-005. You will then be asked if the transaction displayed should be marked as paid. Answering Y for YES will cause the transaction to be marked as paid. Answering N for NO will cause the transaction to remain as an outstanding accounts payable.
7.2.m POSTING PAYMENT OF MISCELLANEOUS BILLS

DISCUSSION. If you have previously "informed" PMAS of an amount owed for a miscellaneous bill in accordance with section 7.2.i, you may post the expenditure of funds used to cover that bill in accordance with the procedures listed below.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 4 - POST CASH EXPENDITURES. You will now see the POST PAYMENT FOR menu (M-024). From this menu, select code 4-OTHER EXPENDITURES. The database will then be searched for all outstanding miscellaneous bills. The bills as they are encountered in the database are displayed on screen TR-005. At the bottom of this screen you will be asked to confirm whether or not this is the correct transaction. If you answer Y for YES, then the bill being displayed will be marked as paid and you will be returned to the menu. If you want to pay more bills start the procedure over again. If you answer N for NO, the next bill in the database, if any, will be displayed and you will again be asked to confirm whether or not this is the bill you want to pay.

If you reach the end of file designation without finding the bill you wanted to pay, refer to section 7.2.i.
7.2.n POST COLLECTION OF CASH FROM A MESS MEMBER

DISCUSSION. Money will be collected from mess members as the result of monthly mess bills, mess shares due or special assessments due. PMAS is made aware of these amounts due by the member check-in process, the member detaching process or the creation of monthly mess bill process. The mess treasurer, after using the aforementioned processes, need only concern himself with the posting of cash collections.

Once the cash is physically collected from mess members, you must post the amount collected to PMAS. PMAS will automatically start the payment process with the member’s oldest debt. Additionally, PMAS will automatically track the full history of outstanding amounts owed by a member and report it on the monthly mess bill. In other words, PMAS will accept partial payments on member’s accounts without forcing the mess treasurer to keep track the member’s outstanding amounts. PMAS will not allow you to post a collection amount that is greater than what is owed by that member. Do not use this section to post cash that has been received by departing mess members in full payment of final bills. For departing mess member collections refer to section 7.2.d.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 3 - POST CASH COLLECTIONS. You will then see screen M-023 CASH COLLECTION OPTIONS menu. From this menu, select code 1 - CASH RECEIVED FROM MEMBERS/USERS. You will then be asked to enter the SSN for the member from which the collection was made. When entering the SSN, use no spaces or dashes. You will then be shown the name that corresponds with the SSN that you have just entered. If by chance you entered the SSN for another (wrong) member of the mess, you can enter 0.00 in the amount collected and exit the procedure without harm. Assuming that you have reached the correct member, post the amount of money collected from the member in the block provided.
7.1.o POST CASH COLLECTION FROM SHIP-RIDER

DISCUSSION. If a monthly or detaching mess bill was prepared for a ship-rider (section 7.1.e), and cash was received from the ship-rider, a collection can now be posted to PMAS. Once a ship-rider has paid in full, his/her account is automatically closed out and his name and SSN are dropped from the database. PMAS will accept partial payment on amounts owed, but when dealing with ship-riders it is best to accept payment in full. PMAS will prevent you from posting a collection amount that is greater than the amount owed.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 3 - POST CASH COLLECTIONS. You will then see screen M-023 CASH COLLECTION OPTIONS menu. From this menu, select code 1- CASH RECEIVED FROM MEMBERS/USERS. You will then be asked to enter the SSN for the ship-rider from which the collection was made. When entering the SSN, use no spaces or dashes. You will then be shown the name that corresponds with the SSN you have just entered. If by chance you entered the SSN for another (wrong) member or ship-rider, you could enter 0.00 in the amount collected and exit the procedure without harm. Assuming that you have reached the correct ship-rider, post the amount of money collected from the ship-rider in the block provided.
7.1.p POST RECEIPT OF COMMUTED RATIONS PAYMENT

DISCUSSION. Messes that do not subsist from the galley, provide meals to enlisted personnel assigned to work the mess. Since these meals were produced with provisions paid for by the mess, the mess is due reimbursement. This reimbursement comes in the form of a commuted rations payment from the Disbursing Officer. The end of month financial close out process calculates the amount due and records it to the database. The mess treasurer, in this case, need only concern himself with the posting of the receipt of payment.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 3 - POST CASH COLLECTIONS. Next screen M-023 CASH COLLECTION OPTIONS menu will appear. From this menu select code 2 - CASH RECEIVED FROM COMRATS PAYMENT. Generally, the database will contain one outstanding Commuted Rations payment due. Just the same, the database will be searched for all transactions of the desired type. When found, the transaction will be displayed on screen TR-005. You will then be asked if the transaction displayed is the correct one. If you respond with a Y for YES, PMAS considers the amount listed on the display as collected and will return you to the menu. If you respond with N for NO, PMAS will leave the displayed transaction as outstanding and look for the next occurrence of the desired transaction.

NOTE: PMAS will not be aware that a Commuted Ration payment is due until after the end of month financial reports are completed. For example, PMAS will not be aware of an amount due for enlisted meals eaten in the month of June, until the June financial reports are processed. Trying to post the receipt of June's Commuted Rations payment prior to that point will prove to be unsuccessful.
7.1.q POSTING MISCELLANEOUS AMOUNTS DUE THE MESS

DISCUSSION. On occasion the mess may find itself in a situation where it is owed money from sources other than the "normal" sources. (e.g., mess members, ship-riders, commuted rations payment) To illustrate, suppose that coffee mugs were ordered using mess funds and when they arrived they were damaged. When the vendor was contacted, he requested the you return the mugs and he further stated that he would forward a refund check in thirty days. That vendor now owes the mess money. PMAS must be informed that money is due before an actual cash collection can be posted. The procedure outlined below will "inform" PMAS that an entity owes money to the mess. The posting of the actual cash collection is covered in section 7.1.r. NOTE: This function should only be exercised to record unusual amounts due the mess. Accounts receivable normally associated with running the mess; such as mess bills due, mess shares due or special assessments due, are handled automatically by PMAS in response to input in specific situations.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 1 - RECORD AMOUNTS DUE THE MESS. Screen TR-001 will now be on the monitor. You will be required to enter the name/entity owing money to the mess, the amount owed and the reason for the account receivable.
7.1.r POSTING CASH COLLECTION FOR MISCELLANEOUS REASON

DISCUSSION. If you have previously recorded an amount due the mess in accordance with section 7.1.q, you can post the cash received, as the result of that amount due, utilizing the procedure below.

HOW TO. From the TRANSACTION INPUT MENU (M-02), select code 3 - POST CASH COLLECTIONS. You will now see the CASH COLLECTION OPTIONS MENU (M-023). From this menu, select code 3 - CASH RECEIVED FOR OTHER REASONS. The database will then be searched for all outstanding miscellaneous accounts receivable. The transactions as they are encountered in the database are displayed on screen TR-005. At the bottom of this screen you will be asked to confirm whether or not this is the correct transaction. If you answer Y for Yes, then the amount due being displayed will be marked as collected and you will be returned to the menu. If you want to collect more accounts receivable start the procedure over again. If you answer N for NO, the next miscellaneous account receivable in the database, if any, will be displayed and you will again be asked to confirm whether or not this is the amount due you want to collect.

If you reach the end of file designation without finding the amount due you wanted to collect, refer to section 7.2.q.
8. PROCESSING MONTHLY FINANCIAL REPORTS

PMAS has the capability to review the database and prepare the Monthly Financial Operating Statement for Messes Afloat, NAVSUP FORM 1367 and all supporting documentation. The process of preparing this report is query based; that is, PMAS will request information not found in the databases (e.g., ending provisions inventory) from the user.

When a mess treasurer elects to process monthly financial reports, PMAS defaults to a trial balance mode. This mode allows the mess treasurer to close out his/her records and have a Monthly Financial Operating Statement prepared for review. The mess treasurer has an unlimited number of attempts to perfect the trial balance before selecting to make the trial balance final. This method allows the mess treasurer the opportunity to find and correct errors before allowing them to permanently affect the mess's financial status. Records must be finalized before a new month's business can be started.

PMAS will utilize the information entered during the tailoring process (section 4) to determine how to prepare your financial reports. There are several different mess "situations". For example, there are Officer and Chief Petty Officer messes. These messes may have one of the following characteristics: subsisting, subsisting but the mess also buys small amounts of bulk provisions, and non-subsisting with two mess bill payment options. PMAS recognizes this fact and tailors the records close out process based on this knowledge. The rest of this section will provide the background required for the query screens you will encounter during this process. Remember, due to the variety of mess "situations", you will not see all of the query screens for which background information is provided.

PMAS will provide the full requirement of records needed to run a private mess. Those reports generated under the trial balance mode will be so indicated with a '** TRIAL BALANCE **' in the date block. Reports generated under the finalize balance option will contain the actual date. The following reports, if appropriate, are provided as output from this process:

- Monthly Financial Operating Statement
- Computation of Committed Ration Form
- Accounts Receivable Report
- Accounts Payable Report
- Record of Collections Report
- Record of Expenditures Report
- Monthly Transaction Report
- Record of Mess Members
8.1 PREPARING TO PROCESS END OF MONTH REPORTS

It is important to have all the information that PMAS will require on hand prior to beginning the records close out process. Below is a check list of items to consider prior to beginning the process.

All types of messes

Ensure all collections and expenditures of mess funds have been posted to PMAS.

Ensure all bills received but not paid are posted to PMAS. Take special care to post all provisions bills (FSO or Vendor) for the month.

Know the current amount of cash on hand, including amounts in bank checking accounts.

Have provision and non-provision inventories for the end of the month available.

Do you need to prepare monthly mess bills for shipriders? See section 7.2.e

Have you closed out accounts for members who have detached during the month? See section 7.2.d.

Ensure you have the names, SSN's and periods of leave/TAD taken by mess members during the month. (may not be required in all cases)

SUBSISTING MESSES

Do you hold the monthly bill, with supporting NAVSUP 1046, from the Food Service Officer detailing individual meals purchased?

Are the Navy Standard meal prices current? If not, see section 4.2.

NON-SUBSISTING MESSES

Are the enlisted personnel currently assigned to work the mess listed in the database? Have you added new arrivals, deleted departures?
Do you know the exact number of days each enlisted member was considered as assigned to the mess?

Ensure you have total meal counts, by category, for meals eaten by Officers, Guests of the mess and enlisted personnel assigned to the mess.

If exercising the pay by meal option as outlined in NAVSUP PUB. 486 Vol. II para. 3111-1(b), ensure you have meal counts for breakfast, lunch, dinner and holiday meals for each member.

8.2 PERFORMING THE RECORDS CLOSE OUT PROCESS

To begin the monthly financial reporting process, select code 3 - GENERATE FINANCIAL REPORTS from the MAIN MENU. You will again be asked to confirm your desire to start the process. This second confirmation allows you the opportunity to return to the menu in the case of an erroneous selection. At certain points during the process, you will be prompted to provide input to PMAS. These prompt screens are discussed below.

8.2.a MEMBER LEAVE/TAD REPORTING. SCREEN EM-007

In situations where a mess bill rebate calculation may be required, you will be asked if any mess members have gone on leave/TAD during the month. If you respond with Y for YES, you will be required to enter the member's SSN. SSN's are entered with no spaces or blanks. You will then receive name confirmation for the SSN that was entered. Screen EM-007 will require the entry of the number of days leave/TAD taken and the total number of days in the month. Note, if a member is on leave/TAD over the end of a month, you should report the number of days absent by the end of the month. For example, let's assume your roommate went on leave starting 15 June and plans to return 14 July. When you process June's financial reports, you would report that he/she had taken 15 days during the month. Do not wait to his/her return and report the entire 30 days leave during July's financial processing.

8.2.b PROVISION/NON-PROVISION ENDING INVENTORIES. SCREEN EM-002

You will be prompted to provide the end of month inventory figures for both provision and non-provision inventories. The ending provisions inventory is usually taken by the mess treasurer and a member of the audit board. Individual meals
purchased from the Food Service Officer are not to be considered as inventory.

The entry of a non-provisions ending inventory figure allows a mess to reduce the impact of large dollar value purchases against the net worth. For example, mess members may authorize the purchase and distribution of ship's plaques to departing members. These plaques can be purchased for $40.00 each in minimum quantities of ten. A $400.00 purchase would have an adverse impact on the net worth if expensed all in one month. By utilizing the non-provisions inventory option, you can distribute that impact over the number of months. As the mess hands out plaques, you would reduce the value of the ending non-provisions inventory a corresponding amount. Note, the tracking of the non-provisions items is a manual process. PMAS only provides the ability to enter an end of month inventory figure. You should be able to justify increases or decreases in this figure with supporting paperwork.

8.2.c DETERMINATION OF MEALS SERVED. SCREEN EM-003

In order to calculate the Commuted Ration amount due the mess, the percentage of total meals eaten by officers and enlisted personnel must be known. PMAS will calculate these percentages based on the total meals eaten by officer and enlisted personnel. Screen EM-003 will require the entry of total meals eaten for the following three categories:

- Officer, Officer's guest and ship-riders
  (If CPO mess, count CPO meals here)

- Guests of the mess

- Enlisted personnel

This information can be found on NAVSUP Form 1046 or some locally prepared and maintained form.

8.2.d ENLISTED PERSONNEL TRACKING SCREEN. SCREEN EM-004

Part of the calculation for Commuted Rations requires the determination of the number of days each enlisted person was assigned to the mess. Situations that would dictate less than a full months entry would be arrivals/departures during a month, or periods of leave/UA taken. Screen EM-004 will display, one at a time, each enlisted person that is recorded in the database and request you enter the number of days each person was assigned to the mess.
PMAS will automatically produce a recommended mess bill based on provision costs and adjustments required to keep the mess share at a specified level. (see section 4.3)

For a non-subsisting mess the screen will display next month's recommended mess bill for each member of the mess.

For subsisting messes, the amount shown on the screen will only represent the equal proration of any bulk provisions purchased and any adjustments required to keep the mess share at the specified level. This recommended mess bill will be in addition to any amounts the member owes for individual meals purchased from the Food Service Officer. The aggregate amount owed by each member will be posted to the monthly Member's Mess Bill Report.

In any event, mess treasurer's may wish to round the amount displayed on screen EM-005 to the nearest dollar to facilitate cash collection.

SPECIAL NOTE: Messes that do not subsist from the galley can exercise two payment options. Option 1 is the equal mess bill option. Option 2 permits mess bills based on individual meals eaten. This option can only be exercised by messes that are to operate in port for the full calendar month. (See NAVSUP PUB. 486 VOL. II para. 3111 for details) If you are a mess that intends to operate under option 2 rules for the upcoming month, change the recommended mess bill displayed on screen EM-005 to 0.00. Remember, when financial reports are finalized, tell PMAS of the change in payment options!

If you are a mess that is currently operating under option 2 and plan to return to option 1 for the upcoming month, you will need to provide your best estimate for a recommended mess bill for that upcoming month. One method of estimation is to use a mess bill amount from a previous month with a similar operating tempo. Realize, that in this case, members will be paying a mess bill for individual meals eaten during the current month and an estimated bill for the upcoming month. Again, when financial reports are finalized, remember to tell PMAS of the change in payment options!

Screen EM-005 will also allow you to charge the membership a special assessment. Special assessments allow you to meet extraordinary expenses without negatively affecting the mess share. For example, let's suppose the mess has planned a going-away party for the Commanding Officer. In addition to the party, it was decided to present him/her with a departing
gift. Based on these anticipated expenses, you could charge a special assessment to cover this event. If an amount other than 0.00 is originally displayed in the special assessment block, this amount is PMAS' recommendation for the minimum special assessment that should be charged. This situation will only occur with certain types of messes. The minimum assessment recommendation is made by reviewing the current value of the mess share and the level at which you specified to maintain the mess share. (see section 4.3) In any event, the amount entered into this block will be assessed to each member of the mess.

8.2.f FSO BILL FOR INDIVIDUAL MEALS PURCHASED. SCREEN EM-009

In subsisting messes, you will receive a bill from the Food Service Officer detailing the amount owed for individual meals purchased by the mess. This bill will be accompanied by a NAVSUP Form 1046 listing meals chargeable to mess members, official guests of the mess and ship-riders. The mess recoups this expense by charging the membership and ship-riders, either, departing or monthly mess bills. The cost of meals eaten by official guests is absorbed by the mess.

NOTE: PMAS assumes the Food Service Officer is not charging the mess for individual meals consumed by mess specialists and mess cooks assigned to your mess. In a subsist situation, enlisted personnel eat the same meals that are being served in the galley. To charge the mess for these meals and then reimburse the mess through a Commuted Rations payment is an added administrative burden. If you are being charged for these meals, other billing arrangements with the Food Service Officer must be made. PMAS, in a subsisting mess situation, has no way of recovering the cost of these meals.

8.2.g MEALS CHARGEABLE TO MESS MEMBERS. SCREEN TR-011

In subsisting messes or non-subsisting messes, exercising the pay by meal option (see section 4.4), the recording of individual meals chargeable is necessary. PMAS will require the number of breakfast, lunch, dinner and holiday meals chargeable to each member for the month. Screen TR-011 will display the members of the mess, one at a time, and request meal total information. The mess bill will then be computed and displayed at the bottom of the screen. Bills computed for subsisting mess members use the Navy Standard Price. Bills computed for non-subsisting mess members use meal prices based on food costs. Subsisting messes should compare
the amount displayed on screen TR-011 with that found on the NAVSUP Form 1046. Resolve discrepancies before continuing.

8.2. h FINALIZE END OF MONTH REPORTS. SCREEN EM-001

In PMAS you may run unlimited trial balances. When you are convinced the trial report are accurate, you may elect to finalize them. Screen EM-001 will ask if you desire to finalize reports. If you decide not to finalize the trial balance, pre-balance conditions will be restored and you will be returned to the MAIN MENU. Since you did not finalize, you are again operating back in the current month. If you elect to finalize the trial balance, another set of reports will be produced with the phrase **TRIAL BALANCE** removed from the reports. You may now begin posting the business for the new month. If an error is discovered after the final report option is selected, you may be able to recover by utilizing the procedures outlined in section 6.2.

8.2. i FINAL REPORT DATE. SCREEN EM-001

If you have selected to finalize the trial reports, you will have to provide PMAS with a date for the reports. This date should always be the last day of the month for which the reports are being produced.

8.2. j SPECIAL ASSESSMENT. SCREEN EM-006

Screen EM-006 will allow you to charge the membership a special assessment. Special assessments allow you to meet extraordinary expenses without negatively affecting the mess share. For example, let's suppose the mess has planned a going-away party for the Commanding Officer. In addition to the party, it was decided to present him/her with a departing gift. Based on these anticipated expenses, you could charge a special assessment to cover this event.

If an amount other than 0.00 is displayed in the entry block, this amount is PMAS' recommendation for the minimum special assessment that should be charged. This determination is made by reviewing the current value of the mess share and the level at which you specified to maintain the mess share. (see section 4.3) In any event, the amount entered into this block will be assessed to each member of the mess.
APPENDIX G
PRIVATE MESS ACCOUNTING DEMONSTRATION

THIS SOFTWARE APPLICATION MUST BE RUN FROM YOUR COMPUTER’S HARD DRIVE.

BEFORE YOU START, TAKE A BLANK FLOPPY DISK AND FORMAT IT IN ACCORDANCE WITH YOUR COMPUTER’S USER’S MANUAL. WHEN THE DISK IS FORMATTED REMOVE IT AND SET IT ASIDE FOR A FEW MINUTES.

THE FOLLOWING ARE SOME CONCEPTS THE USER SHOULD FAMILIARIZE HIMSELF/HERSELF WITH PRIOR TO RUNNING THE PROGRAM.

ENSURE THAT YOUR PRINTER REMAINS POWERED ON DURING THE DEMONSTRATION RUN. FAILURE TO DO SO MAY CAUSE THE PROGRAM TO RUN ERRATICALLY.

WHEN ENTERING DATA, HITTING A CARRIAGE RETURN OR ENTER KEY MAY BE REQUIRED TO HAVE THE DATA ACCEPTED. IN PLACES WHERE IT IS REQUIRED THE SYMBOL <CR> WILL BE USED.

GREAT PAINS HAVE BEEN TAKEN TO ENSURE THE USER HAS THE OPPORTUNITY TO REVIEW HIS/HER INPUT PRIOR TO FINALIZATION. AFTER YOU ARE REQUIRED TO INPUT INFORMATION YOU WILL ALWAYS BE ASKED IF IT IS CORRECT. THIS WILL BE YOUR CHANCE TO CORRECT YOUR ERRORS PRIOR TO DATABASE ACCEPTANCE. IF THE DATA IS FINE ENTER Y FOR YES. IF YOU DESIRE TO MAKE A CHANGE ENTER N FOR NO. YOU MAY NOW CHANGE ANY OF THE INPUT VALUES.

WE WANT TO HELP FACILITATE THIS PROCESS AS MUCH AS POSSIBLE. IF YOU ARE HAVING PROBLEMS WITH THE PROGRAM CALL US AT THE FOLLOWING NUMBER.

LCDR JER TWIGG  LT MIKE MADDEN
AUTOVON 878-2174 OR COMMERCIAL (408) 646-2174

IF WE ARE NOT THERE WE WILL RETURN YOUR CALL AS QUICKLY AS POSSIBLE.

WITH THIS DEMONSTRATION OUTLINE YOU SHOULD HAVE RECEIVED TWO FLOPPY DISKS, LABELED #1 AND #2. THESE ARE THE DISKS THAT NEED TO BE COPIED TO YOUR HARD DRIVE. WHEN OPERATING WITH A HARD DRIVE THE FOLLOWING SYSTEM PROMPT SHOULD APPEAR: C>. AT THIS PROMPT TYPE A:. THE SYSTEM PROMPT SHOULD NOW READ A>. NOW, TAKE THE DISK LABELED #1 AND INSERT IT INTO YOUR A DRIVE. AT THE SYSTEM PROMPT TYPE:

COPY *. *: <CR>

1

222
YOU SHOULD RECEIVE SOME INDICATION THAT FILES WERE INDEED COPIED TO YOUR HARD DRIVE. NEXT REMOVE DISK #1 FROM THE A DRIVE AND INSERT DISK #2. AT THE SYSTEM PROMPT TYPE:

COPY \*.* C: <CR>

THE PROCESS OF LOADING THE SOFTWARE APPLICATION TO YOUR HARD DRIVE IS NOW COMPLETE. RETURN THE SYSTEM PROMPT BACK TO ITS NORMAL DEFAULT BY TYPING C: <CR>.

INSERT THE DISK YOU FORMATTED EARLIER INTO THE A DRIVE. AT THE SYSTEM PROMPT ENTER MESS <CR>

THE FIRST THING YOU SHOULD SEE IS THE PROGRAM IDENTIFICATION SCREEN. HIT ANY KEY TO CONTINUE.

NEXT YOU WILL BE ASKED FOR THE SYSTEM PASSWORD. TYPE FORBIN <CR>.

YOU WILL NOW SEE THE MAIN MENU. SELECT CODE 1. YOU WILL NOW BE AT THE UTILITY PROGRAMS MENU. WE WILL NOW TAILOR THE PROGRAM TO YOUR SHIP. SELECT CODE 1. YOU ARE NOW IN THE SET-UP PROGRAM. PRESS ANY KEY TO CONTINUE. YOU WILL AGAIN BE ASKED TO MAKE SURE YOU WANT TO CHANGE THE SET-UP PARAMETERS. TYPE Y FOR YES.

ANSWER THE ON-SCREEN QUESTIONS IN THE FOLLOWING MANNER:

1. YOUR SHIP’S NAME <CR>
2. D <CR>
3. N <CR>

YOU WILL NOW BE ASKED THE METHOD BY WHICH YOU CHARGE YOUR MEMBERS FOR SUBSISTING. SELECT B <CR>. ACCEPT MEAL PRICES AS LISTED BY HITTING <CR> AT EACH INPUT.

NEXT, YOU WILL BE ASKED AT WHAT LEVEL YOU WANT THE MESS SHARE TO REMAIN. ENTER 50.00 <CR>

THE PROGRAM WILL REQUEST THE VALUE OF ENLISTED BAS. THIS VALUE IS REQUIRED FOR THE COMPUTATION OF COMRATS. ENTER 4.00 <CR>

YOU WILL NOW BE RETURNED TO THE UTILITY PROGRAM MENU. SELECT CODE 6 TO RETURN TO THE MAIN MENU.

NOW WE WILL START A SIMULATED MONTH’S BUSINESS. THE FOLLOWING VALUES HAVE ALREADY BEEN LOADED INTO THE DATABASES.

* CASH BROUGHT FORWARD $1350.00
* BEGINNING INVENTORY $300.00
* MEMBERS ASSIGNED TO THE MESS 23
* ENLISTED PERSONNEL ASSIGNED TO WORK THE MESS 6
* MESS SHARE FROM LAST MONTH $50.00
* MESS BILL COMPUTED LAST MONTH $60.00
* MEAL PRICES: BREAKFAST .50 LUNCH 1.00 DINNER 1.00
HOLIDAY MEAL 1.25

MONTHLY TRANSACTIONS

1. RECEIVED A BILL FOR $30.00 FROM FLOWERS BY PLANT FOR THE
FLOWERS THE MESS BOUGHT FOR THE CO'S WIFE. FROM THE MAIN MENU
SELECT CODE 2 (PROCESS TRANSACTIONS). YOU WILL NOW BE IN THE
TRANSACTION INPUT MENU. SELECT CODE 2 (RECORD AMOUNTS OWED BY
THE MESS). FILL IN THE SCREEN AS FOLLOWS:

BILLED OWED TO : FLOWERS BY PLANT <CR>
AMOUNT OWED : 30.00 <CR>
ENTER SELECTION : C

PURPOSE : FLOWERS FOR CO'S WIFE

ANSWER Y TO THE QUESTION: DO YOU DESIRE TO MAKE ANOTHER ACCOUNTS
PAYABLE ENTRY?

2. BILL'S GROCERY SENT YOU A BILL FOR THE ITEMS THAT MS2
SAGINARIO PICKED UP YESTERDAY. FILL IN THE SCREEN AS FOLLOWS:

BILL OWED TO : BILL'S GROCERY <CR>
AMOUNT OWED : 40.00 <CR>
ENTER SELECTION: B (FOR PROVISIONS FROM VENDORS)

ANSWER Y TO THE QUESTION: DO YOU DESIRE TO MAKE ANOTHER ACCOUNTS
PAYABLE ENTRY?

3. THE FOOD SERVICE OFFICER SENT UP A BILL FOR SOME ITEMS THE
MESS CATERER WANTED FOR A WARDROOM GATHERING. FILL IN THE SCREEN
AS FOLLOWS:

BILL OWED TO : FSO <CR>
AMOUNT OWED : 40.00 <CR>
ENTER SELECTION: A (FOR PROVISIONS FROM THE FSO)

THE PROGRAM WILL NOW ASK FOR THE REQUISITION NUMBER OF THE FOOD
SERVICE DOCUMENT. ENTER 001. ANSWER N TO THE QUESTION: DO YOU
DESIRE TO MAKE ANOTHER ACCOUNTS PAYABLE ENTRY. THIS WILL NOW
RETURN YOU TO THE TRANSACTION INPUT MENU

4. WE ARE NOW GOING TO RECORD AN AMOUNT DUE THE MESS. SELECT
CODE 1. YESTERDAY YOU RETURNED SOME DAMAGED SWO PINS TO THE NAVY
EXCHANGE. THEY ISSUED YOU A CREDIT SLIP FOR $50.00. YOU EXPECT
TO RECEIVE THE CHECK IN THE MAIL IN THE NEAR FUTURE.. FILL IN THE SCREEN AS FOLLOWS:

NAME/ENTITY OWING
MONEY TO THE MESS: NAVY EXCHANGE <CR>
AMOUNT DUE: 50.00 <CR>
REASON: CREDIT MEMO <CR>

ANSWER N TO THE QUESTION: DO YOU DESIRE TO MAKE ANOTHER ACCOUNTS RECEIVABLE ENTRY? YOU WILL THEN BE RETURNED TO THE TRANSACTION INPUT MENU.

5. ENS. JONES REPORTED ABOARD THIS WEEK AND YOU WANT TO ADD HIM TO THE DATABASE. SELECT CODE 5 (ADD/DELETE MEMBERS). YOU WILL NOW BE AT THE ADD/DELETE MESS USERS MENU. SELECT CODE 1. FILL IN THE SCREEN AS FOLLOWS:

NAME OF NEW MEMBER: JONES, JOHN P <CR>
SSN: 191919191
STATUS: M (FOR MEMBER)
DATE JOINED: 11/15/87
RANK: ENS <CR>

ANOTHER SCREEN WILL APPEAR. FILL IN AS FOLLOWS:

NUMBER OF DAYS MEMBER ONBOARD DURING MONTH 15
NUMBER OF DAYS IN MONTH 30

AT THIS POINT THE MEMBER HAS BEEN ADDED TO THE DATABASE. THE AMOUNTS THE NEW MEMBER OWES FOR HIS MESS SHARE AND PARTIAL MESS BILL HAVE BEEN AUTOMATICALLY CALCULATED AND RECORDED TO A DATABASE. LET'S ADD ANOTHER MEMBER. ANSWER Y TO THE PROMPT. FILL IN THE SCREEN AS FOLLOWS:

NAME OF NEW MEMBER: NIMITZ, CHESTER A
SSN: 100000009
STATUS: M
DATE JOINED: 11/20/87
RANK: LTJG

FILL IN THE NEXT SCREEN WITH:

NUMBER OF DAYS MEMBER ONBOARD DURING MONTH 10
NUMBER OF DAYS IN MONTH 30

ANSWER N TO THE QUESTION: DO YOU WISH TO ADD ANOTHER MEMBER? YOU WILL BE RETURNED TO THE ADD/DELETE USERS MENU.
6. NOW LET’S WORK UP A REBATE SUMMARY FOR A DEPARTING MEMBER. LT. MADDEN WILL BE LEAVING LATER TODAY AND HAS ASKED YOU TO CHECK HIM OUT OF THE MESS. SELECT CODE 2 FROM THE ADD/DELETE USERS MENU. ENSURE YOUR PRINTER IS ON!! YOU WILL FIRST BE ASKED FOR THE SOCIAL SECURITY NUMBER OF THE USER. ENTER 987654321. NEXT, IT WILL ASK IF THE DEPARTING MEMBER HAS BEEN ON LEAVE DURING THE MONTH. SINCE THE C.O. GAVE HIM FIVE DAYS AFTER HE WAS RELIEVED, ENTER Y. YOU WILL NOW SEE THE MEMBERS NAME AND A REQUEST FOR MORE INFORMATION. FILL IN THE SCREEN AS FOLLOWS:

NUMBER OF DAYS MEMBER ON LEAVE DURING MONTH: 05
TOTAL NUMBER OF DAYS IN MONTH: 30

NEXT A SCREEN WILL APPEAR ASKING FOR THE REMAINING INFORMATION TO CALCULATE HIS REBATE. FILL IN THE SCREEN AS FOLLOWS:

NUMBER OF DAYS MEMBER ONBOARD DURING MONTH: 20
NUMBER OF DAYS IN MONTH: 30

YOUR PRINTER WILL NOW PRINT OUT A SUMMARY FOR THE DETACHING MEMBER. ANSWER N TO THE QUESTION: DO YOU DESIRE TO DELETE ANOTHER MEMBER? YOU WILL THEN BE RETURNED TO THE ADD/DELETE USER MENU.

7. YOU FIND LT. MADDEN IN THE WARDROOM AND YOU PRESENT HIM HIS REBATE SUMMARY. YOU ASK HIM TO STOP BY YOUR STATEROOM SO YOU CAN PAY HIM AND CLOSE OUT HIS ACCOUNT. SELECT CODE 3 (CLOSE OUT MEMBERS ACCOUNT). YOU WILL FIRST BE ASKED TO PROVIDE A SSN. ENTER 987654321. THE LOWER HALF OF THE SCREEN WILL NOW CONTAIN THE INFORMATION YOU HAVE REQUESTED. SINCE IT IS CORRECT ENTER Y. LT. MADDEN’S ACCOUNT IS NOW CLOSED OUT. YOU WILL NOW BE RETURNED TO THE ADD/DELETE USER MENU. ENTER CODE 4 TO RETURN TO THE PREVIOUS MENU. YOU WILL NOW BE AT THE TRANSACTION INPUT MENU.

8. NIMITZ STOPS BY YOUR STATEROOM AND STATES HE WANTS TO PAY OFF HIS MESS SHARE AND PARTIAL MESS BILL (AMOUNTS DUE GENERATED WHEN HE JOINED THE MESS). HE HANDS YOU $70.00. LET’S POST THIS COLLECTION OF CASH TO THE DATABASE. SELECT CODE 3 (POST CASH
COLLECTION). YOU ARE NOW LOOKING AT THE CASH COLLECTION OPTIONS MENU. SELECT CODE 1. ENTER NIMITZ'S SSN AT THE PROMPT: 100000009. ENTER 70.00 WHEN ASKED FOR THE AMOUNT OF THE COLLECTION. THERE ARE NO FURTHER COLLECTIONS SO ENTER N WHEN ASKED. YOU WILL BE RETURNED TO THE CASH COLLECTION OPTIONS MENU. SELECT CODE 4 TO RETURN TO THE PREVIOUS MENU. YOU WILL NOW BE LOOKING AT THE TRANSACTION INPUT MENU.

9. THE FOOD SERVICE OFFICER HAS JUST HANDED YOU THE PROVISIONS BILL FOR THE MONTH. LET'S POST THE AMOUNT OWED TO THE FSO. SELECT CODE 2 (RECORD AMOUNT OWED BY THE MESS). FILL IN THE SCREEN AS FOLLOWS:

BILL OWED TO: FOOD SERVICE OFFICER
AMOUNT OWED: 695.00
ENTER SELECTION: A

YOU WILL NOW BE ASKED FOR A REQUISITION NUMBER. ENTER 002. THERE ARE NO FURTHER TRANSACTIONS OF THIS TYPE. ENTER N WHEN ASKED IF THERE ARE MORE. YOU WILL NOW BE RETURNED TO THE TRANSACTION INPUT MENU.

9. YOU HAVE THE MONEY, SO WE PAY THE FOOD SERVICE OFFICER HIS $695.00. SELECT CODE 4 (POST CASH EXPENDITURE). THE NEXT SCREEN WILL ASK WHAT THE CASH EXPENDITURE IS FOR. SELECT CODE 1 (PROVISIONS BILL FROM FSO). YOU WILL BE SHOWN EACH BILL OWED TO THE FSO. THE FIRST ONE SHOWN WILL BE SERIAL NUMBER 03001 FOR $40.00. THIS IS OBVIOUSLY NOT THE BILL WE WANT TO PAY. TO PASS IT BY ENTER N AT THE PROMPT. THE NEXT BILL TO BE SHOWN WILL BE SERIAL NUMBER 03002 FOR $695.00. THIS IS IT! SELECT Y TO COMPLETE THE PAYMENT. YOU WILL THEN BE RETURNED TO THE POST PAYMENT FOR: MENU. SELECT CODE 6 TO RETURN TO THE PREVIOUS MENU. ONCE AT THE TRANSACTION INPUT MENU SELECT CODE 7 TO RETURN TO THE MAIN MENU.

10. IT IS NOW TIME TO RUN THE END OF THE MONTH FINANCIAL REPORTS. SELECT CODE 3 TO START THE PROCESS. NOTE THAT THIS PROGRAM WAS DESIGNED TO RUN ON A IBM AT OR SIMILAR MACHINE. RUNNING THIS PROGRAM ON A SLOWER COMPUTER MIGHT CAUSE THE RUN TIME FOR THIS PROCESS TO LAST ABOUT 10 MINUTES. (STILL BETTER THAN DOING IT YOURSELF!!) ENSURE YOUR PRINTER IS ON!!

A. YOU WILL FIRST BE ASKED IF ANY OF THE MEMBERS HAVE BEEN ON LEAVE DURING THE MONTH. ENTER Y. YOUR ROOMMATE TOM BEST WAS ON LEAVE 10 DAYS THIS MONTH. WHEN ASKED ENTER HIS SSN: 273347821. FILL IN THE NEXT.
SCREEN AS FOLLOWS:

NUMBER OF DAYS ON LEAVE DURING MONTH    10
TOTAL NUMBER OF DAYS IN MONTH             30

HIS LEAVE REBATE HAS BEEN AUTOMATICALLY CALCULATED AND
POSTED TO THE DATABASE. NO MORE MEMBERS HAVE BEEN ON
LEAVE DURING THE MONTH, SO ENTER N TO THE QUESTION.

B. YOU WILL NEXT BE ASKED TO PROVIDE AN ENDING
INVENTORY FIGURE. ENTER 400.00 AT THE PROMPT.

C. YOU WILL THEN BE ASKED TO PROVIDE A MEAL SUMMARY
FOR THE MONTH. FILL IN THE SCREEN AS FOLLOWS:

OFFICERS/OFFICER’S GUESTS: 1000 <CR>
GUESTS OF THE MESS: 30 <CR>
ENLISTED PERSONNEL: 270 <CR>
NUMBER OF DAYS IN MONTH: 30

D. YOU WILL NEXT BE ASKED TO PROVIDE THE NUMBER OF
DAYS EACH ENLISTED MEMBER HAS BEEN ASSIGNED TO WORK IN
THE MESS THIS MONTH. THIS INFORMATION IS REQUIRED TO
COMPUTE COMMUTED RATIONS. WHEN ASKED ENTER 30 DAYS FOR
EACH PERSON.

DURING THE PROCESS A SCREEN WILL APPEAR LISTING A
SUGGESTED MESS BILL FOR THE NEXT MONTH. THE AMOUNT
LISTED IS FINE WITH YOU SO HIT <CR>. IT WILL NOW
PROVIDE YOU AN OPPORTUNITY TO CHARGE THE MEMBERS A
SPECIAL ASSESSMENT. YOU KNOW THE C.O. IS DEPARTING
NEXT MONTH AND THE WARDROOM HAS AGREED TO PAY HIM A
DEPARTING GIFT. YOU REASON THAT EXTRA CASH WILL BE
REQUIRED AND YOU DO NOT WANT TO LOWER THE OVERALL VALUE
OF THE MESS SHARE. SO YOU ENTER 5.00 AT THE PROMPT.

F. NEXT YOU WILL BE ASKED IF YOU WANT TO PRODUCE FINAL
REPORTS. FOR THE PURPOSES OF THE DEMO, ENTER N. YOU
WILL BE RETURNED TO THE MAIN MENU. IT IS TIME TO QUIT
SO SELECT CODE 4.

THANK YOU FOR YOUR TIME AND ASSISTANCE. PLEASE FINISH THE
ENCLOSED SURVEY AND USE THE ENVELOPE PROVIDED TO RETURN THE
SURVEY RESULTS TO US. YOU MAY KEEP THE DISK.
APPENDIX H
PRIVATE MESS SURVEY

THIS SURVEY IS NOT FOR THE PURPOSES OF ASSESSING YOUR JOB PERFORMANCE AS MESS TREASURER. ITS PURPOSE IS TO DETERMINE THE DEGREE OF SUPPORT THAT A COMPUTER PROGRAM WE HAVE DEVELOPED WOULD PROVIDE TO A MESS TREASURER.

YOU MAY RESPOND ANONYMously. HOWEVER, SHOULD YOU DESIRE TO KNOW THE RESULTS OF THIS SURVEY, PLEASE PROVIDE YOUR NAME AND ADDRESS BELOW:

NAME____________________________________
ADDRESS__________________________________
CITY_________ STATE____ ZIP__________

PART I

USER PROFILE

1. WHAT IS YOUR PRIMARY DUTY? ________________

2. WHAT RANK DO YOU HOLD? ________________

3. HOW LONG HAVE YOU BEEN A MESS TREASURER? ______

4. HOW LONG IS YOUR TENURE OF MESS TREASURER PLANNED TO BE? ________________

5. WHAT STATEMENT BEST DESCRIBES YOUR UNDERSTANDING OF THE PRIVATE MESS RECORDS-KEEPING SYSTEM?
   __VAGUE __LIMITED __BASIC __FULL __COMPLETE

6. HAVE YOU HAD EXPOSURE TO MICRO COMPUTERS PREVIOUSLY?
   __NONE __VERY LITTLE __SOME __ROUTINE __EXTENSIVE

SURVEY OF PRESENT ENVIRONMENT

1. WHAT TYPE OF MESS DO YOU PRESENTLY RUN?
   __SUBsist FROM THE GALLEY. WE BUY INDIVIDUALLY PREPARED MEALS FROM THE FOOD SERVICE OFFICER.
   __A TRUE PRIVATE MESS. WE BUY PROVISIONS FROM THE FOOD SERVICE OFFICER AND PREPARE OUR OWN MEALS.

   1
2. HOW MANY HOURS A WEEK DO YOU SPEND, ON AVERAGE, HANDLING MESS RECORDS?

___0-2 ___2-3 ___3-5 ___5-10 ___10 OR MORE

3. HOW MANY HOURS DOES IT TAKE YOU TO CLOSE ACCOUNTS AND PREPARE THE MONTHLY FINANCIAL STATEMENT?

___0-2 ___2-3 ___3-5 ___5-10 ___10 OR MORE

4. WHAT STATEMENT BEST DESCRIBES THE IMPACT THAT THE MESS TREASURER JOB HAS ON YOUR SHIPBOARD DUTIES?

___NO IMPACT WHATSOEVER
___ALMOST NO IMPACT
___SOME IMPACT
___A NOTICEABLE IMPACT
___A SEVERE IMPACT

5. HOW WOULD YOU RATE THE TURNOVER TRAINING ACCORDED TO YOU PRIOR TO YOUR ASSIGNMENT AS MESS TREASURER?

___NON-EXISTANT
___OF LITTLE HELP
___SOMewhat HELPFUL
___GENERALLY HELPFUL
___EXTREMELY HELPFUL

6. WHAT STATEMENT BEST DESCRIBES THE CONDITION OF THE RECORDS THAT WERE TURNED OVER TO YOU?

___IN GENERAL DISARRAY; NO APPARENT METHOD OF ORGANIZATION NOTICEABLE

___SOME ATTEMPTS AT PROPER ACCOUNTING TRIED

___ALL REQUIREMENTS FOR RECORDS-KEEPING WERE BASICALLY MET

___A GOOD SET OF RECORDS ALLOWING EASY REVIEW OF PAST TRANSACTIONS

___A COMPLETE, NEAT ACCURATE SET OF RECORDS THAT WERE INSPECTION READY

230
7. WHAT IS THE NUMBER OF MEMBERS IN YOUR MESS?____

8. DO YOU FEEL THAT THE MESS TREASURER'S JOB KEEPS YOU FROM OTHER MORE PRODUCTIVE WORK?
   __NO    __ALMOST NEVER    __SOMETIMES    __OFTEN    __ALWAYS

9. DO YOU BELIEVE THAT RECORDS-KEEPING CHOSES YOU NOW PERFORM COULD BE IMPROVED THROUGH THE USE OF A COMPUTER?
   __NO
   __MAY POSSIBLY BE IMPROVED
   __CAN BE IMPROVED
   __CAN BE IMPROVED NOTICEABLY,
   __CAN BE IMPROVED SIGNIFICANTLY

10. DO YOU FEEL THAT THE TASKS YOU NOW PERFORM COULD BECOME MORE BEARABLE THROUGH THE USE OF A PROGRAM LIKE THIS ONE?
    __NO, NOT AT ALL
    __MAYBE, TO A SLIGHT EXTENT
    __YES, TO SOME EXTENT
    __YES, TO A CONSIDERABLE EXTENT
    __YES, TO A GREAT EXTENT

***************
BEFORE PROCEEDING TO PART II,
PLEASE RUN THE COMPUTER PROGRAM
***************
PART II

CONTINUE WITH THIS SECTION ONLY AFTER YOU HAVE RUN THE DEMONSTRATION SOFTWARE.

1. WHAT STATEMENT BEST DESCRIBES HOW USEFUL YOU FEEL A COMPUTER SYSTEM OF THIS KIND WILL BE?
   
   ___ OF NO USE
   ___ OF VERY LITTLE USE
   ___ OF SOME USE
   ___ VERY USEFUL
   ___ EXTREMELY USEFUL

2. DO YOU THINK THE NEW SYSTEM COULD RESULT IN THE SAVINGS OF YOUR TIME?
   
   ___ NO, IT WILL SAVE NO TIME
   ___ MAY BE, IT WILL SAVE SOME TIME
   ___ YES, IT WILL SAVE SOME TIME
   ___ YES, IT WILL SAVE CONSIDERABLE TIME
   ___ YES, IT WILL BE A GREAT TIME SAVER

3. DID YOU FIND THE SYSTEM UNDERSTANDABLE AND EASY TO RUN?
   
   ___ NO, VERY CONFUSING AND HARD TO RUN
   ___ NO, SOMEWHAT CONFUSING AND NOT CLEAR
   ___ YES, GENERALLY UNDERSTANDABLE AND CLEAR
   ___ YES, VERY UNDERSTANDABLE AND EASY TO RUN
   ___ YES, SURPRISINGLY UNDERSTANDABLE AND VERY EASY TO RUN EVEN BY A NOVICE
4. **DO YOU FEEL THAT IF THIS SYSTEM IS USED THE TURNOVER PROCEDURES BETWEEN MESS TREASURERS WILL BE IMPROVED AND SIMPLIFIED?**

   [ ] NOT REALLY
   [ ] MAY BE TO SOME DEGREE
   [ ] CAN BE TO SOME DEGREE
   [ ] CONSIDERABLY
   [ ] A GREAT DEAL

5. **ESTIMATE THE SAVINGS OF YOUR TIME IN HOURS PER MONTH THAT COULD BE REALIZED IF THIS SYSTEM WERE TO BE USED ON A PERMANENT BASIS.**

   [ ] 0-2
   [ ] 2-5
   [ ] 5-7
   [ ] 7-10
   [ ] 10 OR MORE

6. **DO YOU FEEL IF THE SYSTEM IS ADOPTED THAT IT WILL RESULT IN MORE ACCURATE AND TIMELY RECORDS-KEEPING?**

   [ ] NO; IT WILL CREATE MORE WORK
   [ ] NOT REALLY
   [ ] FEEL SOME IMPROVEMENTS WILL OCCUR
   [ ] FEEL SEVERAL IMPROVEMENTS WILL OCCUR
   [ ] FEEL MAJOR IMPROVEMENTS WILL OCCUR

ADD ANY GENERAL COMMENTS/SUGGESTIONS FOR IMPROVEMENT YOU HAVE CONCERNING THE COMPUTER PROGRAM BELOW:
