6TH WORKSHOP ON THE MATHEMATICAL FOUNDATIONS OF PROGRAMMING SEMANTICS

This workshop was the sixth in this series, which dates back to 1985. It was held on the campus of Queen's University, Kingston, Canada from May 16 to May 19, 1990. Since this meeting was a workshop, as opposed to a full conference, the intention was to keep the number of participants small to enhance the chance for interaction among the attendees. There were 63 participants at the meeting from 7 countries, including Australia, Canada, Denmark, England, Scotland, Sweden, South Africa and the United States. Of these participants, 54 were faculty and 9 were graduate students. Three of the invited speakers were supported with ONR funds, while the rest were supported by funds from the Information and Technology Research Centre of Ontario, Canada, and the Advisory Research Committee of Queen's University. In addition to having reduced registration costs, the nine graduate students were provided additional support by ONR funds.

There were seven invited lectures and 25 contributed talks at the meeting. The invited talks were on three broad topics: polymorphism, applications of category theory to programming semantics, and concurrency. The specific topics included polymorphism and type theory, the use of functor categories to model ALGOL-like languages, linear logic, the semantics of dataflow networks, semantic models of CSP, and the use of probability theory to model nondeterminism. A copy of the Program is attached to this report.

The Proceedings of the workshop will consist of a special issue of the journal, Theoretical Computer Science, composed of papers which have been submitted by participants and refereed to the usual journal standards. Given the time it takes to compose such a volume and the backlog of TCS, we expect this issue to appear sometime within the next year. Copies of the Proceedings will be forwarded to the ONR when they become available.
3. PROGRAM OF THE SIXTH WORKSHOP:

Tuesday, 15 May

8-10:00 pm
Wine and Cheese reception at the Queen's Faculty club, Brown Room
Sponsored by the Dept. of Computing and Information Science.
See enclosed map of campus.

Wednesday, 16 May

ALL TALKS WILL BE HELD IN The Technology Centre # 205.

(Breakout rooms T-C 212 and Goodwin 254 are available throughout the workshop for small, informal meetings) See enclosed map of campus.

9:00 am
J. Mitchell - Invited Speaker
Stanford University

10:00 am
B. Narayanan
Stevens Institute of Technology
A Framework for models of type polymorphism with subtypes.

10:30 am
Coffee Break

11:00 am
A. Ohori
University of Glasgow
Extending ML polymorphism to record structure.

11:30 am
E. Wagner
IBM, Yorktown Heights
Categorical extensions of a language for data directed design.

12:00 pm
A. Melton
Kansas State University
Comparing Hagino's categorical programming language and typed lambda-calculi.

12:30 pm
Luncheon

2:00 pm
F. Oles - Invited Speaker
IBM, Yorktown Heights

3:00 pm
D. Leivant
Carnegie Mellon University
Predicative variants of polymorphism.
Wednesday, 16 May Continued

3.30 pm
Coffee Break

4:00 pm
P. Gilmore
University of British Columbia
A Logical foundation for programming semantics.

4:30 pm
G. Tsiknis
University of British Columbia
A logical foundation for category theory.

5:00 pm
J.C. Shultis
Incremental Systems Corp.
Epistemic type systems.

Thursday, 17 May

9:00 am
P. Panangaden - Invited Speaker
Queen's University

10:00 am
S. Brookes
Carnegie Mellon University
Towards a theory of parallel algorithms on concrete data structures.

10:30 am
Coffee Break

11:00 am
R. Kent
University of Arkansas
Processes as 2-dimensional relational structures.

11:30 am
M. Kwiatkowska
University of Leicester
Causality and fairness properties.

12:00 pm
P. Mosses
Aarhus University
The syntax and semantics of action notation.

12:30 pm
Luncheon

2:00 pm
P. Scott - Invited Speaker
University of Ottawa

3:00 pm
P. O'Hearn
Queen's University
Modelling non-interference using naturality.
Thursday, 17 May Continued

3.30 pm
Coffee Break

4.00 pm
A. Pasztor
Florida International University
Is Pnueli's temporal method complete for nondeterministic programs?

4:30 pm
E. G. Manes
University of Massachusetts
Commutative idempotent choice is inherently nondeterministic.

5:00 pm
J. Zucker
McMaster University
Provably computable total functions on abstract structures.

Friday, 18 May

9:00 am
A. Roscoe - Invited Speaker
Oxford University

10:00 am
M. Mislove
Tufts University
The Category of Continuous Posets.

10:30 am
Coffee Break.

11:00 am
To Be announced

11:30 pm
S. Abramsky - Invited Speaker
Imperial College

12:30 pm
Luncheon

2:15 pm
Boarding the Island Princess

Cruise Boat
# 1 Brock Street OR

6:00 pm
Ferry departs from Wolfe Island dock on Ontario Street to Wolfe Island.
See enclosed map of Kingston.

6:30 pm
Dinner at the General Wolfe Hotel, Wolfe Island
Turn Left after the ferry docks - app 5 minute walk.
Saturday, May 19

9:00 am
G. Plotkin - Invited Speaker
University of Edinburgh

10:00 am
R. Heckman
Universitaet des Saarlandes
*Power domains and second order predicates.*

10:30 am
Coffee Break

11:00 am
M. Huth
Tulane University
*Stable Domains: Their classification, closure properties and applications.*

11:30 am
F. Lamarche
University of Pennsylvania
*Stable domains are generalized topological spaces.*

12:00 pm
C. Brink
University of Cape Town
*Powerdomains and verisimilitude.*

12:30 pm
Luncheon

CONFERENCE CONCLUDES
