Final Report for Period 1 April 1987 - 31 December 1990

Approved for Public Release; Distribution is Unlimited

MANUFACTURING TECHNOLOGY DIRECTORATE
WRIGHT RESEARCH AND DEVELOPMENT CENTER
AIR FORCE SYSTEMS COMMAND
WRIGHT-PATTERSON AIR FORCE BASE, OHIO  45433-6533
NOTICE

When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever, regardless whether or not the government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data. It should not, therefore, be construed or implied by any person, persons, or organization that the Government is licensing or conveying any rights or permission to manufacture, use, or market any patented invention that may in any way be related thereto.

This technical report has been reviewed and is approved for publication.

This report is releasable to the National Technical Information Service (NTIS). At NTIS, it will be available to the general public, including foreign nations.

DAVID L. JUDSON, Project Manager
WRDC/MTI
Wright-Patterson AFB, OH 45433-6533

DATE

FOR THE COMMANDER:

BRUCE A. RASMUSSEN, Chief
WRDC/MTI
Wright-Patterson AFB, OH 45433-6533

DATE

If your address has changed, if you wish to be removed from our mailing list, or if the addressee is no longer employed by your organization please notify WRDC/MTI, Wright-Patterson Air Force Base, OH 45433-6533 to help us maintain a current mailing list.

Copies of this report should not be returned unless return is required by security considerations, contractual obligations, or notice on a specific document.
**Title**: See block 19

**ABSTRACT**

This specification establishes the detailed design of the User Interface Services (UIS) computer program.

**BLOCK 11:**

**INTEGRATED INFORMATION SUPPORT SYSTEM**

**Vol VIII - User Interface Subsystem**

**Part 3 - User Interface (UI) Services Product Specification**
FOREWORD

This technical report covers work performed under Air Force Contract F33600-87-C-0464, DAPro Project. This contract is sponsored by the Manufacturing Technology Directorate, Air Force Systems Command, Wright-Patterson Air Force Base, Ohio. It was administered under the technical direction of Mr. Bruce A. Rasmussen, Branch Chief, Integration Technology Division, Manufacturing Technology Directorate, through Mr. David L. Judson, Project Manager. The Prime Contractor was Integration Technology Services, Software Programs Division, of the Control Data Corporation, Dayton, Ohio, under the direction of Mr. W. A. Osborne. The DAPro Project Manager for Control Data Corporation was Mr. Jimmy P. Maxwell.

The DAPro project was created to continue the development, test, and demonstration of the Integrated Information Support System (IISS). The IISS technology work comprises enhancements to IISS software and the establishment and operation of IISS test bed hardware and communications for developers and users.

The following list names the Control Data Corporation subcontractors and their contributing activities:

<table>
<thead>
<tr>
<th>SUBCONTRACTOR</th>
<th>ROLE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Control Data Corporation</td>
<td>Responsible for the overall Common Data Model design development and implementation, IISS integration and test, and technology transfer of IISS.</td>
</tr>
<tr>
<td>D. Appleton Company</td>
<td>Responsible for providing software information services for the Common Data Model and IDEF1X integration methodology.</td>
</tr>
<tr>
<td>ONTEK</td>
<td>Responsible for defining and testing a representative integrated system base in Artificial Intelligence techniques to establish fitness for use.</td>
</tr>
<tr>

SECTION 1
SCOPE

1.1 Identification

This specification establishes the detailed design of a collection of form-based applications identified as the User Interface Services, hereinafter referred to as UIS. The UIS is one configuration item of the Integrated Information Support System (IISS) User Interface (UI).

1.2 Functional Summary

The UIS is a collection of applications that use the Form Processor. Each application is individually accessed by filling its name in the function item on the IISS Function Screen. Each application presents a form to the user which must be filled in with information for processing by that application. The application then communicates with the Form Processor through messages created and sent by the Application Interface and handled by the UIM (User Interface Monitor) of the Form Processor.
2.1 Reference Documents

2.2 Terms and Abbreviations

Application Interface: (AI), subset of the IISS User Interface that consists of the callable routines that are linked with applications that use the Form Processor or Virtual Terminal. The AI enables applications to be hosted on computers other than the host of the User Interface.

Application Process: (AP), a cohesive unit of software that can be initiated as a unit to perform some function or functions.

Form: structured view which may be imposed on windows or other forms. A form is composed of fields. These fields may be defined as forms, items, and windows.

Form Definition: (FD), forms definition language after compilation. It is read at runtime by the Form Processor.

Forms Definition Language: (FDL), the language in which electronic forms are defined.

Forms Driven Form Editor: (FDFE), subset of the FE which consists of a forms driven application used to create Form Definition files interactively.

Form Editor: (FE), subset of the IISS User Interface that is used to create definitions of forms. The FE consists of the Forms Driven Form Editor and the Forms Language Compiler.

Forms Language Compiler: (FLAN), subset of the FE that consists of a batch process that accepts a series of forms definition language statements and produces form definition files as output.

Form Processor: (FP), subset of the IISS User Interface that consists of a set of callable execution time routines available to an application program for form processing.

IISS Function Screen: the first screen that is displayed after logon. It allows the user to specify the function he wants to access and the device type and device name on which he is working.
Integrated Information Support System: (IISS), a test computing environment used to investigate, demonstrate and test the concepts of information management and information integration in the context of Aerospace Manufacturing. The IISS addresses the problems of integration of data resident on heterogeneous data bases supported by heterogeneous computers interconnected via a Local Area Network.

Presentation Schema: (PS), may be equivalent to a form. It is the view presented to the user of the application.

User Data: data which is either input by the user or output by the application programs to items.

User Interface: (UI), IISS subsystem that controls the user's terminal and interfaces with the rest of the system. The UI consists of two major subsystems: the User Interface Development System (UIDS) and the User Interface Management System (UIMS).

User Interface Development System: (UIDS), collection of IISS User Interface subsystems that are used by applications programmers as they develop IISS applications. The UIDS includes the Form Editor and the Application Generator.

User Interface Management System: (UIMS), the runtime UI. It consists of the Form Processor, Virtual Terminal, Application Interface, the User Interface Services and the Text Editor.

User Interface Services: (UIS), subset of the IISS User Interface that consists of a package of routines that aid users in controlling their environment. It includes message management, change password, and application definition services.

User Interface/Virtual Terminal Interface: (UI/VTI), another name for the User Interface.

Virtual Terminal: (VT), subset of the IISS User Interface that performs the interfacing between different terminals and the UI. This is done by defining a specific set of terminal features and protocols which must be supported by the UI software which constitutes the virtual terminal definition. Specific terminals are then mapped against the virtual terminal software by specific software modules written for each type of real terminal supported.
Window: dynamic area of a terminal screen on which predefined forms may be placed at run time.

Window Manager: a facility which allows the following to be manipulated: size and location of windows, the device on which an application is running, the position of a form within a window. It is part of the Form Processor.
3.1 Structural Description

The UIS consists of independent IISS programs which may be invoked from the IISS Function Screen. The UIS provides the following independent applications:

1) Define Application
2) Change Password
3) Message Management

3.1.1 Define Application

The following figure shows the basic architecture of the Define Application application:

```
+-----------------------+
| Define Application    |
\                               |
+-------------------------+
| Get Application         |
| Description             |
+-------------------------+
| Define New Application  |
+-------------------------+
| Update/Delete Application|
```

Figure 3-1 Basic Architecture of Define Application

The main module determines whether the entered application name is new or already exists. If it exists, then the application description is retrieved from the APPL table. The user may then modify or delete the application definition. Upon modification, the application's entry is modified in the APPL table. Upon deletion, the application's entry is deleted from the APPL table. Also, upon deletion, the application's entry in the ROLAPP table is also deleted. If the application is new, then the Define Application subfunction inserts the application into the APPL table.
3.1.2 Change Password

This application consists of two modules. The main module processes the application form. It retrieves the data from the form and verifies the input. Upon successful verification of password information, it calls the second module to update the user's entry in the UIUSER table. After update, it informs the user of the success of the update.

3.1.3 Message Management

In the VAX environment, the files that are updated are located in the directory pointed to by the logical IISSMLIB and have the format MSGXXX.MSG where XXX is the message base number. A new version of the MSGXXX.MSG file is created every time a new base number is chosen or an existing base number is updated. These message files should be purged so that several versions of the same file do not exist.

The record format of the MSGXXX.MSG file is the message number followed by the message name and then the message description. These files may then be used as input to a program called INCGEN. This program produces an include file in the language specified when the INCGEN program was executed. The include files can be generated in C, Cobol, PLI, or Fortran. The include file may then be used in the application for which this message base was defined.

3.2 Functional Flow

3.2.1 Define Application

Figure 3-2 is a data flow diagram of Define Application.
3.2.2 Change Password

Figure 3-3 is a data flow diagram of Change Password.
3.2.3 Message Management

Figure 3-4 is a data flow for Message Management.

![Message Management Data Flow](image)

Figure 3-4 Message Management Data Flow

3.2.3.1 INCGEN

Figure 3-5 is a data flow diagram for INCGEN.

![INCGEN Data Flow](image)

Figure 3-5 INCGEN Data Flow
3.3 Interfaces

3.3.1 Form Processor

Define Application, Change Password and Message Management interface with the Form Processor through calls to the Application Interface (AI). The AI routines translate the application request into the NTM message format and then send the message that contains the application request data to the User Interface Monitor.

3.3.2 UIM

The UIM, which is the main control program for the Form Processor, calls the appropriate FP routine when a message is received from a UIS application. The UIM then returns the output parameters to the UIS application.

3.3.3 NTM

The UIS applications must use the NTM initialization routine, INITIAL and the NTM termination routine, TRMNAT.

3.4 Program Interrupts

This section does not apply to the detailed design of the User Interface Service applications.

3.5 Timing and Sequencing Description

The UIS applications are initiated through the IISS Function Screen presented to the user after logging on correctly to the IISS. Each application accepts input from and returns output to the user's terminal via application defined forms.

Specific functions within the User Interface Services permit the user to create, maintain and delete commands which are used to run application programs. Utility functions also exist for changing the user's password and for managing error messages for application development.

3.6 Special Control Features

The detailed design of the User Interface Services does not include any special control features as defined in the ICAM Documentation Standards manual.
3.7 **Storage Allocation**

The executable sizes for Define Application, Change Password, Message Management and INCGEN are:

- Define Application: 268 blocks
- Change Password: 237 blocks
- Message Management: 130 blocks
- INCGEN: 65 blocks

3.7.1 **Data Base Definition**

3.7.1.1 **File Descriptions**

The following files are used by the Message Management application.

1. **FILE NAME: MSGxxx.MSG**

   **PURPOSE:** This file contains message codes and descriptions used by the FP routine PMSGLC. The XXX in the name of the file corresponds to the first three numbers in the message codes.

   **DECLARATION:**

   ```c
   typedef struct {
       char number[5];
       char name[8];
       char descrip[60];
   } MSGLIN
   ```

2. **FILE NAME: user specified**

   **PURPOSE:** This file is generated by the program INCGEN. It is used by application programs that call the FP routine PMSGLC. It enables application code to be independent of the message code values since it provides variable names for the values. This file may be generated in COBOL, Fortran, C, or PLI.
DECLARATION:

The following is a sample include file generated by INCGEN:

```
01 OK          PIC X(5) VALUE '70000'.
01 FPMSGS     PIC X(5) VALUE '70300'.
01 INVPAG     PIC X(5) VALUE '70301'.
01 FNOTFND    PIC X(5) VALUE '70302'.
01 FISOPEN    PIC X(5) VALUE '70303'.
01 ALCERR     PIC X(3) VALUE '70304'.
01 OPNERR     PIC X(5) VALUE '70305'.
01 EXPERR     PIC X(5) VALUE '70306'.
01 TRNCFLD    PIC X(5) VALUE '70307'.
01 UNKTYPE    PIC X(5) VALUE '70308'.
01 PNOTARY    PIC X(5) VALUE '70309'.
01 NILKEY     PIC X(5) VALUE '70310'.
01 SYSERR     PIC X(5) VALUE '70311'.
01 PBFULL     PIC X(5) VALUE '70312'.
01 INVEDT     PIC X(5) VALUE '70313'.
01 FILRERR    PIC X(5) VALUE '70314'.
01 PATHERR    PIC X(5) VALUE '70315'.
01 NOMACH     PIC X(5) VALUE '70316'.
01 PNOTFND    PIC X(5) VALUE '70317'.
01 WRDWRAP    PIC X(5) VALUE '70318'.
01 INVMRG     PIC X(5) VALUE '70319'.
01 PNOTUNQ    PIC X(5) VALUE '70320'.
```

3.7.1.2 Table Description

Only the Define Application and the Change Password UIS applications use the relational database management system ORACLE. The Message Management UIS application uses VAX files. The following table descriptions show the ORACLE database. Some of these tables are used by the UIM of the Form Processor. For completeness and to show the relationships between the tables and views, all have been presented here.

The database contains four tables and two views:

1. UIUSER contains information about users.
2. APPL contains information about applications.
3. USEROL relates users to roles.
4. ROLAPP relates roles to applications.
(5) ROLAPT is a view relating roles to application information. It is used to retrieve information for the HELP form.

(6) LOGON is a view relating user information to roles. It is used to verify logon data.

3.7.1.2.1 Relationship Between Tables and Views

The following illustrates the relationship between the various tables and views. The symbol <--> indicates that two columns contain the same type of data. The symbol * denotes key fields. Names enclosed in parentheses are the names of tables from which data is actually retrieved.

**TABLES**

<table>
<thead>
<tr>
<th>TABLES</th>
<th>UIUSER</th>
<th>USEROL</th>
<th>ROLAPP</th>
<th>APPL</th>
</tr>
</thead>

3.7.1.2.2 Detailed Description of Tables and Views

The following figure is a detailed description of the tables and views outlined in the previous section. The heading descriptions are as follows:
(1) CNAME = column name
(2) TNAME = table or view name
(3) CREATOR = creator of table or view
(4) COLNO = column number
(5) COLTYP = column data type
(6) WIDTH = width of column
(7) SCALE = scale
(8) NULLS = whether or not a column may contain nulls
<table>

Figure 3-6 Table and View Description

3.8 Object Code Creation

The UIS application routines were compiled with an ANSI COBOL compiler under VAX/VMS. The source is portable to other compilers on machines such as the IBM.
3.9 Adaptation Data

The UIS application source is portable to other ANSI COBOL compilers.

3.10 Detailed Design Description

3.10.1 Main Program List

The following is a list of all "Main Programs" which are modules that are not called by any other module being documented here. These modules are either program entry points or, if they are hooked into another set of programs via subroutine calls, they are the points the external programs can call and therefore enter through. To differentiate between the two types of entry points, look at the individual Module Documentation (section 3.10.8) and look at Module Type for each of the Main Program modules listed. Note whether the routine is a Program, Subroutine, or Function. If it is a Program, it is truly a main program entry point. If not, then it is merely called by other programs not being documented here.

3.10.3 **External Routines List**

The following is a list of all routines or functions not documented here that are called by modules that are documented here. The first caller, in alphabetical order, is listed as well. The specification in which any module is documented may be found in the Module Documentation Index (Document Number CM 620100001). See section 3.10.6 for a list of the modules that call each of these external routines.

3.10.4 Include File List

The following is a list of all include files called in by modules being documented here. Each include file has a unique name regardless of the language being used. The purpose of each include file is listed as well. A more complete description of each include file is given in section 3.10.9. The purpose listed is the one that is in the source code of the include file.

A purpose of "**** PURPOSE NOT FOUND BY STRIPPER ****" indicates that a purpose statement was not written into the include file itself. The most common reason for this is that the include file comes from system libraries that were not developed by the project, such as 'C' libraries that are provided with the 'C' compiler.

See section 3.10.6 for a set of lists which show all the modules which call in each of these include files.

3.10.7 Main Program Parts List

The following lists each Main Program listed in 3.10.1 and all the modules which are called either by that module itself or by any of the documented modules which it calls. It is possible for a non-main module to be listed more than once if it is called by multiple modules. The called modules, in this case known as program parts, are marked as to whether they are documented here. If so, the phrase "well-defined module" appears by the module name, if not it is an "external routine". The Purpose of the Main Program module is listed as well.

3.10.8 **Module Documentation**

The following documentation describes information which is specific to each individual module being documented in this specification as listed in section 3.10.2. It provides a compact way of getting information that would be otherwise buried within each module's source code.

The specific items in this module documentation have the following meanings:

| NAME: | Name of program Module. |
| PURPOSE: | Purpose of Module as detailed in the source code. |
| LANGUAGE: | Programming language source code is written in. The choices are: |
| | VAX-11 FORTRAN |
| | C (I/S-1 Workbench 'C') |
| | VAX-11 COBOL |
| MODULE TYPE: | Whether a Program, Subroutine, or Function. |
| SOURCE FILE: | Name of Source File from file specification. |
| SOURCE FILE TYPE: | Source File Extension from file specification. |
| HOST: | Whether this is a host-dependent routine (VAX or IBM) or blank if host-independent. |
| SUBSYSTEM: | IISS sub-system this file resides in. |
| SUBDIRECTORY: | Sub-directory of that subsystem in which this file resides. |
| DOCUMENTATION GROUP: | Name of documentation group of which this source file is a member. |
| DESCRIPTION: | A description of the module as obtained from the source code. |
| ARGUMENTS: | The arguments with which this routine is called if it is a Subroutine or a Function. |
| INCLUDE FILES: | A list of all the files that are included into this module as well as their purposes. |
| ROUTINES CALLED: | Subroutines or Functions, either documented or external, called by |
this module, if any.

**CALLED DIRECTLY BY:** The documented routines which call this module, if any.

**USED IN MAIN PROGRAM(S):** The documented Main Programs which contain this module in their parts list according to the list in section 3.10.7.

The Module Documentation is arranged alphabetically according to Module Name.

DESCRIPTION

UTILITY TO MAINTAIN MESSAGE FILES USED BY FORM PROCESSOR

INCLUDE FILES:
-----------------
STDTYP - STANDARD TYPE DEFINITIONS
STDO - **** PURPOSE NOT FOUND BY STRIPPER ****
FPPARM - FORM PROCESSOR PARAMETERS
FPP - FORM PROCESSOR DATA
FPCODE - FORM PROCESSOR RETURN CODES
FPEMSG - FORM PROCESSOR ERROR MESSAGES
NTM - NTM INTERFACE INCLUDE FILE

ROUTINES CALLED:
------------------
INITIAL
MEMCMP
TERMFP
PDATA
PMSGLS
MM/NEWFILE - SAVE MESSAGES IN A NEW FILE
MEMCPY
MM/SAVEIT - SAVE MESSAGE FILE CHANGES
GDATA
MEMSET
OISCR
ADDFRM
TRMNAT
INITFP
OPNFRM
UI SERVICES Module Documentation

NAME: MM/NEWFILE
PURPOSE: SAVE MESSAGES IN A NEW FILE
LANGUAGE: C
MODULE TYPE: SUBROUTINE
FUNCTION TYPE: VOID ()
SOURCE FILE: MM
SOURCE FILE TYPE: .C
HOST:
SUBSYSTEM: UI
SUBDIRECTORY: MM
DOCUMENTATION GROUP: UISERV

DESCRIPTION:

ARGUMENTS:

---------
FILEDESC = CHAR []
BASE = CHAR []

INCLUDE FILES:

---------
STDTYP - STANDARD TYPE DEFINITIONS
STDIO - **** PURPOSE NOT FOUND BY STRIPPER ****
FPPARM - FORM PROCESSOR PARAMETERS
FPD - FORM PROCESSOR DATA
FPCODE - FORM PROCESSOR RETURN CODES
FPEMSG - FORM PROCESSOR ERROR MESSAGES
NTM - NTM INTERFACE INCLUDE FILE

ROUTINES CALLED:

--------------
PDATA
MEMCPY
FCLOSE
FREAD
FOPEN
SPRINTF
MEMSET

CALLED DIRECTLY BY:

--------------
MM/MAIN - MAIN MODULE FOR MESSAGE MANAGEMENT

USED IN MAIN PROGRAM(S):

--------------
MM/MAIN - MAIN MODULE FOR MESSAGE MANAGEMENT
UI SERVICES Module Documentation

NAME: MM/SAVEIT
PURPOSE: SAVE MESSAGE FILE CHANGES
LANGUAGE: C
MODULE TYPE: FUNCTION
FUNCTION TYPE: BOOL()
SOURCE FILE: MM
SOURCE FILE TYPE: .C
HOST:
SUBSYSTEM: UI
SUBDIRECTORY: MM
DOCUMENTATION GROUP: UISERV

DESCRIPTION:

ARGUMENTS:

FILEDESC = CHAR []

INCLUDE FILES:

STDTYP - STANDARD TYPE DEFINITIONS
STDIO - **** PURPOSE NOT FOUND BY STRIPPER ****
FPPARM - FORM PROCESSOR PARAMETERS
FPD - FORM PROCESSOR DATA
FPCODE - FORM PROCESSOR RETURN CODES
FPEMSG - FORM PROCESSOR ERROR MESSAGES
NTM - NTM INTERFACE INCLUDE FILE

ROUTINES CALLED:

FCLOSE
FWRITE
MEMCMP
FOPEN

CALLED DIRECTLY BY:

MM/MAIN - MAIN MODULE FOR MESSAGE MANAGEMENT

USED IN MAIN PROGRAM(S):

MM/MAIN - MAIN MODULE FOR MESSAGE MANAGEMENT

3-60
UI SERVICES Module Documentation

NAME: PROCAP
PURPOSE: PROCess Application
LANGUAGE: VAX-11 COBOL
MODULE TYPE: SUBROUTINE
SOURCE FILE: PROCAP
SOURCE FILE TYPE: .COB
HOST:
SUBSYSTEM: UI
SUBDIRECTORY: UIS
DOCUMENTATION GROUP: UISERV

DESCRIPTION:

THIS MODULE PROCESSES A REQUEST TO RUN A REMOTE APPLICATION.

ARGUMENTS:

LDA = RECRD
CURSOR = RECRD
FUNCTION = DSPLY [X(10)]
ACTION-CODE = DSPLY [X(5)]
MSG-HEADER = DSPLY [X(800)]
RCODE = DSPLY [X(5)]

INCLUDE FILES:

CICODE - Command Interpreter CODEs
ORCODE - ORacle CODEs
FPCODE - FORM PROCESSOR RETURN CODES
APPDEF - APPLICATION DEFINITION data declarations
LDAI - oracle Logon Data Area description
CURSORI - CURSOR description

ROUTINES CALLED:

DBGAPD - Get APPLICATION Description
DBCOM - COMMIT DATA BASE
UI SERVICES Module Documentation

NAME: PROCDC
PURPOSE: PROCess Define Command form
LANGUAGE: VAX-11 COBOL
MODULE TYPE: SUBROUTINE
SOURCE FILE: PROCDC
SOURCE FILE TYPE: .COB
HOST:
SUBSYSTEM: UI
SUBDIRECTORY: UIS
DOCUMENTATION GROUP: UISERV

DESCRIPTION:
-----------------
THIS MODULE PROCESSES THE DEFCOM FORM OF
THE UIMS SYSTEM SERVICES.

ARGUMENTS:
----------
LDA = RECRD
CURSOR = RECRD
ACTION-CODE = DSPLY [X(5)]
APPLICATION-ID = DSPLY [X(10)]
RCODE = DSPLY [X(5)]

INCLUDE FILES:
---------------
CICODE - Command Interpreter CODEs
DEFCOM - DEFCOM data declarations
FPPARM - FORM PROCESSOR PARAMETERS
ORCODE - ORacle CODEs
FPCODE - FORM PROCESSOR RETURN CODES
LDAI - oracle Logon Data Area description
CURSORI - CURSOR description

ROUTINES CALLED:
----------------
ADDFRM
PDATA
GDATA
DBIAPD - Insert APplication Description
DBCOM - COMMIT DATA BASE
PMSGLS

CALLED DIRECTLY BY:
-------------------
PROCDF - PROCess DeFine form

USED IN MAIN PROGRAM(S):
------------------------
PROCDF - PROCess DeFine form
UI SERVICES Module Documentation

NAME: PROCDF
PURPOSE: PROCess DeFine form
LANGUAGE: VAX-11 COBOL
MODULE TYPE: PROGRAM
SOURCE FILE: PROCDF
SOURCE FILE TYPE: .COB
HOST:
SUBSYSTEM: UI
SUBDIRECTORY:UIS
DOCUMENTATION GROUP: UISERV

DESCRIPTION:

THIS MODULE PROCESSES THE DEFINE FORM OF
THE UI SERVICES.

INCLUDE FILES:

APPDEF - APPLICATION DEFINITION data declarations
CICODE - Command Interpreter CODEs
DEFINE - DEFINE form data declarations
FPCODE - FORM PROCESSOR RETURN CODES
FPARM - FORM PROCESSOR PARAMETERS
DBNAME - DataBase field NAMES
ORCODE - ORacle CODEs
LDI - oracle Logon Data Area description
CURSORI - CURSOR description
SRVRET - AS THE RETURN GIVEN A TABLE-FULL ERROR

ROUTINES CALLED:

INITIAL
INITFP
TERMFP
TRMNF
DBOPEN - OPEN DATA BASE
OPNFRM
ADDFRM
PDATA
OISCR
PMSGLS
GDATA
DBGAPD - GET APPLICATION Description
PROCDC - PROCess Define Command form
PROCUC - PROCess Update Command form
GPAGE
RMVPAG
CLSRW
DBCLOSE - CLOSE DATA BASE
UI SERVICES Module Documentation

NAME: PROCPW
PURPOSE: PROCESS PSWORD FORM
LANGUAGE: VAX-11 COBOL
MODULE TYPE: PROGRAM
SOURCE FILE: PROCPW
SOURCE FILE TYPE: .COB
HOST:
SUBSYSTEM: UI
SUBDIRECTORY: UIS
DOCUMENTATION GROUP: UISERV

DESCRIPTION:
-------------------
THIS MODULE PROCESSES THE PSWORD FORM OF THE UI SERVICES.

INCLUDE FILES:
-------------------
CICODE - Command Interpreter CODEs
FPPARM - FORM PROCESSOR PARAMETERS
DBNAME - DataBase field NAMES
ORCODE - ORacle CODEs
PSWORDI - PaaSWORD form data structure
FPCODE - FORM PROCESSOR RETURN CODES
LDAI - oracle Logon Data Area description
CURSORI - CURSOR description
SRVRET - AS THE RETURN GIVEN A TABLE-FULL ERROR

ROUTINES CALLED:
-------------------

FILE NAME: SRVRET
PURPOSE: AS THE RETURN GIVEN A TABLE-FULL ERROR
LANGUAGE: VAX-11 COBOL

DESCRIPTION:

MODIFIED 11/2/83 TO INCLUDE RET-CODE-5
MODIFIED 1/9/84 TO INCREASE ALL ERROR CODES TO PIC X(5)
AND TO ELIMINATE ALPHA'S
MODIFIED 1/26/84 TO ADD RET-CODE FOR GETUSR-NOT-SUCC
SRV-SUCCESSFUL ADDED FOR GENERIC RETURN
MODIFIED 2/7/84 TO ADD ERROR CODES FOR ENTRY-NOT-FOUND
MODIFIED 2/8/84 TO ADD WHTHST-NOT-SUCCESSFUL
MODIFIED 2/20/84 TO ADD TSTMOD NEW CODES.
UI SERVICES Include File Description

FILE NAME: STD Typ
PURPOSE: STANDARD TYPE DEFINITIONS
LANGUAGE: C

DESCRIPTION:

DESCRIPTION
THIS FILE ENSURES THAT THE FOLLOWING STANDARD TYPES ARE AVAILABLE:

FLOAT - SINGLE PRECISION FLOAT
DOUBLE - DOUBLE PRECISION FLOAT

LONG - 32 BIT (OR LARGER) SIGNED INTEGER
LBITS - 32 BITS (OR MORE) FOR BIT MANIPULATION

INT - NATURAL SIZE SIGNED INTEGER
UNSIGNED - NATURAL SIZE UNSIGNED INTEGER
BOOL - NATURAL SIZE LOGICAL (ZERO / NON-ZERO ONLY)

SHORT - 16 BIT (OR LARGER) SIGNED INTEGER
USHORT - 16 BIT (OR LARGER) UNSIGNED INTEGER
BITS - 16 BITS (OR MORE) FOR BIT MANIPULATION

CHAR - SINGLE MACHINE CHARACTER (REAL CHARACTERS ALWAYS POSITIVE)
TINY - 8 BIT (OR LARGER) SIGNED INTEGER
UTINY - 8 BIT (OR LARGER) UNSIGNED INTEGER
TBITS - 8 BITS (OR MORE) FOR BIT MANIPULATION
TBOOL - 8 BIT (OR LARGER) LOGICAL (ZERO / NON-ZERO ONLY)

METACHAR - 16 BIT (OR LARGER) AUGMENTED CHARACTER (SIGNED)

VOID - FUNCTION THAT RETURNS NO VALUE

FORTRAN - STORAGE CLASS FOR FOREIGN (NON-C) ROUTINES OR C ROUTINES WHICH ARE CALLABLE FROM FOREIGN ROUTINES

SINCE NOT ALL COMPILERS SUPPORT USH OR TINY, AND UTINY, THE FUNCTIONS USH(), TINY(), AND UTINY() SHOULD BE USED WHENEVER REFERENCING THEM.

IN ADDITION, THE FOLLOWING UTILITY MACROS ARE DEFINED:
LURSHIFT(N, B) - UNSIGNED LONG RIGHT SHIFT
MAX(A, B) - MAXIMUM OF A AND B
MIN(A, B) - MINIMUM OF A AND B
UI SERVICES Include File Description

ABS(A) - ABSOLUTE VALUE OF A
STRASN(A, B) - TRANSPORTABLE A = B FOR STRUCTURES
NULL - NULL POINTER VALUE (0)
TRUE - 1
FALSE - 0
SUCCESS - EXIT(SUCCESS) INDICATES SUCCESSFUL COMPLETION
FAILURE - EXIT(Failure) INDICATES ERRORS

THE FOLLOWING SYMBOLS SHOULD BE DEFINED BASED ON THE COMPILER BEING USED:
USHORT - COMPILER SUPPORTS UNSIGNED SHORT
TINY - COMPILER TREATS CHAR AS SIGNED
UTINY - CHAR IS SIGNED AND COMPILER SUPPORTS UNSIGNED CHAR
VOID - COMPILER SUPPORTS VOID
FORTRAN - COMPILER SUPPORTS FORTRAN
STRASN - DEFINE APPROPRIATE MACRO
SUCCESS - DEFINE APPROPRIATE VALUE IF NOT 0
FAILURE - DEFINE APPROPRIATE VALUE IF NOT 1
UI SERVICES Include File Description

FILE NAME: UPDCOM
PURPOSE: Update COMMAND form data declarations
LANGUAGE: VAX-11 COBOL

DESCRIPTION:

DESCRIPTION: THESE ARE THE DATA DECLARATIONS FOR THE
UPDATE COMMAND (UPDCOM) FORM.

INFORMATION:
TYPE: (C-COBOL, IC-COBOL COPY) IC
SUBSYSTEM: UI-CI
CONFIGURATION ITEM ID:

DESIGNED BY: S. L. BARKER
START DATE: 2/25/83
FINISH DATE: 2/25/83

PROGRAMMED BY: S. L. BARKER
START DATE: 2/25/83
FINISH DATE: 2/25/83
3.10.10 Hierarchy Chart

The following hierarchy charts show the relationships between all of the modules mentioned in the above documentation. A module may call a subroutine several times within its code, but the call will only be shown once as a single relationship on this hierarchy chart. All modules shown at the top of the first page are considered Main Programs as described in section 3.10.1 above.

There is an internal paging scheme as marked by the numbers in the upper right corner of each page. An index after the last page of the chart shows where a routine and its calls are first defined. If a routine has no page reference, it either makes no calls or is an external routine. A continuation box on the end of a tree limb shows where that the tree continues on the page numbered mentioned. A number in a box with a routine name points to the page where the routine is further defined within the hierarchy tree. If there is no number in a box, the routine either makes no calls or is an external routine.

This information is contained in the Module Descriptions in section 3.10.
SECTION 4
QUALITY ASSURANCE PROVISIONS

4.1 Introduction and Definitions

"Testing" is a systematic process that may be preplanned and explicitly stated. Test techniques and procedures may be defined in advance, and a sequence of test steps may be specified. "Debugging" is the process of isolation and correction of the cause of an error.

"Antibugging" is defined as the philosophy of writing programs in such a way as to make bugs less likely to occur and when they do occur, to make them more noticeable to the programmer and the user. In other words, as much error checking as is practical and possible in each routine should be performed.

4.2 Computer Programming Test and Evaluation

The quality assurance provisions for test consists of the normal testing techniques that are accomplished during the construction process. They consist of design and code walk-throughs, unit testing, and integration testing. These tests are performed by the design team. Structured design, design walk-through and the incorporation of "antibugging" facilitate this testing by exposing and addressing problem areas before they become coded "bugs."
