Code 4027
Crane, IN 47522-5040

The MK 3 MOD 0 Signal Container (MIL-C-18875) was tested for conformance to Performance Oriented Packaging criteria established by the United Nations Transport of Dangerous Goods and Code of Federal Regulations 49 CFR. The container was tested with a gross weight of 11 pounds (5 kilograms) and met all requirements.
## General Instructions for Completing SF 298

The Report Documentation Page (RDP) is used in announcing and cataloging reports. It is important that this information be consistent with the rest of the report, particularly the cover and title page. Instructions for filling in each block of the form follow. It is important to **stay within the lines** to meet optical scanning requirements.

<table>
<thead>
<tr>
<th>Block</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td><strong>Agency Use Only (Leave blank)</strong></td>
</tr>
<tr>
<td>2.</td>
<td><strong>Report Date</strong>. Full publication date including day, month, and year, if available (e.g. 1 Jan 88). Must cite at least the year.</td>
</tr>
<tr>
<td>3.</td>
<td><strong>Type of Report and Dates Covered</strong>. State whether report is interim, final, etc. If applicable, enter inclusive report dates (e.g. 10 Jun 87 - 30 Jun 88).</td>
</tr>
<tr>
<td>4.</td>
<td><strong>Title and Subtitle</strong>. A title is taken from the part of the report that provides the most meaningful and complete information. When a report is prepared in more than one volume, repeat the primary title, add volume number, and include subtitle for the specific volume. On classified documents, enter the title classification in parentheses.</td>
</tr>
<tr>
<td>5.</td>
<td><strong>Funding Numbers</strong>. To include contract and grant numbers; may include program element number(s), project number(s), task number(s), and work unit number(s). Use the following labels: C - Contract; G - Grant; PE - Program; PR - Project; TA - Task; WU - Work Unit; Element Accession No.</td>
</tr>
<tr>
<td>6.</td>
<td><strong>Author(s)</strong>. Name(s) of person(s) responsible for writing the report, performing the research, or credited with the content of the report. If editor or compiler, this should follow the name(s).</td>
</tr>
<tr>
<td>7.</td>
<td><strong>Performing Organization Name(s) and Address(es)</strong>. Self-explanatory.</td>
</tr>
<tr>
<td>8.</td>
<td><strong>Performing Organization Report Number</strong>. Enter the unique alphanumeric report number(s) assigned by the organization performing the report.</td>
</tr>
<tr>
<td>9.</td>
<td><strong>Sponsoring/Monitoring Agency Name(s) and Address(es)</strong>. Self-explanatory.</td>
</tr>
<tr>
<td>10.</td>
<td><strong>Sponsoring/Monitoring Agency Report Number</strong>. (If known)</td>
</tr>
<tr>
<td>11.</td>
<td><strong>Supplementary Notes</strong>. Enter information not included elsewhere such as: Prepared in cooperation with...; Trans. of...; To be published in...; When a report is revised, include a statement whether the new report supersedes or supplements the older report.</td>
</tr>
<tr>
<td>12a.</td>
<td><strong>Distribution/Availability Statement</strong>. Denotes public availability or limitations. Cite any availability to the public. Enter additional limitations or special markings in all capitals (e.g. NOFORN, REL, ITAR).</td>
</tr>
<tr>
<td>12b.</td>
<td><strong>Distribution Code</strong>.</td>
</tr>
<tr>
<td>13.</td>
<td><strong>Abstract</strong>. Include a brief (Maximum 200 words) factual summary of the most significant information contained in the report.</td>
</tr>
<tr>
<td>14.</td>
<td><strong>Subject Terms</strong>. Keywords or phrases identifying major subjects in the report.</td>
</tr>
<tr>
<td>15.</td>
<td><strong>Number of Pages</strong>. Enter the total number of pages.</td>
</tr>
<tr>
<td>16.</td>
<td><strong>Price Code</strong>. Enter appropriate price code (NTIS only).</td>
</tr>
<tr>
<td>20.</td>
<td><strong>Limitation of Abstract</strong>. This block must be completed to assign a limitation to the abstract. Enter either UL (unlimited) or SAR (same as report). An entry in this block is necessary if the abstract is to be limited. If blank, the abstract is assumed to be unlimited.</td>
</tr>

</table>
INTRODUCTION

The MK3 Mod 0 Signal Container was tested to ascertain whether the container would meet the requirements of Performance Oriented Packaging (POP) as specified by the United Nations Recommendations on the Transport of Dangerous Goods Document, ST/SG/AC.10/1, Revision 6, Chapters 4 and 9. A base level vibration test was also conducted in accordance with the rulings specified by the Department of Transportation Performance Oriented Packaging Standards, 49 CFR Part 106 et al. Federal Register/Vol. 56, No. 245/Friday, December 20, 1991/Rules and Regulations. The objectives were to evaluate the adequacy of the container in protecting and retaining the kits when secured with appropriate dunnage.

The MK 3 Mod 0 Signal Container is a sealed aluminum container used primarily for shipment and storage of small signals and signal kits. Figure 1 shows the container open, with the fiberboard liner folded back and a typical load of twelve MK13 signals. The closed container is shown in Figure 2.

TESTS PERFORMED

1. Drop Test

This test was performed in accordance with ST/SG/AC.10/1, Chapter 9, Paragraph 9.7.3. Five containers were used during the test series, one for each drop. The drop height was 1.2 meters and the drop sequence was as follows:

a. Flat on Bottom
b. Flat on Top
c. Flat on Long Side
d. Flat on Short Side
e. On a Corner

The test was performed at ambient temperature (70\(^\circ\) ± 20\(^\circ\)F). The contents of the container should be retained within its packaging and exhibit no damage liable to affect safety during transport.

2. Stacking Test

This test was performed in accordance with ST/SG/AC.10/1, Chapter 9, Paragraph 9.7.6. Three different containers were used, each with a stack weight of 325 pounds. This weight represents the load superimposed on the bottom container of a sixteen-foot stack of MK3 containers weighing 11 pounds each. The test was performed for 24 hours. After the allowed time, the weight was removed and the container examined. Any leakage, deterioration, or distortion which could adversely affect transport or reduce its strength or cause instability in stacks of packages is cause for rejection.
Figure 1
SM 1 3000 Signal Container with a typical load of twelve SM 1 3000 Marine Smoke and Illumination Signals.
3. Base Level Vibration Test

This test was performed in accordance with the Federal Register/Vol. 56, No. 245/Friday, December 20, 1991/Rules and Regulations. Three sample containers were loaded with sand and closed as for shipment. Each container was placed on a vibrating platform that had a vertical double-amplitude (peak-to-peak displacement) of one inch. The packages were constrained horizontally to prevent them from falling off the platform, but were free to move vertically, bounce and rotate. The test was performed for one hour at a frequency that caused each point of the container bottom to be raised from the platform to such a degree that a 1.6mm thick metal strip could be passed between the bottom of any package and the platform.

PASS/FAIL (UN CRITERIA)

The criteria for passing the drop test is outlined in Paragraph 9.7.3.5 of ST/SG/AC.10/1 and states the following: "Where a packaging for solids undergoes a drop test and its upper face strikes the target, the test sample passes the test if the entire contents are retained by an inner packaging or inner receptacle (e.g., a plastic bag), even if the closure is no longer silt-proof".

The criteria for passing the stacking test is outlined in Paragraph 9.7.6.3 of ST/SG/AC.10/1 and states the following: "No test sample should show any deterioration which could adversely affect transport safety or any distortion liable to reduce its strength or cause instability in stacks of packages".

PASS/FAIL (FEDERAL REGISTER CRITERIA)

The criteria for passing the Base Level Vibration Test is outlined in the Federal Register/Vol. 56, No. 245/Friday, December 20, 1991/Rules and Regulations and states the following: "Immediately following the period of vibration, each package shall be removed from the platform, turned on its side and observed for any evidence of leakage. A packaging passes the vibration test if there is no rupture or leakage from any of the packages. No test sample should show any deterioration which could adversely affect transportation safety or any distortion liable to reduce packaging strength."

TEST RESULTS

1. Drop Test
   Satisfactory.

2. Stacking Test
   Satisfactory.

3. Base Level Vibration Test
   Satisfactory.
DISCUSSION

1. Drop Test

After each drop the container was inspected for any damage which would be cause for rejection. Final inspection revealed minor damage to the boxes, but no spillage of contents.

2. Stacking Test

Three containers were individually tested. Each container was visibly inspected after the 24-hour period was over. There was no leakage, distortion, or deterioration to the container as a result of this test.

3. Base Level Vibration Test

Immediately following the vibration test, each container was removed from the platform, turned on its side and observed for any evidence of leakage. All latches remained fastened and there was no evidence of leakage of contents.

Additional Description: MK13 and MK124 signals packed in accordance with Drawing 10001-2128332. Lifeboat Signal Kits packed in accordance with Drawing 53711-6869827. Container has fiberboard liner and chipboard partitions.

PRODUCTS:
- Marine Smoke and Illumination Signal
  - MK13 Mod 0, L275, 1370-00-309-5028
  - MK124 Mod 0, L283, 1370-01-030-8330
- Lifeboat Signal Kit, No NSN assigned

Proper Shipping Name: Signal Devices, Hand

United Nations Number: 0191

United Nations Packing Group: II

Physical State: Solid

Amount Per Container:
- Marine Smoke and Illumination Signals: 12
- Lifeboat Signal Kit: 1

Net Weight: Varies

TEST PRODUCT:
- Name: Sand
  - Physical State: Solid

- Size: N/A
- Quantity: N/A

- Dunnage: None
- Gross Weight: 5.0 kg (11.0 lbs.)
