The U.S. Army Defense Ammunition Center and School (USADACS), Validation Engineering Division (SMCAC-DEV), was tasked by USADACS, Transportation Engineering Division (SMCAC-DET), to test a reduced wooden dunnage loading and bracing procedure for 750-pound M117 bombs with fins on wooden pallets in a commercial International Organization for Standardization (ISO) side-opening container. Rail impact, road, and container tilt tests were performed on a loaded commercial ISO side-opening container. The container was rail impact tested on a Container-on-flatcar (COFC) and Trailer-on-flatcar (TOFC). Road tests were performed with the container mounted on a 20-foot container chassis. Due to the Shipboard Transportation Simulator (STS) being inoperable, the container was tilted 80 degrees to the back wall with a crane. There was no damage to the load or the container as a result of these tests; therefore, the load is acceptable for transportation in all surface modes.

PART 1

INTRODUCTION

A. BACKGROUND. The U.S. Army Defense Ammunition Center and School (USADACS), Validation Engineering Division (SMCAC-DEV), was tasked by USADACS, Transportation Engineering Division (SMCAC-DET), to test a reduced wooden dunnage loading and bracing procedure for 750-pound M117 bombs, complete round in a commercial International Organization for Standardization (ISO) side-opening container.

B. AUTHORITY. This test was conducted IAW mission responsibilities delegated by the U.S. Army Armament, Munitions and Chemical Command (AMCCOM), Rock Island, IL 61299-6000. Reference is made to AR-700, 15 April 1979, DARCOM Supplement 1, 4 September 1979; and AMCCOM-R 10-17, 13 January 1986, Mission and Major Functions of USADACS.

C. OBJECTIVE. The objective of this test was to determine if the loading and bracing procedure with wooden dunnage in a commercial ISO side-opening container of 750-pound M117 bombs, complete round would satisfy the transportation requirements of Transportability Testing Procedure, TP-91-01. The following tests were conducted: rail, road hazard course, washboard course, and container tilt test.

D. CONCLUSION. This loading and bracing procedure satisfactorily retained the 750-pound M117 bombs and prevented damage to the container.

E. RECOMMENDATION. This procedure is recommended for approval for transportation of 750-pound M117 bomb complete rounds in all surface modes.

PART 3

TEST PROCEDURES

These procedures were extracted from TP-91-01, Transportability Testing Procedures, July 1991, for tactical vehicles used for shipping munitions by tactical truck.

A. The test load was prepared using the outloading procedure specified for the munitions (see part 6). The 750-pound M117 bombs used in the load were inert (nonexplosive). The weight and physical characteristics of the load configuration were identical to the live (explosive) ammunition provided for in part 6; i.e., weights, physical dimensions, center of gravity (CG), etc. The ammunition packages duplicated live ammunition.

B. Tests for this load configuration are as follows:

1. Rail Impact Test (Test Method No. 1).
2. Road Hazard Course (Test Method No. 2).
3. Road Trip (Test Method No. 3).
4. Road Hazard Course (Test Method No. 2).
5. Washboard Course (Test Method No. 6).
6. Tilt Test (Test Method No. 5).

C. The test methods are as follows:

1. Test Method No. 1 (Rail Impact Test). The container load of 750-pound M117 bombs was positioned on a container chassis and securely locked in place using the twist locks at each corner. The container and/or chassis was secured to a TOFC/COFC. Equipment needed to perform the test included the TOFC/COFC (hammer) railcar, five empty railroad cars connected together to serve as the anvil, and a railroad locomotive. These anvil cars were positioned on a
level section of track with air and hand brakes set with draft gears compressed. The locomotive unit pulled the TOFC/COFC several hundred yards away from the anvil cars, pushed the TOFC/COFC toward the anvil at a predetermined speed, then disconnected from the TOFC/COFC approximately 50 yards away from the anvil cars, which allowed it to roll freely along the track until it struck the anvil. This constituted an impact. Impacting is accomplished at speeds of 4, 6, and 8.1 mph in one direction and 8.1 mph in the opposite direction. The 4 and 6 mph impact speeds are approximate; the 8.1 mph speed is a minimum. Impact speeds are determined by using an electronic counter to measure the time required for the TOFC/COFC to traverse an 11-foot distance immediately prior to contact with the anvil cars (see figure 1, page 3-3).

2. Test Method No. 2 (Road Hazard Course). This step required the container load of 750-pound M117 bombs be placed on a container chassis and pulled over a 200-foot-long segment of concrete road which consisted of two series of railroad ties projecting 6-inches above the level of the road surface. The load traversed the course two times (see figure 2, page 3-5).

3. Test Method No. 3 (Road Trip). The chassis and container load of 750-pound M117 bombs were transported for a distance of 30 miles over a combination of roads surfaced with gravel, concrete, or asphalt. The test route included curves, corners, railroad crossings, cattle guards, and stops and starts. The load traveled at the maximum speed suitable for the particular road being traversed, except as limited by legal restrictions. No panic stops were performed since the test load was subjected to rail impact testing.

4. Test Method No. 6 (Washboard Course). Using a suitable tractor to pull the chassis, the container load of 750-pound M117 bombs was towed over the 300-foot-long washboard course

FIGURE 1
(see figure 3, page 3-5) at a speed which produced the most violent response in the container load.

5. Test Method No. 5 (80 Degree Tilt Test). The container load of 750-pound M117 bombs was positioned on level terrain with the corner fittings resting on timbers so the entire container was supported by the corner fittings. The timbers were oriented parallel to the end rails of the container and extended 2 feet beyond the corner fittings on each side. Using one mobile crane and appropriate rigging, the container was rotated (tilted) using the bottom corner fittings as a fulcrum. The rigging (sling) was attached to the top corner fittings of the long side of the container. Tilting was accomplished by lifting the top corner fittings diagonally opposite the fulcrum. The crane boom was then positioned over the center of the container and the container was allowed to complete rotation to 80 degrees from where it started. The container was allowed to remain at the 80 degree tilt position for at least 1 minute, then the container was uprighted by reversing this procedure.

ROAD TEST DATA

Test No.: 3

Date: 13,15 July 1994

Specimen Load: 750-pound M117 bombs loaded in a commercial ISO side-opening container on a container chassis.

ROAD HAZARD COURSE:

PASS 1-A OVER FIRST SERIES OF TIES: 6.25 SEC 5.4 MPH
PASS 1-B OVER SECOND SERIES OF TIES: 6.45 SEC 5.1 MPH
REMARKS: No damage to container or load movement.

PASS 2-A OVER FIRST SERIES OF TIES: 6.47 SEC 5.2 MPH
PASS 2-B OVER SECOND SERIES OF TIES: 6.16 SEC 5.3 MPH
REMARKS: No damage to container or load movement.

30-MILE ROAD TEST: No damage or load movement.

PANIC STOP TEST: No panic stops were performed since the container load was previously subjected to four rail impact tests.

PASS 3-A OVER FIRST SERIES OF TIES: 6.17 SEC 5.5 MPH
PASS 3-B OVER SECOND SERIES OF TIES: 5.65 SEC 5.8 MPH
REMARKS: No damage to container or load movement.

PASS 4-A OVER FIRST SERIES OF TIES: 6.09 SEC 5.6 MPH
PASS 4-B OVER SECOND SERIES OF TIES: 6.31 SEC 5.2 MPH
REMARKS: No visual lateral or vertical load or dunnage movement.

WASHBOARD COURSE: No visual damage to the load or container.

80 DEGREE TILT TEST: No visual damage to the load or container.
PART 5

PHOTOGRAPHS
PHOTO NO. DEV-9422-001. This photo shows a field combat-ready load on an EPF and the commercial ISO side-opening container of 750-pound M117 bombs on a COFC. This load was rail impacted at 4, 6, and 8.1 mph and 8.1 mph in reverse.
PHOTO NO. DEV-9422-002. This load of 750-pound M117 bombs in a commercial ISO side-opening container on a TOFC was rail impacted at 4, 6, and 8.1 mph and 8.1 mph in reverse. No damage was observed in the load or container as a result of rail impact testing.
PHOTO NO. DEV-9422-003. This photo shows a closeup view of the COFC load of 750-pound M117 bombs. This load is in the process of being rail impacted.
PHOTO NO. DEV-9422-004. After rail impact tests, the 750-pound M117 bombs were subjected to the road course which is simulated by driving the load over alternating railroad ties. Movement velocity was approximately 5 mph.
PHOTO NO. DEV-9422-005. After rail and road transportation tests, the lateral blocking is validated by tipping the container 80 degrees. Any shifting of the load as a result of this test is a failure. The load of 750-pound M117 bombs did not shift during this test.

GENERAL NOTES

A. THIS DOCUMENT HAS BEEN PREPARED AND ISSUED IN ACCORDANCE WITH T470-1 AND AUGMENTS TM 473-200 (CHAPTER 5).

B. THE SPECIFIED OUTLOADING PROCEDURES ARE APPLICABLE TO LOADS OF M17 (750 POUND) BOMBS, COMPLETE ROUND. SEE PAGE 3 FOR DETAILS OF THE ITEMS TO BE SHIPPED. CAUTION: REGARDLESS OF THE QUANTITY OF CONTAINERS TO BE SHIPPED, THE "MAXIMUM GROSS WEIGHT" OF THE SIDE OPENING ISO CONTAINER MUST NOT BE EXCEEDED.

C. THE LOAD AS SHOWN IS BASED ON A 6,050 POUND 20' LONG BY 8' WIDE BY 8'-6" HIGH SIDE OPENING INTERMODAL CONTAINER WITH INSIDE DIMENSIONS OF 19'-4" LONG BY 8'-6" WIDE BY 8'-6" HIGH. THE LOAD IS DESIGNED FOR TRAILER/CONTAINER-ON-FLAT-CAR (T/COFC) SHIPMENT. HOWEVER, THE LOAD AS DESIGNED CAN ALSO BE MOVED BY OTHER SURFACE MODES OF TRANSPORT. NOTICE: OTHER CONTAINERS OF THE SAME DESIGN CONFIGURATION CAN BE USED.

D. WHEN LOADING CONTAINERS, THEY ARE TO BE POSITIONED SO AS TO ACHIEVE A TIGHT LOAD (TIGHT AGAINST THE DUNNAGE ASSEMBLIES). ALTHOUGH A TOTAL OF 1-1/2' OF UNBLOCKED SPACE ACROSS THE WIDTH OF A LOAD BAY IS PERMITTED, LATERAL Voids WITHIN THE LOAD BAY TO BE HELD TO A MINIMUM. EXCESSIVE SLACK CAN BE ELIMINATED FROM A LOAD BY LAMINATING ADDITIONAL PIECES OF APPROPRIATE THICKNESS TO THE HORIZONTAL PIECES ON THE CENTER GATE ASSEMBLY. NAIL EACH ADDITIONAL PIECE WITH APPROPRIATELY SIZED NAIL EVERY 12". ADDITIONALLY, THE THICKNESS AND/or QUANTITY OF THE VERTICAL AND HORIZONTAL PIECES IN THE CENTER GATE ASSEMBLY MAY BE ADJUSTED AS REQUIRED TO FACILITATE VARIANCE IN THE CONTAINER SIZE.

E. DUNNAGE LUMBER SPECIFIED IS OF NOMINAL SIZE. FOR EXAMPLE, 1" X 4" MATERIAL IS ACTUALLY 3/4" THICK BY 3-1/2" WIDE AND 2" X 6" MATERIAL IS ACTUALLY 1-1/2" BY 5-1/2" WIDE.

F. A STAGED NAILING PATTERN WILL BE USED WHENEVER POSSIBLE WHEN NAILS ARE DRIVEN INTO JOINTS OF DUNNAGE ASSEMBLIES OR WHEN LAMINATING DUNNAGE. ADDITIONALLY, THE NAILING PATTERN FOR AN UPPER PIECE OF LAMINATED DUNNAGE WILL BE ADJUSTED AS REQUIRED TO THAT A NAIL FOR THAT PIECE WILL NOT BE DRIVEN THROUGH OR RIGHT SIDE OF A NAIL IN A LOWER PIECE.

G. IN SOME CONTAINERS THERE IS A SLOT AT THE CORNERS OF THE ENDWALLS. PIECES OF DUNNAGE MATERIAL MUST BE LAMINATED TO THE BUFFER PIECES ON THE END BLOCKING ASSEMBLIES TO PROVIDE A PLAIN SURFACE FOR THE BUFFER PIECES. A PIECE OF 2" X 4", 2" X 3" OR A SPECIAL WIDTH PIECE CUT-TO-FIT CAN BE USED. THIS PIECE WILL BE NAILLED WITH ONE APPROPRIATELY SIZED NAIL EVERY 12". THIS PIECE IS NOT REQUIRED WHEN THE CORNER PORTIONS OF THE CONTAINER ENDWALLS ARE SMOOTH AND FLAT.

H. CAUTION: DO NOT NAIL DUNNAGE MATERIAL TO THE CONTAINER WALL OR FLOOR. ALL NAILING WILL BE WITHIN THE DUNNAGE.

I. PORTIONS OF THE CONTAINER DEPICTED WITHIN THIS DRAWING, SUCH AS THE SIDE DOORS, HAVE NOT BEEN SHOWN IN THE LOAD VIEWS FOR CLARITY PURPOSES.

(continued at right)

VARIOUS SIZES AND WEIGHTS.
1. END BLOCKING ASSEMBLY (2 REQD.). SEE THE "END BLOCKING ASSEMBLY A" DETAIL ON PAGE 6 AND GENERAL NOTES "F" AND "G" ON PAGE 2.

2. ANTI-SWAY BRACE (8 REQD.). SEE THE DETAIL ON PAGE 8 AND SPECIAL NOTE 4 ON PAGE 5.

3. BUFFER PIECE, 2" x 12" BY INSIDE CONTAINER WIDTH MINUS 1" (REF: 7" X 4") (2 REQD.). POSITION ON EDGE ON THE AFT END STOP PIECE OF THE BOMB PALLET AS SHOWN.

4. CENTER GATE (2 REQD.). SEE THE "CENTER GATE A" DETAIL ON PAGE 5. SEE GENERAL NOTE "O" ON PAGE 2.

5. STRUT, 4" x 4" BY CUT TO FIT (REF: 17") (8 REQD.). POSITION SO AS TO BE BETWEEN THE CENTER GATES, PIECES MARKED 6. TOE NAIL TO THE CENTER GATES 1/2-16d NAILS AT EACH END.

6. DECKING, PLYWOOD, 1/2" THICK BY 44" WIDE BY LENGTH TO SUIT (4 REQD.). POSITION ON TOP OF THE BOMB PALLET UNITS AND CENTER GATES AS SHOWN.

7. SEPARATOR GATE (2 REQD.). SEE THE DETAIL ON PAGE 7. POSITION WITH THE HORIZONTAL PIECES AGAINST THE BOMBS.

10. STRUT, 4" x 4" BY CUT TO FIT (REF: 38-1/2") (8 REQD.). POSITION SO AS TO BE BETWEEN THE CENTER GATES, PIECES MARKED 9. TOE NAIL TO THE CENTER GATES 1/2-16d NAILS AT EACH END.

(CONTINUED ON PAGE 5)
(KEY NUMBERS CONTINUED FROM PAGE 4)

1. UNITIZING STRAP, 1-1/4" x .035" or .031" x 14'-0" LONG STEEL STRAPPING (16 REQD). INSTALL SO AS TO ENCLOSE THE LOWER TWO PALLET UNITS AND/OR TOP TWO PALLET UNITS WITH TWO STRAPS EACH AS SHOWN.

2. SEAL FOR 1-1/4" STEEL STRAPPING (16 REQD, 1 PER STRAP). CRIMP EACH SEAL WITH TWO PAIR OF NOTCHES. SEE GENERAL NOTE "H" ON PAGE 2.

3. ANTI-CHAFING MATERIAL (AS REQD). POSITION UNDER ALL STEEL STRAPPING AT POINTS OF CONTACT WITH THE BOMB BODIES.

SPECIAL NOTES:

1. THE LOAD AS SHOWN ON PAGE 4 DEPICTS A COMPLETE ROUND LOAD OF 750 POUND MW57 BOMBS, INCLUDING 16 PALLETS OF BOMBS, 4 WIREBOUND CRATES WITH MAU-91 FINS, AND NUMEROUS BOXES CONTAINING MISCELLANEOUS ITEMS SUCH AS FUSES, ADAPTERS, AND COUPLERS.

2. WHEN INSTALLING THE DUNNAGE THAT APPLIES TO THE MISCELLANEOUS BOXES, ADJUSTMENTS TO THE QUANTITY AND SIZE OF MATERIAL MAY BE MADE TO ADJUST AS NECESSARY.

3. MISCELLANEOUS BOXES MAY ALSO BE PLACED IN OTHER Voids AREAS WITHIN THE LOAD, SUCH AS BETWEEN THE CENTER GATES "A" OR BETWEEN LATERALLY ADJACENT LOAD UNITS OF BOMB PALLETS.

4. FLOOR LINE BLOCKING ASSEMBLIES SHOULD BE PLACED INTO POSITION PRIOR TO LOADING THE SECOND STACK WITHIN A LOAD UNIT, WHEREAS IT WILL BE EASIER TO PARTIALLY FABRICATE THE SECOND AND THIRD LAYER ANTI-SWAY BRACES AND INSTALL THEM AFTER THE SECOND STACK HAS BEEN LOADED.
