1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-Cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.
1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Northrop Corporation's interpretation and use of the CALS standards in transferring technical publication data. Northrop used their CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.
2. Test Parameters

Test Plan: AFCTB 93-022

Date of Evaluation: 16 March 1993

Evaluator: George Elwood
Air Force CALS Test Bed
HQ ESC/ENCP
4027 Colonel Glenn Hwy
Suite 300
Dayton, OH 45431-1672

Data Originator: John Kent
Northrop Corporation

Standards Tested:
MIL-STD-1840A
MIL-D-28000A
MIL-M-28001A
MIL-R-28002A
MIL-D-28003
3. **1840A Analysis**

3.1 **External Packaging**

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was marked with the magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was not enclosed in a barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files recorded on the tape.

3.2 **Transmission Envelope**

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 **Tape Formats**

The tape was run through the AFCTN Tapetool v1.2.8 utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was read using TI's version of Tapetool without reported error.

The tape was also read using XSoft CAPS read1840A utility without reported error.

3.2.2 **Declaration and Header Fields**

No errors were found in the Document Declaration File or data file headers on the tape using the AFCTN Tapetool. When the data files were being evaluated using the TI version of Tapetool, a Core Dump was generated at the start.
of the parsing operation on the second document.

This portion of the tape meets the CALS MIL-STD-1840A requirements.

4. IGES Analysis

The IGES file was evaluated using IDA's Parser and Verify utilities set for CALS Class I. No errors were reported.

The AFCTB has several tools for viewing IGES files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

The IGES file was read into IDA's IGESView without a problem. The image displayed and printed correctly.

The file was read into ITI's IGESWorks without a problem. The image displayed and printed without a problem.

The file was converted using ArborText's iges2draw utility without a reported error. When the file was read into Island Graphics' IslandDraw only the right part of the image was displayed and printed.

The IGES file meets the CALS MIL-D-28000A specification.

5. SGML Analysis

5.1 Document One

The tape contained two DTDs, two text files, and two output specifications.

The DTD from the first document set was evaluated using Exotercia's XGMLNormalizer. The short, unique DTD would not parse on the first attempt. The ISO capacities file had to
be modified to add GRPCNT of 100. If capacities larger than defined in MIL-M-28001A are used, they should be included with the document. This permitted the file to parse without error. Using the generated file, the text file was parsed. Over 300 errors were reported during this procedure. The errors were basically four types which were generated on every two lines in the text file.

The DTD element viewdef was defined as shown below. Also note the definition of viewport. Note that viewport has a required attribute of NAME.

```xml
<!ELEMENT viewdef - o (viewport)+>
<!ELEMENT viewport - o EMPTY>
<!ATTLIST viewport
    name ID #REQUIRED
    viewstyleid NMTOKEN #IMPLIED
    coord CDATA #IMPLIED>
```

Shown below is the first five lines in the text file. Note that viewport is not used while viewdef is. In the text file viewdef was an attribute of name which is not defined in the DTD. Viewport is not used but it must be used with a required attribute of NAME.

```xml
<doc branch="af"
    foseicite="afctb22">
    <front>
    <viewdef name="F0" coord="0 9600 8000 10000" vpflood="white">
        <all viewpa="F0">
```

Shown below are the first four reported errors in the parser log.

C:\XGML\XMLNORM.EXE --
Error on line 4 in file i:\9322\d001t001:
Undeclared attribute specification.
For start tag 'VIEWDEF': Unknown attribute is 'NAME'.
No attributes are allowed for the element 'VIEWDEF'.

C:\XGML\XMLNORM.EXE --
Error on line 5 in file i:\9322\d001t001:
A start tag is missing that must not be omitted.
The element is 'VIEWPORT'.

C:\XGML\XMLNORM.EXE --
Error on line 5 in file i:\9322\d001t001:
A REQUIRED attribute is missing.
For start tag 'VIEWPORT': For REQUIRED ID attribute 'NAME'.

C:\XGML\XMLNORM.EXE --
Error on line 5 in file i:\9322\d001t001:
Undeclared attribute specification.
For start tag 'All': Unknown attribute is 'VIEWPA'.
No attributes are allowed for the element 'All'.

Similar errors were reported when using the Public Domain parser sgmls and McAfee & McAdam's Sema Mark-it parser.

5.2 Document Two

The second document had a "normal" DTD and text file. The first pass through the document using the Exoterica XGML-Normalizer parser generated two errors. The first error was the use of a public entity set that is not defined in MIL-M-28002 and not available in the AFCTB. This statement was commented out. Use of non-standard entity sets should be avoided. If used, they must be included with the document.

<!ENTITY % PUBspc PUBLIC "ISO 8879-1986//ENTITIES Tech Pubs Special Characters//EN">

The parser also reported an ambiguous content model.

C:\XGML\XMLNORM.EXE -- Error on line 466 in file entities/93222.dtd:
A content model is ambiguous.
For element 'TOC'.
The input is 'CONTENTSENTRY'.
<!-- The document prolog is in error. -->

The element on the defined line had contentsentry on the
line twice. When the line was changed to reflect only one, no errors were reported.

<!ELEMENT toc - o (contentsentry*,contents?,table?) >
<!-- line above replacing below
<!ELEMENT toc - o
(contentsentry*,contents?,table?,contentsentry*) > -->

The Public Domain sgmls and McAfee & McAdam's Sema Mark-it parsers also reported similar errors.

When the text file was parsed four errors were reported. All of these errors are the same. See the Appendix for this log.

The DTDs and text files do not meet the CALS MIL-M-28001A specification.

6. Raster Analysis

The Raster file on the tape was a Type II file which cannot be processed by the AFCTB.

7. CGM Analysis

The tape included one CGM file. This file was checked using ATC's MetaCheck with CALS options. This program reported the file was not a CGM file.

The file was checked using the AFCTN validcgm utility which also reported the file was not a CGM file.

An octal dump was made of the file and defined CGM components were not found.

The CGM file does not meet the CALS MIL-D-28003 specification.
8. Conclusions and Recommendations

In summary, the tape from Northrop Corporation was correct. The tape could be read properly using all of the tape reading utilities available in the AFCTB. The physical structure of the tape meets the CALS MIL-STD-1840A requirements.

The IGES file meets the CALS MIL-D-28000A specification.

The DTD and text files have many errors and do not meet the CALS MIL-M-28001A specification.

The Raster file was a Type II file which cannot be evaluated in the AFCTB.

The included CGM could not be read using any tool in the AFCTB and therefore does not meet the CALS MIL-D-28003 specification.

The tape submitted by Northrop Corporation does not meet CALS MIL-STD-1840A requirements.

Evaluating numbering scheme...
No errors were encountered during numbering scheme evaluation.
Numbering scheme evaluation complete.

Checking file count...
No errors were encountered during file count verification.
File Count verification complete.

No errors were encountered in Document D002.

No errors were encountered in this File Set.

MIL-STD-1840A File Set Evaluation Complete.
10. Appendix B - Detailed IGES Analysis

10.1 File One

10.1.1 Parser/Verifier Log

*** IGES DATA FILE ANALYSIS ***
*** MARCH 1992 ***
*** IGES Data Analysis ***
*** (708) 449-3430 ***

Input file is /mnt/Set072/D002/D002Q004.IGS
Checking conformance to CALS Class I (MIL-D-28000A 2/10/92)
Today is March 16, 1993 11:07 AM

*** File and Product Name Information ***

File name from sender = 'Q004.iges'
File creation Date.Time = '930301.192405'
Model change Date.Time = ' '
Author = 'tom'
Department = 'GRAPHICS'
Product name from sender = 'Q004.iges'
Destination product name = 'Q004.iges'

*** Parameter Delimiters ***

Delimiter = ','
Terminator = ';'

*** Originating System Data ***

System ID = 'ITDS CONVERTER: GEF_IGES'
Preprocessor version = '1.0'
Specification version = 6 (IGES 4.0)

*** Precision levels ***

Integer bits = 32
Floating point - Exponent = 38 Mantissa = 6
Double precision - Exponent = 308 Mantissa = 15

*** Global Model Data ***

Model scale = 1.0000E+00
Unit flag = 1
Units = 'IN'
Line weights = 3
Maximum line thickness = 1.152632E-02
Minimum line thickness = 3.842107E-03
Granularity = 1.000000E-03
Maximum coordinate = 2.954101E+00

Drafting standard applicable to original data is not specified.

*** Status Flag Summary ***

Blank status: Visible 41
Blanked 0

Independence: Independent 39
Physically Subordinate 0
Logically Subordinate 2
Totally Subordinate 0

Entity use: Geometry 39
Annotation 2
Definition 0
Other 0
Logical/Positional 0
2D parametric 0
Not Specified 0

Hierarchy: Structure DE applies 0
Subordinate DE applies 41
Hierarchy property applies 0
Not Specified 0

*** Entity Occurrence Counts ***
