Stress and Women’s Health Database

Welcome to the Stress and Women’s Health computerized bibliographical database. This database represents one component of the grant, “Stress and Women’s Health: Combat, Deployment, Contingency Operations and Trauma.” It comes to you on a CD-ROM disk and is designed to be accessible by personal computer using the bibliographic software program, ProCite 3.1®. It is not a full-text database, but rather a bibliographical database containing abstracts and citation information allowing the user to select those articles warranting a review in their entirety.

The database contains articles on the effects of extreme environments, combat, stress, and trauma on women’s physical and mental health. It broadly examines the biopsychosocial stressors and responses in women through collecting all English language non-classified epidemiological and stress research in these areas and by examining analogous areas in which relevant conclusions can be drawn (studies of disaster events, confined environments, Antarctica, space, et.) In addition, it includes references and abstracts of articles on stress and women’s health, traumatic stress, occupational risk factors, deployment, disaster medicine, humanitarian aid, ethical considerations, and sexual harassment. The articles selected have been screened for relevance, uniqueness of findings and quality.

Strategies used to select these key articles included:
* solicitation of recommended articles by subject experts
* review of major biopsychosocial journals for the past 10 years
* review of bibliographies from key references and including their references
* review of the USUHS Center for Traumatic Stress Studies database containing 5800 articles on trauma, stress, and chemical/biological warfare
* Medline/Psyclit/Psycinfo/DTIC computerized searches

Approximately 3200 new articles were retrieved for this project, 5800 articles in the Center’s database were reviewed and, as appropriate, added.
In order to give a better appreciation of the contents of the database, we are including the number of articles appearing under several search words of interest:

- ADAPTATION (1710)
- ADJUSTMENT (1686)
- ANXIETY (891)
- BEHAVIOR (604)
- BIOLOGICAL (707)
- CHILD (770)
- COPING (1969)
- COMBAT (939)
- CONTAINED ENVIRONMENT (295)
- CULTURE (277)
- DEPRESSION (861)
- DISASTER (1011)
- EPIDEMIOLOGY (304)
- FAMILY (1247)
- FEMALE (1504)
- GENDER (1037)
- GROUP (834)
- HEALTH (918)
- HEALTH CARE UTILIZATION (195)
- HOSTAGE (113)
- ISOLATION (279)
- MALE (746)
- MENSES (103)
- MENTAL ILLNESS (546)
- MILITARY (830)
- MINOR PSYCHIATRIC MORBIDITY (17)
- NEUROENDOCRINE (51)
- OCCUPATIONAL STRESS (433)
- PERFORMANCE (760)
- PERSIAN GULF WAR (150)
- PERSONALITY (627)
- PHARMACOLOGIC TREATMENT (76)
- PHYSIOLOGY (967)
- POST-TRAUMATIC STRESS DISORDER (PTSD) (1617)
- PREVENTION (279)
- PRISONER OF WAR (POW) (281)
- PSYCHIATRIC CASUALTIES (302)
- PSYCHIATRIC ILLNESS (1371)
- PSYCHIATRIC TREATMENT (654)
- PSYCHOPHARMACOLOGY (104)
- PSYCHOPHYSIOLOGY (206)
PSYCHOTHERAPY  (284)
RAPE       (171)
RECOVERY  (538)

WORLD WAR I (93)
WORLD WAR II (317)
YOM KIPPUR WAR (19)
ProCite 3.1 Getting Started

This guide is intended for the user to understand the essentials of installing and using ProCite 3.1. It will also enable the user to begin searching the accompanying database in just a short time. The following instructions provide the fundamentals needed for ProCite 3.1. More advanced manipulation of the software requires referring to the Users Guide and Reference Manual included with the program.

Installation:

I. Hardware and software:
   IBM 386 (or later) PC or compatible.
   MS Windows 3.1 or later, or for Workgroups
   4 meg available memory with 8 recommended
   8 meg available disk space
   mouse
   wordprocessor
   printer

II. Installing ProCite:
   A. Close any open applications
   B. Start Windows and bring up Program Manager.
   C. Put ProCite disk labeled Disk 1 into your floppy disk drive.
   D. Select Run from the File menu.
   E. Type A:INSTALL in the Run box and click on OK.
   F. The Installation menu will appear, choose Install Everything.
   G. Follow the instructions on the screen, inserting disks as prompted.
   H. After installation you will be returned to the Windows desktop. At this point close Windows and restart it.
Opening and using ProCite 3.1

I. Opening ProCite:
   A. In Windows Program Manager the installation program has created a ProCite program group. Click open the ProCite folder and then click the ProCite 3.1 icon.

II. Opening and preparing ProCite for use:
   A. The program automatically defaults to the last file opened. In the case of first time use, the File Open window will appear. (See box below)

1. Place the database CD into the CD drive of your computer.
2. In the File Open window choose the appropriate drive for your CD from the lower right hand side of the window.
3. Three file names will appear in the left hand window of the File Open window. They are the following files:
   - cbw.out
   - cbw_proj.frm
   - DWH.dat

B. The files contain the database, and the support files used to properly view and print the records in the database. The first two "cbw.out" and "cbw_proj.frm" need to be loaded to the c: drive no matter where the database itself is kept.

1. With the File Open window set-up as instructed, highlight "cbw.out" in the left hand side of the window.
2. Click the OK button to open the file.
3. When the file is opened choose File from the top menu bar.
4. Choose Save As from the menu.
5. When the Save As window opens type "c:\procite3\styles\cbw.out" and click the OK button.
6. Click File on the menu bar and choose Close.
Repeat steps 1 - 6 using the “cbw_proj.frm” file in place of the “cbw.out” file. In step 5 type “c:\procite3\forms\dwh.frm”. These two files will be used to format the database records on the screen and to print.

C. To load the database on the c: drive repeat steps 1-6 for file “DWH.dat”. In step five type “c:\procite3\database\dwh.dat”. You can also access the database from the CD. Just choose File from the menu bar and click Open. From the Open window choose the drive for your CD and then choose “DWH.dat” from the file name list on the left. This will allow you to search using the CD.

D. Once the database is loaded and/or opened the formats need to be activated. For the on screen format of the individual records:

1. Open the database using the previous instructions. See Section I
2. Click on Edit from the top menu tool bar.
3. Choose Select all.
4. Click the x box on the second level menu tool bar.
5. Select database from top menu tool bar.
7. Select Global Change Workform.
8. A box will appear on screen, choose the down arrow.
9. From the menu that appears choose “cbw_proj.frm”.
10. In the next box choose OK.

E. The output format allows you to create printouts that match the screen format of individual records.

1. Select the down arrow on the second tier of the top menu tool bar.
2. From the menu choose “c:\procite3\styles\cbw.out”.

III. Searching the database:
A. When the database is accessed it will default to Quick Search. There are several different approaches when searching in this format.

Option 1: Go to the upper-left hand window and click on All Records to view a record list containing every record in the database.

Option 2: Go to the upper-left hand window and click on Marked Records to view only those records that have been individually marked
Option 3: Go to the upper-left hand window and choose from three categories:

a. Authors
b. Titles-Journals
c. Keywords

Choose a category and click to highlight it. Once the category is highlighted a field content list will appear in the upper-right hand window, this list shows all unique entries in the chosen field. The numbers to the right indicate how many records contain that particular item. Scroll the window to find the appropriate author, title, or keyword. Once the desired selection is highlighted the associated articles will appear in the bottom window.

*For example: Go to the box in the upper-left hand corner and highlight **Keywords**. The box in the upper-right hand corner will display a list of index terms which are appropriate for the articles in the database. Scroll the list and select the term “child”. The program will search the database and bring up the 770 records that are a match with the word “child”.

B. Another way to search on ProCite 3.1 is by using the **Search** view which will allow you to look for text in any field.

1. Select **View** from the menu bar options.
2. Choose the **Search** option. The Search window will appear, with the cursor in the text box. (See box below)

![ProCite 3.0 for Windows - (Sample 3) View.](image)

3. Select **Fields** from the menu bar options.
4. Scroll to and highlight the field to be searched and choose **OK**.
5. Select Operators from the menu options. (You may refer to 10.16 of the User's Guide for a complete description of each operator).
Scroll to and highlight the search operators you wish to direct your designated field. Choose by double clicking on each operator or by clicking OK. The User may choose to type the field and operator in manually.

*For this example choose = (Equal)
6. Choose a Search Term:
   a. A search term can be a single word or a phrase.
   b. A phrase is any series of words with one or more blank spaces. It must be contained within quotation marks to be read. (ex. "sex differences" or "Freud, S.")
   c. The search term can be typed manually or copied from ProCite's internal list under Terms.
   d. To select within Terms, highlight the desired category (Author, Titles-Journals, keywords, etc.) by clicking on the arrow from top box.
   e. Scroll to the bottom box, and choose the term to be searched.
   f. Select Insert Term and Close.

*For this example type "Adler, J." or select the terms button, choose Author from the top box and scroll down the list of author and select "Adler, J.". Select and click on Insert Term. The entire search expression should read: Author = "Adler J."

7. Click on the Search button to begin the search.

*For this example, the two records in which J. Adler is listed as an author will appear in the bottom window.

IV. Refining a search

A. Refine Search is used when you want to search only the list of records found in the previous search. Choose the Refine Search check box. Clear the old search and execute a new search as explained in Section III. B. and ProCite will limit the new search to the previous search results.

V. Viewing selected records

A. The search results will appear in the record list below the search expression. To view a selection:
   1. Move the cursor to its corresponding bar and click the mouse twice. This will bring up information about the article including an abstract.
   2. To view the next record on the list, click on the arrow bars. forward or backward. The arrow bars are positioned to the right of the Record Number on the top menu bar.
   3. To end viewing, select File and choose Close.
VI. Marking records

A. A record is marked by clicking on the box in the far left corner of the record’s bar. A record is unmarked by clicking on the box again.

B. To mark a group of records, highlight the appropriate records and choose Mark Highlighted Records from the Select menu, or click on the marked box on the toolbar. To unmark records, choose Clear Marked Set from the Select menu on the tool bar or click on the unmarked box on the tool bar.

*The User should always clear any marked records before attempting to mark a new set.

VII. Saving a search as a Result Set

A. Any search or collection of records can be saved as a result set.
   1. Highlight and mark all records to be saved as a result set.
   2. Choose Result Set from the Select menu on the tool bar.
   3. Choose Save Marked Set to open the Save Marked Set window.
   4. You may then name the result set and give a brief definition of its content.
   5. Click on the OK button.

VIII. Printing selected records

1. Select Bibliography from the menu bar.
2. Choose Print Bibliography....
3. Within the General folder, choose one of three options:
   o All Records in List
   o Highlighted Records Only
   o Marked Records
4. Select Printer, choose the appropriate destination and then OK.

Print Preview will allow you to view the bibliography on the screen before sending it to the printer.

*To return to the default screen, select Quick Search within the View option.

Instructions for Using Keyword List

This list is intended to be used as a general topic guide to assist in locating relevant articles. Key words are listed alphabetically. It is suggested that the list be reviewed to find keywords related to the desired word or topic. This will insure locating relevant articles that may contain keywords are more general or universal. Other related keywords are indicated in brackets as "search also". Associated words which have not been entered into the supplemental list are preceded by an asterisk. In these cases, the user is instructed by a "search" statement to search related keywords. "Key, keywords" are designated in bold capitals.
