Software Support Activity
Information Technology
Update Newsletter

Third Quarter, FY 2006
ADMINISTRATIVE INFORMATION

This periodical provides a collection of articles written by the Joint Program Executive Office for Chemical and Biological Defense (JPEO-CBD) Software Support Activity (SSA) as a consistent method of communicating SSA efforts and vision, while providing awareness of key enterprise challenges. The JPEO-CBD is managed by the Space and Naval Warfare Systems Center San Diego (SSC San Diego) and is directed by the Space and Naval Warfare Systems Command. The SSA is a team composed of government and contractor agencies that provide enterprise support in the key tenets of net-centric operations to U.S. Department of Defense chemical and biological programs.

Welcome!

Welcome to the inaugural issue of SSA Information Technology Update. The purpose of this newsletter is to highlight the activities and services of the Joint Program Executive Office for Chemical and Biological Defense (JPEO-CBD) Software Support Activity (SSA), with the hope that this will educate the reader and help us to better serve you. Ultimately our mission is to increase the survivability of warfighters after Chemical, Biological, Radiological, and Nuclear (CBRN) attacks by promoting the interoperability and integration of CBRN defense systems. We hope this newsletter will help stimulate the conversations and partnering that will result in the successful outcome of this mission.

If you have comments or suggestions on how this newsletter could be more useful to you, please contact Doug Hardy (619•553•5410 or douglas.hardy@navy.mil) or Dick Brimson (619•553•0806 or rbrimson@spawar.navy.mil).

---

Introducing the SSA

Officially chartered by Brig. Gen. Stephen Reeves, Joint Program Executive Officer for Chemical and Biological Defense (JPEO-CBD), on May 31, 2005, the Software Support Activity (SSA) is a user software support activity that spans and supports all JPEO-CBD Joint Program Managers (JPMs) and Directorates. The SSA vision is to be a comprehensive and cost-effective single point of contact for users (customers, developers and warfighters) to receive professional and timely assistance with all Information Technology (IT) related to Chemical, Biological, Radiological, and Nuclear (CBRN) Defense program standards, interoperability, and supportability needs. Ultimately, this vision would result in the creation of more efficient, common, and consistently superior interoperable and integrated CBRN systems for the warfighter.

The SSA is focused on IT programs and systems that transmit, receive, or store CBRN data and how those systems interoperate on networks. For the JPEO-CBD, the SSA brings into focus a sometimes blurred picture of new and emerging standards and policies from a variety of sources; including directives and instructions, that drive architectures, data management, and information assurance; such as, the Department of Defense (DoD) Architecture Framework (DoDAF) products, DoD Net-Centric Operations and Warfare Reference Model, and DoD Information Technology Security Certification and Accreditation Process (DITSCAP). The SSA also works with a variety of JPEO related organi-

(Continued on page 2)
Introducing the Software Support Activity (SSA)

(Continued from page 1)

The SO in cooperation with the Joint Require-
ments Office (JRO) Shape Action Officer,
Gen. Howard Bromberg (JROCBRND)
signed a Memorandum of Understanding
(MOU) entitled “Stewardship of Depart-
ments to assist JPMs in clarifying and
further understanding requirements,
providing insight into potential programs
for science and technology transition and
insertion, and better understanding of
integration and test
operations, especi-
ally in relation to
modeling and simu-
lation (M&S) and
verification, valida-
tion, and accredita-
tion (VV&A) activi-
ties. The SSA vision
of bringing into
focus the IT envi-
ronment for all
JPEO-CBD JPMs
and providing key per-
ficiency capabilities for CBRN war-
fighters is reflected
in Figure 1.

To pro-
vide this assistance,
the SSA is forming
teams with expertise in several functional
areas. Current efforts are concentrat-
ed on Architecture, Data Management, In-
formation Assurance, Integration and Test (including Modeling and Simulation),
Science and Technology, Standards and
Policy, and Customer Support (Help
Desk).

ARCHITECTURE

The Architecture team’s pri-
mary focus is toward implementa-
tion of a standard DoDAF compliant Integrated
Architecture in JPEO-CBD products.
Gen. Howard Bromberg (JROCBRND)
signed a Memorandum of Understanding
(MOU) entitled “Stewardship of Depart-
ment of Defense (DoD) Chemical, Bio-
logical, Radiological, and Nuclear (CBRN)
Architecture Products.” The purpose of
the MOU is “to ensure that the compo-
nents of the CBRN architecture are
developed in a coordinated manner that
will result in a fully integrated common
CBRN data model and architecture for the
CBRN Community of Interest
(COI).” After the MOU was signed and
in cooperation with the Joint Require-
ments Office (JRO) Shape Action Officer,
the Architecture team formed a Joint
CBRN Architecture Working Group that
meets monthly (2nd Wednesday) and
includes membership from all JPMs to
discuss the various architectural issues
and concerns among the programs.

Figure 1. SSA Vision

As a result, Architecture produ-
cts are being collected and posted to
the JPEO-CBD Integrated Digital Envi-
ronment (IDE) web site
(jpeocbd.altess.army.mil). All programs
with DoDAF products or interest in
DoDAF products or comments/feedback
are encouraged to visit the site. Please
contact the SSA CM Coordinator, De-
 Denise Milligan, at dmilli@spawar.navy.mil,
619-767-4191, or the SSA Architecture
Lead, Dave Godso, at
godso@spawar.navy.mil, 703-365-9662.

DATA MANAGEMENT

The Data Management team
works closely with the architecture team
in an effort to cultivate an enterprise-
wide data management strategy that
promotes interoperability and integration
between programs thru the implementa-
tion of a common CBRN Data Model.

The CBRN Data Model is reg-
istered with the DoD Extensible Markup
Language (XML) Metadata Registry as the
official Data Model for the CBRN COI
Namespace. The Data Management team
is actively involved in pursuing and un-
derstanding data interface and exchange
requirements from a variety of COIs and
the COI Forum. The Data Management
Team will be hosting the Data Model
Working Group (DMWG) Technical
Review for version 1.3 of the CBRN
Data Model from 10-12 January 2006 at
the Edgewood Chemical Biological Cen-
ter (ECBD), Aberdeen
Proving Ground, Edge-
wood, MD. The
DMWG will provide a
broad forum to dis-
cuss the latest
changes, the future
changes for the next
release, and recom-

mend other changes
and/or improvements
to the Data Model.
The DMWG has
steadily grown, and
the last DMWG in July
2005 included 80 atten-
dees. It’s not too
soon to get your visit
requests on file with
the Security office. For
information concern-
ing this event, contact Bill Snee at
wsnee@msiac.dmso.mil or John Mac-
crossen at macrossen@spawar.navy.mil.

All programs are encouraged
to visit the IDE to see the latest Data
Model, including instructions on change
requests to the Data Model, which can
be made by downloading the form found
on the IDE, or by contacting the SSA CM
Coordinator. For questions regarding
the CBRN Data Model, please contact the
CBRN COI Namespace Manager, Dr.
Tom Johnson, 831-656-3190 and/or the
Deputy Namespace Manager, Bill Snee.

INFORMATION ASSURANCE (IA)

The IA team is providing direct
support to several JPMs, with a dozen
DITSCAP System Security Authorization
Agreements (SSAs) underway in vari-
ous stages of completion. The IA team is
actively involved in certification and ac-
creditation, and in reviewing new and
emerging IA requirements and policies
(e.g., DOD Information Assurance Certifi-
cation and Accreditation Program
(DIACAP)) to determine impact to the
IT programs and systems. For more in-
formation on IA, contact the SSA IA

(Continued on page 3)
Introducing the Software Support Activity (SSA)

(Continued from page 2)

Lead, Guy Casciola, at casciola@spawar.navy.mil.

CUSTOMER SUPPORT (Help Desk)
The Customer Support team has been working to establish the necessary MOUs and business rules to support an initial Level 1 Chemical and Biological Defense (CBD) IT Help Desk capability. This effort has been aimed at two near term requirements to support JPM IS programs, Joint Warning and Reporting Network (JWARN) and Joint Effects Model (JEM) milestones. On 15 October, the SSA stood up this Level 1 CBD IT Help Desk, which provides a Level 1 Customer Support capability and is now taking calls. The plan is to evolve the MOUs and business rules, and promote this Level 1 capability as the CBD IT Help Desk that will provide 24/7 support to any number of IT programs once it is fully operational. For more information on the Help Desk, contact the SSA Help Desk Lead, Pat Lowe, at plowe@spawar.navy.mil.

INTEGRATION AND TEST (I&T)
The I&T team is working to develop consistent processes and guidance for program and model accreditation, data certification, and Independent Verification and Validation (IV&V) efforts and looking for opportunities for co-use of the assets and results associated with the many ongoing program test activities. In June 2005, an M&S VV&A Guidelines document generated by the I&T team was signed by the JPEO-CBD. The I&T team is also involved in evaluating M&S strategies for various programs (e.g., JPM Individual Protective Equipment (IPE)) and in the concept of establishing a JPEO-CBD M&S Center of Excellence. For more information regarding these efforts, contact the SSA I&T Lead, Jennifer Park, at jennifer.park@navy.mil.

SCIENCE AND TECHNOLOGY (S&T)
The S&T representative has recently joined the SSA team to study “transition-able” products with potential to join the already formidable array of technologies in use by the CBRN Defense programs and systems. These include such proposals as a CBRN Medical Pilot proposal that looks at future interoperability between the CBRN and Medical COIs and a Sensor-on-a-Chip Pilot to look at interoperability moved to smaller, in-the-field devices to provide the next generation capability. In coordination with Joint Science and Technology Office (JSTO)/ Defense Threat Reduction Agency (DTRA), these are just two of several pilots and proposed pilots for evaluation and potential insertion into programs. For more information regarding these efforts, contact the SSA S&T Lead, LorRaine Duffy, at lorraine.duffy@navy.mil.

STANDARDS AND POLICY (S&P)
The S&P representative is working to support all of the other areas in understanding and clarifying DoD standards, directives, instructions, and policies. This includes staying abreast of the Army Strategic Software Improvement Program to alert all other areas of opportunities for training and improving processes for acquiring and architecting software systems. A similar initiative is underway to better understand System Engineering plans and processes that may affect the JPEO-CBD. For more information regarding these efforts, contact the SSA S&P Lead, Dan Reuben.

Shortly after being chartered, the SSA began a series of “Roadshows” to introduce itself to the JPEO-CBD community. The initial round of roadshows concluded in October 2005 and included visits to all JPM and JRO activities. The SSA plans to conduct 2006 follow-on visits based on the information obtained during the initial roadshows.

As the SSA moves forward in 2006, it will pursue objectives that align JPEO-CBD IT products with common architectures and data representation, methodologies that promote interoperability and integration for programs and systems across the enterprise, and further support sustainability and maintenance for the product lifecycle. It will also promote technology insertion and/or re-use from the civilian sector and other communities for mutual benefit of the users and customers of JPEO-CBD products. The SSA seeks to leverage the benefit of pre-existing solutions wherever possible, including standardized language/syntax, data, information assurance, integrated architectures, modeling and simulation, and testing.
The threat of Chemical, Biological, Radiological and Nuclear (CBRN) by terrorists or rebellious entities is increasing each day. The U.S. Government has undertaken several efforts to minimize these attacks by developing Information Technology (IT) systems/networks that can predict where the fallout is and take the appropriate action to protect warfighter’s lives. But wait!!!! These IT systems/networks are meant to protect the warfighters, but how do you protect the systems/networks from the terrorists? The answer is easy, by applying Information Assurance (IA) techniques to all of your systems/networks following Department of Defense directives/regulations/instructions.

Let’s face it, IA is the proverbial thorn in the side. Many still resist IA to one degree or another, despite the IA programs and mandates already established. Some people believe the process is an overkill or isn’t necessary at all. Others believe it’s just a drill that generates a lot of paperwork that sits on a shelf and collects dust. In some respects, and in some cases, the critics are right; the process could be viewed overkill. But is it necessary? Absolutely!!! Waiting until an incident occurs before taking action is too late and too costly, because lives are at risk. Anyone who takes the time and effort to create all the necessary documentation without acting on the problems identified, is wasting time and is defeating the purpose.

So why do we need all this security? The Certification and Accreditation (C&A) process is needed to ensure that each and every Information System is being protected against the four impact areas; denial of service, unauthorized disclosure, modification, or destruction. What is needed to protect the IT system/networks against these impact areas is the proper implementation of security safeguards in each system/network and the surrounding environment in which the system/network resides. What comes out of the C&A process is what is known as the System Security Authorization Agreement (SSAA) currently based on the DoD Information Technology Security Certification and Accreditation Process (DITSCAP). If the SSAA documentation proves that the Information System is fully protected, no matter what impact area might occur, the requirement should be satisfied. The following is a brief explanation of these impact areas:

(Continued on page 8)

---

The SSA Integration and Test (I&T) Team has been chartered to:

- Coordinate developmental and operational test schedules and activities of JPEO-CBD Information Technology (IT)/National Security Systems (NSS) across JPMs to minimize expenditures within the enterprise and maximize the opportunities for co-use of facilities, personnel, and test opportunities.
- Ensure I&T personnel have an adequate understanding of Army, Navy, Air Force and Marine Corps Command, Control, Communications, Computers and Intelligence (C4I) systems and their individual Operational Test Agency (OTA) requirements.
- Provide consistent processes and guidance to JPEO-CBD programs for conducting program and model accreditation, data certification, and Independent Verification and Validation (IV&V).

The I&T group is currently focusing on several initiatives:

(Continued on page 6)
The Department of Defense (DoD) defines “Architecture” as “the structure of components, their relationships, and the principles and guidelines governing their design and evolution over time.” As DoD drives all capabilities toward Net-Centric Operations and Warfare (NCOW), architectures provide a critical mechanism for:

- Understanding operational concepts and their relationship to capabilities, technologies, systems, and standards (Figure 1).
- Anticipating changes in operational concepts or changes in automated capabilities.
- Acquiring both materiel and non-materiel assets.
- Developing a roadmap that takes us from where we are to where we want to be.

The SSA Architecture Team looks across the Joint Program Executive Office for Chemical and Biological Defense (JPEO-CBD) Programs of Record for common systems and software engineering themes. The overarching goal is to facilitate reuse and align programs to net-centric Service Oriented Architectures and implementations based on the DoD’s Data Strategy. The SSA Architecture Team serves as the JPEO-CBD Software Integrated Product Team (IPT), reporting directly to the JPEO-CBD Chief Systems Engineer (CSE), having Chief Software Architect (CSA) responsibilities across JPEO-CBD.

The JPEO-CBD SSA Architecture Team is chartered to:

1. Develop, validate, and implement a technical Command, Control, Communications, Computers, and Intelligence (C4I) architecture in support of the operational requirement developed by the Joint Requirements Office (JRO) DoD Architecture Framework (DoDAF) compliant Integrated Architecture.
2. Maintain and shape the Integrated Architecture to address new technology, changing assumptions, and emerging requirements, including transition and mapping to the Global Information Grid (GIG) 2.0 and the NCOW Reference Model (RM).
3. Maintain common frameworks that support and specify integrated individual, family or system of systems, including applicable operating systems, programming languages, tools, and core components as applicable.

The SSA Architecture Team has three fundamental operating principles:

1. Provide support to programs requiring expertise in systems and software engineering as it relates to meeting program milestones.
2. Provide strategic technical expertise in terms of specification development, technology evaluation, and identification of common services and standards such that all “information technology” across the Chemical Biological Defense Program (CBDP) can be reused so CBDP programs can focus resources on CBDP-specific problems.
3. Understand the pieces that currently exist, how they relate, where we need to go to achieve the net-centric vision, and provide recommendations to senior leadership to move the Enterprise in DoD’s intended “DoD as a net-centric enterprise” direction.

Q&A

Q: What’s a WSDL (“wiz dahl”)?

A: WSDL stands for Web Services Definition Language and is one way for you to make your information service available on the GIG. It specifies what your service does, where it's located, who the service provider is, what parameters it requires, among other types of information necessary to connect to and use the service. If you have a service, application, or systems which must connect to the GIG, then you probably need to know more about WSDLs, and web service end-points in general. For more information please contact the SSA Architecture team (godso@spawar.navy.mil).
The mission of the Joint Project Manager for Information Systems (JPM IS) is to provide the information architecture and applications for shaping the battle space against the chemical and biological threat. The key to those architectures and applications begins and ends with data. The JPM IS has several ongoing events that advance systems interoperability with respect to data. On October 27th, 2005 the JPM IS Data Acquisition Program Manager and the Software Support Activity (SSA) Data Management Lead presented the “CBRN Data Model Implementation Approach” at the Chemical-Biological Information Systems (CBIS) Conference in Albuquerque, New Mexico. William Snee, the SSA Data Management Lead presented insights into how the CBRN Data Model can be implemented and how it will fit within the CBRN Community of Interest (COI) and a Service Oriented Architecture (SOA). Also presented at the conference was the “Coordinating CB Engagement Scenarios with the CBRN Data Model” paper. Stephen Helmreich of the University of New Mexico discussed variables and values used in creating chemical and biological engagement scenarios and the correlation between these variables and values with the entities, properties, and values of CBRN Data Model 1.2. The CBIS Conference was an excellent opportunity to discuss, present and (Continued on page 11)

Integration and Test

(Continued from page 4)

- Modeling and Simulation (M&S) Verification, Validation and Accreditation (VV&A). We are providing expertise to assist the Joint Effects Model (JEM), Joint Operational Effects Federation (JOEF), and Joint Warning and Reporting Network (JWARN) Programs of Record (PoRs) in the preparation of their M&S VV&A plans. Previously we developed the JPEO-CBD M&S VV&A Guidelines for use across all the PoRs within JPEO-CBD.
- In response to a request by Brigadier General Reeves, we have developed a proposal for a M&S Center of Excellence that would be facilitated by personnel from several of our SSA Teams.
- JPM Individual Protection (JPM IP) has requested our help in developing their M&S Strategy and we have brought some new faces on board to assist in that effort.
- A CBRN-Medical Information Sharing Pilot Project has been proposed both within the CBRN and Medical communities and the I&T group is deeply involved in moving that effort forward.

With many new efforts being considered and the stated vision of building an Enterprise-wide net-centric Architecture, the I&T group continues to help identify common solutions and complimentary processes across many domains

For more information, please contact Jennifer Park at jennifer.park@navy.mil.

Science & Technology

The Science and Technology (S&T) Service Center has been given the mandate to provide a centralized clearinghouse for initiating, analyzing, managing, and implementing various innovative efforts from the scientific and technology development arenas into the JPEO-CBD Program. The objective is to immediately harness the potential of next generation technologies, by impressing upon the S&T community, the need for interoperability of systems, robustness of architecture, and standardization of data elements for reuse and longevity. The area has several initiatives it is reviewing, focusing on Technology Transition Agreements (TTAs), in order to ensure rapid transition from innovation to standardized component within the DoD Af compliant Integrated Architecture for JPEO-CBD systems. An overarching S&T strategy is being formulated to manage the proposals that the JPEO-CBD Program receives (currently 20), to focus efforts on technology development and adoption at the appropriate milestone.

Two new initiatives that are of immediate interest include data sharing with the medical communities of interest (COIs) and the concept of net-ready sensors. The first is an effort that would result in a logical data model, XML (eXtensible (Continued on page 11)
The SSA Standards and Policy Team supports JPMs and JPEO-CBD in complying with interoperability and supportability requirements mandated for all CBRN defense IT systems and products by the Department of Defense (DoD) and Chairman of the Joint Chiefs of Staff (CJCS).

Support includes collaboration among projects, CJCS, the Office of the Secretary of Defense (OSD), and the Services to resolve issues, streamline processes, provide reusable templates and artifacts, and leverage assets to help maintain and support JPEO-CBD’s most effective use of resources.

JPMs dealing with Joint Capabilities Integration and Development System (JCIDS) compliance can rely on SSA Policy and Standards to support them in developing compliance documents (such as Information Support Plans (ISP)) and advocate with CJCS and OSD to remove impediments and pave the way for projects to comply with mandates for Jointness, certifications, and extensive DoD-wide coordination processes.

(Continued on page 10)

Help Desk

On 15 October 2005, the Joint Program Executive Office for Chemical and Biological Defense (JPEO-CBD) Chemical and Biological Defense (CBD) Information Technology (IT) Help Desk came online. The CBD IT Help Desk will provide Level I support to Warfighters using any of the JPEO-CBD IT Products.

Level I: The Help Desk will obtain all the needed information from the customer calling, in the form of a Customer Service Request (CSR). They will then pass the ticket/user over to the designated Level II Help Desk or to a Level III Subject Matter Expert (SME), when appropriate.

Initially, during its standup phase, the CBD IT Help Desk will support three JPM IS programs; JWARN, JEM, and JWARN Initial Capability (JIC). This support will be Level I.

Level II: The Help Desk at this Level will troubleshoot and work with the customers to resolve the CSR. The Help Desk will access the knowledge base, prior experience, and computers running the software to resolve the issues. If

SSA Highlights

August 2004 - SSA established

February 12, 2005 - CBRN Data Model v1.2 released

May 31, 2005 - Brigadier General Reeves signs the Charter officially standing up the JPEO-CBD SSA

July 13, 2005 - First JCBRND Architecture Working Group (AWG) meeting held

July 15, 2005 - SSA Road Show for JWARN

“...The SSA will provide services and coordination for IT products developed by the JPMs which contain data, software, or which are capable of, or have a requirement for future linkage to the Global Information Grid (GIG). “

JPEO-CBD SSA Charter
Configuration Management

The SSA Configuration Management Team is currently assisting in the implementation of the Memorandum of Understanding (MOU) between the Joint Requirements Office-Chemical, Biological, Radiological, and Nuclear Defense (JRO-CBRND) and the Joint Program Executive Office for Chemical and Biological Defense (JPEO-CBD) for the stewardship of Department of Defense (DoD) Chemical, Biological, Radiological, and Nuclear (CBRN) architecture and data products.

Two of the key requirements of the MOU are to produce a Joint CBRND (JCBRND) Configuration Management Plan (CMP) and to establish a repository for joint architecture and data products on the JPEO-CBD Integrated Digital Environment (IDE) website.

It is anticipated that the JCBRND CMP will be approved late-2nd Quarter or 3rd Quarter FY 2006. The CM Team is in the process of developing the JPEO-CBD IDE repository structure and a

Terrorist Threats Against Information Systems

(Continued from page 4)

- When the system/network is vulnerable to attacks, the entire system/network could be brought down, thereby, rendering the system/network unavailable so if an attack were to occur, the system/network would not be available to function. This could result in the death of many warfighters. This is known as denial of service in which action or actions that result in the inability of a system/network or any essential part to perform its designated mission, either by loss or degradation of operational capability.
- When the system/network is not properly secured, this could enable unauthorized individuals, (either by accidental or intentional means), the ability to access the information, thereby, allowing sensitive information to be compromised. Therefore, unauthorized disclosure improperly, which also endangers the warfighters lives. This is considered modification that exists when software/information is altered by changing or adding to its representation, (integrity is rendered questionable).
- When an attack totally destroys the system/network, then there is no system/network to warn warfighters of possible CBRN attacks. This of course is destruction that exists when any asset is declared 100% economically non-repairable or non-recoverable.

Each Joint Project Manager (JPM) has unique IA problems such as; classification levels, wireless connections, cross-domain situations, etc. Because of the uniqueness, not every situation is covered in an instruction. Some might take the stance that, if their specific
Terrorist Threats Against Information Systems

(Continued from page 8)

situation requires some type of security measure not covered in an instruction, they don’t have to document it. This is not the case. Where instructions are lacking for guidance, best practices should be implemented. In other words, if you really believe some security protection should be employed, then it probably should be. It is better to be safe then sorry. It is up to all JPMs to ensure that the integrity for all Information Systems is maintained, and whatever it takes to accomplish this should be completed. All systems must go through the C&A process before being accredited and deployed for operational use. If not, then per DoD mandates, these systems/networks are in violation and vulnerable to exploitation. Because environments and equipment are always changing, review of the threats and safeguards is an ongoing effort. Remember, going through the C&A process the first time is much harder than maintaining it. The process should be reviewed for re-accreditation at least every three years or when major changes to a system or environment have occurred such as:

- Addition or replacement of a major component or a significant part of a major system.
- A change in classification level of information processed.
- A significant change to the operating system or executive software.
- A breach of security, violation of system integrity, or any unusual situation that appears to invalidate the accreditation.
- A significant change to the physical environment where the system resides.
- A significant change to the threats.
- A significant change to the availability of safeguards.
- A significant change to the user population.
- The passage of three years since the effective date of the existing accreditation.

So, what can you do to accomplish all these regulations? About a year ago the Joint Program Executive Officer for Chemical & Biological Defense (JPEO-CBD) Software Support Activity (SSA) IA team was established to assist all the JPMs by providing C&A support. This team of specialized personnel can ensure your systems/networks are appropriately locked down in order to eliminate or minimize the impact of threats that can cause denial of service, unauthorized disclosure, modification, or destruction to information system resources.

The SSA IA team members provide a resource of technical expertise in satisfying the requirements of the current DoD IA regulations. Our experience with CBRN unique operating environments and security requirements enables us to help you achieve the DoD mandate of operating each Information System at an acceptable level of risk through the C&A process. Our IA team members have a proven record and reputation of performing each step of the current C&A process leading to accreditation of your Information System. So, you need not look any further then the SSA IA team to provide quality and professional IA services.

For information regarding these SSA IA services, please contact the JPM-ISIS/SSA Security Manager, Guy Casciola, at casciola@spawar.navy.mil.

Key C&A Concepts

ATO - Authority To Operate - The formal declaration by the DAA that an Information System is approved to operate in a particular security mode using a prescribed set of safeguards. This is the end goal of the C&A process.

CA - Certification Authority - Individual responsible for making a technical judgment of the system’s compliance with stated requirements, identifying and assessing risks associated with the operating system, coordinating the certification activities, and consolidating the final certification and accreditation package.

DAA - Designated Approval Authority - Official with the authority to formally assume the responsibility for operating a system or network at an acceptable level of risk.

DITSCAP - DoD Information Technology Security Certification and Accreditation Process - “The DITSCAP … defines a process that standardizes all activities leading to a successful accreditation. … Standardizing the process will minimize risks associated with nonstandard security implementations across shared infrastructure and end systems.” (DoD Instruction 5200.40)

IATO - Interim Authority To Operate - Temporary approval granted by a DAA for an Information System to process information based on preliminary results of a security evaluation of the system.
Help Desk

(Continued from page 7)

the issues can not be resolved at this level then the ticket will be referred to a Level III SME.

The future goal of the CBD IT Help Desk is to provide Level I support for all JPEO-CBD Programs of Record. Level II support will be available for any JPEO-CBD Program of Record as a Service-For-Fee.

If Warfighters are having trouble understanding a program feature or simply have a question, they can contact the Help Desk 24/7, by email, telephone, or online. Experts are there to help resolve issues and, if unable to resolve the issue, put the Warfighter in touch with additional resources.

This Help Desk’s web site contains links to:
• JPEO-CBD IT Support Website (herein referred to as Help Desk web page)
• request a user account for access to the Help Desk web page
• submit or check the status of a Customer Service Request (CSR)

The Help Desk web page provides Warfighters access to a wide range of program information with which to address their concerns. As an example, the page has a listing of all JPEO-CBD IT programs. The titles on that listing are linked to the associated Level II web page when available. The page also allows users to access the following information or capabilities:
• Submit a CSR
• Check the status of a CSR

• Manage password and preferences for the web page and the CSR software (Remedy)
• Links to other pertinent Chem-Bio websites and Help Desks.
• For Programs maintaining status and disposition of CSR’s on the CBD IT Help Desk infrastructure
  * Access Frequently Asked Questions (FAQs)
  * A knowledge base of known issues and fixes
• For Programs with participating Level II operations
  * Download the latest version, or patch, of program software (e.g. JEM or JWARN)
  * Download User Manuals for program software
  * Access training products for supported programs
  * Read Lessons Learned from other Warfighters

The CBD IT Help Desk is now here, providing a single point of access for the Warfighter to obtain needed help, in the most efficient way possible.

For more information, please contact John MacCrossen at macrosen@spawar.navy.mil or Pat Lowe at plowe@spawar.navy.mil.

Standards and Policy

(Continued from page 7)

SSA Standards and Policy also supports acquisition activities for software intensive systems. We are wired into the Army’s and OSD’s software acquisition and systems engineering initiatives and are trying to translate these programs into effective practices that benefit JPMs, be it training, process improvement, software architecture design and analysis, or enterprise system engineering plans.

Standard processes, interfaces, guidelines, protocols, syntax, artifacts, data, metrics and templates are being collected in a repository, as an asset JPMs can use for reusable content and examples of items that they will have to produce. This is a work in progress. The repository is located on the JPEO-CBD Integrated Digital Environment (IDE) website (https://jpeocbd.altess.army.mil). Check it out and let us know how we’re doing, what’s missing, whether or not you find your way around, and, in general, how we can help you do your job better and more easily.

For more information, please contact Dan Reuben at dreuben@spawar.navy.mil.
Data Management

(utilize the data model in an open forum. These papers and associated briefings can be found on the Joint Program Executive Office for Chemical and Biological Defense (JPEO-CBD) Integrated Digital Environment (IDE) website. They are located under Software Support Activity/Data Management/ CBRN Data Model Papers directories.

In addition, our Data Initiative Team recently released the CBRN Data Model Version 1.3. This new version includes most of the Hazard Prediction and Assessment Capability (HPAC) 4.0.4 variables, chemical and biological sensor data structures to support the JPM Guardian program, some Joint Warning And Reporting Network (JWARN) model extensions, population representation, and US MOPP levels, among other items. A number of entities and attributes have been remodeled to more tightly integrate with the Joint Consultation, Command and Control, Information Exchange Data Model (JC3IEDM) and to eliminate potential duplication. In addition, discovery metadata has been implemented at the row level.

The CBRN Data Model and associated documentation can be found on both the JPEO-CBD IDE and JPM - IS websites. If you would like to be added to the distribution list or to obtain a copy of the ERwin data file, please have your government sponsor contact Professor Tom Johnson via email at thjohnso@nps.edu.

Science and Technology

(Continued from page 6)

Markup Language) schema, and established interoperability rules between the medical namespace and the CBRN namespace. This would facilitate interoperability between the various COIs, allowing them to achieve the goal of a net-centric data strategy. The second concept, net-ready sensors, would focus on interoperability between legacy sensors and new wireless technology, improving the management of chemical-biological sensors in a net-centric architecture.

With the many proposed development efforts being considered and a growing interest in managing the health and safety of the American populace, a new age of enterprise-level information management is upon us. Our intent is to be on the cutting edge of development, with an eye to rapid transition.

The SSA is a user support organization that is funded by the Joint Program Executive Office for Chemical and Biological Defense (JPEO-CBD) and reports to JPEO-CBD via Joint Program Manager Information Systems (JPM IS). It spans and supports all JPEO-CBD Joint Program Managers (JPMs) and Directorates. It is a comprehensive and cost effective single point of contact for users (Customers, Developers, and Warfighters) to received professional and timely assistance with all CBRN Defense program standards, interoperability, and supportability needs to ultimately facilitate the creation of more efficient, common, and consistently superior interoperable and integrated CBRN systems to the Warfighter.

Interoperability is a puzzle. We look forward to your piece.

**Abstract:**
This periodical provides a collection of articles written by the Joint Program Executive Office for Chemical and Biological Defense (JPEO-CBD) Software Support Activity (SSA) as a consistent method of communicating SSA efforts and vision, while providing awareness of key enterprise challenges. The JPEO-CBD is managed by the Space and Naval Warfare Systems Center San Diego and is directed by the Space and Naval Warfare Systems Command. The SSA is a team composed of government and contractor agencies that provide enterprise support in the key tenets of net-centric operations to U.S. Department of Defense chemical and biological programs.

**Subject Terms:**
- Mission Area: Information Technology
- software support
- chemical/biological defense
- net-centricity
- interoperability
- data modeling
- integration
- information assurance
- joint operations
