Final Performance Report

National Defense Education Program (NDEP) - Science, Technology, Engineering, and Mathematics (STEM) Education

Shannon Cox, Executive Director of Instructional Services and Sandi Preiss, STEM Center Coordinator
8/31/2013

Approved for public release; distribution unlimited.
ABSTRACT

As per Department of Defense Grant and Agreement Regulations (DODGARS) 32.51 and Article 7.040 the Final Performance Report (FPR) is a comprehensive, cumulative, and substantive summary of the substantive progress and significant accomplishments of the Dayton Regional STEM Center achieved from 19 Oct 2009 to 31 May 2013.

1.0 SCOPE

The Department of Defense (DoD) recognizes the downward trend shown by U.S. students in their knowledge of and their participation in STEM as an area of critical concern to national security. Basic science and mathematics competence, gained in grades K-12, form the foundation of an educated, capable, technical future work force for DoD. The objective of the National Defense Education Program is to support the education and encouragement of such a future workforce by establishing a DoD-wide program to invigorate the science and mathematics curriculum, to enhance teaching skills of science and mathematics teachers to deliver the curriculum and to increase the level of awareness, interest and active participation of students in STEM activities, projects, and academics. The overall strategy is to have DoD scientists and engineers partner with educational institutions to make direct connections between the curricula and scientific experimental processes. The NDEP program goal is to further strengthen the real world connection between school curriculum and the work of DoD STEM Professionals that facilitates obtaining a future workforce fully prepared in STEM fields.

The Dayton Regional STEM Center’s STEM Fellowship is an intensive and collaborative program that nurtures STEM education leaders. These dedicated leaders are the driving force behind the materials and services that are provided by the STEM Center to teachers throughout the nation. The Dayton Regional STEM Center’s STEM Fellows include Pre School-12th grade teachers working side-by-side with faculty and researchers from higher education, engineers, and scientists from local STEM industries and the Air Force Research Laboratory (AFRL) at Wright-Patterson Air Force Base. STEM Fellows develop, test, and refine STEM Units of instruction which are connected to STEM career pathways and skills. This experience and resulting curriculum enhance all users understanding of inquiry and scientific pedagogy.

2.0 PROGRAM OBJECTIVES

The DoD selected AFRL/XPPD, Domestic Partnering Branch, as the NDEP coordinator at Wright-Patterson AFB responsible for the NDEP program implementation in Ohio. The selection was made based on the strong series of on-going STEM programs at AFRL managed by XPPD. One of these programs is the Dayton Regional STEM Center partnership. The Center was created in 2007 via a National Governors Association competitive process to be the hub of STEM lessons design, training and support for educators in order to advance the goal of preparing all students with the skills and knowledge to participate in the high-demand STEM careers of the future. The Dayton Regional STEM Center is an unprecedented partnership that combines the strength of education professionals with the realities of industry needs, allowing students to make the connection between what they are learning and how it will be used in future careers, which is the main goal of the DoD NDEP program.

Approved for public release; distribution unlimited.
The Dayton Regional STEM Center and AFRL partnership was initiated by the NDEP funded Statement of Work; however, the relationship continued to go beyond the confines of the projects. AFRL Civilian and Military support services at teacher training events, WPAFB tours, relationships with AFIT, networking relationships with the industries who support AFRL, Air Camp, and general community awareness are all artifacts of a resulting impactful, STEM community partnership. This relationship played a fundamental role in the 100,000 students, 250 STEM Fellows, 1,000 educators, 5 states, 2 other countries and 90 plus Ohio districts benefiting from Dayton Regional STEM Center efforts and outreach.

On August 8, 2012, the Grant/Cooperative Agreement with the Dayton Regional STEM Center transferred from Mr. Rick Negron, Air Force Research Laboratory Domestic Partnering Branch (AFRL/XPPD) to Mr. Daniel Andrews, Wright-Patterson Air Force Base STEM Coordinator and Educational Outreach Office.

3.0 TECHNICAL REQUIREMENTS

The Dayton Regional STEM Center will perform, through their unique collaborative process known as STEM Fellows, the functions under this statement of work:

Note: STEM Fellows are university, industry, government and K-12 education experts working as collaborators.

3.1 STEM Lesson Development:

The Center will develop inquiry-based, hands-on STEM lessons utilizing regional workplace sectors or clusters that maps to real world work being done at the Air Force Research Laboratory in the areas of air systems, sensors, power/propulsion/energy, advance materials/manufacturing and medicine/human performance. The Center will work closely with AFRL STEM Fellows to develop inquiry-based/hands-on instructional lessons based on AFRL work in order to capture the real life connection required by the NDEP program. The Center in coordination with the AFRL NDEP coordinator will buy STEM Learning Modules or kits to complement the lessons as necessary. Once the lessons are developed, piloted and documented, the Center will work with the AFRL STEM Fellows and the AFRL NDEP coordinator to identify AFRL scientists and engineers to deliver parts of the lessons on site at schools in the region. As lessons are finalized, the Center will migrate them across grade levels vertically, and horizontally. As part of this task, final STEM lessons fully piloted and approved for use will be provided to the AFRL NDEP coordinator to be shared with other NDEP coordinators across the DoD.

Approved for public release; distribution unlimited.
STEM Fellows, under the leadership of the STEM Center, have developed and published 47 units of PK-12 instruction that consist of multiple lessons (average is 10 lessons) and one course in Modeling and Simulation for the High School level. These user-friendly, content-rich lessons for hands-on learning are aligned to Ohio’s Academic Content Standards and are mapped to real work being done in the region’s STEM industry career fields: Power and Propulsion (10 units); Advanced Materials and Manufacturing (23 units); Medicine/Human Performance (11 units); Air Vehicles (5 units); Sensors (8 units); and Modeling and Simulation (1 high school semester course).

SEE APPENDIX A

STEM Fellows collaborate with AFRL scientists and engineers to create and teach these lessons. This project provides an excellent opportunity for Dayton-area schools to tap into the combined resources of Wright-Patterson Air Force Base and the STEM Center. STEM Fellows follow a STEM Lesson Template that has been designed by the STEM Center to ensure each lesson has the right framework and content for a comprehensive curriculum that reflects the STEM Education Quality Framework (also created by the DRSC). Once vetted, lessons are accessible online and are easy to implement in the classroom.

Through collaboration with the National Defense Education Program, the STEM Center is distributing lessons nationwide to school districts in communities with Air Force bases.

Over 40 Curriculum kits reflecting DRSC curriculum and technology needs have been used in a lending library format through the STEM Fellows network. On average this network is active with over 20 Ohio school districts annually.

Additionally, materials necessary for curriculum piloting are provided to each piloting teacher to ensure authentic incorporation of curriculum into diverse classroom settings. In July 2012, thirteen school districts participated in a reallocation program of STEM materials that allowed for placement of consumables and technology directly within the district setting thereby affording staff immediate access to materials often integral to STEM educational learning experiences.

3.2 Professional Development:

The Center in cooperation with AFRL and higher educational institutions in the region will develop a professional development training experience in STEM in order to build teacher and leadership capacity. Teachers, principals, and superintendents participating in the STEM Center training will be exposed to intensive engineering experiences at the AFRL facilities. The engineering
intensive experiences content will be coordinated by the Center with AFRL personnel to match the content of the STEM lessons developed for the students.

The STEM Center’s fellows, higher education representatives and industry representatives interact in a collaborative team capacity. Each team is comprised of PK-12 teacher(s), industry specialist(s) and higher educational institution representative(s). Higher education institutions involved were The University of Dayton, Wright State University, Central State, Antioch University, Air Force Institute of Technology (AFIT) and Sinclair Community College. Industry specialists participated from the areas of materials, manufacturing, architecture, machining, aerospace, and the WPAFB directorates. The Fellowship program is an example of sustained professional development and also meets the standard of Highly Qualified Professional Development set by the Ohio Department of Education’s Teacher Standards Board. Over 250 STEM Fellows have participated in the Fellowship program.

In 2010-2011 school year an approximated 2769* students participated in STEM Center curriculum via the curriculum piloting requirements for STEM Fellows. These STEM education learning experiences traditionally constituted for 500 minutes of instructional time.

In 2011-2012 school year an approximated 1176* students participated in STEM Center curriculum via the curriculum piloting requirements for STEM Fellows. These STEM education learning experiences traditionally constituted for 500 minutes of instructional time.

In 2012-2013 school year an approximated 2167* students participated in STEM Center curriculum via the curriculum piloting requirements for STEM Fellows. These STEM education learning experiences traditionally constituted for 500 minutes of instructional time.

* Due to shared distribution among STEM Fellow participants and colleagues as well as public distribution this number only reflects students participating in the teacher’s pilot requirements and greatly underrepresents the
number of actual students that participate in STEM learning experiences reflecting Dayton Regional STEM Center trainings and curriculum distribution.

The Fellowship experience enabled the PK-12 teachers to serve their own districts in various leadership capacities including:

- STEM Fellows created/planned/provided professional development and support for teachers in their schools/districts.
- STEM Fellows created/planned/provided professional development and support for teachers in the region.
- STEM Fellows have designed and implemented middle and high school STEM courses for ALL students using the STEM Center curriculum and STEM Quality Framework.
- STEM Fellows created programs (after school clubs, brown bag lunch program, guest speakers, etc.) that invite STEM community participation to increase partnership and develop STEM awareness and understanding.
- STEM Fellows used the STEM Center lessons to enhance classroom connections to service learning that benefits their schools and communities.
- STEM Fellows helped obtain grants to enhance curricular and co-curricular activities for their schools and districts.
- STEM Fellows have created other innovative and custom tailored programs to increase student performance in STEM.
- STEM Fellows support regional STEM educational outreach efforts such as Junior Science and Humanities Symposium and Dayton Science Festival.

3.2.1 STEM Teacher Intern Program

The Center and AFRL/XPPD will collaborate to implement a STEM Teacher Intern Program in which area High School teachers are competitively selected to complete a four week paid internship in AFRL. The Center will coordinate the teacher selections and will make arrangements to provide the teachers the necessary stipends. AFRL/XPPD will be responsible for identifying AFRL mentors and projects for the teachers to complete during their internship. The Center will apply their STEM Lesson development process to provide assistance to the teachers and mentors in the development of a STEM Lesson based on their internship experience. The Center will provide training to teachers and AFRL mentors on STEM Lesson development and the utilization of the STEM Quality Rubric. The final lessons will be made available to AFRL for distribution across DoD.

Approved for public release; distribution unlimited.
The STEM Center and AFRL collaborated to implement a STEM Teacher Intern Program for high school teachers. Application and competitive selection process for both seasons was completed by the Center in advance of introductory training for the interns. Each teacher completed a four-week paid internship with AFRL and other STEM Industry partners. A total of 20 high school teachers participated in the experience. Each Intern was responsible for creating a unit of instruction aligned to their industry intern experience. Lessons were developed by each teacher for personal implementation. The STEM Quality Framework was used to build the lessons. STEM Interns were trained by the Center in inquiry processes, problem-based learning and the STEM Education Quality Framework.

SEE APPENDIX B

SEE APPENDIX C

3.2.2 ASM Materials Camp for High School Teachers

The STEM Center will enhance the ASM Material Camp program curriculum in the Dayton Region by providing the advanced materials/manufacturing cluster developed lessons to the ASM Material Camp. The Center will establish a cadre of teachers fully trained in ASM Materials Camp activities. The trained teachers will in turn execute the ASM Material Camp in the Dayton Region and apply engineering techniques in the classroom.

The Center accepted a proposal submitted by the ASM Materials Education Foundation to support ASM Materials Camp implementation. The camp was held 25 June-29 June, 2012 at Stebbins High School in Riverside, OH. The Center provided $11,875.00 to ASM Materials Education Foundation, Charles Hayes to conduct the Camp.

SEE APPENDIX D
3.2.3 Modeling and Simulation

*The STEM Center in collaboration with AFRL will continue improving the Modeling and Simulation course selection offered in Ohio High Schools. The Center will coordinate M&S lesson improvements and the establishment of the course in four new schools. AFRL will provide M&S scientist and engineers, as part of the STEM Fellows program, to provide the required technical expertise to the Center.*

2010-2013 STEM Fellows and community advocates representing education, industry and government supported the creation, training, piloting, editing and completion of a semester long High School curriculum for Modeling and Simulation: Survey Course. Eleven high schools participated in the pilot for the 2012-2013 school year, which included 191 students. The final edited version will be available from the Center free of charge. The course will be advertised on the Center’s website.

SEE APPENDIX E

SEE APPENDIX F

SEE APPENDIX G

2012-Current STEM Fellows and community advocates representing education, industry and government supported the creation of an additional semester long High School curriculum for Modeling and Simulation: Surveillance and Response. The Center will continue its implementation of the additional course through training, piloting, and editing.

3.2.4 STEM-ulate

*The STEM Center will conduct two STEM-ulate workshops in the Dayton Region. The Center will assemble Professional Development Kits to Fellow facilitators for workshop sessions.*

Dayton Regional STEM Fellow Teachers supported Wright Patterson’s Education Outreach Middle School Teacher Workshop by providing training reflecting Dayton Regional STEM Center curriculum, the STEM Education Quality Framework and Academic Content Standards. The Wright Patterson’s Education Outreach office maintained record of participant numbers. The STEM Center conducted two STEM-ulate full-day workshops in the Dayton Region in the summer of 2011 and two more in the summer of
2012. Sixteen kits were designed and used as part of the training led by a STEM Fellow in coordination with AFRL.

SEE APPENDIX G

3.2.5 STEM Workshops

The STEM Center will conduct a minimum of two STEM focused professional development teacher training activities in conjunction with AFRL conferences. The Center, in coordination with the AFRL NDEP Coordinator, will determine the location and date of the activities.

The STEM Center conducted two focused professional development training sessions in conjunction with AFRL events. TTITP was held in Tucson, AZ. At TTITP the Center provided introductory STEM Education and curriculum training to Tucson Unified School District for over 50 teachers/administrators. I/ITSEC Conference, held in Orlando, Florida, provided a forum for STEM Education outreach and roll out of the M&S Curriculum. Both conferences were held in the 2012-2013 school year.

4.0 DELIVERABLES

The STEM Center will provide quarterly and annual reports to AFRL/XPPD including the number of lessons developed/number of lessons downloaded from the website and their status. Additionally the report will include number of AFRL scientists and engineers participating in the Center activities; hours of teacher professional development training; hours of direct classroom instruction to students; list of national and local level partnerships; number of S&Es, students and teachers participants organized by Elementary/Middle/High School; demographics – including gender/race or ethnicity/disadvantaged/disability; efforts to achieve diverse and inclusive participation among teachers and students; evaluation metrics – teacher improvement or performance in STEM education instruction/program participation satisfaction/student performance, reached through the Center’s activities. One copy of the STEM lessons finalized in each quarter should be attached to the quarterly report. A quarterly financial report showing dollars received and expenses will be provided by the Center to AFRL/XPPD.

The STEM Center and AFRL/XPPD will coordinate the development of a program quad chart and a program bubble chart to be provided to the DoD NDEP program manager. The charts will be updated as necessary.

In October 2010 the Dayton Regional STEM Center debuted the DaytonRegionalSTEMCenter.org website. The website offers users access to LabTV, STEM career videos, STEM Education Quality Framework and Curriculum developed by the Dayton Regional STEM Center. In October 2012, Vectren Corporation gifted the Dayton Regional
STEM Center with an updated website via the web development services of ThinkTV. The upgrade allows for improved usability as well as increased data storage and dissemination as well as offering individual pages for teachers, students, and the community. Over the past three years the Dayton Regional STEM Center’s combined sites have experienced over 17,500 web visits. Since the launch of the new website the DRSC has experienced over 5,800 web visits.

SEE APPENDIX I

SEE APPENDIX J

See Figure 1.in Section 3.2 regarding number of participating AFRL scientists and engineers in the Center’s activities.

The STEM Center’s two pronged professional development model consist of the STEM Fellowship Program previously discussed throughout Section 3.0. The second prong of the model exists in the form of community outreach.

SEE APPENDIX M

The Center has established a dynamically growing network of partnerships.

SEE APPENDIX K

SEE APPENDIX L

Most professional development opportunities catered to the full spectrum of educators PK-12; however, focused opportunities were available throughout the duration of the cooperative agreement to support students, parents, community members, scientists, engineers and professors.

SEE APPENDIX M

Dayton Regional STEM Center outreach efforts and Fellows impact the community at large through an approximated annual effect of providing over 5,000 students STEM outreach experiences, 700 educators’ professional outreach and workshop experiences and 1,500 community members STEM awareness experiences. The outreach efforts were in urban, rural and suburban Ohio school districts, various states and provided various types of STEM training. Specifically the Ohio school districts served through these efforts collectively are comprised of students who fit the subgroup classification used in the Ohio Department of Education reporting system: students with disability, English language learners, economically disadvantage, male, female, and various ethnicity groups representative of Ohio population.

DRSC was evaluated by Wright State University. Classroom observations and the analysis of teacher planning artifacts confirmed changes in the behavior of teachers participating in DRSC
professional development. Analysis of student gain scores were also positive for many of the
STEM units of instruction developed through the STEM Fellows Program.

Dayton Regional STEM Center lessons can be found via the website under the teacher tab at:
DaytonRegionalSTEMCenter.org.

Quarterly financial reports documented dollars received and expenses.

SEE APPENDIX N

Quad charts and bubble chart was provided to Contract Supervisor upon request throughout
duration of the contract.

SEE APPENDIX K

5.0 OPERATING PROCEDURES

AFRL/XPPD will provide program management and direction to the STEM Center in the
execution of the NDEP program. The STEM Center director will be responsible for execution
of the NDEP funded program per the tasks described in this SOW. Activities involving AFRL
STEM Fellows will be coordinated with AFRL/XPPD prior to conducting the activity.
AFRL/XPPD will continue to be a non-voting member of the STEM Center Advisory Board.

Rick Negron was the non-voting member to the STEM Center Advisory Board and when it was
transferred to the WPAFB Educational Outreach Office, Daniel Andrews replaced Rick Negron
on the STEM Center Advisory Board. The respective Contract Officer Representative (COR)
served on the STEM Center Advisory Board for the duration of the cooperative agreement. Prior
to conducting activities, the STEM Center Director and the COR would communicate via bi-
weekly teleconference, face-to-face meetings, and email communication. Also, yearly "Kick-
Off" meetings were used prior the Center’s Fellowship Program. The Center’s Advisory Board
convened semi-annually.

Personnel assigned will receive OPSEC Awareness Education and Duty related training
deemed necessary by the Government or program supported. OPSEC Awareness Education
and Training will be provided or coordinated through government channels and OPSEC
protective measures (countermeasures) will be applied as directed by government or program
sponsors.

No employees from the Dayton Regional STEM Center were on-base contractors so OPSEC
Training was not needed. Normal Awareness was encouraged by making sure that the off-site
contractors (non-base contractors-Dayton Regional STEM Center Employees) would clear
information for public release with the Contract Officer Representative (COR).
7.0 TECHNICAL and FINANCIAL REPORTING

7.1 The recipient shall engage in all program review meetings to provide progress reports and discuss technical issues.

7.1.1 These meetings are anticipated to be semi-annual including a kick-off meeting shortly after agreement signatures.

7.1.2 The recipient will be required to actively engage with and share work information with Government reviewers including electronic copies of presentations.

The Center Executive Director participated in program review meetings, provided progress reports, discussed technical issues, and shared work information surpassing minimum anticipation as outlined in the scope of work.
Screen shot from website database displaying name of STEM career connection (name, first column) and number of STEM Curriculum linked to the career field (last column).

<td><strong>2. Degree of STEM Integration</strong></td>
<td>The learning experience provides no opportunities for students to consider the relationships between and among Science, Technology, Engineering or Mathematics.</td>
<td>The learning experience requires students to complete task(s) that integrate knowledge and/or skills from two of the STEM disciplines. Or, the teacher describes or prompts discussion of the relationships between and among two or more of the STEM Disciplines.</td>
<td>The learning experience requires students to complete task(s) that integrate knowledge and/or skills from three of the STEM disciplines. For example, students use a graphing calculator to apply a mathematics formula to a science data set.</td>
<td>The learning experience is carefully designed to help students integrate knowledge and skills from Science, Technology, Engineering and Mathematics. For example, science students design and test water filtration devices, calculate their comparative efficiencies, and display the data using computer software.</td>
</tr>
<tr>
<td><strong>3. Connections to Non-STEM Disciplines</strong></td>
<td>The learning experience provides no opportunities for students to make connections between their STEM learning and non-STEM disciplines. For example, Language Arts, Social Studies, Art, etc.).</td>
<td>The learning experience overtly identifies a connection between the STEM and non-STEM disciplines but does not require students to perform tasks that integrate those disciplines.</td>
<td>The learning experience requires students to connect STEM learning with knowledge and/or skills from at least one non-STEM discipline. For example, researching the economic and environmental impacts of alternative energy sources.</td>
<td>The learning experience requires students to connect STEM learning with one or more non-STEM disciplines, and includes instructional support for quality performance in the non-STEM discipline. For example, providing students with information about quality technical writing.</td>
</tr>
</tbody>
</table>

Approved for public release; distribution unlimited.
**4. Integrity of the Academic Content**

Quality STEM learning experiences are content-accurate, anchored to the relevant content standards, and focused on the big ideas and foundational skills critical to future learning in the targeted discipline(s).

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not Evident</td>
<td>The academic content for the learning experience is inaccurate or is not anchored to the relevant academic content standards.</td>
</tr>
<tr>
<td>Emerging</td>
<td>The academic content for the learning experience is accurately presented and appropriately anchored to at least one academic content standard for each content area represented.</td>
</tr>
<tr>
<td>Accomplished</td>
<td>The academic content for the learning experience is accurately portrayed and appropriately anchored to more than one academic content standard for each content area represented. Or, the learning experiences is anchored to one content standard in each targeted discipline that is difficult to teach, or hard to learn.</td>
</tr>
<tr>
<td>Advanced</td>
<td>The academic content for the learning experience is accurately portrayed, tied to multiple content standards, and focused on helping students acquire deep understanding of a “big idea” or “foundational skill” critical to their future learning in the targeted discipline(s).</td>
</tr>
</tbody>
</table>

**5. Quality of the Cognitive Task**

Quality STEM learning experiences challenge students to develop higher-order thinking skills through processes such as inquiry, problem-solving, and creative thinking.

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not Evident</td>
<td>The cognitive task is simplistic, too easily solved, and does not require students to employ higher-order thinking skills.</td>
</tr>
<tr>
<td>Emerging</td>
<td>The cognitive task requires students to employ higher-order thinking skills in addressing a project or problem with the procedures prescribed by the teacher.</td>
</tr>
<tr>
<td>Accomplished</td>
<td>The cognitive task requires students to employ higher-order thinking skills in addressing a teacher-defined project or problem where students are responsible for designing the procedures to complete the assigned task(s).</td>
</tr>
<tr>
<td>Advanced</td>
<td>The cognitive task requires students to select and employ the higher-order thinking skills necessary to frame the problem, design the procedures, develop strategies to complete the project, or to generate one or more possible solutions to the problem. (For example, in PBL this is frequently referred to as presenting students with an ill-structured problem).</td>
</tr>
</tbody>
</table>

**6. Connections to STEM Careers**

Quality STEM learning experiences place students in learning environments that help them to better understand and personally consider STEM careers.

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not Evident</td>
<td>The learning experience provides no opportunity for students to explore STEM careers that are related to the STEM learning experience taking place in the classroom.</td>
</tr>
<tr>
<td>Emerging</td>
<td>The learning experience engages students in work that occurs in one or more STEM careers, but does not explicitly help students make the connection between their classroom work and work in the STEM career field.</td>
</tr>
<tr>
<td>Accomplished</td>
<td>The learning experience engages students in work that occurs in one or more STEM careers and the teacher intentionally helps students see the relationship between their classroom work and the work carried out by STEM professionals.</td>
</tr>
<tr>
<td>Advanced</td>
<td>The learning experience requires students to complete tasks in a simulated or real STEM work environment in which they are working like STEM professionals. In addition, the experience includes an activity intentionally designed to help students explore the relevant STEM careers and their educational requirements.</td>
</tr>
</tbody>
</table>
## 7. Individual Accountability in a Collaborative Culture

Quality STEM learning experiences often require students to work and learn independently and in collaboration with others using effective interpersonal skills.

<table>
<thead>
<tr>
<th>STEM Learning Quality Component</th>
<th>Not Evident</th>
<th>Emerging</th>
<th>Accomplished</th>
<th>Advanced</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students are not required to work or learn in collaboration with other students.</td>
<td>Students are encouraged or required to work in teams, but the collaborative work is informal in nature with little or no attention given to individual accountability.</td>
<td>Students are required to work in formally structured teams with specific methods for measuring team and individual accountability for the targeted learning outcomes.</td>
<td>Students are required to work in formally structured teams that have clearly defined expectations for individual and team accountability, including an intentional instructional focus on helping students develop the interpersonal skills valued in real-world work environments such as respect for diverse perspectives, active listening, checking for shared understanding, etc.</td>
<td></td>
</tr>
</tbody>
</table>

## 8. Nature of Assessment(s)

Quality STEM learning experiences require students to demonstrate knowledge and skill, in part, through performance-based tasks.

<table>
<thead>
<tr>
<th>STEM Learning Quality Component</th>
<th>Not Evident</th>
<th>Emerging</th>
<th>Accomplished</th>
<th>Advanced</th>
</tr>
</thead>
<tbody>
<tr>
<td>The assessment plan is limited in scope and designed to test primarily for retention using traditional measures such as pencil and paper tests and quizzes.</td>
<td>The assessment plan includes more than one form of assessment, with at least one assessment that requires students to demonstrate knowledge or skill through the completion of a performance-based task.</td>
<td>The assessment plan includes multiple forms of assessment with at least one assessment that is performance-based and anchored to a rubric. The assessment however, is not an authentic representation of the real world of work outside of school.</td>
<td>The assessment plans includes one or more rubric-based, performance assessments that require students to demonstrate knowledge and/or skill in completing authentic tasks that model performances in the real world of work outside of school.</td>
<td></td>
</tr>
<tr>
<td>STEM Learning Quality Component</td>
<td>Not Evident</td>
<td>Emerging</td>
<td>Accomplished</td>
<td>Advanced</td>
</tr>
<tr>
<td>--------------------------------</td>
<td>-------------</td>
<td>----------</td>
<td>--------------</td>
<td>----------</td>
</tr>
<tr>
<td><strong>9. Application of the Engineering Design Process</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Quality STEM learning experiences require students to demonstrate knowledge and skills fundamental to the engineering design process (e.g., brainstorming, researching, creating, testing, improving, etc.).</td>
<td>The learning experience includes no requirement that students develop thinking skills required in the engineering design process.</td>
<td>The learning experience helps students develop or refine thinking skills that are part of the engineering design process without explicitly referencing the engineering design process.</td>
<td>The learning experience explicitly references the engineering design process and requires students to demonstrate thinking skills across multiple steps in the engineering design process.</td>
<td>The learning experience, in addition to explicitly referencing engineering design, requires students to demonstrate thinking skills in employing all steps in the engineering design process including opportunities to experience the recursive nature of the process.</td>
</tr>
<tr>
<td><strong>10. Quality of Technology Integration</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Quality STEM learning experiences provide students with hands-on experience in using multiple technologies. (Examples: computer hardware and software, calculators, probes, scales, microscopes, rulers and hand lenses to name just a few)</td>
<td>The learning experience includes no opportunities for technology integration and makes no references to the many roles technology plays in the STEM fields.</td>
<td>The learning experience includes one or more technology tools or resources which are employed or demonstrated only by the teacher.</td>
<td>The learning experience engages students in effectively employing at least one technology tool or resource selected by the teacher.</td>
<td>The learning experience requires students to select and effectively employ multiple technology tools and resources to enhance their capacity to complete tasks, solve problems or manage projects.</td>
</tr>

Appendix E

Content Progression

This course is meant to serve as an introduction to the Modeling and Simulation discipline which has diverse applications from training to prototyping. Industry professionals using Modeling and Simulation range from medical responders attempting to improve their response capabilities, manufacturing companies interested in improving quality of production rates or parts, NASCAR’s performance interest in designing more aerodynamic vehicles, to aerospace engineers designing new satellites or space systems.

Modeling and Simulation is becoming an increasingly common industry standard as it lessens risks and costs while promoting collaboration and creative problem-solving. The expectation is that course participants will develop a working knowledge of the discipline, mathematical and scientific content as well as 21st century skills such as collaboration, problem-solving, creativity, and technological competency.

Main concepts of Modeling and Simulation include an understanding and application of types of simulation: live, virtual, and constructive, as well as types of modeling: physical, mathematical and process models. Students will also explore computer programming through introductory challenges where they develop a basic source code necessary for the capstone project. It is essential that students routinely employ the Engineering Design Process as they systematically navigate the curricular concepts.

As students work through the learning sequence, they will navigate and address many of the challenges common to this career field including software validation, software verification, and level of fidelity. Validation is the process of determining to what degree a model or simulation represents data, objects, projects or relationships. Verification is the process of determining whether a model or simulation aligns with the developer’s theoretical description and specifications. Fidelity refers to the degree the modeled simulation or scenario reflects its true form. Students will spend much time determining the appropriate level of fidelity for the capstone project. This will require students to balance hardware capabilities, allotted time and simulation goals.

Conceptual growth of the individual learner will be monitored throughout the six modules. Student generation of a concept map will occur in Modules One, Five and Six. Additionally, each module relies on student completion of journal entries reflecting the enduring understandings, essential questions, and objectives. These entries will further support a culminating paper submission.

The following chart outlines the content progression of the six modules. Supplied information is also located in the Content Overview section within each module.
## Appendix F

<table>
<thead>
<tr>
<th>Module</th>
<th>Content Overview</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Module 1</strong></td>
<td>Module One of this survey course provides an overview and introduction to the field of Modeling and Simulation. Students will be introduced to the discipline, and will complete a concept map to serve as a baseline for measured growth at the end of the semester. Next, students will investigate the types of models and simulations and their potential application in industry. After reviewing course objectives and expectations, students will utilize Microsoft Excel to develop mathematical models of a simple situation. Using their knowledge of the use of Excel, students will interpret data gathered from a physical model of a trebuchet. As a summative assessment, students will validate trebuchet simulation software from VirtualTrebuchet.com, based on the results from the physical model.</td>
</tr>
<tr>
<td><strong>Module 2</strong></td>
<td>In Module Two, students will continue the exploration of modeling tools, and will begin conducting research relative to the development of simulations. First, students will explore node theory through an operations research task. They will evaluate process models in a systematic manner and make decisions regarding real-world scenarios. Next, students will investigate the stride length and average walking rate of students in the class. They will utilize Microsoft Excel’s capabilities to interpret data and make conclusions. Finally, students will apply their understanding of node theory to the development of an evacuation network blueprint.</td>
</tr>
<tr>
<td><strong>Module 3</strong></td>
<td>In Module Three, students will explore 3-D modeling as a component of the field of Modeling and Simulation. Students will utilize SolidWorks modeling software to generate 3-D renderings of common classroom objects. A didactic video tutorial is provided to guide students through the process of rendering a filing cabinet. Following this experience, students will model a classroom object of their choosing; applying the SolidWorks techniques they have learned. Students will apply measuring techniques such as the use of a caliper when generating their high fidelity 3-D models. Finally, students will articulate the need for varied fidelity modeling in application in different real-world scenarios.</td>
</tr>
<tr>
<td><strong>Module 4</strong></td>
<td>In Module Four, students will investigate programming as a component of the field of Modeling and Simulation. First, students will investigate Scratch, a programming software with pre-programmed tiles that can be pieced together to accomplish tasks in a virtual environment. Next, students will read and complete activities from a Python programming text, <em>Invent Your Own Computer Games with Python</em>. In these activities, students will learn the commands and syntax of programming specific to Python. Following this introduction, students will write a program that represents the Fibonacci sequence as a mathematical model. Students will develop this program in its entirety, and will then apply their understanding of source code to the analysis of their stride rate data from Module Two. Students will modify an existing Python program to allow it to read their CSV file and make conclusions about the evacuation scenario. Finally, students will generate a program that simulates the exponential growth of fire in the evacuation network. They will apply their understanding of exponential functions and Python programming to verify the program as a constructive simulation.</td>
</tr>
<tr>
<td>Module 5</td>
<td>In Module Five, students are formally introduced to the capstone project and the Valve software that will be utilized for its completion. Using tutorial resources, students will generate a sample virtual map with the various functions of the Half-Life 2’s, Hammer Editor. Through guided practice with the software features, students will develop the skills necessary for completion of the course capstone project. Additionally, students will reflect upon their conceptual understanding of Modeling and Simulation by making additions to their previously generated concept map. A midterm take home exam that reflects the course enduring understandings is also provided as a summative assessment.</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Module 6</td>
<td>Module Six encompasses an entire school quarter (45 school days) of classroom time and is entirely devoted to the course capstone project. Students will develop a virtual environment that resembles the evacuation network blueprint identified in Module Two, and apply acquired course concepts to the creation of a school evacuation simulation. Students will incorporate their knowledge of 3-D modeling, computer programming, and serious game level development as they apply the Engineering Design Process to their capstone project. They will consider facets of Modeling and Simulation such as fidelity, validity, and verifiability at each stage of development, and will make informed decisions about their project. Upon completion of simulation development, students will compose a summative verification study that evaluates their capstone project.</td>

Paperwork Burden Statement
According to the Paperwork Reduction Act, as amended, no persons are required to respond to a collection of information unless it displays a valid OMB Control Number. The valid OMB control number for this information collection is 0348-0061. Public reporting burden for this collection of information is estimated to average 1.5 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Management and Budget, Paperwork Reduction Project (0348-0061), Washington, DC 20503.
Appendix O

Quad Chart

The Dayton Regional STEM Center

Description:
The STEM (Science, Technology, Engineering, & Mathematics) Center is the hub of curriculum design, training, and support for K-12 educators in an effort to increase student awareness and excitement about STEM and to advance the goal of preparing all students with the skills and knowledge to participate in STEM disciplines and careers should they choose to pursue them. In order for all students to have access, the STEM Center believes that high quality STEM education must be integrated into the regular school day. The way we design and disseminate our curriculum fills that need. Our motto is, "All means all.”

Activities:
- Fall STEM Curriculum Dissemination at Boonshoft Museum
- STEM Fellow Meetings occur weekly to develop and create STEM / NDEP Curriculums; each group meets every two weeks
- AFRIL Tour of 4 Directorates for STEM Educator Fellows
- National Air Camp – STEM Fellows & DRSC wrote the curriculum and STEM Fellows were the lead instructors
- TechFest 2010 – 2539 registered youths in attendance, 14 STEM Fellows presented 4 hands-on STEM activities
- Working with multiple districts to design STEM Courses for their districts using our STEM / NDEP Curriculum
- Plan, collaborate, and provide professional development of STEM Curriculum and Inquiry for Greene County, Southeast, and Northwest Ohio.

Progress / Schedule:
11/02/10 – STEM / NDEP Curriculum & Inquiry Professional Development for Teachers of Grades K-12
Nov. 2010–June 2011 – Educators and AFRIL Engineers/Scientists piloting STEM / NDEP Lessons with materials kits
11/29/10 – STEM / NDEP Lesson presented online for 4th grade Ohio Teachers (hosted by SOITA)
Present–June 2011 – STEM Fellow Meetings twice monthly to develop and create STEM / NDEP Curriculum

Approved for public release; distribution unlimited.
