AWARD NUMBER: W81XWH-12-2-0121

TITLE: Project VALOR: Trajectories of Change in PTSD in Combat-Exposed Veterans

PRINCIPAL INVESTIGATOR: Raymond C. Rosen, PhD

CONTRACTING ORGANIZATION: New England Research Institutes, Inc.

Waterbury, MA 02472-4521

REPORT DATE: October 2014

TYPE OF REPORT: Annual

PREPARED FOR: U.S. Army Medical Research and Materiel Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release;
Distribution Unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

REPORT DOCUMENTATION PAGE				Form Approved OMB No. 0704-0188	
Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.

14. ABSTRACT This goal of this project is to develop a large-scale, longitudinal registry of PTSD in combat-exposed OIF/OEF/OND male and female veterans. The objective of the current study is to systematically expand the longitudinal assessment by collecting follow-up data at additional time points for multiple domains of interest. Patterns of longitudinal change in the VALOR cohort will be empirically classified into trajectory subtypes by means of latent growth mixture modeling. The availability of comprehensive data on PTSD symptoms and related exposures and outcomes at multiple time points in a cohort of VA users with and without PTSD provide a unique opportunity to examine a number of hypotheses regarding longitudinal trajectories in combat-exposed veterans. In addition, the large proportion of women in our sample will allow us to examine variation in the associations by gender.					
15. SUBJECT TERMS Risk factors for PTSD, PTSD symptom development, VA healthcare utilization.

1. INTRODUCTION:

Project VALOR is a large-scale, longitudinal registry of PTSD in combat-exposed OIF/OEF/OND male and female veterans. The objective of the current study is to systematically expand the longitudinal assessment by collecting follow-up data at additional time points for multiple domains of interest. Patterns of longitudinal change in the VALOR cohort will be empirically classified into trajectory subtypes by means of latent growth mixture modeling. The availability of comprehensive data on PTSD symptoms, related exposures, and outcomes at multiple time points in a cohort of VA users with and without PTSD provides a unique opportunity to examine a number of hypotheses regarding longitudinal trajectories in combat-exposed veterans. In addition, the large proportion of women in our sample will allow us to examine variation in the associations by gender.

Using baseline and follow-up data from participants in Project VALOR, we will evaluate the following specific aims:

1. Examine trajectories of PTSD symptomatology and diagnosis by chart and diagnostic interview assessments in combat-exposed men and women.
2. Examine the nature and extent of military sexual trauma (MST) in combat-exposed men and women who have utilized the VA Healthcare System, including the contribution of MST to PTSD symptoms and diagnosis.
3. Examine associations of PTSD, mTBI, major depressive disorder (MDD), and treatment utilization in relation to changes in suicidal ideation.

2. KEYWORDS:

Post-traumatic stress disorder (PTSD), military sexual trauma (MST), suicide, combat-exposed veterans, PTSD trajectory, longitudinal, VA utilization

3. OVERALL PROJECT SUMMARY:

In quarter one of this year, 511 participants were consented to participate in the study and 381 subjects completed their participation in the first phase (consisting of an online questionnaire and telephone interview). By the end of quarter two, a total of 1168 subjects were consented to participate and 933 subjects had completed the study. At the end of quarter three, a total of 1448 participants were consented and 1268 subjects had completed the study. In quarter four, we completed the first round of data collection. Out of the total Project VALOR sample (n=1649), 1460 participants (88.5%) were consented for participation and 1348 participants (81.7%) completed their participation in the first phase of the study. In total, 49 participants (3% of the sample) declined to participate in the study. To date, all of the data from the first round of data collection has been entered and we are in the process of cleaning that data for use in future analyses. In September of 2014, we started recruitment for the second round of data collection. To date, 98 participants have agreed to participate and 61 participants have completed their participation in the second round of data collection. Throughout the year, we have continued to analyze data from the first Project VALOR grant for multiple manuscripts and presentations.

4. KEY RESEARCH ACCOMPLISHMENTS:

Nothing to report

5. CONCLUSION:

The PTSD registry will provide information to assist researchers, military leaders, and treatment providers to better understand PTSD and related problems, with specific focus on the course of the disease, suicidal ideation, and military sexual trauma. This knowledge will be of benefit to health care providers, policy makers and current service members as well as victims of trauma in the broader community. It will include:

- Evaluation of long-term outcomes of PTSD;
- A more accurate assessment of current theoretical models of symptom development, and;
- Documentation of health resource utilization and development of a database that would serve as a resource for health services planning and policy.

Furthermore, this study will contribute:

- The formation of a potential cohort of subjects for ancillary studies, ranging from genomic influences to quality of life and psychosocial outcomes, as well as future clinical trials;
- The creation of a representative sample of PTSD OEF/OIF Veterans who use the VA medical system, available for use in epidemiologic studies, particularly for comparisons with active duty and other Veteran or civilian populations;
- Utility to clinicians, patient advocacy groups, and health policy planners;
- Publications and dissemination of the registry results to provide a representative perspective of what is achieved in actual current care settings, thereby augmenting outcomes data from clinical trials.

7. INVENTIONS, PATENTS AND LICENSES:

Nothing to report

8. REPORTABLE OUTCOMES:

Nothing to report

9. OTHER ACHIEVEMENTS:

Three proposals that extend Project VALOR's work on the prediction of risk for suicidality are awaiting funding. The first two, entitled "Establishing an Empirically-

Based Method for Assigning Suicide Risk Status” and “Developing a Multidimensional Suicide Risk Profiling System for Returning Veterans” have been accepted into a larger proposal to fund the VA Patient Safety Center of Inquiry for Suicide Prevention. They will work in tandem to examine large VA databases (Suicide Prevention Applications Network or SPAN and the VA Corporate Data Warehouse or CDW) to develop and test an empirically based approach to designating level of suicide risk, including the identification of suicide risk profiles using latent profile analysis.

The third project is awaiting funding from the VA Quality Enhancement Research Initiative (QUERI) Rapid Implementation Supplements for Operations and Methodological Enhancements (RISOMEs) mechanism, and is entitled, “Enhancing Suicide Risk Prediction Systems across VA and Private Healthcare Settings”. This project will combine the efforts of the previous two proposals with a third, similar study to be conducted in not-for-profit civilian hospital systems. These three projects will be collecting data and building risk calculation algorithms simultaneously. Through shared knowledge and an iterative approach, an overarching risk prediction model, using information from all three projects, will be developed with the ultimate goal of implementation across all healthcare systems involved. This greatly expands the generalizability and potential national reach of these projects.

Project VALOR: Trajectories of Change in PTSD in Combat-Exposed Veterans

Annual Report

W81XWH-12-2-0121

PI: Raymond Rosen, PhD

Org: New England Research Institutes, Inc.

Award Amount: \$1,479,632

Study/Product Aim(s)

- Examine trajectories of PTSD symptomatology and diagnosis by medical chart abstractions and diagnostic interview assessments in combat-exposed men and women.
- Examine the nature and extent of military sexual trauma (MST) in combat-exposed men and women who have utilized the VA Healthcare System, including the contribution of MST to PTSD symptoms and diagnosis.
- Examine associations of PTSD, mTBI, major depressive disorder (MDD), and treatment utilization in relation to changes in suicidal ideation

Approach

To develop the first longitudinal registry of combat-exposed men and women with post-traumatic stress disorder (PTSD), 1649 participants from across the country will complete a second follow-up round of online questionnaires, and telephone interviews. We will also have access to our participants' electronic VA medical charts.

Data collection for Phase 2 began 9/2014. Analysis of Phase 1 data is ongoing.

Timeline and Cost

Activities	CY	13	14	15	16
Data Collection (Rounds 1-3)		<div style="width: 100%; height: 10px; background-color: #90EE90;"></div>	<div style="width: 100%; height: 10px; background-color: #90EE90;"></div>	<div style="width: 100%; height: 10px; background-color: #90EE90;"></div>	
Analysis of Data (Phase 1 and 2)		<div style="width: 100%; height: 10px; background-color: #90EE90;"></div>	<div style="width: 100%; height: 10px; background-color: #90EE90;"></div>	<div style="width: 100%; height: 10px; background-color: #90EE90;"></div>

Preparation of Dataset for Future Use				<div style="width: 100%; height: 10px; background-color: #90EE90;"></div>	
Estimated Budget (\$K)		\$347.5	\$341.8	\$430.3	

Goals/Milestones

CY13 Goal – Continue Data Collection

- ☒ Collection of Round 1 data
- ☒ Continue analysis of data from VALOR I and II

CY14 Goals – Continue Data Collection

- ☐ Finish collection of round 2 data
- ☐ Start Round 3 data collection

CY15 Goal – Complete Data Collection and Analyze Data

- ☐ Finish collection of Round 3 data
- ☐ Continue data analysis and prepare database for future use

Comments/Challenges/Issues/Concerns

- No concerns

Budget Expenditure to Date

Projected Expenditure: \$347,524

Actual Expenditure: \$274,746

Updated: (October 15, 2014)
