REPORT DOCUMENTATION PAGE				Form Approved OMB No. 0704-0188	
<p>The public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing the burden, to Department of Defense, Executive Services, Directorate (0704-0188). Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.</p> <p>PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ORGANIZATION.</p>

14. ABSTRACT The promotional schedule to advertise the National Research Council (NRC) Research Associateship Programs included the following: 1) attendance at meetings of major scientific and engineering professional societies; 2) advertising in programs and career centers for these and other professional society meetings; 3) direct mailing and emailing of announcements and program materials to presidents, graduate deans, and heads of appropriate science and engineering departments and minority-affairs offices of all academic degree-granting institutions in the United States; 4) posting announcements on internet job sites, electronic newsletters and professional society websites; 5) print advertising in high profile publications (e.g., Science magazine, the Chronicle of Higher Education); and, 6) maintaining a presence on social media sites such as Facebook. The NRC attended a number of minority focused events in which we maintained exhibit booths, participated in workshops and advertised in meeting literature, newsletters and websites or submitted materials for distribution. In addition, ads were placed in a variety of minority publications (e.g., Affirmative Action, Black Collegian).

National Research Council

RESEARCH ASSOCIATESHIP PROGRAM

with

Air Force Research Laboratory

Final Contract Technical Report

Contract No. FA9550-12-C-0009

Contract Period: 12/01/2011-11/30/2012

Report Period: 12/01/2011-11/30/2012

During the reporting period, the NRC conducted the following activities in support of the subject contract:

Outreach and Promotion

The promotional schedule to advertise the National Research Council (NRC) Research Associateship Programs included the following: 1) attendance at meetings of major scientific and engineering professional societies; 2) advertising in programs and career centers for these and other professional society meetings; 3) direct mailing and emailing of announcements and program materials to presidents, graduate deans, and heads of appropriate science and engineering departments and minority-affairs offices of all academic degree-granting institutions in the United States; 4) posting announcements on internet job sites, electronic newsletters and professional society websites; 5) print advertising in high profile publications (e.g., Science magazine, the Chronicle of Higher Education); and, 6) maintaining a presence on social media sites such as Facebook.

The NRC attended a number of minority focused events in which we maintained exhibit booths, participated in workshops and advertised in meeting literature, newsletters and websites or submitted materials for distribution. In addition, ads were placed in a variety of minority publications (e.g., Affirmative Action, Black Collegian).

In advertising the Research Opportunities available to prospective applicants, the NRC maintained an up-to-date listing of all active Research Advisers, current Adviser contact information and details of each Research Opportunity.

Processing and Review of Applications

Applications to the Research Associateship Program were submitted via a web-based application system. Each of the four application cycles opened two months prior to the application deadline. NRC staff provided support to prospective applicants including providing application instructions, technical support and additional information as requested.

A summary of applications for the reporting period is shown in Table 1.

For each applicant, the NRC received and processed an application form, a research proposal, transcripts, a statement of previous and current research, and confidential reference reports. An application file check was made prior to the review and each applicant was notified if required documents were missing.

The NRC convened panels in five broad discipline areas for the competitive review of applications in the Research Associateship Programs. Results of the review were made available to Laboratory Program Representatives immediately following the conclusion of the each review.

A summary of the outcome of the review of applications for the reporting period is shown in Table 1.

Administration of Awards

The NRC made awards to applicants based on sponsor authorization. A summary of awards authorized and the acceptance or declination by the applicant during the current reporting period is shown in Table 1.

For Associates beginning or continuing tenure, the NRC provided the administrative functions described in the contract Statement of Work. These functions included stipend payments, management of a major medical benefits insurance program, and reimbursement for relocation and travel to professional meetings.

A summary of NRC Research Associates on tenure during the reporting period is shown in Table 2.

Outcomes Reporting

All NRC Associates who completed tenure were required to submit a final report that described the outcome of their Associateship award. Final reports received by the NRC during the current reporting period are attached to this technical report.

The activities of Associates submitting final reports during this reporting period, including publications, presentations and patents, as well as an assessment of their experience in the program, are summarized in Table 3. Specific research accomplishments of Associates completing tenure during the reporting period are summarized in Table 4.

Table 3: Associates' Activities

- 28** Associates ended tenure during the report period
- 22** months was the average tenure length
- 36** months was the longest
- 10** months was the shortest
- 22** submitted final reports

In the final reports, Associates indicated the following scholarly activity while on tenure.

- 33** Articles published in refereed journals
- 1** Patent applications
- 14** International presentations
- 131** Domestic presentations
- 4** Awards

After ending their tenure, Associates indicated their future plans as follows:

- 1** Permanent position at the NRC host agency
- 6** Contract or temporary position at the NRC host agency
- 0** Research/administrative position with another U.S. government agency
- 0** Research/administrative position with foreign government agency
- 10** Research/teaching at US college/university
- 1** Research/teaching position at a foreign college or university
- 1** Research/administrative position in private industry in the U.S.
- 0** Research/administrative position in private industry outside of the U.S.
- 0** Research/administrative position with a non-profit
- 0** Self-employed/consulting
- 2** Postdoctoral Research
- 0** Other
- 1** No information provided

In their final reports, Associates were asked to evaluate certain aspects of their experiences on a scale of 1 (low) to 10 (high). The average rating for each item follows:

- 9.0** Short-term value (lab)-Development of knowledge, skills, and research productivity at lab
- 8.9** Long-term value (career)-How your Research Associateship affected your career to date
- 8.9** Laboratory Support-Equipment, funding, orientation, safety & health training, etc.
- 9.1** Adviser Mentoring-Quality of mentoring from the Research Adviser
- 9.0** LPR Support-Quality of administrative support from the LPR
- 8.9** NRC Support-Quality of administrative support from the NRC

Table 4: Summary of Associate Research

Associate		Tenure Dates
Alleyne, Andrew		6/8/2011-6/7/2012
1	Developed a hierarchical approach to controlling Thermal Management Systems (TMS's) within complex air vehicles. Hierarchical approach is preferred method for handling distributed loads and storage	
2	Initiated research on diagnostics and health management using hierarchical framework.	
3	Created modeling software to analyze Vapor Cycle Systems as part of TMS's. Enables the study of transient thermal phenomena.	
Anderson, Eric		11/2/2009-5/1/2012
1	Assisted in establishment of the Small Engine Research Laboratory (SERL) at AFRL to develop IC engine technology.	
2	Constructed and tested rotary ball valve for Pulsed Detonation Engine use, with substantial improvements in volumetric efficiency.	
3	Developed computational code to compute heat transfer rates to pulsed detonation engine tube walls, found thermal barrier coating increased detonation tube wall temperatures.	
4	Demonstrated prechamber as knock mitigation technique, enabling full load operation down with a 60 octane PRF blend in a spark ignition engine.	
5	Demonstrated intercooler, optimized ignition timing, direct injection, and to reduce the octane requirement of the Rotax 914 from 100 to 87.	
Beier, Hope		1/4/2010-11/16/2012
1	Developed a multiplex stimulated Raman scattering imaging system.	
2	Improved the spectral resolution of multiplex coherent Raman scattering spectra.	
3	Used coherent Raman scattering to measure the temperature of aqueous solutions with submicron resolution.	
4	Monitored the kinetics of ion influx into biological cells using a high-speed imaging system.	
5	Developed a system to acquire low-frequency Raman scattering spectra of biological molecules and compare to THz resonances.	
Chakravarty, Uttam		10/1/2010-8/13/2012
1	Biologically inspired wings of micro munition vehicles (MMVs) were constructed with membrane, attached to the metallic/composite reinforced structures.	
2	Finite element models were developed for the modal characteristics of the flexible wings of MMVs and validated by experimental and analytical results.	
3	The effects of added mass, damping, and aerodynamic loads on the modal characteristics (natural frequencies and mode shapes) of the wings were investigated.	
4	The wings were vibrated in vacuum and in air for investigating the effects of added mass and damping on their modal characteristics.	
5	Aerodynamic loads were estimated from the wind-tunnel test data, where the angle of attack of the wings and freestream velocity of air are varied.	
Comfort, Kristen		8/2/2010-8/1/2012
1	Identified a disruption in EGF dependent signal transduction by silver, gold, and iron oxide nanoparticles.	
2	Elucidated combinatorial bioeffects on a cellular, protein, and genomic level following concurrent exposure to nanoparticles and a static magnetic field.	
3	Evaluated the photothermal capability of gold nanorods during NIR laser irradiation and correlated the resultant heat production to nanorod aspect ratio.	
4	Discovered the impact of biologically relevant fluids on the photothermal efficiency of gold nanorods and successfully linked the diminution of thermal production to a solution-induced nanorod agglomeration phenomenon.	
5	Developed and implemented a new nano-bioeffect paradigm targeting lower, occupational exposure levels of nanomaterials.	
Fillery, Scott		1/5/2009-1/4/2012
1	Dielectric breakdown strength in insulating materials is heavily dependent on the population of defects. Hence, control over the size, shape and orientation of inclusion fillers can significantly impact the high electric field behavior.	
2	Introduction of inorganic inclusions, in the form of low permittivity platelets, aligned to frustrate propagation of a failure path, show significant improvements in dielectric breakdown strength.	
3	Attachment of polymeric structures to the nanoparticle surface, while positively promoting an improved nanocomposite dispersion, does not provide an enhancement to dielectric breakdown strength.	

4	Improvements to capacitor energy density, when utilizing nanocomposite motifs, requires a delicate balance, increasing material polarizability while staunching deleterious defects that result in premature breakdown under applied fields.
5	Biomaterials, such as silk, show significant versatility, stemming from the large phase space of chain conformation. Highly crystalline chain conformations show improvements to dielectric breakdown strength of 150%.
Kanel, Sushil	
8/2/2010-8/1/2012	
1	Synthesized nanomaterials (NMs) such as silver nanoparticles (AgNPs) and nanoscale zerovalent iron (nZVI) and Ni and Pd coated nZVI.
2	Remediation of carbontetrachloride(CT) by nZVI and bimetallic(Ni and Pd) nZVI is investigated and found that nZVI and Bimetallic nZVI has fast Kinetics to react CT. We found the highest efficiency ever reported in literature.
3	Fate and transport of AgNP was studied and found that AgNP transport differently at different pHs through porous media.
4	AgNPs and Ag ion showed different transport pattern through porous media.
Martin, Jennifer	
11/1/2010-10/31/2012	
1	Designed and utilized an aptamer selection for cortisol with a tunable stringency component integrated into the method. Found that more stringent conditions evolved the pool toward a single sequence dominating 45% of the final sequenced pool.
2	Developed equilibrium dialysis protocols for testing dissociation constants of aptamer/small molecule target binding. Confirmed a low micromolar K _d of a cortisol sequence.
3	Modified conditions to enable a ~30 nM limit of detection for cortisol the identified cortisol aptamer with a gold nanoparticle assay (serum cortisol ~200-450 nM).
4	Developed a method for testing aptamer/target interactions with custom DNA microarrays. Studied structural properties of aptamer/target binding (buffer conditions, purity, fluorescence reporting scheme, distance from chip surface).
5	Identified potential thrombin binding aptamers, each of which contained a sequence motif similar to the known 15-mer thrombin binding aptamer.
McClung, Amber	
7/1/2009-2/13/2012	
1	Established and validated the appropriate digital image correlation system, laser extensometer, high temperature grips, and environmental chamber for thermomechanical evaluation of shape memory polymers.
2	Thermal stability of shape memory polymers determined with thermogravimetric analysis (TGA) and differential scanning calorimetry (DSC).
3	Appropriate post-cure cycles established for multiple shape memory polymers based on the preliminary TGA and DSC results.
4	The path-dependent axial behavior of both Veriflex-E and a BMI-based SMP were evaluated using dynamic mechanical analysis (DMA) and axial tensile tests.
5	The shape memory response of Veriflex-E was evaluated using DMA and axial tensile tests.
6	The strain rate dependence of Veriflex-E was evaluated using axial tensile tests.
7	Shape memory hybrids combining SMPs and SMAs were created and evaluated.
McConney, Michael	
9/1/2009-8/17/2012	
1	Developed a new fabrication technique to create polymer stabilized cholesteric liquid crystals that enables high contrast optical filters to be made.
2	Made an cholesteric optical filter that induces high contrast (hyper-reflectivity) when exposed to heat or to light.
3	Made an cholesteric optical filter that which is high contrast and the wavelength of the filter changes when exposed to heat or light.
4	Developed an electrically tunable cholesteric liquid crystal.
5	Developed a novel CW laser from a polymer stabilized cholesteric liquid crystal.
McDonald, Jonathan	
1/18/2011-6/29/2012	
1	Derived discrete representation of the Ricci tensor for Piecewise-flat manifolds.
2	Used our discrete Ricci tensor to provide a geometric discretization of Richard Hamilton's Ricci flow equations on piecewise-flat manifolds.
3	Used discrete exterior calculus (DEC) to develop an inherently discrete analysis of curvature on simplicial geometries.
4	Applied techniques from Persistent Homology and quantum theory to demonstrate how quantum computations can be viewed as foliations of hypersurfaces whose geometry is determined by the correlation information between qubits.
5	Demonstrated the geometric view of quantum computation for 1D quantum cellular automata.
O'Connor, Alan	
9/12/2011-7/31/2012	
1	Demonstrated convergence of a distributed multi-agent system for agreeing on a collective sensing action when

	there is uncertainty about the target dynamical model.
2	Computed an analytical formula for the Cramer-Rao Lower Bound on range and velocity estimation variance and its dependence on the emitted radar pulse-train length. This result was confirmed for a stationary target using an S-band radar.
3	Quantified the benefit of feedback control of radar pulse-train length. Showed that the actively controlled approach achieved a 14% reduction in tracking error and dwell-time cost for constant velocity targets compared to the best constant policy.
4	Developed detector/tracker for asteroids moving in image sequences. This was an application of cognitive-based data-association algorithms developed by my advisor. Demonstrated improved performance for data with occlusions of objects of interest.
Rider, Keith 7/18/2011-7/17/2012	
1	Measured particle deposition rates from helium droplet beam to compare with calculations.
2	Designed and build magnesium and perfluoropolyether sources.
3	Performed TPD/TPR experiments on magnesium and perfluoropolyether thin films.
4	Performed DSC/TGA experiments on magnesium and perfluoropolyether bulk materials.
5	Assisted with other experiments (XRD, SEM) of these and other materials.
Sanders, Nathaniel 8/1/2011-6/30/2012	
1	Developed a heating reactor for gas-phase molecules to be interfaced with molecular beam, mass spectrometer.
2	Developed models for the pyrolysis of endothermic fuel simulant n-hexane under deoxygenated, low pressure conditions.
3	Introduced a novel class of Boron Nitride-based nanomaterials as catalysts to modify distribution of reaction intermediates.
4	Was able to differentiate classes of catalytic activity, and identify commonalities in catalytic behavior.
5	Developed a supercritical sample reaction chamber to be safely integrated to instrument for future work.
Seletskiy, Denis 10/1/2010-7/26/2012	
1	High sensitivity spectroscopic methods developed.
2	Using methods above, local cooling to 110 K has been measured, in agreement with the model.
3	Bulk cooling to 119 K has been demonstrated.
4	Laser cooling model has been extended to include effects of saturation.
5	Cooling by 80 degrees has been demonstrated inside of a optically-pumped semiconductor laser cavity.
Smith, Matthew 6/1/2010-6/30/2012	
1	Created novel self-oscillating (BZ) gels based on the biomacromolecule gelatin and synthetic polymer p(AAm-co-APMA).
2	Developed chemistries for effectively postfunctionalizing these gels with a Ru metal catalyst.
3	Characterized chemical and mechanical behavior of BZ gelatin as a function of reactant concentration, gel size.
4	Demonstrated gel printing and ink stamping techniques for effective patterning of catalyst, made first heterogeneous gels.
5	Demonstrated conditions for synchronized, coupled oscillations between active patches, laid foundation for modular design.
Voccola, Kaitlyn 9/15/2011-9/14/2012	
1	For a polarimetric SAR system consisting of orthogonally polarized dipoles, we found a way to circumvent the standard assumption/approximation that the polarization properties of the transmitted waves remain constant throughout the flight trajectory.
2	Completed numerical experiments comparing current polarimetric SAR imaging with our coupled polarimetric imaging approach for extended targets in clutter and found that it improved image signal-to-clutter ratio and mean-squared error.
3	Developed forward model and imaging operator for a correlation based SAR imaging technique for targets and volume scattering clutter. Developed resolution analysis for the imaging scheme and found improvements over standard imaging.
4	Created a clutter minimization technique based on avoiding certain pairs of correlated data which requires no knowledge of the clutter present in the scene of interest.
5	Developed MATLAB code to simulate correlated SAR data and implement the correlation imaging scheme. It was found that clutter mitigation was successful for a variety of targets and for a variety of antenna trajectories.
Wang, Peng 10/1/2009-8/3/2012	
1	Joint Spectrum Allocation and Scheduling in Multi-Radio Multi-Channel Cognitive Radio Wireless Networks; Throughput Optimization for Cognitive Radio Network with Slowly Varying Channels.
2	Capacity Optimization of MIMO Links with Interference: Derives the approximate theoretical capacity formula for MIMO links with interference through SVD. An Integer Programming algorithm is proposed to solve the capacity

	problem.
3	Resource Allocation in MIMO-based Ad Hoc Networks: Solves the problem of joint routing, scheduling, power control and bit rate selection with the goal of maximizing the system throughput that satisfies the given end-to-end traffic demands.
4	Throughput Optimization of Cognitive Radio Networks: The optimal solution provides a theoretical upper bound of throughput for cognitive radio networks. Also, derives a theoretical upper bound when greedy solution is used to solve the MWIS problem.
5	Throughput Optimization for Cognitive Radio Network with Slowly Varying Channels: Study the effect of aggregate delay; compare the optimal solution and the approximation solution, the centralized solution and distributed solution.
Wu, Thomas 9/1/2010-8/14/2012	
1	Investigated design methodologies for aircraft synchronous generator, including main machine, exciter and pilot exciter.
2	Developed linear and nonlinear electrical models for aircraft synchronous generator.
3	Developed lumped element thermal and mechanical models for aircraft synchronous generator.
4	Updated nonlinear electromechanical actuator model.
5	Started to work on generator testing.
Yang, Chi 6/22/2010-6/21/2012	
1	Developed optically pumped mid-infrared in-plane DBR semiconductor lasers, reached the record power of 3 W in a 7 nm spectral range.
2	Realized the first unstable resonator diode laser at 2 μm wavelength as precursor to unstable resonator quantum cascade lasers.
Yen, Chun-Wan 8/15/2011-9/28/2012	
1	Introducing Gold Nanoparticles into PEDOT:PSS Layer.
2	Introducing Gold Nanoparticles into Active Layer.
3	Modifying the metallic electrode/active layer interface through nano-imprint patterning.
Zunoubi, Mohammad 8/1/2011-7/31/2012	
1	Designed a Graphic Precessing Unit (GPU) high-performance computing system with a compute power of 15 Teraflops/s.
2	Implemented the first multiple computational tools for the analysis of coupled propagation equations for the Ultra-Short Laser Pulse (USPL) propagation.
3	Implemented the first multiple computational tools for the propagation of USPL in atmosphere and its interaction with matters.
4	Developed the massively parallel version of the above tool on GPUs to help speeding up the computation times by a factor of 70 over the conventional CPU tools.

FINAL REPORT

1) Associate Last or Family Name		First Name	M.I.
Alleyne		Andrew	G
2) FORWARDING Address (to which your tax statement will be mailed)		FORWARDING Phone(s) and E-Mail (if known)	
Residence or Institution		Home Phone:	
Street		Alt. Phone: 217-244-9993	
City, State Zip Urbana, IL, 61801		Preferred E-mail: alleyne@illinois.edu	
3) Today's Date		Dates of Tenure	
May 16, 2012		from June 6, 2011 to June 7, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFRL	WPAFB	RZP	
(e.g., AFRL)	(e.g., Wright Patterson AFB)	(e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Kirk Yerkes			

6) TITLE OF RESEARCH PROPOSAL

Distributed Hybrid Thermal Management Systems for High Performane Aircraft Cooling Systems

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Developed a hierarchical approach to controlling Thermal Management Systems (TMS's) within complex air vehicles. Hierarchical approach is preferred method for handling distributed loads and storage
- 2) Initiated research on diagnostics and health management using hierarchical framework
- 3) Created modeling software to analyze Vapor Cycle Systems as part of TMS's. Enables the study of transient thermal phenomena
- 4)
- 5)

(USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Merging the modeling framework with the control framework. Create an actual system model with realistic components to design hierarchical controller and test in simulation

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

b) Books, book chapters, other publications

c) Manuscripts in preparation, manuscripts submitted

Transient Thermal Systems, in preparation for ASME Dynamic Systems and Control

10) PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide titles, inventors, and dates of applications.

11) PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

International

Domestic

A Dynamic Modeling Toolbox for Air Vehicle Vapor Cycle Systems, SAE Power Systems Conference, Phoenix AZ, Oct 30-Nov 1, 2012.

Experimental Load Emulation for Multi-Evaporator Air Conditioning and Refrigeration Systems, 14th International Refrigeration and Air Conditioning Conference, Purdue University, West Lafayette, IN, July 16-19, 2012

12) SEMINARS OR LECTURES DELIVERED AT UNIVERSITIES AND/OR INSTITUTES Include dates, names and locations of seminars.

Transient Thermal Systems Modeling and Control, University of Cincinnati, ME Dept, Jan 27, 2012

Transient Thermal Systems Modeling and Control, University of California, Irvine, ME Dept, March 9, 2012

Transient Thermal Systems Modeling and Control, University of Michigan, Controls Systems Seminar, March 30, 2012

Transient Thermal Systems Modeling and Control, University of California, San Diego, ME Dept, April 6, 2012

Transient Thermal Systems Modeling and Control, Rutgers University, MAE Dept, April 11, 2012

13) PROFESSIONAL AWARDS RECEIVED DURING TENURE

14) POST-TENURE POSITION / JOB TITLE

Professor

15) NAME AND ADDRESS OF POST-TENURE POSITION / JOB ORGANIZATION

Mechanical Science and Engineering, University of Illinois at Urbana-Champaign

16) POST-TENURE POSITION STATUS / CATEGORY Please indicate only one.

☐ Permanent position at the NRC host agency	☐ Research/administration position in private industry in the U.S.
☐ Contract or temporary position at the NRC host Agency	☐ Research/administration position in private industry outside of the U.S.
☐ Abbreviate Host Laboratory/Center _____	
☐ Research/Administrative position with another U.S.-government agency	☐ Research/administration position with a non profit
☐ Research/Administrative position with a foreign-government agency	☐ Self-employed/consulting
☒ Research/teaching position at a U.S. college or university	☐ Postdoctoral research
☐ Research/teaching position at a foreign college or university	☐ Other (Please specify, possible) _____
	☐ No information provided

17) APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

7 Development of knowledge, skills, and research productivity

Comments

It was good to know more specifics of the people and problems here at the lab. I did not pick up new skills but I did get to see how they may be applicable in various domains.

LONG TERM VALUE

6 How the NRC Associateship award affected your career to date

Comments

The NRC Associateship award has had a neutral effect on my career to date. It will be more interesting to see how it affects my career in the future.

LAB SUPPORT

9 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

I have had everything that I've needed.

ADVISER/MENTOR SUPPORT

3 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

There was little contact between the mentor and myself on research related topics over the course of the year.

LPR SUPPORT

9 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)

Comments

I think the admin support was very good. Things were turned around in a timely fashion. The LPR even came up with some admin solutions that were out of the box for the Educational Partnership Agreement we created.

NRC SUPPORT

9 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

Very good.

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

National Research Council

Research Associateship Programs

FINAL REPORT

1) Associate Last or Family Name		First Name	M.I.
Anderson		Eric	K
2) FORWARDING Address (to which your tax statement will be mailed)		FORWARDING Phone(s) and E-Mail (if known)	
Residence or Institution residence		Home Phone:	
Street		Alt. Phone:	
City, State Zip Centerville, OH 45459		Preferred E-mail: <u>eric.anderson.ctr@wpafb.af.mil</u>	
3) Today's Date		Dates of Tenure	
April 30, 2012		from November 2, 2009 to May 2, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFRL	Wright Patterson AFB	Turbine Engine Division, Combustion Bran	
(e.g., AFRL)	(e.g., Wright Patterson AFB)	(e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Dr. Joseph Zelina			

6) TITLE OF RESEARCH PROPOSAL

Knock Mitigation Techniques to Enable SI Engine Operation on Low Octane Fuels

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Assisted in establishment of the Small Engine Research Laboratory (SERL) at AFRL to develop IC engine technology.
- 2) Constructed and tested rotary ball valve for Pulsed Detonation Engine use, with substantial improvements in volumetric efficiency.
- 3) Developed computational code to compute heat transfer rates to pulsed detonation engine tube walls, found thermal barrier coating increased detonation tube wall temperatures.
- 4) Demonstrated prechamber as knock mitigation technique, enabling full load operation down with a 60 octane PRF blend in a spark ignition engine.
- 5) Demonstrated intercooler, optimized ignition timing, direct injection, and to reduce the octane requirement of the Rotax 914 from 100 to 87.

(USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Continuing research includes development of a prechamber optimized for the Rotax 914 combustion chamber geometry. We are also an optically accessible single cylinder engine for studying direct injection and prechamber ignition in the Rotax 914. This engine will enable visualization of fuel sprays in a firing or motored engine with high speed video, laser induced fluorescence, or particle imaging velocimetry techniques. Flame development with the prechamber can be observed by recording natural flame luminosity and chemiluminescence.

	☐ No information provided

17) *APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM*

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

8 Development of knowledge, skills, and research productivity

Comments

Working at AFRL/RZTC/SERL provided me with the opportunity to spend most of my time doing hands-on experimental research. I would have ranked this a full 10 with some additional guidance as to the overall goals of the laboratory would have been.

LONG TERM VALUE

8 How the NRC Associateship award affected your career to date

Comments

The accociateship allowed me to learn new skills in the Detonation Engine Research Facility as well as continue to learn IC engine testing and development. It also provided me the opportunity to teach at nearby universities. I would have ranked this a full 10 had I been able to publish/present more frequently.

LAB SUPPORT

8 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

Since SERL was a new laboratory, funding and equipment for our laboratory has improved dramatically since I began my fellowship. I feel that we now have funding and equipment which enables us to produce quality data. I have had no problems with the safety and health guidelines followed here.

ADVISER/MENTOR SUPPORT

8 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

I feel I could have used more interaction from my mentor. Most of my interaction on a day-to-day basis were with the non-NRC laboratory researchers. Additional input as to the expectations of the NRC would have been helpful.

LPR SUPPORT

10 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)

Comments

All of my needs from the LPR were met quickly.

NRC SUPPORT

10 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

All of my needs in this area were met quickly. One area that is always tricky is figuring out income tax with the lack of official tax forms from NRC, but I understand that there are good reasons for NRC avoid providing 1099 or W-2 forms.

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

As stated above, more mentor input and the income tax issue could be areas for improvement.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

Dr. Benjamin Rockwell			

6) TITLE OF RESEARCH PROPOSAL

Stimulated Raman Scattering Imaging of Laser Induced Protein Denaturation

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Developed a multiplex stimulated Raman scattering imaging system.
- 2) Improved the spectral resolution of multiplex coherent Raman scattering spectra.
- 3) Used coherent Raman scattering to measure the temperature of aqueous solutions with submicron resolution.
- 4) Monitored the kinetics of ion influx into biological cells using a high-speed imaging system.
- 5) Developed a system to acquire low-frequency Raman scattering spectra of biological molecules and compare to THz resonances.

(USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

My current research is focused on using techniques such as spontaneous and coherent Raman scattering, high-speed imaging, and confocal and multi-photon microscopy for the investigation of biological response to electromagnetic exposure. Of particular interest is exploration of effects or specific information that can be gained from low-frequency Raman techniques and using this technique as an indirect comparison to direct terahertz exposure.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

17) APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

10 Development of knowledge, skills, and research productivity

Comments

The NRC program gave me the opportunity to work in a laboratory with equipment and resources not typically available in an academic setting, with free reign to work on projects of my own choosing. I was able to work directly with and learn from other scientists and technicians with many years of true laboratory experience. I do not believe I could have gained experience of this magnitude in an university setting.

LONG TERM VALUE

10 How the NRC Associateship award affected your career to date

Comments

The NRC program gave me the opportunity to establish a research program and apply for and be awarded research grants as a principal investigator that I will continue to work on as a federal civilian employee. It gave me the opportunity to prove my capabilities to my mentors and led directly to an offer of employment.

LAB SUPPORT

10 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

Support from the laboratory was outstanding. I was given unparalleled access to any equipment necessary for any experiment of my choosing, substantial start-up type funds to purchase any need supplies, my own laboratory space which I was subsequently allowed to upgrade as my space requirements increased, and access to technician support to help me meet my objectives. I was also given the opportunity to apply for additional research grants to expand my research program.

ADVISER/MENTOR SUPPORT

10 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

I could not have asked for a more supportive mentor. He is always there to make sure I had everything I needed for my research program and as a member of the laboratory. He is always more than willing to go out of his way to solve any problem that I may have, whether with research, professionally, or personally.

LPR SUPPORT

10 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)

Comments

Support from the LPR was outstanding. He always made sure we had everything we needed in the laboratory. He was also extremely supportive in ensuring I was well-taken care of in terms of my research program and future career.

NRC SUPPORT

9 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

Administrative support was typically excellent. I never had any issues with insurance, payroll, etc. Everyone in the NRC office was courteous and seemed willing to help. Travel reimbursement was a bit slow at times (up to two months) and sometimes required an over-abundance of justification; however, all issues were eventually resolved.

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Jess Willard Curtis			

6) TITLE OF RESEARCH PROPOSAL

Experimental and Finite Element Modal Analysis of the Flexible Wings of Micro Munition Vehicles

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Biologically inspired wings of micro munition vehicles (MMVs) were constructed with membrane, attached to the metallic/composite reinforced structures.
- 2) Finite element models were developed for the modal characteristics of the flexible wings of MMVs and validated by experimental and analytical results.
- 3) The effects of added mass, damping, and aerodynamic loads on the modal characteristics (natural frequencies and mode shapes) of the wings were investigated.
- 4) The wings were vibrated in vacuum and in air for investigating the effects of added mass and damping on their modal characteristics.
- 5) Aerodynamic loads were estimated from the wind-tunnel test data, where the angle of attack of the wings and freestream velocity of air are varied.

(USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Biologically inspired hair receptors are designed for detecting the surrounding air flow characteristics of micro munition vehicles. Finite element model is developed for investigating the deformation, shear force, and bending moment distributions of the hair receptors at different fluid flow velocities, considering both steady and unsteady aerodynamics. Dynamic characteristics (natural frequencies and mode shapes) of the hair receptors are also investigated at the steady and unsteady air flow regimes.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

- 1) Uttam Kumar Chakravarty, "Vibration Characteristics of the Wings of Micro Air Vehicles," Journal of Aircraft 49(2) (2012) 644–650.
- 2) Uttam Kumar Chakravarty, "Modal Analysis of a Composite Wing of a Micro Air Vehicle," Journal of Aircraft 48(6) (2011) 2175–2178.
- 3) Uttam Kumar Chakravarty, and Roberto Albertani, "Modal Analysis of a Flexible Membrane Wing of Micro Air Vehicles," Journal of Aircraft 48(6) (2011) 1960–1967.

b) Books, book chapters, other publications

c) Manuscripts in preparation, manuscripts submitted

- 1) Uttam K. Chakravarty, Benjamin T. Dickinson, Michael R. Hays, and William S. Oates, "Aeromechanics of an Electroactive Membrane Wing of Micro Air Vehicles," manuscript in preparation.
- 2) Michael R. Hays, Jeffrey Morton, Benjamin Dickinson, Uttam K. Chakravarty, and William S. Oates, "Aerodynamic Control of Micro Air Vehicle Wings using Electroactive Membranes," Journal of Intelligent Materials Systems and Structures, submitted for publication.
- 3) Uttam Kumar Chakravarty, "On the resonance frequencies of a membrane of a dielectric elastomer," Journal of Intelligent Materials Systems and Structures, submitted for publication.
- 4) Uttam Kumar Chakravarty, "Analytical and Finite Element Modal Analysis of a Hyperelastic Membrane for Micro Air Vehicle Wings," ASME Journal of Vibration and Acoustics, submitted for publication.

10) *PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH*

Provide titles, inventors, and dates of applications.

11) *PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES*

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Dr. Saber M Hussain			

6) TITLE OF RESEARCH PROPOSAL

Remote Actuation of Epidermal Growth Factor (EGF) Signal Transduction through a Nano-based Mechanism

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Identified a disruption in EGF dependent signal transduction by silver, gold, and iron oxide nanoparticles.
- 2) Elucidated combinatorial bioeffects on a cellular, protein, and genomic level following concurrent exposure to nanoparticles and a static magnetic field.
- 3) Evaluated the photothermal capability of gold nanorods during NIR laser irradiation and correlated the resultant heat production to nanorod aspect ratio.
- 4) Discovered the impact of biologically relevant fluids on the photothermal efficiency of gold nanorods and successfully linked the diminution of thermal production to a solution-induced nanorod agglomeration phenomenon.
- 5) Developed and implemented a new nano-bioeffect paradigm targeting lower, occupational exposure levels of nanomaterials. (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Currently, a NIR dependent, remote release of EGF is being developed which utilizes gold nanorods of various aspect ratio as a platform. Gold nanorods are functionalized with carboxylated PEG and EGF molecules are conjugated to via a well documented EDC/NHS reaction. Successful creation of these EGF-nanorod conjugates will be verified by dynamic light scattering, UV-VIS, and SEM. These conjugates will then undergo NIR laser irradiation with the released EGF being collected, quantified, and correlated to the nanorod aspect ratio and the degree of solution heating. Following optimization, this release mechanism will be used to induce EGF signaling in vitro.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

Comfort, K.K.; Maurer, E.I.; Braydich-Stolle, L.K.; Hussain, S.M. Interference of Silver, Gold, and Iron Oxide Nanoparticles on Epidermal Growth Factor Signal Transduction in Epithelial Cells. ACS Nano 2011, 5, 10000-10008.

17) *APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM*

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

9 Development of knowledge, skills, and research productivity

Comments

This was an excellent opportunity to expand my core knowledge base and skill set. Additionally, through the support I was provided, my NRC postdoctoral period was very productive, both professionally and research-based.

LONG TERM VALUE

8 How the NRC Associateship award affected your career to date

Comments

I feel that the prestige associated with an NRC post-doctoral fellow will significantly strengthen my prospects for my future career. Furthermore, the skills I aquired through this fellowship will be incorporated into and strengthen my highlighted qualifications for future employment opportunities.

LAB SUPPORT

9 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

The support I received from Dr. Hussain's laboratory was phenominal. The equipment is state of the art and I was always provided with the materials and proper safety information that I needed to effectively perform my research. The multi-disciplinary approach Dr. Hussain has taken to his group was of a significant benefit to expanding my research capabilities and learning new laboratory skills.

ADVISER/MENTOR SUPPORT

10 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

I received nothing both the utmost level of support and encouragement from Dr. Hussain. He helped me grow as a scientist and a professional, while simultaneous introducing me to the Air Force environment. Furthermore, I always received the necessary funding for project completion and travel. Dr. Hussain has helped to direct me and provide advise for my future career path and what I have learned from him, I believe, will be invaluable in my future endeavors.

LPR SUPPORT

9 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)

Comments

Whenever I required assistance from Dr. Stone, such as travel authorization or fellowship renewals, these were always handled rapidly and in a very professional manner. Futhermore, he made himself very availabe at the beginning of my tenure to discuss my project and personally welcome me, which to me demonstrated his extreme investment in NRC fellows.

NRC SUPPORT

7 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

On the whole, I perceived the NRC support to be very good and Ms. Linda Sligh was more than willing to help me or to put me in contact with the appropriate person. The reimbursement for travel process was fairly straight-forward and I received my reimbursement quickly. However, one concern I have is that I or my advisor were not informed that NRC changed their policy and no longer allowed for a 3rd year renewal, not allowing for adequate time to search for a new position.

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

1) Clearly outline if the renewal policies change to allow fellows adaquete time line up another position.

2) Transistion to per diem for meals instead of individual entry as this was a very time consuming process.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

Michael Durstock			
6) TITLE OF RESEARCH PROPOSAL			

Next Generation Polymer Nanocomposites: Implications to Capacitor Dielectrics and Energy Density

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Dielectric breakdown strength in insulating materials is heavily dependent on the population of defects. Hence, control over the size, shape and orientation of inclusion fillers can significantly impact the high electric field behavior.
 - 2) Introduction of inorganic inclusions, in the form of low permittivity platelets, aligned to frustrate propagation of a failure path, show significant improvements in dielectric breakdown strength.
 - 3) Attachment of polymeric structures to the nanoparticle surface, while positively promoting an improved nanocomposite dispersion, does not provide an enhancement to dielectric breakdown strength.
 - 4) Improvements to capacitor energy density, when utilizing nanocomposite motifs, requires a delicate balance, increasing material polarizability while staunching deleterious defects that result in premature breakdown under applied fields.
 - 5) Biomaterials, such as silk, show significant versatility, stemming from the large phase space of chain conformation. Highly crystalline chain conformations show improvements to dielectric breakdown strength of 150%.
- (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

1. Investigation into the potential of SiO₂ nanoparticles, functionalized with a polystyrene surface coverage, to provide an enhancement in dielectric breakdown strength. SiO₂ nanoparticles provide an ideal platform, due to the low dielectric constant, thereby providing no significant field enhancement to the polymeric phase, as well as the large breadth of synthesis routes.
2. Completion of research into the silk films as potential dielectric materials. Final characterization of silk phase and electrical properties.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

☐ Permanent position at the NRC host agency

☐ Contract or temporary position at the NRC host Agency

Abbreviate Host Laboratory/Center _____

☐ Research/Administrative position with another U.S.-government agency

☐ Research/Administrative position with a foreign-

- ☐ government agency
☐ Research/teaching position at a U.S. college or university
☐ Research/teaching position at a foreign college or university
☒ Research/administration position in private industry in the U.S.
☐ Research/administration position in private industry outside of the U.S.
- ☐ Research/administration position with a non profit
☐ Self-employed/consulting
☐ Postdoctoral research
☐ Other (Please specify, possible) _____
☐ No information provided

17) APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

8 Development of knowledge, skills, and research productivity

Comments

The associateship program, in combination with the post doctoral position at AFRL/RX provided in-valuable support towards developing new skills and knowledge. Allowing me to broaden my knowledge and skills base, becoming a more productive research scientist. The opportunity presented a entirely new research area from which I have developed skills that are intrinsic to my future position, as well as offering a new perspective of soft skills in proposal writing and communication skills.

LONG TERM VALUE

9 How the NRC Associateship award affected your career to date

Comments

In examining my productivity and maturity, the NRC associateship has a broader and complete effect on my research career, than my graduate studies. The NRC associateship and AFRL post doctoral position will provide a far greater influence in communication, experimental design and writing than any other opportunity to this date.

LAB SUPPORT

7 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

The support for equipment and funding at AFRL/RXBN was outstanding. I found the level of bureaucracy to be understandable for a military organization, but at times did stunt productivity and prevent full investigation into particular research areas. Health and safety was a primary concern at the laboratory, handled well at both orientation and periodically throughout my tenure.

ADVISER/MENTOR SUPPORT

8 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

The quality of mentoring at AFRL/RXBN was excellent. The door was always open, allowing for discussions of research and overarching projects direction. At the same time, there was space and support to pursuing differing ideas and concepts, not linearly related to the core mission.

LPR SUPPORT

5 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)

Comments

I only interfaced with the NRC Program Representative on official occasions, relating to travel requests and tenure extensions. As such, I can't reliably comment or rate the quality of support.

NRC SUPPORT

7 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

The quality of support from the associateship administration was prompt and efficient. Questions relating to insurance, travel and changes to stipend were handled without delay.

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

No handwritten signature required;
but you may upload a scanned
signature file below:

Advisers to the Nation on Science, Engineering, and Medicine
National Research Council

Research Associateship Programs

FINAL REPORT

1) Associate Last or Family Name		First Name	M.I.
Kanel		Sushil	R
2) FORWARDING Address (to which your tax statement will be mailed)		FORWARDING Phone(s) and E-Mail (if known)	
Residence or Institution		Home Phone: 6788601746	
Street 2950 Hobson Way		Alt. Phone: 9372553636x4568	
City, State Zip Beaver Creek, OH, 45433		Preferred E-mail: srkanel@gmail.com	
3) Today's Date		Dates of Tenure	
July 31, 2012		from August 2, 2010 to August 1, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFIT/ENV	Wright Patterson AFB	AFIT	
(e.g., AFRL)	(e.g., Wright Patterson AFB)	(e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Mark Goltz			

6) TITLE OF RESEARCH PROPOSAL

Fate and Transport of Nano Materials in the Subsurface Environment and their Application to Groundwater Remediation

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Synthesized nanomaterials (NMs) such as silver nanoparticles (AgNPs) and nanoscale zerovalent iron (nZVI) and Ni and Pd coated nZVI
 - 2) Remediation of carbontetrachloride(CT) by nZVI and bimetallic(Ni and Pd) nZVI is investigated and found that nZVI and Bimetallic nZVI has fast Kinetics to react CT. We found the highest efficiency ever reported in literature.
 - 3) Fate and transport of AgNP was studied and found that AgNP transport differently at different pHs through porous media
 - 4) AgNPs and Ag ion showed different transport pattern through porous media
 - 5)
- (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

I was trying to use the study in column experiment, which resembles the real field condition.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

Kanel, S. R., Clement, T.P., Barnett, M. O. and Goltz, M. N. Nano-Scale Hydroxyapatite: Synthesis, Two-Dimensional Transport Experiments, and Application for Uranium Remediation. J of Nanotechnology (doi:10.1155/2011/462382), 2011.

b) Books, book chapters, other publications

Kanel, S. R., Su, C., Patel, U. and Agrawal, A. Nanoscale Multifunctional Materials: Science & Applications Applications of Metal Nanoparticles in Environmental Cleanup, Eds: Mukhopadhyay S M., Wiley, London, UK, 2010.

Kanel S.R., Nepal D., Goltz M.N. Nanotechnology for water and wastewater treatment, Eds: Surampalli, Tian C. Zhang, American Society of Civil Engineers, USA, 2013 (In preparation)

c) Manuscripts in preparation, manuscripts submitted

1. Jason Flory, Sushil R. Kanel, LeeAnn Racz, Christopher A. Impellitteri, Rendahandi G. Silva, Mark N. Goltz, Influence of pH on the Transport of Silver Nanoparticles in Saturated Porous Media: Laboratory Experiments and Modeling, submitted to J of Nanoparticle Research (2012).

2. McPherson A., Agrawal A., Danner K., Goltz N. M. and Kanel, S. R., Highly Efficient Degradation of Chlorinated Aliphatic Hydrocarbons by Carbosulfonate Cellulose Stabilized Bimetallic Palladium-Zero Valent Iron under Anoxic Conditions (In preparation to submit in Environ. Sci. and Tech.)

3. Sushil R. Kanel¹, Jason Flory Jessica Dagher, Ioana E. Pavel, LeeAnn Racz, Christopher A. Impeliteri, Craig Patterson, Rendahandi G. Silva and Mark N. Goltz, Fate and Transport of Silver Nanoparticles and Their Ions in Saturated Porous Media: Modeling and Experimental Validation, (In Preparation to submit in Environ. Sci. and Tech).

4. Jessica Dagher, Sushil R. Kanel¹, Ioana E. Pavel, LeeAnn Racz, Christopher A. Impeliteri, Craig Patterson, Rendahandi G. Silva and Mark N. Goltz Fate and Transport of Different Size Silver Nanoparticles in Saturated Porous Media, (In Preparation to submit in Environ. Sci. and Tech).

5. Prakash Swarnakar, Sushil R. Kanel, Yuntong Jiang, Lei Kerr, Mark N. Goltz, Jonathan Levy, John Rakovan, Visible Light Activity of Silver Coated Titanium Dioxide Thin Film for Photocatalysis of Organic Compounds Using Natural Solar Light, (In preparation)

10) *PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH*
Provide titles, inventors, and dates of applications.

11) *PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES*

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

International

12) SEMINARS OR LECTURES DELIVERED AT UNIVERSITIES AND/OR INSTITUTES Include dates, names and locations of seminars.

1. Kanel, S. R. Department of Civil Engineering, North Dakota State University: Engineered Iron Nano Materials: Fate, their Application in Groundwater Treatment and Transport: Research Presentation as a Guest Speaker, ND, May 3, 2012.
2. Kanel, S. R. Department of Engineering and Environmental Management, Air Force Institute of Technology (AFIT)/ENV: Application and implication of Nanotechnology in our environment: Research Presentation as a Guest Speaker, Dayton, OH, 28th October, 2011.
3. Kanel, S. R. School of Chemical and Environmental Engineering, Toledo University: Engineered nano materials: fate, transport and their application in soil and water treatment: Research Presentation as a Guest Speaker, Toledo, OH, USA, 3rd May, 2011.

13) PROFESSIONAL AWARDS RECEIVED DURING TENURE

14) POST-TENURE POSITION / JOB TITLE

Research Scientist

15) NAME AND ADDRESS OF POST-TENURE POSITION / JOB ORGANIZATION

2950 Hobson Way, Beavercreek Oh 45433, AFIT-Wright Patterson AFB

16) POST-TENURE POSITION STATUS / CATEGORY Please indicate only one.

☐ Permanent position at the NRC host agency	☐ Research/administration position in private industry in the U.S.
☒ Contract or temporary position at the NRC host Agency	☐ Research/administration position in private industry outside of the U.S.
Abbreviate Host Laboratory/Center _____	
☐ Research/Administrative position with another U.S.-government agency	☐ Research/administration position with a non profit
☐ Research/Administrative position with a foreign-government agency	☐ Self-employed/consulting
☐ Research/teaching position at a U.S. college or university	☐ Postdoctoral research
☐ Research/teaching position at a foreign college or university	☐ Other (Please specify, possible) _____
	☐ No information provided

17) APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

☐ Development of knowledge, skills, and research productivity

Comments

10

LONG TERM VALUE

☐ How the NRC Associateship award affected your career to date

Comments

10

LAB SUPPORT

☐ Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

10

ADVISER/MENTOR SUPPORT

☐ Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

10

LPR SUPPORT

☐ Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)

Comments

10

NRC SUPPORT

☐ Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

10

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

It would be nice to let the fellow to complete the three year tenure once hired.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

FINAL REPORT

1) Associate Last or Family Name		First Name	M.I.
Martin		Jennifer	A
2) FORWARDING Address (to which your tax statement will be mailed)		FORWARDING Phone(s) and E-Mail (if known)	
Residence or Institution		Home Phone: :	
Street		Preferred E-mail: jennifer_a19@hotmail.com	
City/State/Zip Beavercreek, OH 45431		Dates of Tenure	
October 29, 2012		from November 1, 2010 to November 1, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFRL (e.g., AFRL)	Wright Patterson AFB (e.g., Wright Patterson AFB)	Human Effectiveness Directorate (e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Dr. Morley Stone		Dr. Nancy Kelley-Loughnane	
6) TITLE OF RESEARCH PROPOSAL			

DNA MICROARRAYS TO IMPROVE THE APTAMER SELECTION PROCESS FOR ON-CHIP APPLICATIONS

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Designed and utilized an aptamer selection for cortisol with a tunable stringency component integrated into the method. Found that more stringent conditions evolved the pool toward a single sequence dominating 45% of the final sequenced pool.
- 2) Developed equilibrium dialysis protocols for testing dissociation constants of aptamer/small molecule target binding. Confirmed a low micromolar K_d of a cortisol sequence.
- 3) Modified conditions to enable a ~30 nM limit of detection for cortisol the identified cortisol aptamer with a gold nanoparticle assay (serum cortisol ~200-450 nM).
- 4) Developed a method for testing aptamer/target interactions with custom DNA microarrays. Studied structural properties of aptamer/target binding (buffer conditions, purity, fluorescence reporting scheme, distance from chip surface).
- 5) Identified potential thrombin binding aptamers, each of which contained a sequence motif similar to the known 15-mer thrombin binding aptamer.

(USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

We are looking at testing the binding of several more cortisol aptamer candidates, and further decreasing the LOD of the AuNP detection assay to enable saliva-based detection (~10-25 nM). We are also working on confirming binding of the microarray potential thrombin aptamers by capillary electrophoresis and surface plasmon resonance methods.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

b) Books, book chapters, other publications

c) Manuscripts in preparation, manuscripts submitted

- Martin, J., Chushak, Y., Chavez, J., Hagen, J., Kelley-Loughnane, N., "Tunable Aptamer Selection and Gold Nanoparticle Detection of Cortisol" (2012) in preparation
- Martin, J., Chushak, Y., Chavez, J., Hagen, J., Kelley-Loughnane, N., "DNA Microarrays for Aptamer Identification and Structural Characterization" (2012) Technical Note, internal review

10) PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide titles, inventors, and dates of applications.

11) *PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES*

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

International

Domestic

- Gordon Research Conference (Newport, RI) 2011- "Small-molecule Aptamer Selection for Detection of Cortisol" Jennifer A. Martin, Jorge Chavez, Yaroslav Chushak, and Nancy Kelley-Loughnane
- Chemical and Biological Defense Science and Technology Conference (Las Vegas) 2011- "Combination of In Silico Oligonucleotide Library Design and Microarray Screening for High Throughput Selection of Aptamers" Yaroslav Chushak, Jennifer A. Martin, Jorge L. Chávez, Morley O. Stone, and Nancy Kelley-Loughnane

12) *SEMINARS OR LECTURES DELIVERED AT UNIVERSITIES AND/OR INSTITUTES* Include dates, names and locations of seminars.

- RH Biotronics Update (Dayton, OH) 2011- Presented "Human Effectiveness Directorate: Bio-X Biotronics Review" (with J. Hagen)
- RX Biotechnology Review (Dayton, OH) 2012- Presented "In silico and High-throughput Microarray Selection of Biological Recognition Elements" (with Y. Chushak)

13) *PROFESSIONAL AWARDS RECEIVED DURING TENURE*

14) *POST-TENURE POSITION / JOB TITLE*

Research Associate, Henry Jackson Foundation

15) *NAME AND ADDRESS OF POST-TENURE POSITION / JOB ORGANIZATION*

711 HPW/RHXBC
2510 Fifth St.
Area B Bldg. 840
WPAFB, OH 45433-7913

16) *POST-TENURE POSITION STATUS / CATEGORY* Please indicate only one.

☐ Permanent position at the NRC host agency	☐ Research/administration position in private industry in the U.S.
☒ Contract or temporary position at the NRC host Agency
Abbreviate Host Laboratory/Center RHXBC	☐ Research/administration position in private industry outside of the U.S.
☐ Research/Administrative position with another U.S.-government agency	☐ Research/administration position with a non profit
☐ Research/Administrative position with a foreign-government agency	☐ Self-employed/consulting
☐ Research/teaching position at a U.S. college or university	☐ Postdoctoral research
☐ Research/teaching position at a foreign college or university	☐ Other (Please specify, possible) _____
	☐ No information provided

17) *APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM*

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

10 Development of knowledge, skills, and research productivity
Comments

LONG TERM VALUE

8 How the NRC Associateship award affected your career to date
Comments

LAB SUPPORT

9 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.
Comments

ADVISER/MENTOR SUPPORT

9 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)
Comments

LPR SUPPORT

9 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)
Comments

NRC SUPPORT

5 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

It was difficult to receive feedback or any response related to moving expenses. Responses for payroll, travel, etc. were efficient.

18) *PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.*

It would be nice to have an orientation at the beginning of the program for all related aspects of the program. If I hadn't met current/former NRC researchers, I wouldn't have known anything about estimated taxes. Otherwise, I think it is a fantastic opportunity and I really appreciated and enjoyed the experience.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

6) TITLE OF RESEARCH PROPOSAL

Characterization of the Path-Dependent Behavior of Reinforced Shape Memory Polymers for Adaptive (Morphing) Skins

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Established and validated the appropriate digital image correlation system, laser extensometer, high temperature grips, and environmental chamber for thermomechanical evaluation of shape memory polymers.
 - 2) Thermal stability of shape memory polymers determined with thermogravimetric analysis (TGA) and differential scanning calorimetry (DSC).
 - 3) Appropriate post-cure cycles established for multiple shape memory polymers based on the preliminary TGA and DSC results.
 - 4) The path-dependent axial behavior of both Veriflex-E and a BMI-based SMP were evaluated using dynamic mechanical analysis (DMA) and axial tensile tests.
 - 5) The shape memory response of Veriflex-E was evaluated using DMA and axial tensile tests.
 - 6) The strain rate dependence of Veriflex-E was evaluated using axial tensile tests.
 - 7) Shape memory hybrids combining SMPs and SMAs were created and evaluated.
- (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

- 1) Constitutive models are under development and will be validated with both Matlab and with Abaqus finite element software.
- 2) Expanded manufacturing and evaluation of shape memory hybrids is in the planning stages.
- 3) Novel shape memory polymers that have the potential for higher transition temperatures and are processable into composites are being synthesized and evaluated.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

McClung, A.J.W., Tandon, G.P., and Baur, J.W. "Deformation Rate-, Hold Time-, and Cycle-Dependent Shape Memory Performance of Veriflex-E Resin." In Press Mechanics of Time-Dependent Materials.

McClung, A.J.W., Tandon, G.P., and Baur, J.W. "Strain Rate- and Temperature-Dependent Tensile Properties of an Epoxy-Based, Thermosetting, Shape Memory Polymer (Veriflex-E)." In Press Mechanics of Time-Dependent Materials.

☐ Research/Administrative position with another U.S.-government agency	☐ Research/administration position with a non profit
☐ Research/Administrative position with a foreign-government agency	☐ Self-employed/consulting
☒ Research/teaching position at a U.S. college or university	☐ Postdoctoral research
☐ Research/teaching position at a foreign college or university	☐ Other (Please specify, possible) _____
	☐ No information provided

17) *APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM*

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

9 Development of knowledge, skills, and research productivity

Comments

I was exposed to many new areas of technical expertise.

LONG TERM VALUE

6 How the NRC Associateship award affected your career to date

Comments

This is difficult to judge. An answer might be easier to give if looking back in several years than it is right now.

LAB SUPPORT

10 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

ADVISER/MENTOR SUPPORT

10 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

Time is an issue with the successful Advisers. In my opinion NRC should do something to provide supplemental mentoring/career broadening assistance.

LPR SUPPORT

10 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)

Comments

NRC SUPPORT

9 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

Travel started off rough, but was a 10 by the end of tenure.

18) *PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.*

Some sort of support needs to be in place for career development. This was a great opportunity to do research but it seems to lead to a bit of a dead end as far as the next career step. The top candidates already know how to do research, what we need even more is development of other skills and connections to create a pathway forward.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

Research Associateship Programs

FINAL REPORT

1) Associate Last or Family Name		First Name	M.I.
McConney		Michael	E
2) FORWARDING Address (to which your tax statement will be mailed)		FORWARDING Phone(s) and E-Mail (if known)	
Res. or Inst. Res.		Home Phone:	
Street		Alt. Phone: 515-231-4059	
City, State Zip Beavercreek, Oh, 45434		E-mail: mconney@gmail.com	
3) Today's Date		Dates of Tenure	
August 22, 2011		from September 1, 2009 to August 17, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFRL	Wright Patterson AFB	Materials and Manufacturing	
(e.g., AFRL)	(e.g., Wright Patterson AFB)	(e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Timothy J. Bunning			

6) TITLE OF RESEARCH PROPOSAL

"Advanced Light Responsive Liquid Crystal Elastomers"

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Developed a new fabrication technique to create polymer stabilized cholesteric liquid crystals that enables high contrast optical filters to be made
 - 2) Made an cholesteric optical filter that induces high contrast (hyper-reflectivity) when exposed to heat or to light
 - 3) Made an cholesteric optical filter that which is high contrast and the wavelength of the filter changes when exposed to heat or light
 - 4) Developed an electrically tunable cholesteric liquid crystal
 - 5) Developed a novel CW laser from a polymer stabilized cholesteric liquid crystal
- (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Currently working on photo-responsive liquid crystalline polymers. More specifically this includes designing and patterning the mesogenic monomers before polymerization to create a material with the desired photo-induced actuation.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

ME McConney, MM Duning, LV Natarajan, AA Voevodin, VP Tondiglia, TJ White, TJ Bunning, Molecular Crystals and Liquid Crystals 559: 115-126 (2012)

5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable) Paul M Alsing			

6) TITLE OF RESEARCH PROPOSAL

A Discrete Geometric Approach to Characterizing Quantum Computations

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Derived discrete representation of the Ricci tensor for Piecewise-flat manifolds
 - 2) Used our discrete Ricci tensor to provide a geometric discretization of Richard Hamilton's Ricci flow equations on piecewise-flat manifolds
 - 3) Used discrete exterior calculus (DEC) to develop an inherently discrete analysis of curvature on simplicial geometries
 - 4) Applied techniques from Persistent Homology and quantum theory to demonstrate how quantum computations can be viewed as foliations of hypersurfaces whose geometry is determined by the correlation information between qubits.
 - 5) Demonstrated the geometric view of quantum computation for 1D quantum cellular automata.
- (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

We are currently studying the numeric behavior of simplicial Ricci flow and the role of diffeomorphisms. We are also investigating the geometric foundations of multi-partite entanglement (through measures such as information area).

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

P M Alsing, J R McDonald, W A Miller, "The simplicial Ricci tensor, " Class . Quantum Gra.v. 28 (2011) 155007

b) Books, book chapters, other publications

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

Development of knowledge, skills, and research productivity
Comments

LONG TERM VALUE

How the NRC Associateship award affected your career to date
Comments

LAB SUPPORT

Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.
Comments

Obtaining proper equipment/computers to perform research adequately could sometimes be slow and stall some aspects of the research.

ADVISER/MENTOR SUPPORT

- 10** Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)
Comments

LPR SUPPORT

- 8** Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)
Comments

There was very little interaction between NRC associates and the LPR. However, they were always helpful when needed and getting forms signed/approved was quick and effortless.

NRC SUPPORT

- 9** Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)
Comments

Very helpful and always knowledgeable about processes and requirements.

18) *PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.*

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

Leonid Perlovsky			

6) TITLE OF RESEARCH PROPOSAL

Integrating Prior Knowledge and Sensor Data for Active Sensing

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Demonstrated convergence of a distributed multi-agent system for agreeing on a collective sensing action when there is uncertainty about the target dynamical model.
- 2) Computed an analytical formula for the Cramer-Rao Lower Bound on range and velocity estimation variance and its dependence on the emitted radar pulse-train length. This result was confirmed for a stationary target using an S-band radar.
- 3) Quantified the benefit of feedback control of radar pulse-train length. Showed that the actively controlled approach achieved a 14% reduction in tracking error and dwell-time cost for constant velocity targets compared to the best constant policy.
- 4) Developed detector/tracker for asteroids moving in image sequences. This was an application of cognitive-based data-association algorithms developed by my advisor. Demonstrated improved performance for data with occlusions of objects of interest.

5)

(USMA Davies Fellow: please add summary of teaching, including classes taught.)

N/A

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Am currently investigating the use of multipath propagation information in passive location of RF emitters. The active sensing aspect of this project has to do with the fact that the quality of information depends on the position and velocity of the mobile sensor. Having some prior knowledge of the position of the emitter permits an optimization sensor trajectory and thus of future measurements.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

None completed yet.

b) Books, book chapters, other publications

FINAL REPORT

1) Associate Last or Family Name		First Name	M.I.
Rider		Keith	B
2) FORWARDING Address (to which your tax statement will be mailed)		FORWARDING Phone(s) and E-Mail (if known)	
Residence or Institution Residence		Home Phone:	
Street		Alt. Phone: 4343952585	
City, State Zip Prospect, VA 23960		Preferred E-mail: riderkb@longwood.edu	
3) Today's Date		Dates of Tenure	
July 17, 2012		from July 17, 2011 to July 17, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFRL	Eglin AFB	Munitions	
(e.g., AFRL)	(e.g., Wright Patterson AFB)	(e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
C. Michael Lindsay			
6) TITLE OF RESEARCH PROPOSAL			
Energetic Nanocluster Thin Films			
7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.			
1) Measured particle deposition rates from helium droplet beam to compare with calculations			
2) Designed and build magnesium and perfluoropolyether sources			
3) Performed TPD/TPR experiments on magnesium and perfluoropolyether thin films			
4) Performed DSC/TGA experiments on magnesium and perfluoropolyether bulk materials			
5) Assisted with other experiments (XRD, SEM) of these and other materials			
(USMA Davies Fellow: please add summary of teaching, including classes taught.)			
8) RESEARCH IN PROGRESS Describe in no more than 100 words.			
The next phase of this research project will be characterizing materials made with the helium droplet method using the baseline chemistry that was established with the thin film studies. Knowing the TPD behavior of the thin films should make it much easier to understand the behavior of the more complex core-shell particles made with the helium droplet beam.			
9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH			
Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.			
a) Publications in peer-reviewed journals			
none			
b) Books, book chapters, other publications			
none			
c) Manuscripts in preparation, manuscripts submitted			
Physical and Chemical Properties of Iodine (V) Oxide Films			
B.K. Little,* M.B. Bogle, J.C. Nittinger, R.C. Fantasia, S.B. Emery, K.B. Rider, and C.M. Lindsay			
J. Mat. Chem.			
Superfluid Helium Droplet Assembled Nanocluster Films: Cluster Formation and Deposition Rates			
S.B. Emery, K.B. Rider, B.K. Little, and C.M. Lindsay			
J. Phys. Chem. C			
Magnesium Cluster Films Grown by Superfluid Helium Nanodroplets			
S.B. Emery, K.B. Rider, B.K. Little, and C.M. Lindsay			
Appl. Phys. Lett.			
Thermochemical Measurements of a Magnesium-Perfluoropolyether Pyrolant			

Keith B. Rider, Brian Little, Samuel Emery, C. Michael Lindsay
Propellants, Explosives, Pyrotechnics

10) *PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH*

Provide titles, inventors, and dates of applications.

none

11) *PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES*

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

International

none

Domestic

Keith B. Rider, Samuel B. Emery, Brian K. Little, and C. Michael Lindsay, Magnesium-Perfluoropolyether Reactions Studied by TPD/TPR, AFOSR Contractor's Meeting, Arlington, VA, 5/21 to 5/24/2012

12) *SEMINARS OR LECTURES DELIVERED AT UNIVERSITIES AND/OR INSTITUTES* Include dates, names and locations of seminars.

none

13) *PROFESSIONAL AWARDS RECEIVED DURING TENURE*

none

14) *POST-TENURE POSITION / JOB TITLE*

Associate professor of Chemistry

15) *NAME AND ADDRESS OF POST-TENURE POSITION / JOB ORGANIZATION*

Longwood University, 201 High St., Farmville, VA 23909

16) *POST-TENURE POSITION STATUS / CATEGORY* Please indicate only one.

☐ Permanent position at the NRC host agency	☐ Research/administration position in private industry in the U.S.
☐ Contract or temporary position at the NRC host Agency	☐ Research/administration position in private industry outside of the U.S.
Abbreviate Host Laboratory/Center _____	
☐ Research/Administrative position with another U.S.-government agency	☐ Research/administration position with a non profit
☐ Research/Administrative position with a foreign-government agency	☐ Self-employed/consulting
☒ Research/teaching position at a U.S. college or university	☐ Postdoctoral research
☐ Research/teaching position at a foreign college or university	☐ Other (Please specify, possible) _____
	☐ No information provided

17) *APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM*

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

9 Development of knowledge, skills, and research productivity

Comments

I got a lot of work done in a very short time. It was a very intense year.

LONG TERM VALUE

10 How the NRC Associateship award affected your career to date

Comments

My associateship will probably win me my promotion to full professor.

LAB SUPPORT

9 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

ADVISER/MENTOR SUPPORT

9 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

LPR SUPPORT

9 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)
Comments

NRC SUPPORT

9 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

We had very good experiences with Azar Storage, Omega Travel, and the NRC payroll office

National Research Council

Research Associateship Programs

FINAL REPORT

1) Associate Last or Family Name		First Name	M.I.
Sanders		Nathaniel	L
2) FORWARDING Address (to which your tax statement will be mailed)		FORWARDING Phone(s) and E-Mail (if known)	
Residence or Institution Residence		Home Phone:	
Street		Alt. Phone: 765-426-5982	
City, State Zip Sunnyvale, CA 94087		Preferred E-mail: sanders.nate.l@gmail.com	
3) Today's Date		Dates of Tenure	
June 26, 2012		from August 1, 2011 to June 29, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFRL	Wright Patterson AFB	Fuels Branch / Propulsion Directorate	
(e.g., AFRL)	(e.g., Wright Patterson AFB)	(e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Christopher Bunker			

6) TITLE OF RESEARCH PROPOSAL

In-situ Detection of Pyrolysis Intermediates in Supercritical Hydrocarbon

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Developed a heating reactor for gas-phase molecules to be interfaced with molecular beam, mass spectrometer.
 - 2) Developed models for the pyrolysis of endothermic fuel simulant n-hexane under deoxygenated, low pressure conditions.
 - 3) Introduced a novel class of Boron Nitride-based nanomaterials as catalysts to modify distribution of reaction intermediates.
 - 4) Was able to differentiate classes of catalytic activity, and identify commonalities in catalytic behavior.
 - 5) Developed a supercritical sample reaction chamber to be safely integrated to instrument for future work.
- (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Currently, we are preparing multiple manuscripts for publication, the first of which thoroughly describes the foundational characterization of pyrolysis reaction intermediates in the gas-phase which we found to produce reaction mechanisms which produced unique intermediates of potential importance. The second manuscript describes work investigating the behavior of a new class of BN-based nanomaterials which display unique, low-temperature catalytic activity in driving the intermediate, and product ion distribution towards useful, endothermic fuel products of potential use in the AFRL. Now, having laid the groundwork and characterized a novel catalysts, a supercritical source will be integrated for the second phase of work.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

b) Books, book chapters, other publications

c) Manuscripts in preparation, manuscripts submitted

Nathaniel L. Sanders, William K. Lewis, Kevin Kuchta, and Christopher E. Bunker "Characterization of n-Hexane Pyrolysis Intermediates Using a Molecular Beam Mass Spectrometer" Manuscript in preparation.

Nathaniel L. Sanders, William K. Lewis, Yi Lin, John Connell, K.A. Shiral Fernando, and Christopher Bunker "Characterization of BN and Metal-BN Catalyzed Pyrolysis of n-Hexane" Manuscript in preparation.

10) PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide titles, inventors, and dates of applications.

11) *PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES*

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

International

Domestic

	☐ No information provided

17) *APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM*

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

8 Development of knowledge, skills, and research productivity

Comments

The position allowed me to broaden and stretch my research skills, by allowing me to approach the research from a new perspective (physical chemistry as opposed to analytical chemistry). Also, by taking full responsibility for the direction and progress of the project it was necessary that I work more efficiently and evaluate potential project directions more critically than in the past.

LONG TERM VALUE

8 How the NRC Associateship award affected your career to date

Comments

The award was definitely a positive contribution to my resume. The job has allowed me to network with and develop new research connections which I would like to take advantage of in the future. It has given me an appreciation for the program in developing the careers of young scientists, and introducing them to the research environment in which close interactions occur between university and government laboratories.

LAB SUPPORT

10 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

The host lab provided for every possible need on a timely basis. I couldn't speak more highly of the manner in which they helped to facilitate my associateship.

ADVISER/MENTOR SUPPORT

9 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

My adviser did an excellent job in his role as a mentor. Our discussions regarding the work was challenging and insightful, often giving me the opportunity to think of new approaches to perform studies and present results. I believe any young scientist would benefit tremendously from working in Dr. Bunker's lab.

LPR SUPPORT

Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)
Comments

Dr. Rivir was extremely helpful in accomodating my administrative needs, as well as enthusiastic in support of my, and my host laboratory research goals and accomplishments.

NRC SUPPORT

Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

The support I received from the NRC was very helpful and always communicated back to me in a timely manner. I felt that they were extremely reliable, and I'm grateful for my time there. I would highly recommend the experience to anyone considering the opportunity.

5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Dr. Paul LeVan			

6) TITLE OF RESEARCH PROPOSAL

Laser Refrigeration

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) High sensitivity spectroscopic methods developed
 - 2) Using methods above, local cooling to 110 K has been measured, in agreement with the model
 - 3) Bulk cooling to 119 K has been demonstrated
 - 4) Laser cooling model has been extended to include effects of saturation
 - 5) Cooling by 80 degrees has been demonstrated inside of a optically-pumped semiconductor laser cavity.
- (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Understanding of parasitic heating effects that limit cooling; cooling below 100 K; improving intra laser cavity cooling to reach sub-100 K regime.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

- 1) D.V. Seletskiy, M.P. Hehlen, R.I. Epstein, M. Sheik-Bahae "Cryogenic Optical Refrigeration" *Advances in Optics and Photonics* 4, 78-107 (2012);

17) *APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM*
On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

10 Development of knowledge, skills, and research productivity
Comments

LONG TERM VALUE

10 How the NRC Associateship award affected your career to date
Comments

LAB SUPPORT

9 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.
Comments
It would be great if NRC could allocate some of the small equipment/lab supplies/ money for the researchers

ADVISER/MENTOR SUPPORT

10 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)
Comments
It was a pleasure working with Dr. Paul Le Van, he showed the right ammount of guidance as well as given freedom to pursue my own research ambitions.

LPR SUPPORT

10 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)
Comments
Great support

NRC SUPPORT

10 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

Great support by all the staff members, especially Linda Sligh

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

Research Associateship Programs

FINAL REPORT

1) Associate Last or Family Name		First Name	M.I.
Smith		Matthew	L
2) FORWARDING Address (to which your tax statement will be mailed)		FORWARDING Phone(s) and E-Mail (if known)	
Residence or Institution		Home Phone:	
Street		Alt. Phone:	
City, State Zip Holland, MI 49423		Preferred E-mail: msmith@hope.edu	
3) Today's Date		Dates of Tenure	
July 3, 2012		from June 1, 2010 to June 30, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFRL	Wright Patterson AFB	Materials and Manufacturing Directorate	
(e.g., AFRL)	(e.g., Wright Patterson AFB)	(e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Richard A. Vaia			

6) TITLE OF RESEARCH PROPOSAL

Mechanical quantification of model parameters during oscillation in catalytically active hydrogels

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Created novel self-oscillating (BZ) gels based on the biomacromolecule gelatin and synthetic polymer p(AAm-co-APMA)
- 2) Developed chemistries for effectively postfunctionalizing these gels with a Ru metal catalyst
- 3) Characterized chemical and mechanical behavior of BZ gelatin as a function of reactant concentration, gel size
- 4) Demonstrated gel printing and ink stamping techniques for effective patterning of catalyst, made first heterogeneous gels
- 5) Demonstrated conditions for synchronized, coupled oscillations between active patches, laid foundation for modular design (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Demonstrating effective stamping in p(AAm-co-APMA) gels. Will use mechanical design principles to demonstrate amplified nonlinear motion driven by autonomous coupled oscillations.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

- 1) M.L. Smith, K. Heitfeld, C. Slone, R.A. Vaia. Autonomic Hydrogels Through Postfunctionalization of Gelatin. Accepted Chem. Mater. 2012.
- 2) K.M. Lee, M.L. Smith, H. Koerner, N. Tabiryan, R.A. Vaia, T.J. Bunning, T.J. White, Photodriven, Flexural-Torsional Oscillation of Glassy Azobenzene Liquid Crystal Polymer Networks. Adv. Func. Mater. 21(15):2913-2918, 2011

b) Books, book chapters, other publications

- 1) M.L. Smith, K. Heitfeld, M. Tchoul, R.A. Vaia. Chemical Wave Characterization of Self-Oscillating Gelatin and Polyacrylamide Gels. Proceedings of SPIE, 7975, 79750A, 2011
- 2) R.A. Vaia, M.L. Smith, K. Heitfeld. New Biomimetic Gel Chemistries may Refine Device Designs. SPIE Newsroom, 2011, DOI: 10.1117/2.1201102.003514.

c) Manuscripts in preparation, manuscripts submitted

- 1) M.L. Smith, C. Slone, K. Heitfeld, R.A. Vaia. Design and Fabrication of Composite Natural Gels with Autonomic Response. In Preparation.
- 2) H. Koerner, R. Strong, M.L. Smith, H. Wang, L.-S. Tan, K.M. Lee, T. White, R.A. Vaia. Polymer Design for High Temperature Shape Memory: Low Crosslink Density Polyimides. Submitted, 2012.
- 3) M. L. Smith, K. M. Lee, R. A. Vaia, T. J. White. Optical polarization and material alignment coupled deformations in anisotropic, photoresponsive liquid-crystal polymer cantilevers. In Preparation.

10) *PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH*

Provide titles, inventors, and dates of applications.

11) *PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES*

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

International

Domestic

- 1) M. L. Smith, C. Slone, K. Heitfeld, R. A. Vaia, "Hybrid BioGels: Amplification and Synchronicity through Composite Design." US-Japan Workshop on Advances in Organic/Inorganic Hybrid Materials, Ann Arbor, Michigan, May 2012 (poster).
- 2) M. L. Smith, C. Slone, K. Heitfeld, R. Kramb, R. A. Vaia, "Coupling Chemomechanical Oscillators: Patterning BZ Hydrogels." Materials Research Society Fall Meeting, Boston, Massachusetts, December 2011 (oral presentation).
- 3) M. L. Smith, K. M. Lee, H. Koerner, R. A. Vaia, T. J. Bunnung, T. J. White, "Tuning the Photoinduced Motion of Azobenzene Liquid Crystal Polymer Cantilevers." ASME Applied Mechanics and Materials Conference, Chicago, Illinois, May 2011 (oral presentation).
- 4) M. L. Smith, K. Heitfeld, R. Kramb, M. Tchoul, D. Gallagher, R. Vaia, "Chemomechanical Characterization of Autonomic Polyacrylamide Gels," American Physical Society March Meeting, Dallas, Texas, March 2011 (oral presentation).

12) *SEMINARS OR LECTURES DELIVERED AT UNIVERSITIES AND/OR INSTITUTES* Include dates, names and locations of seminars.

- 1) January 2012, Photoresponsive and Self-Oscillating Materials: Creating Building Blocks for Adaptive Structures, Washington and Lee University, Virginia.
- 2) February 2012, Photoresponsive and Self-Oscillating Materials: Creating Building Blocks for Adaptive Structures, Hope College, Michigan.

13) *PROFESSIONAL AWARDS RECEIVED DURING TENURE*

14) *POST-TENURE POSITION / JOB TITLE*

Assistant Professor of Engineering

15) *NAME AND ADDRESS OF POST-TENURE POSITION / JOB ORGANIZATION*

Hope College, 27 Graves Place, Holland, MI 49423

16) *POST-TENURE POSITION STATUS / CATEGORY* Please indicate only one.

☐ Permanent position at the NRC host agency	☐ Research/administration position in private industry in the U.S.
☐ Contract or temporary position at the NRC host Agency	☐ Research/administration position in private industry outside of the U.S.
Abbreviate Host Laboratory/Center _____	
☐ Research/Administrative position with another U.S.-government agency	☐ Research/administration position with a non profit
☐ Research/Administrative position with a foreign-government agency	☐ Self-employed/consulting
☒ Research/teaching position at a U.S. college or university	☐ Postdoctoral research
☐ Research/teaching position at a foreign college or university	☐ Other (Please specify, possible) _____
	☐ No information provided

17) *APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM*

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

- 10** Development of knowledge, skills, and research productivity
Comments

LONG TERM VALUE

- 10** How the NRC Associateship award affected your career to date
Comments

LAB SUPPORT

- 10** Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

ADVISER/MENTOR SUPPORT

10 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

LPR SUPPORT

10 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)

Comments

NRC SUPPORT

10 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

18) *PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.*

I was extremely satisfied with my time as an NRC Associate, this has been an exceptional opportunity for me for career growth. Overall I think the program is in a good position.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

FINAL REPORT

1) Associate Last or Family Name Voccola		First Name Kaitlyn	M.I. E
2) FORWARDING Address (to which your tax statement will be mailed) Residence or Institution Street City, State Zip Fort Collins, CO 80525		FORWARDING Phone(s) and E-Mail (if known) Home Phone: Alt. Phone: Preferred E-mail: <u>kvoccola@gmail.com</u>	
3) Today's Date September 14, 2012		Dates of Tenure from September 15, 2011 to September 15, 2012	
4) Host Agency AFRL (e.g., AFRL)	Laboratory or Center Wright Patterson AFB (e.g., Wright Patterson AFB)	Division / Directorate / Department Sensors, RYAP (e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable) Muralidhar Rangaswamy			

6) TITLE OF RESEARCH PROPOSAL

Polarimetric Synthetic-Aperture Radar Correlation Imaging

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

1) For a polarimetric SAR system consisting of orthogonally polarized dipoles, we found a way to circumvent the standard assumption/approximation that the polarization properties of the transmitted waves remain constant throughout the flight trajectory

2) Completed numerical experiments comparing current polarimetric SAR imaging with our coupled polarimetric imaging approach for extended targets in clutter and found that it improved image signal-to-clutter ratio and mean-squared error.

3) Developed forward model and imaging operator for a correlation based SAR imaging technique for targets and volume scattering clutter. Developed resolution analysis for the imaging scheme and found improvements over standard imaging.

4) Created a clutter minimization technique based on avoiding certain pairs of correlated data which requires no knowledge of the clutter present in the scene of interest

5) Developed MATLAB code to simulate correlated SAR data and implement the correlation imaging scheme. It was found that clutter mitigation was successful for a variety of targets and for a variety of antenna trajectories.

(USMA Davies Fellow: please add summary of teaching, including classes taught.)

In addition I mentored two summer students in the lab on two separate research projects. One on extending my polarimetric imaging scheme for more complicated targets and a second on developing Cramer-Rao type bounds for bounded estimators.

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Currently I am finishing the proof to analytically show why my imaging technique minimizes clutter effects on the image. I am preparing a manuscript to submit to SIAM Journal on Imaging Sciences for the end of the month. After the proof is finished for standard SAR imaging I am working on generalizing the result for polarimetric SAR imaging. In addition during my tenure I developed a second technique for estimating the correlation or covariance matrix of a scene of interest using reproducing kernel Hilbert space techniques. I will compare this technique with the first method developed during my tenure at the lab.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

K. Voccola, M. Cheney, B. Yazici, "Polarimetric SAR Imaging for Extended Targets in Clutter," IEEE Radar Conference 2012, pp: 281 - 286, 2012.

b) Books, book chapters, other publications

c) Manuscripts in preparation, manuscripts submitted

K. Voccola, M. Cheney, B. Yazici, "Polarimetric Synthetic-Aperture Imaging for Extended Targets in Clutter," invited paper, to appear in Inverse Problems Special Issue on Radar Imaging, submitted May 2012.
K. Voccola, "Synthetic-Aperture Correlation Imaging," in preparation for SIAM Journal on Imaging Sciences, September 2012.

10) *PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH*

Provide titles, inventors, and dates of applications.

11) *PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES*

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

International

Domestic

17) *APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM*

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

10 Development of knowledge, skills, and research productivity

Comments

The associateship gave me the opportunity to spend focused time on gaining knowledge in my research area and allowed me to get my thesis work published quickly. It is so helpful for a young scientist to have this time post grad school to get settled as a researcher without other responsibilities to distract from our intellectual development.

LONG TERM VALUE

10 How the NRC Associateship award affected your career to date

Comments

The Associateship gave me a chance to travel to many conferences and network with many in my field. It also gave me the ability to consider and see first hand certain career possibilities. In addition I was able to try my hand at mentoring at the lab during the summer which helped me to decide to continue in academia and work with students.

LAB SUPPORT

8 Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.

Comments

The lab has a lack of MATLAB licenses which affected my ability to start my numerical experiments in a timely manner, this is a general lab issue though, not specific to myself and my situation.

ADVISER/MENTOR SUPPORT

9 Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)

Comments

Dr. Rangaswamy was very helpful in sharing his knowledge of radar and general career development advice. There was a mismatch between our interests but this was expected as he was not the original mentor I applied to work with.

LPR SUPPORT

10 Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)

Comments

Also Sam Rosengarten and Joanne Maurice at AFRL were very helpful.

NRC SUPPORT

10 Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

Linda was great at answering my questions quickly and in a helpful manner. Everything was easy to figure out and it made the move very simple.

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

3) Today's Date		Dates of Tenure	
July 25, 2012		from October 1, 2009 to August 3, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFRL	ROME	INFORMATION	
(e.g., AFRL)	(e.g., Wright Patterson AFB)	(e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Michael Medley			

6) TITLE OF RESEARCH PROPOSAL

Joint Spectrum Allocation and Scheduling in Multi-Radio Multi-Channel Cognitive Radio Wireless Networks; Throughput Optimization for Cognitive Radio Network with Slowly Varying Channels

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) **Throughput Optimization for Cognitive Radio Networks with Multi-Radio Multi-Channel:** Extends the optimal scheduling algorithm developed in my PhD thesis to solve the joint spectrum allocation and scheduling problem and obtains the optimal solution.
 - 2) **Capacity Optimization of MIMO Links with Interference:** Derives the approximate theoretical capacity formula for MIMO links with interference through SVD. An Integer Programming algorithm is proposed to solve the capacity problem.
 - 3) **Resource Allocation in MIMO-based Ad Hoc Networks:** Solves the problem of joint routing, scheduling, power control and bit rate selection with the goal of maximizing the system throughput that satisfies the given end-to-end traffic demands.
 - 4) **Throughput Optimization of Cognitive Radio Networks:** The optimal solution provides a theoretical upper bound of throughput for cognitive radio networks. Also, derives a theoretical upper bound when greedy solution is used to solve the MWIS problem.
 - 5) **Throughput Optimization for Cognitive Radio Network with Slowly Varying Channels:** Study the effect of aggregate delay; compare the optimal solution and the approximation solution, the centralized solution and distributed solution.
- (USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

The proposed projects have been finished. Now we are working on the test bed development of cognitive radio network. We are interested in implementing a Frequency Hopping system (i.e. Bluetooth) with GNU Radio and USRP. We modify the hardware through FPGA programming to achieve two goals. One is the frequency hopping mechanism which has been finished. The second one is to implement a time slot transmit protocol where each packet is transmitted at the beginning of each time slot. Currently we are working on the second part which can be done soon.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

b) Books, book chapters, other publications

- Peng Wang, John Matyjas and Michael Medley. Throughput Optimization of Cognitive Radio Networks. Globecom 2011 (Houston, TX).
- Peng Wang, John Matyjas and Michael Medley. Resource Allocation in MIMO-based Ad Hoc Networks. CISS 2011 (Baltimore, MD).

12) SEMINARS OR LECTURES DELIVERED AT UNIVERSITIES AND/OR INSTITUTES Include dates, names and locations of seminars.

13) PROFESSIONAL AWARDS RECEIVED DURING TENURE

14) POST-TENURE POSITION / JOB TITLE

Research Associate

15) NAME AND ADDRESS OF POST-TENURE POSITION / JOB ORGANIZATION

Army Research Lab, Aberdeen Proving Ground, MD

16) POST-TENURE POSITION STATUS / CATEGORY Please indicate only one.

☐ Permanent position at the NRC host agency	☐ Research/administration position in private industry in the U.S.
☐ Contract or temporary position at the NRC host Agency	☐ Research/administration position in private industry outside of the U.S.
☐ Abbreviate Host Laboratory/Center _____	☐ Research/administration position with a non profit
☐ Research/Administrative position with another U.S.-government agency	☐ Self-employed/consulting
☐ Research/Administrative position with a foreign-government agency	☒ Postdoctoral research
☐ Research/teaching position at a U.S. college or university	☐ Other (Please specify, possible) _____
☐ Research/teaching position at a foreign college or university	☐ No information provided

17) APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

Development of knowledge, skills, and research productivity

Comments

Cooperate with senior researchers to publish and present papers in conferences, and do projects to improve the skills of software and hardware.

LONG TERM VALUE

How the NRC Associateship award affected your career to date

Comments

Research experiences provided by NRC program are helpful in finding a position in DOD industry.

LAB SUPPORT

Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.
Comments
Lab provides the required equipments, safe and confortable working environment, and a pretty good library.

ADVISER/MENTOR SUPPORT

Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)
Comments
Adviser provides helpful suggestions, and discuss the research with me frequently.

LPR SUPPORT

Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)
Comments
LPR signes the documents in time.

NRC SUPPORT

Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)
Comments
NRC processes my travel authorization form and travel reinburse request in time, and answers my questions patiently.

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

Dr. Kerk Yerkes		Dr. Mitch Wolff	
6) TITLE OF RESEARCH PROPOSAL			
Advanced Modeling of Aircraft Synchronous Generator System			
7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.			
1) Investigated design methodologies for aircraft synchronous generator, including main machine, exciter and pilot exciter;			
2) Developed linear and nonlinear electrical models for aircraft synchronous generator;			
3) Developed lumped element thermal and mechanical models for aircraft synchronous generator;			
4) Updated nonlinear electromechanical actuator model;			
5) Started to work on generator testing.			
(USMA Davies Fellow: please add summary of teaching, including classes taught.)			
8) RESEARCH IN PROGRESS Describe in no more than 100 words.			
The design and modeling methodologies for the three-stack aircraft synchronous generator have been developed. The design for the main machine and exciter uses the expansion of the inverse air-gap function to tailor the salient-pole rotor appropriately. Both linear and nonlinear electric modeling techniques have been introduced. The nonlinear modeling incorporates finite-element method and neural networks to provide a more realistic depiction of machine performance. Using these design and modeling methodologies, we have developed a preliminary electrical model for a F-16 generator, which is a three-stack, 40 kVA, 12 krpm design. Initial test plans for validation of the models was introduced. Design of experiment and statistical model development as a cross-validation will be incorporated into future efforts to develop a functional, accurate electrical, thermal and mechanical models of the F-16 generator.			
9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH			
Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.			
a) Publications in peer-reviewed journals			
b) Books, book chapters, other publications			
c) Manuscripts in preparation, manuscripts submitted			
N. Posey, T. Wu, J. Zumberge, and M. Wolff, "Modeling and Control Scheme Design of a Solenoid-Actuated Fuel Injection System", to be submitted to AIAA Journal of Propulsion and Power.			
10) PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH			
Provide titles, inventors, and dates of applications.			

11) *PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES*

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

International

1) Associate Last or Family Name		First Name	M.I.
Yang		Chi	
2) FORWARDING Address (to which your tax statement will be mailed)		FORWARDING Phone(s) and E-Mail (if known)	
Residence or Institution Residence		Home Phone:	
Street 6952 Carmelito Loop NE		Alt. Phone: 505-363-6474	
City, State Zip Albuquerque, NM 87113		Preferred E-mail: chiyang@chtm.unm.edu	
3) Today's Date		Dates of Tenure	
June 20, 2012		from June 22, 2010 to June 21, 2012	
4) Host Agency	Laboratory or Center	Division / Directorate / Department	
AFRL	Kirtland AFB	RDLAS	
(e.g., AFRL)	(e.g., Wright Patterson AFB)	(e.g., High-Speed Propulsion)	
5) Name of Laboratory NRC Adviser (and USMA Mentor, if applicable)			
Ron Kaspi			

6) TITLE OF RESEARCH PROPOSAL

Improved Hole Confinement in GaSb-Based Type-I Multi Quantum Well (MQW) Diode Lasers for >3 μm Emission

7) SUMMARY OF RESEARCH DURING TENURE

Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Developed optically pumped mid-infrared in-plane DBR semiconductor lasers, reached the record power of 3 W in a 7 nm spectral range.
- 2) Realized the first unstable resonator diode laser at 2 μm wavelength as precursor to unstable resonator quantum cascade lasers.
- 3)
- 4)
- 5)

(USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS

Describe in no more than 100 words.

We are developing strategies to extract high brightness from broad-area interband diodes and quantum cascade lasers (QCLs) emitting in the mid-infrared. The method is to use Focused Ion Beam (FIB) milling to generate fabricate cylindrical mirrors to form on-chip unstable resonator cavity geometries.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.

a) Publications in peer-reviewed journals

C. Yang, R. Kaspi, M. L. Tilton, G. C. Dente, J. R. Chavez, A. P. Ongstad. Optically pumped mid-infrared in-plane DBR lasers. *Optics Express*, 20, 10833-10838, 2012.

R. Kaspi, M. L. Tilton, G. C. Dente, R. Barresi, C. Yang, A. P. Ongstad., Intersubband photoluminescence in InAs quantum wells, *Applied Physics Letters*, 97, 201104-201106, 2010.

b) Books, book chapters, other publications

c) Manuscripts in preparation, manuscripts submitted

10) PATENT OR COPYRIGHT APPLICATIONS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide titles, inventors, and dates of applications.

11) PRESENTATIONS AT SCIENTIFIC MEETINGS OR CONFERENCES

Provide complete references: author(s), title, abstract/proceeding citation, meeting name and location.

International

Domestic

12) SEMINARS OR LECTURES DELIVERED AT UNIVERSITIES AND/OR INSTITUTES Include dates, names and locations of seminars.

13) PROFESSIONAL AWARDS RECEIVED DURING TENURE

14) POST-TENURE POSITION / JOB TITLE

Research Assistant Professor

15) NAME AND ADDRESS OF POST-TENURE POSITION / JOB ORGANIZATION

University of New Mexico

16) POST-TENURE POSITION STATUS / CATEGORY Please indicate only one.

☐ Permanent position at the NRC host agency	☐ Research/administration position in private industry in the U.S.
☐ Contract or temporary position at the NRC host Agency	☐ Research/administration position in private industry outside of the U.S.
☐ Research/Administrative position with another U.S.-government agency	☐ Research/administration position with a non profit
☐ Research/Administrative position with a foreign-government agency	☐ Self-employed/consulting
☒ Research/teaching position at a U.S. college or university	☐ Postdoctoral research
☐ Research/teaching position at a foreign college or university	☐ Other (Please specify, possible) _____
	☐ No information provided

17) APPRAISAL OF RESEARCH ASSOCIATESHIP PROGRAM

On a scale of 1 – 10 (poor - excellent), please rate the following:

SHORT TERM VALUE

- 9** Development of knowledge, skills, and research productivity
Comments

LONG TERM VALUE

- 9** How the NRC Associateship award affected your career to date
Comments

LAB SUPPORT

- 9** Quality of support from the Laboratory--equipment, funding, orientation, safety and health guidelines, etc.
Comments

ADVISER/MENTOR SUPPORT

- 10** Quality of mentoring from the Laboratory NRC Adviser (USMA Mentor, if applicable)
Comments

LPR SUPPORT

- 8** Quality of administrative support from the Laboratory (e.g., NIST, NRL, IWR, FHWA) NRC Program Representative (LPR)
Comments

NRC SUPPORT

- 9** Quality of administrative support. Please assess respective NRC aspects (e.g., moving company, insurance, Omega, payroll, coordinator, travel, etc.)

Comments

18) PLEASE PROVIDE ANY SUGGESTIONS FOR PROGRAM IMPROVEMENT.

Please do NOT scan to PDF. Send the Final Report as MSWord document via e-mail to your NRC Program Coordinator

5) TITLE OF RESEARCH PROPOSAL			
Plasmonic Enhancement of Organic Photovoltaics			

6) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

1) Introducing Gold Nanoparticles into PEDOT:PSS Layer

2) Introducing Gold Nanoparticles into Active Layer

3) Modifying the metallic electrode/active layer interface through nano-imprint patterning

4)

5)

USMA Davies Fellow: please add summary of teaching, including classes taught.)

7) RESEARCH IN PROGRESS Describe in no more than 100 words.

Polymer-based organic photovoltaic systems hold promise for a low-cost, light-weight alternative renewable energy. To date, organic bulk heterojunction solar cells show power conversion efficiencies up to 8.6%. Recently, the exploitation of surface plasmon resonance effects, based on advantageous optical properties such as light concentration and scattering, has attracted much attention for increasing the photocurrent generation of organic solar cells. Surface plasmon is localized by noble metallic nanoparticles, such as Au, Ag, and Cu, resulting in highly localized and intense fields. We are seeking methods to incorporate gold nanoparticles into organic solar cells and then improve its light-to-electric conversion efficiency. We have been successfully transferred metillaic nanoparticles into organic device (proven by TEM) and monitored a 30% efficiency enhancement.

Dr. William P. Roach			

6) TITLE OF RESEARCH PROPOSAL

Massively-Parallel Modeling of High Peak Ultrafast Laser Pulse Propagation and Nonlinear Matter Interaction on Multi-GPU Systems

7) SUMMARY OF RESEARCH DURING TENURE Itemize significant findings in concise form, utilizing key concepts/words.

- 1) Designed a Graphic Precessing Unit (GPU) high-performance computing system with a compute power of 15 Teraflops/s.
- 2) Implemented the first multiple computational tools for the analysis of coupled propagation equations for the Ultra-Short Laser Pulse (USPL) propagation.
- 3) Implemented the first multiple computational tools for the propagation of USPL in atmosphere and its interaction with matters.
- 4) Developed the massively parallel version of the above tool on GPUs to help speeding up the computation times by a factor of 70 over the convetional CPU tools.

5)

(USMA Davies Fellow: please add summary of teaching, including classes taught.)

8) RESEARCH IN PROGRESS Describe in no more than 100 words.

Currently, there exists ongoing research activities to develop the multi-GPU version of the tool described above in item 4 to make the analysis of extremely large compute scenarios and kilometer-long propagation of USPLs possible.

9) PUBLICATIONS AND PAPERS RESULTING FROM NRC ASSOCIATESHIP RESEARCH

Provide complete citations: author(s), title, full name of journal, volume number, page number(s), and year of publication.
