FINDING OF NO SIGNIFICANT IMPACT
AND
FINDING OF NO PRACTICABLE ALTERNATIVE
CONSTRUCTION OF AN ADDITION TO USSOCOM COMMAND AND CONTROL
FACILITY, AN INFORMATION TECHNOLOGY FACILITY,
AND A PERMANENT PARKING LOT
MACDILL AIR FORCE BASE, FLORIDA

Agency: United States Air Force (USAF), Headquarters, Air Mobility Command

Background: Pursuant to the President's Council on Environmental Quality (CEQ) regulations, Title 40 Code of Federal Regulations (CFR) Parts 1500-1508, as they implement the requirements of the National Environmental Policy Act (NEPA) of 1969, 42 U.S.C. § 4321, et seq., and the Air Force Environmental Impact Analysis Process, as promulgated at 32 CFR Part 989, the U.S. Air Force conducted an assessment of the potential environmental consequences associated with implementation of the following Proposed Action: construction of an addition to USSOCOM Command and Control Facility, an Information Technology (IT) Facility, and a permanent parking lot. The environmental assessment considered all potential impacts of the Proposed Action and alternatives, both as solitary actions and in conjunction with other proposed activities. The finding of no significant impact (FONSI) summarizes the results of the evaluation of the Proposed Action and alternatives. The discussion focuses on activities that have the potential to change both the natural and human environments. The finding of no practicable alternative (FONPA) summarizes the options considered and why the proposed project was designed and sited as proposed.

Proposed Action: To meet the need for a sufficiently sized facility, proposed improvements to the USSOCOM Plaza compound include demolition of Building 501A, construction of an addition to Building 501, construction of a new IT facility, and construction of a permanent parking lot.

Alternatives: USSOCOM would utilize and remodel, as necessary, an existing facility on MacDill AFB. This alternative would provide permanent facilities for USSOCOM personnel; however, the highly secure and sensitive mission planning and command and control function would continue to be located outside the HQ USSOCOM Antiterrorism/Force Protection (AT/FP) perimeter. The synergy which CDRUSSOCOM requires would be lost without this function adjacent to Building 501. Furthermore, most of the usable space on MacDill AFB is occupied, and an analysis of available office space determined that there are no sufficiently sized facilities in close proximity to USSOCOM. Close proximity to the USSOCOM Plaza is required to improve efficiency and security and to provide secure communications connectivity via the Protected Distribution System (PDS). The no action alternative was also considered as an alternative to the Proposed Action. The no action alternative would not involve construction or demolition activities to Building 501A, or construction of the IT Facility and new permanent parking lot. The environmental consequences associated with implementation of the Proposed Action are summarized in the following sections.

Air Quality: Fugitive dust and construction vehicle exhaust will be generated during construction demolition. The estimated values for carbon monoxide (CO), volatile organic compounds (VOC), nitrogen oxides (NOₓ), sulfur oxides (SOₓ), and particulate matter (PM₁₀) were determined to be
Finding of No Significant Impact and Finding of No Practical Alternative
Construction of An Addition To USSOCOM Command and Control Facility,
An Information Technology Facility, and A Permanent Parking Lot

substantially less than USEPA de minimis values and less than 10% of the Hillsborough County
emissions inventory, and therefore, an air conformity analysis is not necessary.

Noise: Noise levels will increase temporally during construction and demolition activities,
particularly for occupants of adjacent USSOCOM facilities (Building 501, 501B, 501C, and the
Public Access Building). Construction activities would be conducted during the day which
coincides with business hours at USSOCOM. This increases the potential for negative effects to
sensitive noise receptors. However, the noise levels through closed windows in adjacent facilities
would not likely interfere with operations.

Wastes, Hazardous Materials and Stored Fuels: The Proposed Action will cause a temporary
increase in the generation of solid waste. Limited surveys have detected asbestos containing
building materials (ACBM) in Building 501A. Prior to demolition of the building the construction
contractor shall hire an environmental consulting company to assess the extent of the asbestos and
lead-based paint (LBP) in Building 501A. The environmental consulting company shall also be
responsible for abatement of any hazardous materials and monitoring of the environment during
abatement. Assuming these precautions are followed, the Proposed Action will not result in
significant impacts from hazardous materials or wastes.

Water Resources: Implementation of the Proposed Action will not result in any significant impacts
to surface or ground water quality, or to the base potable water or sanitary sewer system.

Floodplains: Eighty percent of the real property at MacDill AFB is located within the 100-year
coastal floodplain. The remaining 20% of the installation is primarily used for airfield operations
and support. Current operations for USSOCOM, and the site for the Proposed Action, are in the
floodplain. Economic, security and logistics reasons mandate location of the Proposed Action in
close proximity to existing USSOCOM operations. This situation leads to the conclusion that there
is no practicable alternative (as defined in Executive Order 11988) to completing the Proposed
Action in the coastal floodplain on the base.

All practicable measures to minimize the impact of floods on human health, safety and welfare and
preserve the natural values of the floodplains will be implemented for the project. The project will
not involve discharges of hazardous or sanitary wastewater to the floodplain or to Tampa Bay.
There will be no negative impacts to the floodplain functions and values or threats to human life,
health, and safety.

Biological Resources: Implementation of the Proposed Action will not impact terrestrial ecological
resources. Coordination with the U.S. Fish and Wildlife Service has been completed and confirms
that implementation of the Proposed Action will not impact any Federally-listed or state-listed
species of concern or their habitat.

Socioeconomic Resources: Implementation of the Proposed Action will have a moderate economic
benefit for the Tampa community, and would also result in a minor beneficial impact for the work
force in the region during the construction period.

Cultural Resources: No historic architectural resources are recorded within the Proposed Action
site boundaries and no adverse effects to cultural resources would occur during completion of the
Finding of No Significant Impact and Finding of No Practical Alternative
Construction of An Addition To USSOCOM Command and Control Facility,
An Information Technology Facility, and A Permanent Parking Lot

Proposed Action. In accordance with Section 106 of the National Historic Preservation Act,
consultation with the SHPO has been completed to confirm that they concur with MacDill's
assessment of no adverse impact to historic properties.

Land Use: The Proposed Action is consistent with current land use planning on the installation and
will not result in a major change in land use.

Transportation Systems: No long-term or short-term adverse effects to transportation around the
base will result from the Proposed Action.

Airspace/Airfield Operations: The Proposed Action will not have an impact on Airspace/Airfield
Operations or Bird-Aircraft Strike Hazard.

Safety and Occupational Health: The Proposed Action poses safety hazards to the workers similar
to those associated with typical industrial construction projects, such as falls, slips, heat stress,
and machinery injuries. Limited surveys for LBP and ACBM have been performed in Building 501A
which is proposed for demolition; these surveys were by no means comprehensive. Prior to
initiating demolition activities the demolition contractor shall hire a qualified independent
environmental consulting firm to perform a comprehensive asbestos and lead-based paint survey for
the building proposed for demolition. Once the survey has been completed, if hazardous materials
are identified, the demolition contractor shall hire a qualified environmental abatement subcontractor to remove and dispose of any ACBM or LBP. The same environmental firm shall
perform environmental monitoring during the abatement work in accordance with Air Force,
Environmental Protection Agency, and other applicable environmental regulations. All waste
disposal manifests shall be turned over to the government upon completion of the demolition work.

Environmental Management (including Geology and Soils): There will be no impacts to geology
with implementation of the Proposed Action. Impacts to the soil, primarily the potential for erosion,
will be temporary and minimized through best management practices. USSOCOM personnel in the
new facility will participate in Base recycling programs to reduce solid waste disposal volumes.

Environmental Justice: No disproportionately high or adverse effects on minority or low-income
populations would occur as a result of construction and demolition.

Indirect and Cumulative Impacts: There are no site-specific direct, indirect, or cumulative
impacts associated with the construction or demolition.

Unavoidable Adverse Impacts: There are no unavoidable adverse impacts.

Relationship Between Short-term Uses and Enhancement of Long-term Productivity: Construction of the addition to Building 501, as well as construction of the IT Facility would greatly
improve efficiency for the USSOCOM organization, which would in turn improve productivity. The
project would have a positive effect on morale for USSOCOM personnel, which in turn can
improve productivity.
Irreversible and Irretrievable Commitment of Resources: The Proposed Action would irreversibly commit fuels, manpower, construction materials, and costs related to construction and demolition.

Florida Coastal Zone Management: In accordance with the Federal Coastal Zone Management Act (CZMA) and the Florida CZMA, this Federal action must be consistent "to the maximum extent practicable" with the Florida Coastal Management Program (CMP). The Air Force finds that the Proposed Action is consistent with Florida's CMP and the State of Florida concurs with the Air Force's finding of consistency.

FINDING OF NO SIGNIFICANT IMPACT: Based upon my review of the facts and analyses contained in the attached Environmental Assessment, which is hereby incorporated by reference, I conclude that implementation of the Proposed Action will not have a significant environmental impact, either by itself or cumulatively with other projects at MacDill AFB. Accordingly, the requirements of NEPA, the regulations promulgated by the Council on Environmental Quality and the Air Force are fulfilled and an Environmental Impact Statement is not required. The Tampa Tribune published a Notice of Availability on December 12, 2003. No comments were received during the public comment period ending January 12, 2004. The signing of this combined finding of no significant impact and finding of no practicable alternative (FONSI/FONPA) completes the EIAP under Air Force regulations.

FINDING OF NO PRACTICABLE ALTERNATIVE: Pursuant to Executive Order 11988, the authority delegated in Secretary of the Air Force Order (SAFO) 791.1, and taking the above information into account, I find that there is no practicable alternative to locating the proposed new addition to Building 501, the IT Facility, and permanent parking lot at the identified sites. The alternatives to construction of an addition to Building 501, the IT Facility, and a permanent parking lot were determined to be impracticable due the highly secure and sensitive mission planning and command and control function. The synergy which CDRUSSOCOM requires would be lost without this function adjacent to Building 501. Furthermore, most of the usable space on MacDill AFB is already occupied, and an analysis of the current office space available determined that there are no sufficiently sized, unoccupied facilities in close proximity to USSOCOM. Close proximity to the USSOCOM Plaza is required to improve efficiency and security and to provide secure communications connectivity via PDS. This severely limits the options available when choosing an existing facility to house this function. The Proposed Action, as designed, includes all practicable measures to minimize the impact of floods on human health, safety, and welfare. The Air Force has sent all required notices to Federal agencies, single points of contact, the State of Florida, local government representatives, and the local news media.

SECTION 1.0
PURPOSE OF AND NEED FOR PROPOSED ACTION

This Environmental Assessment (EA) examines the potential for impacts to the environment resulting from the construction of an addition to Building 501, construction of an Information Technology (IT) Facility, and construction of permanent parking lot located within the United States Special Operations Command (USSOCOM) Plaza at MacDill Air Force Base (AFB). The project would also involve the demolition of Building 501A within the USSOCOM plaza. The location of the proposed project, the scope of the environmental review, applicable regulatory requirements and coordination, and the type of decision being made are presented in this section. The logic, scope, and organization of the Environmental Assessment (EA) are also described.

1.1 PURPOSE OF PROPOSED ACTION

Due to an “Urgent and Compelling” mission requirement to support the Global War on Terrorism (GWOT), the Commander Headquarters U.S. Special Operations Command (CDRUSSOCOM) directed a fast-track military construction (MILCON) project to consolidate, in a permanent facility, all facets of mission planning with associated command and control, and to provide a secure on-base facility housing critical information technology personnel and functions. By co-locating these functions CDRUSSOCOM intends to vastly improve HQ USSOCOM’s crucial and unique ability to plan and wage the GWOT by fully exploiting the synergy between organizations. To meet the immediate need, HQ USSOCOM created temporary administration and meeting space through the installation of two trailers within the USSOCOM Plaza and a mobile trailer complex adjacent to Building 6 outside the USSOCOM Plaza.
1.2 NEED FOR PROPOSED ACTION

The USSOCOM Plaza must be modified beyond what was proposed during initial development of the USSOCOM Plaza complex. To meet the expanding needs of USSOCOM, command and control functions have had to be located in separate facilities both inside and outside the USSOCOM Plaza complex at MacDill AFB. To improve the efficiency and security of Special Operations Command, a sufficiently sized facility must be constructed to permit consolidation of the separated functions. To meet the need for a sufficiently sized facility, proposed improvements to the USSOCOM Plaza compound include demolition of Building 501A, construction of an addition to Building 501, construction of a new IT facility, and construction of a permanent parking lot. These improvements are hereafter described as the ‘USSOCOM project’.

Mobilization of forces to support the Command and Control operation has resulted in a moderate increase in the number of personnel at MacDill AFB. The additional personnel have been provided temporary office space in trailers; however, permanent, sufficiently sized facilities are required to meet the long-term need of USSOCOM.

1.3 OBJECTIVES OF THE PROPOSED ACTION

The objective of the Proposed Action is to create additional workspace for personnel to meet new mission requirements and USSOCOM staff increases. Also, to provide a centralized operational command and control center for USSOCOM. The project is needed to conduct classified mission planning and command and control missions with co-location functions. The project is also essential for USSOCOM to maintain operational readiness capabilities necessary to effectively accomplish assigned mission.

January 2004
1.4 LOCATION OF PROPOSED ACTION

The Proposed Action would take place at MacDill AFB. The Base occupies approximately 5,630 acres in Hillsborough County adjacent to the City of Tampa, at the southern tip of the Interbay Peninsula (Figure 1.1). The Base is surrounded on three sides by Tampa Bay and Hillsborough Bay, and is bordered on the north by development within the City of Tampa. The site proposed for the USSOCOM project (construction of the addition to Building 501, the IT Facility, the permanent parking lot and demolition of Building 501A) contains roughly 3.6 acres of land located within the USSOCOM Plaza as shown on Figure 1.1. Building 501A would be demolished prior to installation of the new addition.

1.5 THE SCOPE OF THE ENVIRONMENTAL REVIEW

This EA identifies, describes, and evaluates potential environmental impacts associated with the proposed construction of the 110,000 square foot, two-story addition to Building 501, a 47,500 square foot IT Facility, and a permanent asphalt parking lot. This environmental analysis has been conducted in accordance with the President’s Council on Environmental Quality (CEQ) regulations, Title 40 of the Code of Federal Regulations (CFR) §1500-1508, as they implement the requirements of the National Environmental Policy Act (NEPA) of 1969, 42 U.S.C. §4321, et seq., and the Air Force Environmental Impact Analysis Process, as promulgated in 32 CFR Part 989.

The Federal Coastal Zone Management Act (CZMA) requires Federal agencies carrying out activities subject to the Act to provide a “consistency determination” to the relevant state agency. The Air Force’s Consistency Determination for the USSOCOM project is contained in Appendix A. The State of Florida agrees with the Air Force’s Consistency Determination for the Proposed Action.
1.6 ENVIRONMENTAL PERMIT REQUIREMENTS

It is anticipated that completion of this project would require application for a stormwater management permit from the Southwest Florida Water Management District (SWFWMD). In addition, since the site is larger than one acre in area, a National Pollutant Discharge Elimination System (NPDES) Phase II Storm water construction permit would be required.
SECTION 2.0  
DETAILED DESCRIPTION OF THE PROPOSED ACTION AND ALTERNATIVES

This section provides a description of the Proposed Action and alternatives to the Proposed Action. The Proposed Action is to provide a centralized operational command and control center for USSOCOM through the expansion of existing facilities and construction of new facilities within the USSOCOM Plaza. Under the Proposed Action a 110,000 square foot, two-story addition would be constructed onto Building 501. Prior to construction of this addition, Building 501A would be demolished. The Proposed Action also includes construction of a new, 47,500 square foot IT Facility and a permanent asphalt parking lot. Under the No Action alternative, the addition to Building 501, the IT Facility, and the permanent parking lot would not be constructed at MacDill AFB, and USSOCOM personnel would continue working in the temporary trailers both within and outside the USSOCOM Plaza. Portions of the information technology functions would continue to be dispersed in off-base leased facilities with potentially serious antiterrorism/force protection repercussions.

2.1 SELECTION CRITERIA

Due to the nature of business conducted at USSOCOM, the Building 501 addition and the IT Facility are required to be located within a secure, force protected area of MacDill AFB, preferably within the USSOCOM plaza which provides an additional level of force protection. Selecting a location for the USSOCOM Addition and IT Facility that is in close proximity to the existing USSOCOM Facilities (Building 501, 501B and 501C) is important to insuring operational efficiency and productivity within USSOCOM organizations.
2.2 DETAILED DESCRIPTION OF THE PROPOSED ACTION

The Proposed Action is demolition of Building 501A (a previous addition to Building 501), construction of a 110,000 square foot two-story addition to replace Building 501A, construction of a new two-story IT facility, and construction of a permanent parking lot (Figure 2.1.1). The permanent facility and ancillary equipment (i.e. support building for generators and UPS, pad-mounted transformer, etc.) would be located on the west side of and attached to Building 501.

Building 501 is located within the antiterrorism/force protection controlled access plaza of USSOCOM. The site proposed for construction of the new addition is currently an existing building (501A) and an asphalt-parking surface. The 501A Building construction would consist of pre-cast concrete exterior wall panels, to match existing Building 501 architecture, constructed on a reinforced concrete foundation (on piles) with a concrete floor slab and supported by structural steel framing. In addition, the facility would include a built-up roof system, fire protection, electrical, mechanical, plumbing, assured communications architecture, security systems, and utilities. The facility would provide full backup electrical power generation and partial Uninterruptible Power Supply (UPS). In addition to the new addition, the project would also include a loading dock/receiving area, landscaping, vehicle parking, underground communications infrastructure, and antiterrorism/force protection measures. Heating and cooling would also be provided. Parking spaces displaced by construction of the addition would be replaced through construction of a new parking lot on the site of an existing limestone gravel lot located across Tampa Point Boulevard on the east side of Buildings 501B/C. The new parking lot would require stormwater retention and treatment in accordance with the requirements of SWFWMD. Additionally, retention would, to the extent practical, attenuate post-development flows to a level of approximately pre-development to minimize the impact upon downstream structures. Drainage for the building addition would not materially change the existing conditions as the footprint of the addition is an existing parking lot. Roof drains and site grading would be routed to the existing storm drainage system. Existing utilities are available within the USSOCOM plaza to support the new addition. Existing overhead primary electric
would feed a new pad mounted transformer. A six-inch water main runs north/south between Buildings 501A and 501 and would provide for potable water needs including fire protection. Existing fire hydrants would be removed and relocated as necessary and, if required, new hydrants would be added. A 15-inch sanitary sewer runs along Tampa Point Boulevard along the northwest and the new building sewer would discharge into the gravity sewer.

Communication connectivity would be accomplished by tying into the existing “Protected Distribution System” (PDS) consisting of several conduits leading from Buildings 540 and 6 to Building 501. Due to the sensitive nature and ensuring the integrity of secure communications, the National Security Agency insists on the PDS conduits being secured and readily inspected.

The Information Technology facility and ancillary equipment would be located just east of Building 501B/C. The facility would be constructed of reinforced concrete foundation on piles, a concrete floor slab, structural steel framing, and a built-up roof system. Other improvements include fire protection, electrical, mechanical, plumbing, assured communications architecture, security systems, and utilities. The IT facility would be located within the antiterrorism/force protection controlled access plaza of USSOCOM. The site is currently a temporary parking lot. Building construction would consist of pre-cast concrete exterior wall panels to match existing Building 501C. Storm water drainage, utilities, and communication connectivity would be similar to what has been mentioned above.

2.3 DESCRIPTION OF THE NO ACTION ALTERNATIVE

Under the No Action alternative, no demolition or construction of additions to Building 501 would occur, nor would construction of the IT Facility and the new permanent parking lot occur. Under this alternative there would be no impacts to the 100-year floodplain because the status quo would be maintained. There would be no risk of damage to facilities within the 100-year floodplain since temporary flooding would not damage the parking lot. This is not considered a viable alternative by USSOCOM due to the unique requirements for the mission planning, command and control, and information technology functions. Part of this function currently

January 2004
resides in temporary trailers next to Building 6 and portions of the information technology functions are currently dispersed in off-base leased facilities resulting in the potential for serious antiterrorism/force protection repercussions. Under the No Action Alternative the parking needs of USSOCOM personnel would be partially met since the existing temporary parking areas would still be used; however, parking short falls would still exist since the existing USSOCOM parking areas do not have sufficient amount of spaces to satisfy the increasing number of USSOCOM personnel. Given the current international situation, and the United States lead role in the fight against global terrorism the threat of attack is real, implementation of the No Action Alternative could dramatically impact the mission of the various command organizations.

2.4 ALTERNATIVES CONSIDERED BUT ELIMINATED FROM FURTHER STUDY

Two alternatives were considered for the USSOCOM Project; Utilization of existing MacDill AFB facilities and Direct Compensation Alternative for off-base office space.

Under the existing facility alternative, the proposed modifications to the USSOCOM plaza would not be completed as described in the proposed action and USSOCOM would utilize and remodel, as necessary, an existing facility on MacDill AFB. This alternative would provide a permanent facility(ies) for USSOCOM personnel; however, the highly secure and sensitive mission planning and command and control function would continue to be located outside the USSOCOM Antiterrorism/Force Protection (AT/FP) perimeter. The synergy which CDRUSSOCOM requires would be lost without this function adjacent to Building 501. Furthermore, most of the usable space on MacDill AFB is already occupied, and an analysis of the current office space available determined that there are no sufficiently sized, unoccupied facilities in close proximity to USSOCOM. Close proximity to the USSOCOM Plaza would be preferred to improve efficiency and security and to provide the secure communications connectivity via PDS. This severely limits the options available when choosing an existing facility to house this function. Since no sufficiently sized, vacant facilities are currently available in close proximity to the USSOCOM Plaza and a proximal location is required to meet
security and PDS requirements, this alternative was not considered viable and was not evaluated further in this EA.

Using the Direct Compensation Alternative for off-base office space was identified, and determined to be impracticable for economic, security, and logistical reasons. An analysis of the current office space available determined that a sufficiently sized facility must be located in close proximity to USSOCOM in order to provide the secure communications connectivity via PDS. Additionally, utilization of an off-base facility would require duplication of anti-terrorism/force protection measures currently in place at USSOCOM. Finally, the synergy which CDRUSSOCOM requires would be lost without this function adjacent to Building 501. This severely limits the options available when choosing an off-base facility to house this function. Since a proximal location is required to meet security and PDS requirements, this alternative was not considered viable and was not evaluated further in this EA.

SECTION 3.0 AFFECTED ENVIRONMENT

This section describes the characteristics of the existing natural and man-made environment that could be affected by implementation of the Proposed Action including all considered alternatives. This section establishes the basis for assessing impacts of the alternatives on the affected environment provided in Section 4.0.

3.1 AIR QUALITY

The Clean Air Act (CAA), as amended in 1977 and 1990, provides the basis for regulating air pollution to the atmosphere. The United States Environmental Protection Agency (USEPA) set air quality standards for six “criteria” pollutants: carbon monoxide (CO), nitrogen dioxide (NO₂), ozone (O₃), sulfur oxides (SOₓ), measured as sulfur dioxide (SO₂), lead (Pb), and particulate matter with an aerodynamic diameter less than or equal to 10 micrometers (PM₁₀). These standards are the cornerstone of the CAA. Although not directly enforceable, they are the benchmark for the establishment of emission limitations by the states for the pollutants USEPA determines may endanger public health or welfare.

The Environmental Protection Commission of Hillsborough County (EPC) is responsible for issuing and enforcing the CAA Title V Air Operation Permit (Permit No. 0570141-001-AV issued 21 Oct 99) for MacDill AFB. The 1998 air emission inventory at MacDill AFB found the installation is a major source of nitrogen oxides with potential emissions of 184 tons per year.

The USEPA tracks compliance with the air quality standards through designation of a particular region as “attainment” or “non-attainment.” MacDill AFB is located in Hillsborough County within the West Central Florida Intrastate Air Quality Control Region (AQCR). Hillsborough County currently meets the EPA air quality standards for all criteria pollutants (60 FR 62748, December 7, 1995). The county was formerly non-attainment for ozone, but is currently in maintenance of attainment.

January 2004
3.2 NOISE

The day-night average sound level (DNL) developed to evaluate the total daily community noise environment applies here. In June 1980, the Federal Interagency Committee on Urban Noise published guidelines relating DNL values to compatible land uses. This committee was composed of representatives from the U.S. Departments of Defense, Transportation, and Housing and Urban Development; the USEPA; and the Veterans Administration. Since their issuance, Federal agencies have generally adopted their guidelines for noise analysis. Most agencies have identified 65 dB DNL as a criterion that protects those most affected by noise and that can often be achieved on a practical basis.

Base activities that have the highest potential source of noise impacts are the aircraft/airspace operations. The Air Installation Compatible Use Zone (AICUZ) Study (1996) plotted the day-night average sound level (DNL) from 65 to 80 dB for a typical busy day at MacDill. The DNL contours reflect the aircraft operations at MacDill AFB. The DNL 65 dB contour covers the main runway, and extends about one mile southwest over Tampa Bay, and about 1.5 miles northeast over Hillsborough Bay. The proposed USSOCOM project is located outside the 65 dB contour.

3.3 WASTES, HAZARDOUS MATERIALS, AND STORED FUEL

Hazardous wastes generated at MacDill AFB include solvents, fuels, lubricants, stripping materials, used oils, waste paint-related materials, and other miscellaneous wastes. The responsibility for managing hazardous waste lies with the generating organization and 6th CES/CEV. Wastes come from approximately 50 locations throughout the Base and are managed at satellite accumulation points base-wide.

Approximately 105 operations base-wide use hazardous materials. Hazardous materials on-base include various organic solvents, chlorine, freon, paints, thinners, oils, lubricants, compressed gases, pesticides, herbicides, nitrates, and chromates. A detailed tracking and accounting system...
is in place to identify potentially hazardous materials and to ensure that Base organizations are approved to use specific hazardous materials.

The Base receives jet fuel (JP-8) at the Defense Fuel Supply Point (DFSP) by pipeline from Port Tampa. JP-8 storage capacity at DFSP and MacDill AFB is over 7.5 million gallons. Diesel, gasoline and heating oil are stored throughout MacDill in small to medium-sized Underground Storage Tanks (USTs) and Aboveground Storage Tanks (ASTs) ranging in size from 50 to 12,000 gallons, including a 5,000-gallon diesel UST located on the south side of Building 501.

### 3.4 WATER RESOURCES

Surface water flows at the Base are primarily from stormwater runoff. Most of the Base drains toward the southern tip of the Interbay Peninsula; however, the easternmost section of the Base drains toward Hillsborough Bay.

The USEPA issued a National Pollutant Discharge Elimination System (NPDES) multi-sector storm water general permit (No. FLR05B679) to MacDill AFB in October 1998. This permit authorizes the discharge of storm water associated with industrial activity. In accordance with 40 CFR 112, the base has developed a Spill Prevention Control and Countermeasures (SPCC) Plan and a Facility Response Plan given the location of the Base adjacent to navigable waters and shorelines, as well as the amount of fuel storage capacity existing on site.

### 3.5 FLOODPLAINS

According to information provided by the Federal Emergency Management Agency (FEMA Maps dated 1982-1991), 80 percent of the Base is within a 100-year coastal floodplain (see Figure 3-1). The maps indicate that all the residential, industrial, and institutional (medical and education) land uses on the Base are within the 100-year floodplain, along with most of the commercial and aviation support areas. The remaining 20% of land that is above the floodplain is designated primarily for airfield operations.

January 2004
The extent of the floodplain is an important consideration for MacDill AFB because Executive Order (EO) 11988 - Floodplain Management, and the floodplain management criteria contained in 44 CFR Part 60, Criteria for Land Management and Use regulates the uses of these areas. The objective of this presidential order is to avoid to the extent possible the long- and short-term adverse impacts associated with occupancy and modification of floodplains. The order applies to all Federal agencies conducting activities and programs that may potentially affect floodplains. To comply with EO 11988, before taking any action, the Air Force must evaluate the impacts of specific proposals in the floodplain. The site proposed for the USSOCOM project is located in the 100-year coastal floodplain.

### 3.6 BIOLOGICAL RESOURCES

A detailed description of the biological resources found at MacDill AFB is provided in the *Integrated Natural Resources Management Plan* (INRMP) (USAF, 2000). MacDill’s INRMP has been approved by the state and Federal fish and wildlife agencies. Land use on MacDill AFB includes urban, light industrial, residential, or improved vacant land. The few undeveloped areas within the Base boundaries have all experienced some degree of disturbance, such as ditching, clearing, or the encroachment of exotic vegetation.

The 1998 Wetland Delineation Study identified, delineated, and classified approximately 1,195 acres of wetlands on MacDill AFB. Mangrove wetlands are the principal scrub/shrub wetland community on the Base. The mangrove community at MacDill AFB has been categorized as excellent wildlife habitat and is protected by state and local regulations.

Wildlife species listed by federal or state agencies as endangered, threatened, or of special concern and known to occur permanently or periodically, or have the potential to occur on the Base are shown in Table 3.6.1 below. In 1996, the *Endangered Species Management Plan MacDill AFB* and the *Biological Survey of MacDill AFB* identified the general locations of
protected species at MacDill AFB. The report does not identify any protected species within the proposed boundaries of the USSOCOM project (USAF, 1996).

### 3.7 SOCIOECONOMICS

The Economic Impact Region (EIR) for MacDill AFB is the geographic area within a 50-mile radius of the Base subject to significant Base-related economic impacts. According to the 1998 Economic Resource Impact Statement for MacDill AFB the total economic impact of MacDill AFB on the EIR was $3.5 billion with over 105,000 jobs supported. Purchase of local labor, goods, and services to support base operations provides a total annual economic impact of $1.34 billion.

January 2004
billion. Retiree income provides a total economic impact of $2.19 billion. The direct impact on local income produced by Base expenditures is $494 million.

3.8 CULTURAL RESOURCES

Cultural resources are prehistoric and historic sites. These resources consist of districts, buildings, structures and objects that are significant in American history, architecture, archaeology, engineering, and culture. Historic properties listed in or eligible for listing in the National Register of Historic Places (NRHP) are subject to protection or consideration by a federal agency in accordance with Section 106 of the National Historic Preservation Act of 1966, as amended.

Five archaeological sites are found on MacDill AFB. There are no archaeological prehistoric sites within a one-mile radius of the proposed USSOCOM project site.

Construction of MacDill AFB began in November 1939, and the Base was dedicated in April 1941. Sites and structures related to the early missions remain on Base today. A portion of the MacDill Field historic district is located immediately south of Building 501 along Florida Keys Avenue. The USSOCOM building has always served as a command facility since its construction in 1969; however, the facility has not been identified as potentially eligible for the National Register of Historic Places.

3.9 LAND USE

Land use at MacDill AFB includes airfield, industrial, commercial, institutional (educational & medical), residential, recreational, and vacant land. These areas are delineated in MacDill AFB 2010 Plan (USAF, 2002). The “Base Comprehensive Plan” classifies the area of the Proposed Action as administrative land use.
3.10 TRANSPORTATION

MacDill AFB is currently served by four operating gates. The main gate is located at Dale Mabry Highway, and secondary gates are at Bayshore Boulevard and MacDill Avenue. Due to an increase in force protection measures since September 11, 2001, the Dale Mabry, MacDill and Bayshore gates are only used for commuter traffic. The fourth gate, located on the west side of the Base near Manhattan Avenue, has been reopened and is used as the sole entry point for commercial, contractor, delivery, and recreational vehicles.

The transportation system on Base consists of arterials, collectors, and local streets that connect with the off-base network through the three gates. On-base arterial facilities include North and South Boundary Roads, Bayshore Boulevard, Marina Bay Drive, and Tampa Point Boulevard. The 1998 traffic study determined that service levels for traffic on Base are generally acceptable.

3.11 AIRSPACE AND AIRFIELD OPERATIONS AND BIRD AIRCRAFT STRIKE HAZARD

The airspace region of influence includes the airspace within a 20-nautical-mile radius of MacDill AFB from the ground surface up to 10,000 feet above MSL. Radar monitoring and advisories within the region are provided by the Tampa Terminal Radar Approach Control (TRACON). There are 13 military and public airports, as well as five private use airports located within or adjacent to the controlled airspace associated with the MacDill AFB region of influence. No special use airspace exists within the region.

MacDill AFB has a bird-aircraft strike hazard plan. It provides guidance for reducing the incidents of bird strikes in and around areas where flying operations occur. The plan establishes provisions to disperse information on specific bird hazards and procedures for reporting hazardous bird activity.

January 2004
3.12 SAFETY AND OCCUPATIONAL HEALTH

The MacDill AFB Asbestos Management Plan identifies procedures for management and abatement of asbestos. Prior to renovation or demolition activities, asbestos sampling is performed; and, if present, the asbestos is removed in accordance with applicable Federal and State regulations.

Building 501A would be demolished to permit construction of the new two-story addition to Building 501. Some limited-scope asbestos surveys have been completed for Building 501A. These files are maintained on-base at 6 CEV/CES, Building 147, Room 304. Typically, these surveys were completed prior to small-scale renovation projects. Asbestos fibers were identified as being present in numerous screening reports on file.

The Base engineer assumes that all structures constructed prior to 1978 possibly contain lead-based paint (LPB). When required, LBP abatement is accomplished in accordance with applicable Federal and State regulations, and Base procedures, prior to demolition activities to prevent any health hazards.

Lead-based paint has not been identified in the exterior walls of Building 501A. Sampling results for lead based paint (LBP) can be found in MacDill’s environmental office, please see Section 7.0 References for location of the sampling results.
SECTION 4.0
ENVIRONMENTAL CONSEQUENCES

Section 4.0 discusses the potential effects associated with implementation of the Proposed Action and the alternative to the Proposed Action. The Proposed Action is to construct an addition to Building 501A, construct an IT facility, and construct a permanent parking lot at the locations proposed in Section 2.2. The only alternative evaluated further in this EA is the No Action alternative which would implement no construction and USSOCOM would continue to operate out of geographically separated facilities.

4.1 AIR QUALITY

4.1.1 Proposed Action

Air quality impacts would occur during implementation of the USSOCOM project; however, these air quality impacts would be temporary.

Fugitive dust (particulate matter: suspended and PM$_{10}$) and construction vehicle exhaust emissions would be generated by (1) equipment traffic; and (2) entrainment of dust particles by the action of the wind on exposed soil surfaces and debris. Fugitive dust emissions would be greatest during site preparation and grading for the USSOCOM project. Emissions would vary daily. Dust would be generated by equipment travel over temporary roads and would fall rapidly within a short distance from the source.

Pollutants from construction equipment and vehicle engine exhausts include nitrogen oxides (NO$_x$), carbon monoxide (CO), PM$_{10}$, and VOCs. Internal combustion engine exhausts would be temporary and, like fugitive dust emissions, would not result in long-term impacts. Pollutant emission estimates are presented in Appendix C and summarized in Table 4.1.1.

b PM10 estimated as 50 percent of the 1990 tpy reported for TSP
c Source: 40 CFR 93.153, November 30, 1993. tpy Tons per year % Percent

4.1.2 No-Action Alternative

Because the status quo would be maintained, there would be no impacts to air quality under the No-Action alternative.

4.1.3 Cumulative Air Quality Impacts

The cumulative air impacts would include air sources from other proposed construction projects on MacDill AFB. Table 4A in Appendix C presents the estimated air emissions calculated for projects proposed for the near future, during the timeframe that construction and demolition activities would be completed. Based on the calculations provided in Appendix C, implementation of the Proposed Action would not result in cumulative air impacts that exceed Hillsborough County’s guidance standards.

4.2 NOISE

The primary human response to environmental noise is annoyance (AIHA, 1986). The degree of annoyance has been found to correlate well with the DNL. Annoyance for short-term
activities, such as construction noise and fire fighting, could be influenced by other factors such as awareness and attitude toward the activity creating the noise.

Several social surveys have been conducted in which people’s reaction to their noise environment has been determined as a function of DNL occurring outside their homes. Guidelines have been developed for individual land uses based upon the information collected in these surveys and upon information concerning activity interference. For various land uses, the level of acceptability of the noise environment is dependent upon the activity that is conducted and the level of annoyance, hearing loss, speech interference, and sleep interference that results there from.

4.2.1 Proposed Action

Noise impacts associated with the Proposed Action would result from implementation of the USSOCOM project. The degree of noise impacts would be a function of the noise generated by construction equipment, the location and sensitivity of nearby land uses, and the timing and duration of the noise-generating activities. Normally, construction activities are carried out in stages and each stage has its own noise characteristics based on the mixture of construction equipment in use.

The closest sensitive receptors are occupants of the USSOCOM facility (Building 501, 501A, B, and C), and Public Access Building. Construction activities would be conducted during the day which coincides with business hours at USSOCOM. This increases the potential for negative effects to sensitive noise receptors. However, noise levels from construction would not likely interfere with operations in adjacent facilities.

Noise impacts associated with construction of the IT facility and permanent parking lot would be dramatically less than those associated with the addition to Building 501 since adjacent facilities are further away from the proposed construction sites. The closest buildings to IT Facility and parking lot sites are Buildings 501 B and C to the west across Tampa Point Boulevard and the...
Public Access building to the south. All of these facilities are more than 100 feet from the nearest edge of the proposed construction sites. In general, the noise impacts associated with construction would be temporary and considered minor.

4.2.2 No-Action Alternative

Under the No-Action Alternative no new noise impacts would occur since no demolition or construction would occur.

4.3 WASTES, HAZARDOUS MATERIAL, AND STORED FUEL

The following section describes sanitary wastewater treatment, solid waste collection and disposal, hazardous material and waste management, and stored fuels management.

4.3.1 Proposed Action

A temporary increase in the generation of solid waste would occur during construction for the USSOCOM project. Local off-base waste handling services/facilities have sufficient capacity to handle this increased output. The Proposed Action, would result in a minor increase in the number of personnel on base. However, the increase in solid waste generation would be within the capacity of the local off-base waste handling services capacity.

The Proposed Action would result in a minor increase in the number of personnel on base. However, the net increase in wastewater discharge to the base wastewater treatment plant is not substantial and would not impact operation of the plant or exceed the plants treatment capacity since the WWTP is currently only operating at half of its permitted capacity.

Hazardous wastes/materials, such as paint, adhesives, and solvents, would be on site during construction of the new housing units. All hazardous wastes/materials would be temporarily stored and disposed of per Base procedures. All construction related hazardous wastes/materials, including petroleum products, would be removed and disposed of according to Base procedures.
following the completion of tasks. The disposal of such waste would be in compliance with established Base procedures. No adverse effects from hazardous materials or waste would occur during construction of the USSOCOM project.

Previous, limited scope surveys of Building 501A have detected asbestos containing building materials. Lead-based paint was not detected in the previous sampling of the exterior walls of Building 501A. Prior to demolishing Building 501A, a lead-based paint survey and asbestos survey of the facility would be completed. If asbestos and lead-based paint-containing materials are identified during the survey, these materials must be abated prior to beginning demolition. Any materials containing asbestos must be removed by a licensed asbestos contractor in accordance with all Federal, state and local guidelines. An independent environmental consulting firm shall perform environmental monitoring of the work area during the asbestos abatement work.

There are no Installation Restoration Program (IRP) sites within the SOCOM Plaza. Therefore, contact with contaminated soil or groundwater would not be expected during the project. However, if contaminated media is encountered during construction, the material would be managed in accordance with IRP guidelines and would not represent a significant impact to the project. If proper precautions are taken during construction, including the use of approved personal protective equipment (PPE) and clothing, the proposed construction activities would not represent a significant health and safety concern. In addition, the demolition contractor would be required to develop a site-specific Health & Safety Plan prior to initiating construction activities at the site. If these precautions and advanced planning actions are completed, the proposed construction activities should not present an adverse effect to the environment or the health and safety of the construction workers.

The Proposed Action would have no impact on stored fuels management and environmental compliance at the Base.

January 2004
4.3.2 No-Action Alternative

Under the No-Action Alternative, no impacts to wastes or hazardous material or stored fuels would occur since there would be no change in the existing conditions.

4.4 WATER RESOURCES

4.4.1 Proposed Action

A small amount of soil erosion would occur during construction and demolition activities since the soil surface would be exposed and disturbed at work locations during the project. Soil erosion in areas that are disturbed would be controlled by implementation of a sediment and erosion control plan, including implementation of Best Management Practices (BMPs). This EA has been prepared under the assumption that the construction and demolition sites would, at a minimum, be covered with a clean layer of graded and grassed fill. Silt fencing would be installed around the perimeter of the proposed construction and demolition sites to control erosion caused by stormwater runoff. There would be no long-term impacts to water resources once the project is complete.

Under the Proposed Action, there would be no direct or indirect discharges to groundwater. No negative impacts to groundwater would occur with implementation of the Proposed Action. Potable water would be required for USSOCOM Addition and the new IT Facility and the increase in USSOCOM personnel would have a minor impact on potable resources; however, the increase in potable water consumption is negligible when compared to total base usage and the base potable water system can easily handle the increase in usage.

4.4.2 No Action Alternative

Under the No Action alternative, there would be no change to the current conditions and no impact to water resources would occur with implementation of this alternative.
4.5 FLOODPLAINS

In accordance with the requirements of EO 11988, the Air Force must demonstrate that there is no practicable alternative to carrying out the proposed action within the coastal floodplain. No other practicable sites were identified during the initial siting phase, and potential siting locations were limited due to the nature of the project.

4.5.1 Proposed Action

The USSOCOM project would be located entirely in the 100-year floodplain. Both the USSOCOM Addition and the IT Facility would be constructed on a sufficient volume of fill material to raise the building foundations above the 100-year coastal floodplain elevation (11 ft msl). Elevating the new buildings above the floodplain would reduce the risk of flood loss and dramatically reduce the impacts from floods on human safety, health and welfare. Construction of the USSOCOM project would increase the amount of impervious surface within the floodplain; however the increase in impervious surface would be compensated for through construction of stormwater retention areas which collect stormwater runoff and direct it back into the ground.

4.5.2 No Action Alternative

There would be no changes to existing conditions with implementation of the No Action alternative and there would be no impacts to the floodplain.

4.6 BIOLOGICAL RESOURCES

4.6.1 Proposed Action

No major wetland areas are located in or adjacent to areas proposed for construction for the USSOCOM project. MacDill’s construction program practices would ensure that silt fencing is
installed around the perimeter of the construction area; consequently, implementation of the Proposed Action should have no impact on the wetlands.

Section 3.6.4 identifies the Federal- and State-listed species that potentially occur at MacDill AFB. The USSOCOM project site has been inspected by the MacDill AFB natural resources manager who determined that no threatened or endangered species or critical habitat would be impacted by construction activities at the site. Coordination with the USFWS has been completed to insure compliance with the Endangered Species Act and confirm that the project would have no impact on listed species (Appendix D).

4.6.2 No Action Alternative

No new construction or demolition would occur with implementation of the No Action alternative and no impacts to biological resources would occur.

4.7 SOCIOECONOMICS

4.7.1 Proposed Action

The Proposed Action would cost approximately $25.5 million to complete, based on 2003 cost estimates. This would equal approximately 5.1% of the nearly $494 million annual expenditures that MacDill AFB provides to the local economy, and would constitute a moderate beneficial impact. The Proposed Action would also have a minor beneficial impact on the work force in the region during the construction period.

4.7.2 No-Action Alternative

Under the No-Action Alternative, no impacts to socioeconomic resources would occur.
4.8 CULTURAL RESOURCES

4.8.1 Proposed Action

No historic architectural resources are recorded within the Proposed Action site boundaries and no adverse effects to cultural resources would occur during completion of the Proposed Action. The SHPO concurrence letter is provided in Appendix D.

4.8.2 No Action Alternative

Under the No-Action Alternative, no impacts to cultural resources would occur.

4.9 LAND USE

4.9.1 Proposed Action

The Proposed Action would involve modification and improvements to the USSOCOM plaza and would not alter the land use for the area, which is currently designated as administrative land-use. Consequently, no impacts to land use would result from the Proposed Action.

4.9.2 No Action Alternative

Under the No-Action Alternative, no impacts to land use would be incurred.

4.10 TRANSPORTATION

4.10.1 Proposed Action

No long-term or short term adverse effects to transportation around the base would result from the Proposed Action.
4.10.2 No-Action Alternative

No impacts on transportation would be incurred under the No-Action alternative.

4.11 AIRSPACE/AIRFIELD OPERATIONS AND BIRD-AIRCRAFT STRIKE HAZARD

Neither the Proposed Action nor the No Action alternative would have an impact on Airspace/Airfield Operations or Bird-Aircraft Strike Hazard.

4.12 SAFETY AND OCCUPATIONAL HEALTH

4.12.1 Proposed Action

The proposed construction activities for the project would pose safety hazards to the workers similar to those associated with typical industrial construction projects, such as falls, slips, heat stress, and machinery injuries. Construction would not involve any unique hazards and all construction methods would comply with OSHA requirements to ensure the protection of workers and the general public during construction. Vigilant but not controlling governmental oversight of contractor activities would help assure OSHA compliance.

Prior to demolition, lead-based paint and asbestos containing building materials would be managed in accordance with procedures outlined in 4.3.1.

4.12.2 No-Action Alternative

No impacts on safety and occupational health would be incurred under the No-Action Alternative.

4.13 ENVIRONMENTAL JUSTICE

Implementation of the USSOCOM project at MacDill AFB would not affect minority or low-income populations. There are no minorities or low-income populations in the area around the
USSOCOM plaza, and thus, there would be no disproportionately high or adverse impacts on such populations. No adverse environmental impacts would occur outside MacDill AFB. Therefore, no adverse effects on minority and low-income populations would occur as a result of the USSOCOM project.

4.14 INDIRECT AND CUMULATIVE IMPACTS

There are no site-specific direct or indirect impacts associated with implementation of the USSOCOM project at MacDill AFB. As indicated in Table 4A in Appendix C, this project when combined with other ongoing construction projects on MacDill AFB would not result in cumulative impacts to air quality. Likewise, no cumulative impacts to noise would result from this project since there are no other large construction projects proposed or on-going in the near vicinity of the USSOCOM plaza and noise level dissipate quickly with distance from the construction site. The Hillsborough County landfill has an estimated 20+ years to reach full capacity based on current loading rates which suggests there is sufficient capacity to handle the demolition material as well as the volume of solid waste generated post-construction. There would be no cumulative impacts to potable water since water is supplied by the City of Tampa via pipeline which can easily handle the negligible increase in water consumption. Although the project would result in a net increase in impervious surface, the design includes construction of sufficiently sized stormwater retention ponds which would collect all of the stormwater from the newly constructed facilities and direct it back into the ground through infiltration. Currently, all proposed or on-going construction projects on MacDill AFB include construction of sufficiently sized stormwater retention structures which compensate for any increases in impervious surface by directing stormwater back into the ground. Consequently, this project, when combined with other proposed or on-going construction projects within MacDill AFB would not result in cumulative impacts to the floodplain. The project would have no impact on biological resources, cultural resources, land use, transportation, or airspace/airfield operations, and would therefore not result in cumulative impacts for these resources. Any cumulative impacts to socioeconomic

January 2004
resources would be positive since this project, along with other on MacDill AFB infuses money into the local economy supporting local labor pools and suppliers.

4.15 UNAVOIDABLE ADVERSE IMPACTS

There are no significant unavoidable adverse impacts associated with implementation of the USSOCOM project.

4.16 RELATIONSHIP BETWEEN SHORT-TERM USES AND ENHANCEMENT OF LONG TERM PRODUCTIVITY

Construction of the addition to Building 501, as well as construction of the IT Facility would greatly improve the efficiency for the USSOCOM organization, which would in turn improve productivity. The project would have a positive effect on morale for USSOCOM personnel, which, in turn, can improve productivity.

4.17 IRREVERSIBLE AND IRRETRIEVABLE COMMITMENT OF RESOURCES

The Proposed Action would irreversibly commit fuels, manpower, construction materials, and costs related to construction and demolition.

APPENDIX A

CONSISTENCY STATEMENT
APPENDIX A
CONSISTENCY STATEMENT

This consistency statement will examine the potential environmental consequences of the Proposed Action and ascertain the extent to which the consequences of the Proposed Action are consistent with the objectives of Florida Coastal Management Program (CMP).

Of the Florida Statutory Authorities included in the CMP, impacts in the following areas are addressed in the EA: beach and shore preservation (Chapter 161), historic preservation (Chapter 267), economic development and tourism (Chapter 288), public transportation (Chapters 334 and 339), saltwater living resources (Chapter 370), living land and freshwater resource (Chapter 372), water resources (Chapter 373), environmental control (Chapter 403), and soil and water conservation (Chapter 582). This consistency statement discusses how the proposed options may meet the CMP objectives.

CONSISTENCY DETERMINATION

Chapter 161: Beach and Shore Preservation

No disturbances to the base's canals are foreseen under the Proposed Action or Alternative Actions.

Chapter 267: Historic Preservation

The Air Force and the Florida State Historic Preservation Officer have determined that there are two areas on MacDill AFB with buildings that are potentially eligible for the National Register of Historic Places. The Proposed Action site is not located in either of the historic districts. Consultations between the Air Force and State Historical Preservation Officer have been completed to ensure compliance with Section 106 of the National Historic Preservation Act.

Chapter 288: Economic Development and Tourism

The EA presents the new employment impact and net income impact of the Proposed Action and alternatives. The options would not have significant adverse effects on any key Florida industries or economic diversification efforts.

The EA quantitatively addresses potential impacts to transportation systems and planning and implementation of transportation improvements.
Appendix A

Consistency Statement

Chapter 372: Saltwater Living Resources

The EA addresses potential impacts to local water bodies. Water quality impacts were surveyed for existing conditions at the Proposed Action and alternatives. Results indicate that no significant long-term impacts would result from the Proposed Action or alternatives.

Chapter 372: Living Land and Freshwater Resources

Threatened and endangered species, major plant communities, conservation of native habitat, and mitigation of potential impacts to the resources are addressed in the EA. The Proposed Action and alternatives would not result in permanent disturbance to native habitat and should not impact threatened or endangered species.

Chapter 373: Water Resources

There would be no impacts to surface water or groundwater quality under the Proposed Action or alternatives as discussed in the EA.

Chapter 403: Environmental Control

The EA addresses the issues of conservation and protection of environmentally sensitive living resources; protection of groundwater and surface water quality and quantity; potable water supply; protection of air quality; minimization of adverse hydrogeologic impacts; protection of endangered or threatened species; solid, sanitary, and hazardous waste disposal; and protection of floodplains and wetlands. Where impacts to these resources can be identified, possible mitigation measures are suggested. Implementation of mitigation will, for the most part, be the responsibility of MacDill AFB.

Chapter 582: Soil and Water Conservation

The EA addresses the potential of the Proposed Action and alternatives to disturb soil and presents possible measures to prevent or minimize soil erosion. Impacts to groundwater and surface water resources also are discussed in the EA.

CONCLUSION

The Air Force finds that the conceptual Proposed Action and alternatives plans presented in the EA are consistent with Florida's CMP.
APPENDIX B
AIR FORCE FORM 813
REQUEST FOR ENVIRONMENTAL IMPACT ANALYSIS

INSTRUCTIONS: Section I to be completed by Proponent; Sections II and III to be completed by Environmental Planning Function. Continue on separate sheets as necessary. Reference appropriate item number(s).

SECTION I - PROponent INFORMATION

1. TO (Environmental Planning Function)
6 CES/CE

2. FROM (Proponent organization and functional address symbol)
HQ USSOCOM/SOCS-EN

3. TITLE OF PROPOSED ACTION
Construct an addition to the Command and Control Facility and an Information Technology Facility.

4. PURPOSE AND NEED FOR ACTION (Identify decision to be made and need date)
Provide an addition to the Command and Control Facility and construct an Information Technology Facility to fulfill the 7 Dec 02 SECDEF guidance directing USSOCOM to be a supported command with a new mission on the war on terror.

5. DESCRIPTION OF PROPOSED ACTION AND ALTERNATIVES (Provide sufficient details for evaluation of the total action.)
Provide an 83,000SF addition to SOI and a 47,500SP IT facility as shown on the attached site plan and described on the attached DD Form 1391s. The 7 Dec 02 SECDEF directive concerning the Global War on Terrorism/USSOCOM is the principle authority.

6. PROPONENT APPROVAL (Name and Grade)
Harold D. Bosse PE, GS15
Command Engineer

SECTION II - PRELIMINARY ENVIRONMENTAL SURVEY. (Check appropriate box and describe potential environmental effects including cumulative effects.)

7. AIR INSTALLATION COMPATIBLE USE ZONE/ LAND USE (Noise, accident potential, encroachment, etc.)

8. AIR QUALITY (Emissions, attainment status, state implementation plan, etc.)

9. WATER RESOURCES (Quality, quantity, source, etc.)

10. SAFETY AND OCCUPATIONAL HEALTH (Asbestos/radiation/chemical exposure, explosives safety quantity-distance, bird/wildlife aircraft hazard, etc.)

11. HAZARDOUS MATERIALS/WASTE (Use/storage/generation, solid waste, etc.)

12. BIOLOGICAL RESOURCES (Wetlands/floodplains, threatened or endangered species, etc.)

13. CULTURAL RESOURCES (Native American burial sites, archaeological, historical, etc.)

14. GEOLOGY AND SOILS (Topography, minerals, geothermal, Installation Restoration Program, seismicity, etc.)

15. SOCIOECONOMIC (Employment/population projections, school and local fiscal impacts, etc.)

16. OTHER (Potential impacts not addressed above.)

SECTION III - ENVIRONMENTAL ANALYSIS DETERMINATION

17. PROPOSED ACTION QUALIFIES FOR CATEGORICAL EXCLUSION (CATEX) # ; OR

PROPOSED ACTION DOES NOT QUALIFY FOR A CATEX; FURTHER ENVIRONMENTAL ANALYSIS IS REQUIRED.

18. REMARKS

MacDill AFB is located in a maintenance area for the following criteria pollutant: Ozone. Direct emissions from construction and indirect emissions from visiting traffic and/or follow-on operations, when totaled are less than the de minimus amounts in 40 CFR 93.153, therefore, a conformity analysis is not required.

19. ENVIRONMENTAL PLANNING FUNCTION CERTIFICATION (Name and Grade)
MARK J. MEYERS, Col, USAF
Vice Commander, 6 AMW

AF FORM 813, 19990901 (EF-V1)
4. PURPOSE AND NEED FOR ACTION:

Due to an “Urgent and Compelling” mission requirement to support the Global War on Terrorism (GWOT), the Commander Headquarters U.S. Special Operations Command (CDRUSSOCOM) directed a fast-track military construction (MILCON) project to consolidate, in a permanent facility, all facets of mission planning with associated command and control and to provide a secure on-base facility housing critical information technology personnel and functions. By co-locating these functions CDRUSSOCOM intends to vastly improve HQ USSOCOM’s crucial and unique ability to plan and wage the GWOT by fully exploiting the synergy between seven functions. To meet the immediate need, HQ USSOCOM has provided temporary administration and meeting space adjacent to Building 6.

5. DESCRIPTION OF PROPOSED ACTION AND ALTERNATIVES:

Proposed Action –

The permanent facility and ancillary equipment (i.e. support building for generators and UPS, pad mounted transformer, etc.) would be located just south and attached to Building 501A. The Add/Alter Building 501A project is located within the antiterrorism/force protection controlled access plaza of HQ USSOCOM. The site is currently an existing administrative facility and asphalt parking surface. The building construction will consist of columns on piles and tilt-up concrete panels. Displaced parking will be accommodated by a new parking lot on the site of an existing limestone lot located across Tampa Point Boulevard on the east side of Buildings 501B/C. The new parking lot will require stormwater retention and treatment in accordance with the requirements of SWFWMD. Additionally, retention will, to the extent practical, attenuate post-development flows to a level of approximately pre-development to minimize the impact upon downstream structures. Drainage for the building addition will not materially change the existing conditions as the footprint of the addition is an existing parking lot. Roof drains and site grading will be routed to the existing storm drainage system. Existing utilities are available within the SOCOM plaza to support the new addition. Existing overhead primary electric will feed a new pad mounted transformer. A 6” water main runs north/south between Buildings 501A and 501 and will provide for the needs including fire protection. Existing fire hydrants will be removed and relocated as necessary and, if required, new hydrants will be added. A 15” sanitary sewer runs along Tampa Point Boulevard along the northwest and the new building sewer will discharge into the gravity sewer. Communication connectivity will be accomplished by tying in to the existing “Protected Distribution System” (PDS) consisting of several conduits leading from Building 540 and 6 to 501. Due to the sensitive nature and ensuring the integrity of secure communications, the National Security Agency insists on the PDS conduits being secured and readily inspected.
The Information Technology facility and ancillary equipment would be located just east of Building 501B/C and located within the antiterrorism/force protection controlled access plaza of HQ USSOCOM. The site is currently a temporary parking lot. Building construction will also consist of columns on piles and tilt-up concrete panels to match 501C. Storm water drainage, utilities, and communication connectivity will be similar to what has been mentioned above.

No Threatened or Endangered Species or habitats would be disturbed by this action and no environmentally sensitive areas would be impacted.

Alternative #1: Use of Other Existing Facilities Alternative – This alternative would involve locating the highly secure and sensitive mission planning and command and control function outside of the HQ USSOCOM AT/FP perimeter in other available building space on MacDill AFB. Most of the usable space on MacDill AFB is already occupied. An analysis of the current office space available determined that a sufficiently sized facility is not available for the form and function required. In addition, this function must be located in close proximity to HQ USSOCOM in order to provide the secure communications connectivity via a PDS. This severely limits the options available when choosing an existing facility to house this function. Finally, the synergy which CDRUSSOCOM requires would be lost without this function adjacent to Building 501.

Alternative #2: Locate the Function in a Different Location near HQ USSOCOM – Due to the physical constraints of the USSOCOM Plaza, adding to and altering an existing USSOCOM facility appears to be the only viable alternative. The USSOCOM Plaza is in the middle of an administratively built-up area of MacDill AFB. Once again, this function must be located in close proximity to HQ USSOCOM in order to provide the secure communications connectivity via a PDS and within the existing AT/FP perimeter to minimize the impact to the MacDill AFB administrative area.

Alternative #3: Construct a Permanent Facility – This is a viable option and is currently being programmed. HQ USSOCOM/SOCS-EN anticipates a fast track MILCON project to have the new facility constructed by FY05.

No Action Alternative – This alternative would continue operations as they currently are with no new facilities construction. This alternative is not a viable option due to the unique requirements for the mission planning, command and control, and information technology functions. Part of this function currently resides in temporary trailers next to Building 6 and portions of the information technology functions are currently dispersed in off-base leased facilities with serious antiterrorism/force protection issues. This function would essentially be a 24/7/365 organization, hence “hot desking” with existing HQ USSOCOM assets is not feasible.
APPENDIX C

AIR EMISSIONS CALCULATIONS FOR PROPOSED ACTION

Emissions Due to Wind Erosion of Soil Piles and Exposed Graded Surface

Soil Piles EF = 6.7 lbs/day/ acres covered by soil piles
Consider soil piles area fraction so that EF applies to graded area

Soil piles area fraction: 0.01 (Fraction of site area covered by soil piles)
Soil Piles EF = 0.067 lbs/day/acres graded

APPENDIX D
PUBLIC NOTICE
AND AGENCY CORRESPONDENCE
MEMORANDUM FOR DIVISION OF HISTORIC RESOURCES
ATTN: MS. JANET SNYDER MATTHEWS

FROM: 6 CES/CD
7621 Hillsborough Loop Drive
MacDill AFB FL 33621-5207

SUBJECT: Construct an Addition to the Command and Control Facility and an Information Technology (IT) Facility at MacDill Air Force Base (AFB)

1. The United States Air Force (USAF) intends to construct an 83,000 square foot two-story addition to the Command and Control Facility located at Building 501A, a 47,500 square foot IT Facility across Tampa Point Boulevard, and an adjacent permanent parking lot. The proposed improvements intend to fulfill the 7 December 2002 Secretary of Defense (SECDEF) guidance directing the United States Special Operations Command (USSOCOM) to be a supported command with a new mission of war. The US Government's decision to combat terrorist activities in the states and abroad has resulted in the increased need to provide a centralized operational Command and Control Facility for HQ USSOCOM. The additional two-story facility to Building 501/501A, IT Facility, and new permanent parking lot is needed to accommodate increased personnel and equipment. The new buildings are essential for HQ USSOCOM to maintain operational readiness capabilities necessary to effectively accomplish assigned missions. Modifications include integrating the 83,000 square foot two-story structure with Building 501/501A, loading dock/receiving area, landscaping, site improvements, vehicle parking, underground communications infrastructure to connect to the Bldg 501/501A complex, antiterrorism/force protection (AT/FP) measures and providing temporary leased facility office space. The new IT Facility would be constructed to the east of the existing Buildings 501B/C within the AT/FP controlled plaza of HQ USSOCOM (Figure 1). A new permanent asphalt-paved parking lot would be constructed adjacent north to the IT Facility where a dirt road currently exists.

2. A representative from the MacDill AFB Cultural Resources staff surveyed the proposed project site to determine if any cultural resources would be affected by the project. There are no historic or archeological sites on or in the vicinity of the areas proposed for construction under the project. The proposed construction site is not located in but is adjacent to (north of) a portion of the MacDill Field Historic District. Although Building 501 has been an integral part of the Cold War history, serving as a command headquarters since its construction in 1969, the building has been modified through the construction of two lightly attached “wings” including 501A and 501B, and a detached outbuilding, 501C. The addition of these facilities has changed the appearance of the USSOCOM complex and Building 501, and as a result, MacDill AFB believes that the proposed project would not adversely impact cultural resources. If the State Historical Preservation Office agrees with this assessment, please document your concurrence by signing
SUBJECT: Construct an Addition to the Command and Control Facility and an Information Technology Facility at MacDill Air Force Base (AFB)

where indicated on page 2. If you would like to inspect the proposed project site, please contact the MacDill AFB Cultural Resources staff.

3. If you have any questions about the proposed project, please contact Mr. Jason Kirkpatrick at (813) 828-0459.

Attaches:
Figure 1 – Proposed Command and Control Facility and IT Facility at MacDill AFB

1st Indorsement
MEMORANDUM FOR 6 CES/CD

The State Historic Preservation Office concurs with MacDill Air Force Base’s finding that construction of the above mentioned project will have no adverse effect on cultural resources at MacDill Air Force Base.

JANET SNYDER MATTHEWS
State Historic Preservation Officer

Date: ____________________
October 14, 2003

Mr. Gene A. Rogers
Department of the Air Force
6 CES/CD
7621 Hillsborough Loop Drive
MacDill AFB, Florida 33621-5207

RE: DHR Project File Number: 2003-8817
Received by DHR September 30, 2003
Construction of an Addition to the Command and Control Facility (#501A)
and Construction of an Information Technology Facility
MacDill AFB, Hillsborough County

Dear Mr. Rogers:

Our office received and reviewed the above referenced projects in accordance with Section 106 of the National Historic Preservation Act of 1966, as amended and 36 CFR Part 800: Protection of Historic Properties. The State Historic Preservation Officer is to advise Federal agencies as they identify historic properties (listed or eligible for listing, in the National Register of Historic Places), assess effects upon them, and consider alternatives to avoid or minimize adverse effects.

Based on the information provided, it is the opinion of this office that the proposed projects will have no effect on historic properties.

If you have any questions concerning our comments, please contact Scott Edwards, Historic Preservationist, by electronic mail sedwards@dos.state.fl.us, or at 850-245-6333 or 800-847-7278.

Sincerely,

Janet Snyder Matthews, Ph.D., Director, and State Historic Preservation Officer
MEMORANDUM FOR U.S. FISH AND WILDLIFE SERVICE

The proposed improvements intend to fulfill the 7 December 2002 Secretary of Defense (SECDEF) guidance directing the United States Special Operations Command (USSOCOM) to be a supported command with a new mission of war. The US Government's decision to combat terrorist activities in the states and abroad has resulted in the increased need to provide a centralized operational Command and Control Facility for HQ USSOCOM. The additional two-story facility to Building 501A/501A, IT Facility, and new permanent parking lot is needed to accommodate increased personnel and equipment. The new buildings are essential for HQ USSOCOM to maintain operational readiness capabilities necessary to effectively accomplish assigned missions. Proposed modifications include integrating the 83,000 square foot two-story structure with Building 501A, loading dock/receiving area, landscaping, site improvements, vehicle parking, underground communications infrastructure to connect to the Building 501A complex, antiterrorism/force protection (AT/FP) measures and providing temporary leased facility office space. The new IT Facility building would be constructed to the east of the existing Building 501B/C and located within the existing AT/FP controlled plaza of HQ USSOCOM (Figure 1). A new permanent asphalt-paved parking lot would be constructed adjacent north to the IT Facility where a dirt road currently exists.

2. A representative from the MacDill AFB Natural Resources staff surveyed the proposed construction site to determine if any threatened or endangered species inhabit the site. The site proposed for construction is located in an open, developed (partially asphalt-paved) area in the center of the Base and no threatened or endangered species were observed on the site. The HQ USSOCOM complex and surrounding area has not been identified as critical habitat for any Federally-listed threatened or endangered species. MacDill AFB believes that the proposed project would not adversely impact threatened or endangered species. If the U.S. Fish and Wildlife Service agrees with this assessment, please document your concurrence by stamp or signing where indicated on page 2.

The proposed action is not likely to adversely affect resources protected by the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 et seq.). This finding fulfills the requirements of the Act.

With reference to the Fish and Wildlife Coordination Act (16 U.S.C. 1531 et seq.) the Service does not have sufficient staff to review and comment on this application; therefore, we are unable to make recommendations and take no action regarding this application.

Peter M. Benjamin
Assistant Field Supervisor
MEMORANDUM FOR CES/CD
SUBJECT: Construct an Addition to the Command and Control Facility and an Information Technology Facility at MacDill Air Force Base (AFB)

3. To schedule an inspection of the proposed project sites or if you have any questions about the proposed project, please contact Mr. Jason Kirkpatrick at (813) 828-0459.

Dear Mr. Kirkpatrick:

Based on the information contained in the EA and comments provided by our reviewing agencies, the state has determined that the subject project is consistent with the Florida Coastal Management Program.

Thank you for the opportunity to review this project. If you have any questions regarding this letter, please contact Ms. Lauren P. Milligan at (850) 245-2163.

Sincerely,

Sally B. Mann, Director
Office of Intergovernmental Programs

PUBLIC NOTICE - UNITED STATES AIR FORCE

The Air Force (AF) seeks public comment on an Environmental Assessment and Finding of No Significant Impact for a proposed project at US Special Operations Command (USSOCOM) at MacDill Air Force Base. The project would demolish an existing addition to Building 501 and construct a new, larger addition to the building. In addition, the project would construct a new Information Technology facility within the USSOCOM Plaza. The project would also construct a new permanent parking lot to replace parking spaces lost during construction of the new facilities. MacDill AFB has evaluated this action in accordance with Executive Order 11988 - Floodplain Management, and believes there is no practical alternative to construction within the floodplain.

NOTICE OF AVAILABILITY

The EIAP documents satisfy the requirements of the National Environmental Policy Act (NEPA). The documents are available for public review and comment from December 12th, 2003 through January 12th, 2004 at the Tampa/Hillsborough County Public Library, located at 900 N. Ashley Drive, Tampa, FL 33606. The documents may be found in the Humanities Section of the Main Library. Address written comments to the 6 AMW Public Affairs, 8209 Hangar Loop Drive, Suite 14, MacDill AFB, FL 33621-5502. The telephone number is (813) 828-2215.
