This paper is part of the following report:

TITLE: Chemical and Biological Medical Treatment Symposium - Industry II World Congress on Chemical and Biological Terrorism

To order the complete compilation report, use: ADA411272

The component part is provided here to allow users access to individually authored sections of proceedings, annals, symposia, etc. However, the component should be considered within the context of the overall compilation report and not as a stand-alone technical report.

The following component part numbers comprise the compilation report:

ADP013371 thru ADP013468
ABSTRACT
Though the Biological Weapons Convention (BWC) prohibits the development, production and stockpiling of biological and toxin weapons, during the war in Croatia we saw unknown artificial materials, which appeared to be like spider cobwebs. We expect that during the peace time domestic and international acts of terrorism may use chemical and biological pathogens with such an ideal delivery device as the cobweb with their polyvalent characteristics. Today the terrorists use very sophisticated chemical and biological weapons and such as anthrax, sarin or cyanides. In our approach we review delivery device and packaging of biological agents, and we address some technical difficulties in maintaining chemical and biological agents.

KEYWORDS
Artificial cobweb, delivery biological and toxin warfare and terrorism agents
