INTRODUCTION

This report contains oceanographic data collected on five offshore cruises of Research Vessel Brown Bear during the months of January to June, 1961. The cruises presented are numbers 275, 280, 282, 287 and 288, which were the first cruises of a series designed to provide data for a year-round study of the water characteristics along the Washington-Oregon coast with special emphasis on the fresh water entering the system from the Columbia River. The objectives of this study are to determine the gross features of the movement and dispersion of Columbia River effluent water in the open sea off the mouth of the river and along the adjacent coast, and ultimately to ascertain the probable fate of any radioactive material that might be associated with the effluent or with river-borne materials. Funds for this investigation are being provided by the United States Atomic Energy Commission under Contracts No. AT (45-1)-1385 and AT (45-1)-1725 and by the United States Office of Naval Research Contract Nonr-477(10), Project NR 083-012.

Vessel Operation and Types of Observations

The Brown Bear is based in Seattle, and all of the cruises described herein departed from and returned to that port.

Cruises 275, 280 and 287 were primarily for the purpose of obtaining physical, chemical and productivity data and zooplankton specimens in the area under study. Cruise 282 was a quick trip offshore to moor an experimental buoy on Cobb Seamount, but six oceanographic stations were also occupied. Cruise 288 served a dual purpose of collecting oceanographic data and providing instruction at sea for University of Washington students enrolled in the Summer Session course entitled "Field Experience in Oceanography". Figures 1-5 show the cruise tracks and station locations for the various cruises. Preliminary reports describing the work carried out have been issued for certain of these cruises (Love and Anderson, 1961, Lincoln and Dawson, 1961, Collias, 1961).

Temperature, salinity and dissolved oxygen were determined at all oceanographic stations. Productivity and chlorophyll measurements were obtained at 75 per cent of the oceanographic stations and at some additional "productivity only" stations. On most cruises these "productivity only" stations were designated by a number and a letter, such as 10-A, 12-D, etc. At 44 per cent of the stations, additional water samples were drawn for "special chemistry" analyses; namely, phosphate, silicate and nitrate.

In addition to the above mentioned data which are tabulated in this report, several other types of collections and observations were made during these cruises. On all cruises except 282, horizontal tows with Clarke-Pumpus samplers were made for collection of zooplankton samples. Such tows were usually made from four different depths in the upper 100 meters twice a day. The salinity-temperature deviation recorder was in continuous use during all of the cruises except 282. This instrument makes continuous recordings of the deviations of temperature and salinity of the near-surface water from selected base values. The water sampled is pumped through a sea water intake located in the ship's side, approximately eight feet below the water line. Other routine observations were mechanical bathythermograph and/or electronic bathythermometer

lowerings at each station, and the lowering of a 12-inch (30.5 cm) Secchi disc at each daylight station where productivity measurements were made. Underway bathythermograph lowerings were made during some cruises. On all cruises except 282, continuous measurements and recordings of solar radiation were made.

Zooplankton and water samples were collected on behalf of the Laboratory of Radiation Biology, University of Washington. The zooplankton samples were collected with half-meter nets, using horizontal or oblique tows. The water samples were five gallons each and collected from the surface and/or near the bottom, usually at stations near the mouth of the Columbia River. The water and plankton samples were analyzed by the Laboratory of Radiation Biology for the amounts of certain gamma-emitting radionuclides present, Zn^{65} , Cr^{51} , P^{32} , Np^{239} , and K^{40} . Gross beta-ray counts were also made on the samples.

During Cruise 288, gravity cores were obtained at five stations and 18 mid-water trawl samples were collected.

Collection of Samples

There was no fixed sequence of station operations during these cruises. However, a typical order of procedure was as follows: deep oceanographic cast, one or two casts for chlorophyll and productivity samples, shallow oceanographic cast, two Clarke-Bumpus tows. Lowerings of the electronic bathythermometer and/or mechanical bathythermograph were made while the bottles and attached thermometers were coming to equilibrium on the deep and shallow casts.

Nansen bottles were used to obtain the water samples for salinity and oxygen analyses. Chlorophyll and productivity samples were collected with modified Van Dorn plastic samplers (Van Dorn, 1957). Some of the special chemistry samples were obtained from the Nansen bottle casts whereas others were taken from the plastic samplers. An indicator column in the data tables tells which sampler was used.

In general, two different schemes of sampling depths were used. At stations near shore or in the vicinity of the low salinity water from the Columbia River, or other sources, the Nansen bottles were more closely spaced than usual in the upper 100 meters to pick up details of the salinity structure. The sampling depths used in these cases were 0, 3, 6, 10, 15, 20, 25, 30, 40, 60, 80, and 100 meters. At other locations fewer bottles were used in the upper layer.

The sampling depths for chlorophyll and productivity samples corresponded to 100, 50, 10 and 1 per cent of surface illumination. These depths were computed from extinction coefficients as obtained from Secchi disc measurements using the formula $K = \frac{1.7}{SECDI}$ where K is the extinction coefficient and SECDI is the depth in meters to which the Secchi disc could be seen (Poole and Atkins, 1929).

Determination and Accuracy of Properties

Two protected reversing thermometers were used on each Nansen bottle. In addition, except on Cruise 288, the bottom seven or eight bottles each carried one unprotected reversing thermometer. This arrangement provided that on deep casts (usually 200 meters and deeper) all the bottles carried an unprotected thermometer, and that on shallow casts, usually all bottles at 125 meters or deeper also carried unprotected thermometers. On Cruise 288 the thermometer arrangement was somewhat different, and two of the bottles normally used on the deep cast did not carry unprotected thermometers.

The temperatures shown are in most cases the average of two protected thermometer readings after application of the usual expansion and index corrections. A study was made to determine the extent of agreement within the pairs of corrected thermometer readings recorded during these five cruises. Based on the total number of pairs of readings for all these cruises, the following table shows the percentage of cases where the value tabulated in the "Temperature" column of the station data is the average of two readings that differed by 0-0.05°C, by 0.06-0.10°C, or by more than 0.10°C, and also the percentage of cases where the temperature is based on one thermometer reading only, due to thermometer malfunction or other causes:

Difference between protected thermometer readings			One thermometer reading only
0 - 0.05°	0.06° - 0.10°	> 0.10°	
92.3%	3.4%	0.8%	3.4%

The depths of subsurface observations were calculated from measured wire angles; from readings of unprotected reversing thermometers; and from smoothed curves of wire length minus thermometric depth (L-Z) versus wire length (L), the difference method described by LaFond (1951).

The salinity determinations were run with the University of Washington salinometer (Paquette, 1958). Some were run aboard ship and some ashore, as follows: Cruises 275 and 280, partly aboard ship and partly ashore; Cruises 282 and 287, all run ashore; Cruise 288, all run aboard ship. The values obtained have a reproducibility of ± 0.004 ‰ salinity at the 95 per cent probability level and a probable accuracy of ± 0.01 ‰ salinity or better at the same level of probability.

Dissolved oxygen was obtained by the modified Winkler method described by Thompson and Robinson (1939). All the analyses were run aboard ship.

Phosphate values were obtained by the method of Wooster and Rakestraw (1951), except that the color intensities were measured with a Beckman spectrophotometer model DU, and a constant temperature bath set at 27° Celsius was used to bring all samples and standards to the same temperature. The water samples were obtained from frozen samples on all cruises except Cruise 288, these were run both aboard ship and ashore.

Silicate values were obtained by the molybdenum blue method of Mullin and Riley (1955a), except that sodium silicofluoride was used to prepare the standard solutions. All analyses for silicate were run ashore using water from the frozen samples.

Nitrate values were obtained using the method of Mullin and Riley (1955b) with a few minor changes in the procedure of addition of reagents. All analyses were run ashore using water from frozen samples.

The chlorophyll samples were analyzed according to the method of Richards with Thompson (1952) as modified for use with the Millipore[®] filter (Greitz and Richards, 1955). A turbidity correction was made by subtracting the extinction at 7500 Å from spectrophotometer readings at other wave lengths (Strickland and Parsons, 1960). The error in the technique is reported to be about $\pm 5\%$. An IBM machine was used to process the data.

The radiocarbon method was used for productivity measurements (Steemann Nielsen, 1952). The error in the method is about $\pm 10\%$ (Strickland and Parsons, loc. cit.). Approximately 2.5 microcuries of radioactive carbonate $C^{14}O_3^{2-}$ were added to sea water samples in 125 ml light and dark pyrex reagent bottles. Incubator measurements were made under constant illumination of about 800 foot-candles, using a bank of "Cool-White" fluorescent lights. Temperature was controlled with running surface sea water. After three to six hours of incubation, the samples were filtered on PH Millipore filters ($0.3 \pm 0.02 \mu$) and stored over silica gel. Simulated in situ measurements were generally made twice daily, at dawn and at noon. Samples were incubated in a topside deck incubator exposed to full sunlight illumination. Kodak Wratten neutral density filters were used to simulate conditions of 50, 10 and 1 per cent of surface illumination. Temperature was controlled by running surface sea water. Periods of incubation were either from sunrise to noon or noon to sunset. Usually, only a surface sample was incubated during the sunrise to noon period.

In the laboratory, the filters retaining the C^{14} were fumed with concentrated HCl for 10-15 minutes to remove traces of inorganic C^{14} . Geiger counting equipment consisted of a Nuclear-Chicago Model D-47 gas flow counter with micromil window, 161-A scaler, C-110 automatic sample changer and C-111B printing timer. Each sample was counted until a minimum number of 1280 total counts was obtained. IBM processing of the data included corrections for background, dark bottle uptake, variations in inorganic carbon content of sea water, coincidence, and isotope effect (5%).

The following quantities were computed with the IBM 709 Data Processing System at the Research Computer Laboratory of the University of Washington: the interpolated values of temperature, salinity, and oxygen at standard oceanographic depths; the interpolation error for each of the above quantities; the density of sea water at atmospheric pressure as sigma-t (σ_t), for interpolated values; the specific volume anomaly ($10^5 \delta$); and the geopotential anomaly ($\Sigma \Delta D$). Sigma-t for observed values was computed on the IBM 650 Magnetic Drum Data Processing Machine. Programs developed at the Department of Oceanography were used. The interpolation program is based on two three-point Lagrange parabolic interpolation polynomials (Buckingham, 1957). This interpolation scheme yields two estimates

® Registered trademark, Millipore Filter Corp., Bedford, Mass.

of the interpolated value of a property at each standard depth. The first polynomial makes use of two observed values from depths above the desired standard depth and one value from a depth below; the second polynomial uses one value above and two below. The resulting interpolated value is the numerical average of the two estimates. The error of interpolation is equal to the difference in magnitude between the two Lagrange interpolation polynomials times a factor depending on the third derivatives. This factor is given the value 0.33 in this computer program. The derivation of the error term is given by Buckingham (1957). A discussion of this system of interpolation and error determination and a derivation of the value 0.33 for the factor is given by Rattray (1962). The equations for σ_t were taken from LaFond (1951), and the equations for specific volume anomaly and geopotential anomaly were those used by the U. S. Navy Hydrographic Office in their computer program (U. S. Navy Hydrographic Office, 1955b). With a few local exceptions, the procedures described in H. O. Special Publication No. 12, Part III (U. S. Navy Hydrographic Office, 1960) were used for coding and punching the data on IBM cards.

The interpolation program formerly used by this Department made use of only one three-point interpolation. This occasionally led to incorrect machine-interpolated values at certain standard depths, especially if the distribution of observed values was not adequate to properly define the curve in that region. The use of two interpolation polynomials in the new computer program substantially reduces the chance of obtaining such incorrect values. Furthermore, the magnitude of the error terms may be taken by the reader as an indication of whether the arrangement of sampling depths used was adequate to portray the vertical distribution in sufficient detail.

The geographical positions are based on navigational fixes obtained by the watch officers of the Brown Bear. At locations within 18 miles of shore, the fix was usually obtained from radar ranges and bearings; beyond that distance Loran was used. In the area in which these cruises operated the error of Loran fixes is considered not to exceed one mile. In most cases a fix was obtained immediately upon arrival on station, and another obtained prior to departure from station. Occasionally one or more fixes were also obtained at intermediate times while on station. The positions reported herein are usually "mean" positions, determined graphically, lying between the arrival and departure fixes, and taking into account any intermediate fixes obtained.

Miscellaneous Comments

The station numbers used on Brown Bear cruises consist of two parts: the cruise number, a dash, then a number representing the consecutive number of the station within the cruise, viz., 275-1, 275-2, etc. By the use of this system, each station of each cruise is uniquely identified.

The data tables contain a few apparently anomalous values of various properties which do not fit on a smooth curve of the particular property versus depth. These questionable values are marked with an asterisk (*). They have been checked to the extent that existing original data sheets, work sheets, and other information will allow and cannot be proved incorrect.

Recent University of Washington Publications Containing OffshoreOceanographic Data

This list continues the one presented in Technical Report No. 66.

<u>Report No.</u>	<u>Reference No.</u>	<u>Contains Data Collected</u>
Technical Report No. 66	60-18	Northeast Pacific, April 1956 to April 1958

ASHORE

The following persons, as well as some of the sea-going personnel, were engaged ashore in the analyses and preparation of these data for publication:

Aagaard, Knut	Research Assistant
Corr, Michael	Marine Aide
Edenso, Jim	Tab Machine Operator
Garnjobst, Joan M.	Marine Aide
King, Alma R.	Secretary-Typist
Lightwood, Keith G.	Assistant Engineer
Long, Linda K.	Laboratory Technician
Melton, Robert J.	Marine Aide
Milne, David H.	Research Assistant
Nigro, Nicholas D.	Marine Technician
Riley, Ralph W.	Marine Chemist
Rona, Monique R.	Programmer
Shafer, Thayer C.	Research Assistant
Van Dyke, Craig	Marine Aide
Wallin, Marsha M.	Keypunch Operator

EXPLANATION OF DATA TABLES

The information in the data tables was transcribed directly from IBM cards using an IBM Type 407 accounting machine. A blank space in the tables or headings indicates that no observation was taken. The original data and the interpolated and computed values punched on the cards were recorded or coded in accordance with the procedures used by the U. S. Navy Hydrographic Office (1960). The codes used to describe weather and sea conditions, etc., will be found in H. O. Publication No. 606-C (U. S. Navy Hydrographic Office, 1956) and H. O. Publication No. 607 (U. S. Navy Hydrographic Office, 1955a). Some changes were made in the card form but these do not affect the arrangement of the data in this report. Abbreviations and column headings are described below and, where necessary, the Hydrographic Office numerical codes have been reproduced to aid in interpreting the data.

Abbreviations and Headings Used in Data Tables

DATE	Greenwich month/day/year
HR (Hour)	Greenwich mean time to the nearest hour of the messenger drop on the <u>shallow</u> cast. If the messenger drop occurred at exactly 30 minutes after the hour, the time was rounded to the nearest even hour.
LAT (Latitude)	In degrees and minutes
LONG (Longitude)	In degrees and minutes
SDG (Depth of water)	Depth of water in meters at the station as determined by the ship's echo sounder. This depth was generally recorded immediately after the ship arrived on station.
WEA (Weather)	State of the weather. See code, page 13.
SECDI (Water transparency)	Depth in meters to which a 12-inch (30.5 cm) Secchi disc could be seen on daylight stations.
BA (Barometric pressure)	To obtain the barometric pressure in millibars, add 900 if this number is above 50; add 1000 if below 50.
CL <u> </u> AMT <u> </u> (Cloud type and cloud cover)	Cloud type, see code, pages 11 and 12. Cloud cover, see code, page 12.
DRY (Air temperature, dry bulb)	In degrees Celsius
WET (Air temperature, wet bulb)	In degrees Celsius

RELHU (Relative humidity) Expressed in per cent

VIS (Visibility) Range of visibility. See code, page 12.

WVEL DIR
(Wind velocity and direction) Wind velocity in meters per second. Wind direction, see code, page 12.

SEA DIR State of the sea, see code, page 12. Direction (Sea state and direction) from which sea was coming, see code, page 12.

SWL DIR
(Swell amount and direction) Height and wave length of swell, see code, page 14. Direction from which swell was coming, see code, page 12.

BTMCODE (Bottom type) See code, page 14.

WA (Wire angle) In degrees. Wire angles are tabulated only for those casts whose numbers appear in the "Cast" column at the left of the page, i.e., casts from which data were obtained. The first number is the wire angle for Cast 1, or the lowest numbered cast appearing, the second for Cast 2, etc. Dashes (---) indicate the wire angle was not recorded for that cast.

CAST Cast number

DEPTH Depth in meters from which sample was obtained.

TEMP (Temperature) In degrees Celsius

SAI (Salinity) In parts per thousand (‰).

Sigma-T (σ_t) An expression for the density of sea water at atmospheric pressure, having the indicated temperature and salinity. To convert sigma-t values to density, divide by 1000 and add 1; thus sigma-t 22.42 = density 1.02242.

OXY (Dissolved oxygen) In milliliters per liter (ml/l).

PHOS (Phosphate-phosphorus) In microgram-atoms per liter ($\mu\text{g-at/l}$)

SIL (Silicate-silicon) In microgram-atoms per liter ($\mu\text{g-at/l}$)

NITR (Nitrate-nitrogen) In microgram-atoms per liter ($\mu\text{g-at/l}$)

CHL-A (Chlorophyll a) In milligrams per cubic meter

PROD-I (Incubator productivity) Expressed as milligrams carbon assimilated per cubic meter per hour.

PROD-S (Simulated <u>in situ</u> productivity)	Expressed as milligrams carbon assimilated per cubic meter per day.
SP VOL ANOMALY (Specific volume anomaly, $10^5 \delta$)	The anomaly of specific volume of water at the indicated temperature, salinity, and pressure compared to a standard water of 0°C temperature and 35 ‰ salinity at the same pressure. (The depth in meters is taken as numerically equal to the pressure in decibars.) Tabular values multiplied by 10^{-5} will give the anomaly in units of cubic centimeters per gram.
GEPOT ANOMALY (Geopotential anomaly, $\Sigma \Delta D$)	Geopotential anomaly in dynamic meters of the layer of water between the surface and the indicated depth. (The depth in meters is taken as numerically equal to the pressure in decibars.)
E(T) (Temperature interpolation error)	Interpolation error, in degrees Celsius, of the temperature value at this depth. For a discussion of the interpolation error, see page 5. Dashes (---) in this column indicate that the interpolated value at this depth is based on one interpolation polynomial only and therefore the error could not be determined. A blank space in this column indicates no interpolation was made because the observed depth corresponded to the desired standard depth.
E(S) (Salinity interpolation error)	Interpolation error, in parts per thousand, of the salinity value at this depth. See comments under E(T) above.
E(O) (Oxygen interpolation error)	Interpolation error, in milliliters per liter, of the oxygen value at this depth. See comments under E(T) above.
A,C,E,P,M	"Indicator" letters which have the meanings defined below.
A	All of the observed values at this depth were obtained from the productivity cast, using modified Van Dorn plastic samplers. See page 2.
C	Special chemistry values (phosphate, silicate and nitrate) at this depth, as well as chlorophyll and productivity values were obtained from the productivity cast. All other values are from the Nansen bottle cast.

- E Chlorophyll and productivity values and special chemistry values, except phosphate, at this depth were obtained from the productivity cast. Phosphate and all other values are from the Nansen bottle cast. (This situation occurs only on four stations of Cruise 280.)
- P Only the chlorophyll and productivity values at this depth were obtained from the productivity cast. All other values are from the Nansen bottle cast.
- No indicator letter (observed values) Indicates all values at that depth are from the Nansen bottle cast.
- M The interpolated values at this depth are based on observed values from more than one cast (casts were "mixed").
- See WA (wire angle) or E(T), (Temperature interpolation error) for the meaning of dashes in these or other columns.
- * Indicates a questionable value. See page 5.

Codes Used for Reporting Observations

Taken from U. S. Navy Hydrographic Office Publication No. 606-C, "Hydrographic Office Observers Manual, Bathythermograph Observations" and U. S. Navy Hydrographic Office Publication No. 607, "Instruction Manual for Oceanographic Observations".

Cloud Type

Code

- | | |
|---|---|
| 0 | Stratus or fractostratus |
| 1 | Cirrus |
| 2 | Cirrostratus |
| 3 | Cirrocumulus |
| 4 | Alto cumulus |
| 5 | Altostratus |
| 6 | Strato cumulus |
| 7 | Nimbostratus |
| 8 | Cumulus or fractocumulus |
| 9 | Cumulonimbus |
| X | Cloud not visible owing to darkness, fog, duststorm, sandstorm, or other analogous phenomena. |

Amount of Cloud Cover (WMO Code 60)

Code

0	No clouds
1	Less than 1/10, or 1/10
2	2/10 and 3/10
3	4/10
4	5/10
5	6/10
6	7/10 and 8/10
7	9/10 and 9/10 plus
8	10/10
9	Sky obscured

Visibility

Code	Description	Objects not visible at:
0	Dense fog	50 yards
1	Thick fog	200 yards
2	Fog	400 yards
3	Moderate fog	1000 yards
4	Thin fog or mist	1 mile
5	Visibility poor	2 miles
6	Visibility moderate	5 miles
7	Visibility good	10 miles
8	Visibility very good	30 miles
9	Visibility excellent	over 30 miles

Direction (Compass Direction from which Wind, Sea, or Swell is coming)

Code

00	Calm, or no value
01 to 36	Each value represents 1/10 of the true direction in degrees, measured clockwise from the north, with 36 representing true north.

State of Sea - Wind Waves (WMO Code 75)

Code	Description	Height (Feet)
0	Calm (Glassy)	0
1	Calm (Rippled)	0 - 1/3
2	Smooth (Wavelets)	1/3 - 1 2/3
3	Slight	1 2/3 - 4
4	Moderate	4 - 8
5	Rough	8 - 13
6	Very Rough	13 - 20
7	High	20 - 30
8	Very High	30 - 45
9	Phenomenal	over 45

Note: The bounding height is to be assigned to the lower code, that is, a height of 4 feet is coded as 3.

NUMERICAL WEATHER CODES—PRESENT WEATHER

00	Cloud development NOT observed or NOT visible during past hour.	01	Clouds generally clearing or becoming less dense during past hour.	02	State of sky on the ground unchanged during past hour.	03	Clouds generally clearing during past hour.	04	Visibility reduced by smog.	05	Mist.	06	Reduction in visibility due to dust or sand raised by wind, at time of observation.	07	Dust or sand raised by wind, at time of observation.	08	Well developed dust devil(s) within past hour.	09	Duststorm or sand storm within sight of or at station during past hour.																				
10	Light fog.	11	Patches of shallow fog at intervals, but less than 5 feet on level on land.	12	Shallow fog on level on land.	13	Lightning visible, no thunder heard.	14	Precipitation within sight but NOT reaching the ground.	15	Precipitation within sight, reaching the ground, but distant from station.	16	Precipitation within sight, reaching the ground, near to but distant from station.	17	Thunder heard, but no precipitation at the time of observation.	18	Squall(s) within sight during past hour.	19	Funnel cloud(s) with or without rain in sight during past hour.																				
20	Drizzle (NOT freezing rain) or rain (NOT freezing rain) during past hour, but NOT at time of observation.	21	Light (NOT freezing rain) or moderate (NOT freezing rain) rain during past hour, but NOT at time of observation.	22	Shower (NOT freezing rain) or heavy shower (NOT freezing rain) during past hour, but NOT at time of observation.	23	Rain or shower (NOT freezing rain) during past hour, but NOT at time of observation.	24	Freezing drizzle or freezing rain (NOT freezing rain) during past hour, but NOT at time of observation.	25	Showers of rain during past hour, but NOT at time of observation.	26	Showers of snow, or rain and snow, during past hour, but NOT at time of observation.	27	Showers of hail, or of rain and hail, during past hour, but NOT at time of observation.	28	Fog during past hour, but NOT at time of observation.	29	Thunderstorm (with or without rain or hail) during past hour, but NOT at time of observation.	30	Slight or moderate duststorm or sandstorm during past hour, but NOT at time of observation.	31	Slight or moderate duststorm or sandstorm during past hour, but NOT at time of observation.	32	Slight or moderate duststorm or sandstorm during past hour, but NOT at time of observation.	33	Severe duststorm or sandstorm, has increased during past hour.	34	Severe duststorm or sandstorm, has decreased during past hour.	35	Severe duststorm or sandstorm, generally steady during past hour.	36	Slight or moderate duststorm or sandstorm, generally steady during past hour.	37	Heavy drifting snow, generally low.	38	Slight or moderate drifting snow, generally high.	39	Heavy drifting snow, generally high.
40	Fog at distance at time of observation, but NOT at station during past hour.	41	Fog in patches.	42	Fog, sky observable, has become thicker during past hour.	43	Fog, sky NOT discernible, has become thicker during past hour.	44	Fog, sky discernible, no appreciable change during past hour.	45	Fog, sky NOT discernible, no appreciable change during past hour.	46	Fog, sky discernible, has begun or become thicker during past hour.	47	Fog, sky NOT discernible, has begun or become thicker during past hour.	48	Fog, dissipating, sky not discernible.	49	Fog, dissipating, sky not discernible.	50	Intermittent drizzle (NOT freezing rain) or intermittent rain (NOT freezing rain) during past hour, but NOT at time of observation.	51	Continuous drizzle (NOT freezing rain) or continuous rain (NOT freezing rain) during past hour, but NOT at time of observation.	52	Intermittent drizzle (NOT freezing rain) or intermittent rain (NOT freezing rain) at time of observation.	53	Continuous drizzle (NOT freezing rain) or continuous rain (NOT freezing rain) at time of observation.	54	Intermittent drizzle (NOT freezing rain) or intermittent rain (NOT freezing rain) at time of observation.	55	Continuous drizzle (NOT freezing rain) or continuous rain (NOT freezing rain) at time of observation.	56	Slight freezing drizzle.	57	Moderate or heavy freezing drizzle.	58	Drizzle and rain, slight.	59	Drizzle and rain, moderate or heavy.
60	Intermittent rain (NOT freezing rain) or intermittent snow (NOT freezing rain) during past hour, but NOT at time of observation.	61	Continuous rain (NOT freezing rain) or continuous snow (NOT freezing rain) during past hour, but NOT at time of observation.	62	Intermittent rain (NOT freezing rain) or intermittent snow (NOT freezing rain) at time of observation.	63	Continuous rain (NOT freezing rain) or continuous snow (NOT freezing rain) at time of observation.	64	Intermittent rain (NOT freezing rain) or intermittent snow (NOT freezing rain) at time of observation.	65	Continuous rain (NOT freezing rain) or continuous snow (NOT freezing rain) at time of observation.	66	Slight freezing rain.	67	Moderate or heavy freezing rain.	68	Rain or drizzle and snow, slight.	69	Rain or drizzle and snow, moderate or heavy.	70	Intermittent fall of ice pellets (sleet) or intermittent snow (with or without U. S. definition) during past hour, but NOT at time of observation.	71	Continuous fall of ice pellets (sleet) or continuous snow (with or without U. S. definition) during past hour, but NOT at time of observation.	72	Intermittent fall of ice pellets (sleet) or intermittent snow (with or without U. S. definition) at time of observation.	73	Continuous fall of ice pellets (sleet) or continuous snow (with or without U. S. definition) at time of observation.	74	Intermittent fall of ice needles (with or without U. S. definition) at time of observation.	75	Continuous fall of ice needles (with or without U. S. definition) at time of observation.	76	Ice needles (with or without U. S. definition).	77	Granular snow (with or without U. S. definition).	78	Isolated starlike snow crystals (with or without U. S. definition).	79	Ice pellets (sleet).
80	Slight rain shower(s).	81	Moderate or heavy rain shower(s).	82	Violent rain shower(s).	83	Slight shower(s) of rain and snow mixed.	84	Moderate or heavy shower(s) of rain and snow mixed.	85	Slight snow shower(s).	86	Moderate or heavy snow shower(s).	87	Slight shower(s) of hail, with or without rain or snow mixed, not associated with thunder.	88	Moderate or heavy shower(s) of hail, with or without rain or snow mixed, not associated with thunder.	89	Slight shower(s) of hail, with or without rain or snow mixed, not associated with thunder.	90	Moderate or heavy rain or snow with or without rain or snow mixed, not associated with thunder.	91	Slight rain or snow with or without rain or snow mixed, not associated with thunder.	92	Moderate or heavy rain or snow with or without rain or snow mixed, not associated with thunder.	93	Slight snow or rain shower(s) of rain and snow mixed, not associated with thunder.	94	Mod. or heavy snow or rain and snow mixed, not associated with thunder.	95	Slight or mod. thunderstorm, with hail at time of observation, but NOT at time of observation.	96	Slight or moderate thunderstorm, with hail at time of observation, but NOT at time of observation.	97	Heavy thunderstorm, with hail at time of observation, but NOT at time of observation.	98	Thunderstorm, with hail at time of observation, but NOT at time of observation.	99	Heavy thunderstorm with hail at time of observation.

Swell Conditions

Code	Approx. Height in Feet	Description		Approx. Length in Feet
0	0	No swell		0
1 2	1 - 6	Low swell	Short or average Long	0 - 600 Above 600
3 4 5	6 - 12	Moderate	Short Average Long	0 - 300 300 - 600 Above 600
6 7 8	Greater than 12	High	Short Average Long	0 - 300 300 - 600 Above 600
9	---	Confused		

Bottom Type

Code	
0	Not otherwise specified
1	Mud or ooze
2	Sand and mud
3	Sand
4	Sand with shells and/or gravel
5	Shells
6	Gravel
7	Rock
8	Coral
9	Stone
