TOXIC HAZARDS ASSOCIATED WITH PYROTECHNIC ITEMS

INTRODUCTION

This publication presents a compilation of the toxicity characteristics of all pyrotechnic compositions in Fleet use. Also presented are those compositions under development by the Department of Defense for Naval use. The publication provides data concerning the degree of injury imposed when Naval personnel are exposed to toxic chemical ingredients, hazardous residues, and resultant products from burning pyrotechnic compositions.

The first phase of this program is concerned with the tabulation of the toxic characteristics of all chemical ingredients used in Navy compositions. In this work, standard texts, reports and any source of reliable data are used to gather the required information. The second phase of the study presents, for each pyrotechnic item, an estimation of the possible toxic effects from the unburned composition and from the products or residues of the pyrotechnic reaction.

DEFINITION OF TERMS

The toxicity hazard for any material is dependent on two factors, namely, (1) the basic toxicity of the material, and (2) the manner in which it is used or handled, or in other words, the exposure. The "toxicity"

of a substance describes or defines the ability of that substance to cause damage to the human body. This always involves the difficult problem of determining the degree of physiological impairment produced by the material. Considering the facts that (1) the physiological response may vary significantly, and (2) that toxicity ratings are usually derived from laboratory animals, the lack of a precise, quantitative method for defining the toxicity of a material is not surprising.

In compiling toxicity data on pyrotechnic materials, the system of toxicant classification used in "Dangerous Properties of Industrial Materials," by N. Irving Sax has been adopted. In this text, the following terms are defined.

ACUTE. Exposure of short duration; as applied to materials which are inhaled or absorbed through the skin, it refers to a single exposure lasting seconds, or hours; as applied to materials which are ingested, it refers generally to a single quantity or dose.

CHRONIC. In contrast to acute; exposures of long duration; for inhalation or absorption through the skin, it refers to prolonged or repeated exposure measured in days,

months or years; for ingested material, it refers to repeated doses over a period of days, months or years.

LOCAL. Refers to the site of action of an agent and means that the action takes place on the skin, mucous membranes of the eyes, nose, mouth, throat, or anywhere along the respiratory or gastrointestinal system. Absorption may or may not occur.

SYSTEMIC. Refers to a site of action other than the point of contact and presupposes that absorption has occurred. It is possible, however, for a toxic agent to produce its effects through "local" action and at the same time, through "systemic" action upon the area of original contact.

ABSORPTION. Implies that a material has entered into the blood stream and is thus distributed throughout the body.

GENERAL

The toxicity of a given material, as shown in Table 1, is considered according to its local or systemic effect in acute or chronic exposure. Under each type of exposure, columns are provided to indicate the principal modes through which the agent acts. The numbers in the table indicate the severity of the toxic effect. Zero indicates that the material causes no harm under any condition of use or may cause harm only under the most unusual conditions or by overwhelming dosage. The number, 1, indicates slight toxicity such that any effects are temporary and will disappear following termination of exposure, with or without medical treatment. A rating of 2 indicates moderate toxicity and is applied to those sub-

stances which may produce irreversible, as well as reversible, changes in the human body. These effects are not of such severity as to threaten life or produce serious permanent physical impairment. A rating of 3 indicates severe toxicity and is applied to those materials which threaten life or cause serious permanent physical impairment or disfigurement. A blank space in the table indicates that the toxic characteristics of the materials are unknown or not available. The solubility column indicates the water solubility of the material, "S" meaning moderately soluble to quite soluble and "i" meaning not soluble to an appreciable extent. "R" indicates that the material reacts with water.

In this OP, the composition for each pyrotechnic item is listed in percent or in parts by weight and an estimate of the toxic hazard is presented. This estimate is given for each ingredient in the composition on the basis of the amount present and the basic toxicity of the ingredient. It is impossible to foresee what the exposure may be in the event of breakage or spillage of the pyrotechnic composition. The estimate of toxic hazard therefore must be conditioned by the assumption that a maximum "normal" exposure may occur, and that "abnormal" exposures of the type resulting from deliberate or accidental ingestion of large quantities are excluded.

Information on the hazards which may exist from the toxic effects of the products of combustion is also present for each composition. In this case, the nature and relative amount of products or residues are estimated from the chemistry of the combustion reactions. The amounts of a particular product may differ

with different signals due to different proportions of the ingredient in the composition. For this reason, the estimate of toxic hazard for a particular product may vary with the initial concentration of the ingredient giving rise to the product. The scope of the present program did not permit experimental verification of these products and in some cases, particularly with the smokes, there may be a variety of dye decomposition products which cannot be readily identified. However, it should be assumed that any concentration of material in the air sufficient to produce a smoke will produce, at the very least, some undesirable physiological effects on the respiratory system and exposure should be minimized as far as possible.

The notes on disposal of damaged items or remains from burned items are intended to point out the hazards which may exist from handling highly toxic, corrosive, or spontaneously flammable materials. It must be remembered, however, that pyrotechnic compositions themselves may be explosive under some conditions and that many items are assembled with primers or other explosive components. Consequently, the disposal procedures prescribed in OP 5 and OP 2213 must be observed. These instructions constitute the normal routine procedures for disposal of pyrotechnic items.

ANIMAL TESTS

In order to obtain information on the toxicological characteristics of combustion products from pyrotechnic compositions, a program of animal tests was initiated with the Army Chemical Warfare Laboratories at the Army Chemical Center, Maryland. The results of this work were presented in CWL Technical Memorandum

26 - 12 May 1960. Some of the conclusions from these tests are discussed herein.

Rats, guinea pigs, and mice were given single one-hour exposure to various concentrations of combustion products from smokes and flares. The compositions used in the animal tests are listed in Table 2. The animals were observed for toxic signs, weight changes, and mortality during a seven-day post exposure period. Surviving animals were sacrificed after three to four weeks for pathological examination. During the exposure, the air in the chambers was analyzed for particulate matter, carbon dioxide, carbon monoxide, and oxygen.

Results from the animal exposure tests indicate that at the minimum exposure, i.e., about 100 grams in a 20,000-liter chamber, the most toxic were the red phosphorus composition and the Navy Blue Light. Among the smokes, the Yellow Smoke caused the greatest mortality and the severest toxic symptoms and should be considered the most harmful. Since the composition of the combustion products is not completely known and the physiological effects produced may be due to several individual agents acting simultaneously or to unsuspected synergistic phenomena, it is difficult to define the toxicity of these systems in a quantitative manner.

Some estimate of the possible toxic effects may be had through the following considerations. If it is assumed that the 100-gram charge in the 20,000-liter chamber results in 50 percent mortality in the guinea pigs, it might be assumed that the lethal amount of toxic agent was approximately in the range of 50- to 500-mg/kg. Using a figure of

100 mg/kg, the LD₅₀ for a 170-pound man would be 7.7 grams. If a 100-gram charge burning in a 10-foot x 20-foot x 10-foot room resulted in the uniform dispersion of 50 grams of the toxic materials and if the breathing rate is 0.5-liter per second, it would require at least 4.8 hours to receive the LD₅₀. If 500 grams were

burned in the room, with the same assumptions, the LD₅₀ might be received in about one hour. Of course, under actual conditions of exposure combative actions would usually be taken to minimize the extent of exposure and adverse physiological effects could be prevented.

Sulfur	5.0	None
Castor oil	2.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazards</u>
Barium oxide	Solid	Moderately severe if ingested or inhaled
Aluminum oxide	Solid	Very slight if inhaled
Sulfur dioxide	Gas	Very slight
Nitrogen dioxide	Gas	Moderately severe if inhaled
Nitrogen	Gas	None

Disposal: Normal routine disposal.

OP 2793

AIRCRAFT FLOAT LIGHT, MK 2, MK 3, MK 6 AND MODS

<u>Composition</u>		<u>Toxic Hazard</u>
Phosphorus, red	50.0	Moderately severe if ingested or inhaled
Manganese dioxide	34.0	Moderately severe if ingested or inhaled
Zinc oxide	3.0	None
Magnesium powder	7.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Phosphorus, red	Solid	Slight
Phosphorus, white	Solid	Highly toxic if ingested or absorbed; only small amounts formed but may re-ignite spontaneously
Phosphorus pentoxide	Solid	Moderately severe as caustic irritant to skin and mucous membranes
Manganous oxide	Solid	Slight
Manganese	Solid	Slight
Zinc oxide	Solid	None

Disposal: Any items which are damaged or any remains after accidental burning should be disposed of by sinking at sea or by thorough incineration. Avoid handling such items with bare hands. Any damaged or partially burned signals must be stored in metal fireproof cans until final disposition.

OP 2793

AIRCRAFT PARACHUTE FLARE, MK 5 MOD 9

<u>Composition</u>		<u>Toxic Hazard</u>
Barium nitrate	43.0	Moderately severe if ingested or inhaled
Magnesium powder	36.0	Slight temporary if inhaled or received through the skin
Sodium oxalate	12.5	Moderately severe if ingested or inhaled
Aluminum flakes	4.0	Very slight, if inhaled
Paraffin wax	2.5	None
Castor oil	1.0	None
Linseed oil	1.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Barium oxide	Solid	Moderately severe if ingested or inhaled
Magnesium oxide	Solid	Slight, if fresh fumes are inhaled
Sodium hydroxide	Solid	Very slight local corrosive effect on skin or mucous membranes
Aluminum oxide	Solid	Very slight if inhaled
Nitrogen	Gas	None
Nitrogen dioxide	Gas	Moderately severe if inhaled
Carbon dioxide	Gas	None

Disposal: Normal routine disposal

AIRCRAFT PARACHUTE FLARE, MK 5 MOD 10

<u>Composition</u>		<u>Toxic Hazard</u>
Barium nitrate	21.0	Moderately severe if ingested or inhaled
Sodium nitrate	21.0	Moderately severe if ingested or inhaled
Sodium oxalate	5.0	Moderately severe if ingested or inhaled
Magnesium powder	48.0	Slight temporary if inhaled or received through the skin
Paraffin wax	3.0	None
Castor oil	1.0	None
Linseed oil	1.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Magnesium oxide	Solid	Slight if fresh fumes are inhaled
Barium oxide	Solid	Moderately severe if ingested or inhaled
Sodium hydroxide	Solid	Very slight local corrosive effect on skin or mucous membranes
Carbon dioxide	Gas	None
Nitrogen dioxide	Gas	Moderately severe if inhaled
Nitrogen	Gas	None

Disposal: Normal routine disposal

AIRCRAFT PARACHUTE FLARE, MK 6 MOD 6

<u>Composition</u>		<u>Toxic Hazard</u>
Barium nitrate	41.5	Moderately severe if ingested or inhaled
Sodium oxalate	10.0	Moderately severe if ingested or inhaled
Aluminum powder	5.5	Very slight, if inhaled
Magnesium powder	38.5	Slight temporary if inhaled or received through the skin
Paraffin wax	2.5	None
Castor oil	1.0	None
Linseed oil	1.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>

Sulfur	5.0	None
Castor oil	3.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Barium oxide	Solid	Moderately severe if ingested or inhaled
Sodium hydroxide	Solid	Very slight corrosive effect on skin or mucous membranes
Aluminum oxide	Solid	Very slight if inhaled
Magnesium oxide	Solid	Slight if fresh fumes are inhaled
Sulfur dioxide	Gas	Slight
Carbon dioxide	Gas	None
Nitrogen dioxide	Gas	Moderately severe if inhaled
Nitrogen	Gas	None

Disposal: Normal routine disposal

OP 2793

FLOAT SMOKE, MK 1
(WHITE SMOKE)

<u>Composition</u>		<u>Toxic Hazard</u>
Hexachloroethane	46.5	Moderately severe if ingested or inhaled
Zinc dust	38.3	Moderately severe if ingested or inhaled
Ammonium perchlorate	6.1	Moderately severe if ingested or inhaled
Calcium chlorate	3.0	Slight
Ammonium chloride	6.1	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Zinc chloride	Solid	Severe if ingested or inhaled
Zinc oxide	Solid	Inhalation of fresh fumes may be hazardous
Ammonia	Gas	Slight
Nitrogen	Gas	None
Hydrogen chloride	Gas	Slight irritant effect on skin or mucous membranes
Carbon dioxide	Gas	None

Disposal: Normal routine disposal

IGNITER COMPOSITION, 6-6-6

<u>Composition</u>	<u>Parts/ Weight</u>	<u>Toxic Hazard</u>
Lead peroxide	6	Moderately severe if ingested or inhaled
Cupric oxide	6	Moderately severe if ingested or inhaled
Silicon, fused	6	Moderately severe if ingested or inhaled

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Lead silicate	Solid	Slight if inhaled
Copper silicate	Solid	Slight if inhaled

Disposal: Normal routine disposal

IGNITER COMPOSITION, 6-6-8

<u>Composition</u>	<u>Parts/ Weight</u>	<u>Toxic Hazard</u>
Lead peroxide	6	Moderately severe if ingested or inhaled
Cupric oxide	6	Moderately severe if ingested or inhaled
Silicon, fused	8	Moderately severe if ingested or inhaled

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Lead silicate	Solid	Slight if inhaled
Copper silicate	Solid	Slight if inhaled

Disposal: Normal routine disposal

ILLUMINATING HAND GRENADE, MK 1

<u>Composition</u>		<u>Toxic Hazard</u>
Barium nitrate	42.0	Moderately severe if ingested or inhaled
Sodium oxalate	10.0	Moderately severe if ingested or inhaled
Aluminum powder	3.5	Very slight if inhaled
Aluminum grain	15.5	Very slight if inhaled
Sulfur	5.0	None
Castor oil	2.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Barium oxide	Solid	Moderately severe if ingested or inhaled
Sodium hydroxide	Solid	Very slight corrosive effect on the skin and mucous membranes
Aluminum oxide	Solid	Very slight if inhaled
Sulfur dioxide	Gas	Slight
Carbon dioxide	Gas	None

OP 2793

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Nitrogen dioxide	Gas	Moderately severe if inhaled
Nitrogen	Gas	None

Disposal: Normal routine disposal

ILLUMINATING PROJECTILE LOAD MK 12 MOD 0 (3"/50)

<u>Composition</u>		<u>Toxic Hazard</u>
Barium nitrate	53.0	Moderately severe if ingested or inhaled
Magnesium powder	35.0	Slight if inhaled or received through the skin
Aluminum flakes	2.0	None
Paraffin wax	7.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Barium oxide	Solid	Moderately severe if ingested or inhaled
Magnesium oxide	Solid	Slight if fresh fumes are inhaled
Nitrogen dioxide	Gas	Moderately severe if inhaled
Nitrogen	Gas	None

Disposal: Normal routine disposal

JET ENGINE IGNITER, MK 243 MOD 1

<u>Composition</u>		<u>Toxic Hazard</u>
Sodium nitrate	65.0	Moderately severe if ingested or inhaled
Magnesium	25.0	Slight if inhaled or received through the skin
Shellac	10.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Sodium hydroxide	Solid	Moderately severe corrosive effect on skin and mucous membranes
Magnesium oxide	Solid	Slight if fresh fumes are inhaled

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Nitrogen	Gas	None
Carbon dioxide	Gas	None
Nitrogen dioxide	Gas	Moderately severe if inhaled

Disposal: Normal routine disposal

LOCATION MARKER KIT, MK 19 MOD 0

<u>Composition</u>		<u>Toxic Hazard</u>
Yellow dye, Mil-D-50029	15	
Auramine hydrochloride	10	Moderately severe if ingested or inhaled
Benzanthrone	13	Moderately severe if ingested or inhaled
Methylaminoanthraquinone	10	Slight
Potassium chlorate	24	Moderately severe if ingested or inhaled
Sugar	20	None
Sodium bicarbonate	5	None
Sil-o-cel	5	None
8% solution of camphorated nitrocellulose in acetone	5	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Yellow dye	Solid	
Auramine hydrochloride	Solid	Moderately severe if ingested or inhaled
Benzanthrone	Solid	Moderately severe if ingested or inhaled
Methylaminoanthraquinone	Solid	Slight
Potassium chloride	Solid	Slight
Sodium carbonate	Solid	None
Carbon dioxide	Gas	None

Disposal: Normal routine disposal

Disposal: Any items which are damaged or any remains after accidental burning should be disposed of by sinking at sea or by burial in an area suitable for such disposition. Avoid handling such items with bare hands. Any damaged or burned, or partially burned signals must be stored in metal fireproof cans until final disposition. Since the signal contains an explosive charge, in addition to phosphorus, disposition by incineration should not be attempted unless a suitable barricaded burning pit is available.

CP 2793

PRACTICE BOMB SIGNAL, MK 4 MOD 4

<u>Composition</u>		<u>Toxic Hazard</u>
Zinc oxide	100	Slight if ingested or inhaled

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Zinc oxide	Solid	Slight if ingested or inhaled

Disposal: No special problems of corrosive or toxic substances but the cartridge contains an explosive charge and must be handled according to appropriate instructions for explosive loaded items.

PRACTICE BOMB SIGNAL, MK 5

<u>Composition</u>		<u>Toxic Hazard</u>
Uranine	100	Toxicity not fully known, but hazard is probably slight

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Uranine	Dye	Toxicity not fully known, but hazard is probably slight

Disposal: Defective or damaged signals may be disposed of by dumping or burning.

SINGLE STAR SIGNAL, MK 5
(GREEN FLARE)

<u>Composition</u>		<u>Toxic Hazard</u>
Barium chlorate	86.0	Severe if ingested or inhaled
Shellac	11.0	None
Rosin	2.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Barium chloride	Solid	Moderately severe if ingested or inhaled
Carbon dioxide	Gas	None

Disposal: Normal routine disposal

SINGLE STAR SIGNAL, MK 5
(RED FLARE)

<u>Composition</u>		<u>Toxic Hazard</u>
Potassium chlorate	63.0	Moderately severe if ingested or inhaled
Strontium nitrate	19.5	Moderately severe if ingested or inhaled
Shellac	15.5	None
Rosin	2.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Potassium chloride	Solid	Slight
Strontium oxide	Solid	Slight
Carbon dioxide	Gas	None
Nitrogen dioxide	Gas	Moderately severe if inhaled
Nitrogen	Gas	None

Disposal: Normal routine disposal

SINGLE STAR SIGNAL, MK 5
(YELLOW FLARE)

<u>Composition</u>		<u>Toxic Hazard</u>
Barium nitrate	64.0	Moderately severe if ingested or inhaled
Potassium perchlorate	12.0	Moderately severe if ingested or inhaled
Aluminum powder	19.0	Slight if inhaled
Sulfur	5.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Barium oxide	Solid	Moderately severe if ingested or inhaled
Barium chloride	Solid	Moderately severe if ingested or inhaled

OP 2793

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Potassium chloride	Solid	Slight
Aluminum oxide	Solid	Slight if inhaled
Sulfur dioxide	Gas	Slight
Nitrogen dioxide	Gas	Moderately severe if inhaled
Nitrogen	Gas	None

Disposal: Normal routine disposal

Magnesium oxide	Solid	Slight if fresh fumes are inhaled
Strontium oxide	Solid	Slight
Magnesium chloride	Solid	None
Potassium carbonate	Solid	Slight
Carbon dioxide	Gas	None
Nitrogen	Gas	None
Nitrogen dioxide	Gas	Moderately severe if inhaled

Disposal: Normal routine disposal

TRACKING FLARE, MK 25 MOD 0

<u>Composition</u>		<u>Toxic Hazard</u>
Sodium nitrate	35	Moderately severe if ingested or inhaled
Magnesium	35	Slight if inhaled or received through the skin
Hexachlorobenzene	10	Severe if ingested or inhaled
Potassium nitrate	15	Moderately severe if ingested or inhaled
Binder (rosin)	5	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Sodium hydroxide	Solid	Moderately severe if ingested or inhaled - corrosive effect on skin or mucous membranes
Magnesium oxide	Solid	Slight if fresh fumes are inhaled
Sodium chloride	Solid	None
Potassium chloride	Solid	Slight
Carbon dioxide	Gas	None
Nitrogen	Gas	None
Nitrogen dioxide	Gas	Moderately severe if inhaled

Disposal: Normal routine disposal

TRACKING FLARE, MK 27 MOD 0

<u>Composition</u>		<u>Toxic Hazard</u>
<u>Ignition Comp. (14 gm)</u>		
Barium chromate	85.5	Moderately severe if ingested or inhaled
Boron	9.5	Moderately severe if ingested or inhaled
Calcium stearate	5.0	None
<u>First Fire Comp. (10 gm)</u>		
Barium peroxide	42.5	Moderately severe if ingested or inhaled
Magnesium	5.0	Slight
Aluminum	2.5	None
Black powder	50.0	Slight
<u>Low Intensity Flare Comp. (75 gm)</u>		
Strontium nitrate	27.5	Moderately severe if ingested or inhaled
Magnesium	39.0	Slight if inhaled or received through the skin
Hexachlorobenzene	10.0	Moderately severe if ingested or inhaled
Potassium nitrate	18.5	Moderately severe if ingested or inhaled
Laminac-Lupersol	5.0	Slight
DDM		
<u>High Intensity Flare Comp. (270 gm)</u>		
Strontium nitrate	22.5	Moderately severe if ingested or inhaled
Sodium nitrate	22.5	Moderately severe if ingested or inhaled
Magnesium	50.0	Slight if inhaled or received through the skin
Laminac-Lupersol	5.0	Slight
DDM		

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Barium oxide	Solid	Moderately severe if ingested or inhaled
Boron oxide	Solid	Moderately severe if ingested or inhaled
Chronic oxide	Solid	Moderately severe if ingested or inhaled
Magnesium oxide	Solid	Slight if fresh fumes are inhaled
Strontium oxide	Solid	Slight
Potassium hydroxide	Solid	Moderately severe corrosive action on skin and mucous membranes
Sodium hydroxide	Solid	Moderately severe corrosive action on skin and mucous membranes
Carbon dioxide	Gas	None

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Nitric oxide	Gas	Moderately severe if ingested or inhaled
Nitrogen	Gas	None

Disposal: Normal routine disposal

TRACKING FLARE, MK 29 MOD 0

<u>Component</u>	<u>Percentage</u>	<u>Toxic Hazard</u>
<u>Fume Mixture (3-4)</u>		
Barium chromate	90	Moderately severe if ingested or inhaled
Boron	10	Moderately severe if ingested or inhaled
<u>First Fire Comp.</u>		
Magnesium	40	Slight if inhaled or received through the skin
Barium chromate	60	Moderately severe if ingested or inhaled
Vistanex L-100	3	None
<u>Fluorinant Comp. (100 g)</u>		
Sodium nitrate	37	Moderately severe if ingested or inhaled
Magnesium	58	Slight if inhaled or received through the skin
Vistanex L-100	5	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Barium oxide	Solid	Moderately severe if ingested or inhaled
Boric oxide	Solid	Moderately severe if ingested or inhaled
Magnesium oxide	Solid	Slight, if fresh fumes are inhaled
Chromium oxide	Solid	Moderately severe if ingested or inhaled
Sodium hydroxide	Solid	Moderately severe corrosive action on skin and mucous membranes
Carbon dioxide	Gas	None
Nitrogen	Gas	None
Nitric oxide	Gas	Moderately severe if inhaled

Disposal: Normal routine disposal

OP 2793

TRIP WIRE FLARE, MK 1 MOD 0

<u>Composition</u>		<u>Toxic Hazard</u>
Barium nitrate	64.0	Moderately severe if ingested or inhaled
Sodium oxalate	10.0	Moderately severe if ingested or inhaled
Aluminum, grain	15.5	Very slight if inhaled
Aluminum, powder	3.5	Very slight if inhaled
Sulfur	5.0	None
Castor oil	2.0	None

Probable Principal Products or Residues

<u>Material</u>	<u>State</u>	<u>Toxic Hazard</u>
Barium oxide	Solid	Moderately severe if ingested or inhaled
Sodium hydroxide	Solid	Very slight corrosive effect on skin or mucous membranes
Aluminum oxide	Solid	Very slight if inhaled
Sulfur dioxide	Gas	Slight
Carbon dioxide	Gas	None
Nitrogen dioxide	Gas	Moderately severe if inhaled
Nitrogen		None

Disposal: Normal routine disposal

OP 2793
