## FOREWORD

This document provides a record of resource allocations by both the US and the Republic of Vietnam (RVN) for the RVN Army, Regional Forces, and Popular Forces during FY68. It is the product of a study which represents the continuation of earlier studies on the cost of counterinsurgency land-combat operations in the RVN; these earlier studies are documented as noted.\*

The series of documents depicts the resource allocations in support of land-combat counterinsurgency operations over a period of 11 fiscal years and provides data inputs and planning factors for other studies on counterinsurgency operations involving aspects such as force-structure planning, cost-effectiveness analyses, and methods of estimating resource requirements for future comparable operations.

## ACKNOWLEDGMENTS

This study could not have been made without the unstinting cooperation of many officers and civilian employees at various US Army headquarters, particularly HQ US Military Assistance Command, Vietnam; HQ US Army, Pacific; and HQ US Army Materiel Command. A particular debt is owed to Mr. Earl W. Williamson of HQ US Army Materiel Command, who assisted in the search for data and shared his detailed knowledge of the problems of military assistance.

The study was reviewed by GEN Thomas T. Handy, USA (Ret), Mr. John T. Newman, and Mr. Charles A. Warner. Their comments were most helpful, but the responsibility for the contents of the study remains with the author.

The tables were prepared by Mrs. Irene E. Jacobs.

**Problem**

(U) To analyze the resource allocations in support of the Republic of Vietnam (RVN) Army, Regional Forces (RF), and Popular Forces (PF) for FY68 to determine sources and expenditures by amount and purpose, to derive planning factors, and to provide inputs to other studies on counterinsurgency operations.

(U) To illustrate historical trends in the resource allocations studied.

**Discussion**

(U) The principal sources of resources made available in FY68 for support of the forces studied were:

(a) Military assistance programs funded by the US Army. This source provided equipment, supplies, and services for the forces studied.

(b) US Army, Vietnam (USARV). This source provided some supplies to the RVN Army.

(c) US economic assistance programs under the auspices of the Agency for International Development (AID). This source generated funds (in piasters, RVN currency) for US support of the RVN defense budget.

(d) RVN defense budget. This source, made up of US financial support as previously mentioned and RVN funds, provided funds primarily for operating costs of the forces studied.

(U) The resources made available from the aforementioned sources are traced for each force studied by estimating the cost of pertinent activities such as provision of materiel and maintenance, construction and maintenance of facilities, training, and pay and allowances.

(U) FY68 was characterized by a sharp increase in the assigned strengths of each of the forces studied, particularly in the second half of the fiscal year. The delivery of materiel for the RVN Army during FY68 increased significantly over previous years as a result of the implementation of earlier programs for modernizing the RVN Army. The delivery of US military assistance materiel for the RF in FY68 was relatively unchanged over the previous year. The delivery of US military assistance materiel for the PF in FY68 declined, compared with previous years, probably because of completion of certain programs to improve the effectiveness of the PF.

## SUMMARY

### Conclusions

(U) Figure 1 shows the estimated total cost of the RVN Army, RF, and PF. The data in Fig. 1 and in the figures that follow are based on absolute costs with piaster expenditures converted to dollar equivalents at the legal rate existing when the applicable RVN defense budgets were approved. In the FY59-FY68 period the total combined expenditures for the three forces studied were the highest in FY68. Compared with earlier years, the increase was caused by the greater deliveries of US Military Assistance Service Funded (MASF) materiel for the RVN Army—primarily new weapons and equipment.

(U) The estimated costs shown in Fig. 1 are the sum of three inputs (a minor exception is discussed in Chap. 3): (1) US Army funds expended primarily in military assistance programs, (2) US support of the RVN defense budget (derived from operations of US economic assistance programs, and (3) RVN funds used for the RVN defense budget. Figure 2<sup>1</sup> shows the distribution of US financial resources in terms of the force supported and input sources. Figure 3 shows the distribution of RVN funds in the RVN defense budget for support of the RVN Army, RF, and PF.

(U) In FY68 the total US financial resources for support of the RVN Army, RF, and PF were the highest during the period FY59-FY68. The major cause was the increase in the magnitude of military assistance materiel discussed previously. At the same time, US support of the RVN defense budget, in terms of dollar equivalents, decreased to the lowest point during the period FY59-FY68.

(U) The amount of RVN funds used in FY68 for support of the RVN Army, RF, and PF, in terms of dollar equivalents, decreased slightly compared with FY66 and FY67. However, in terms of piasters, the FY68 funds for these forces were the highest in the period FY59-FY68. The distribution of RVN funds among the RVN Army, RF, and PF has been relatively stable for the period FY65-FY68.

(U) Figure 4 shows the average annual per capita (assigned strength) costs for support of the RVN Army, RF, and PF by major functional expenditures. Data on annual per capita costs in terms of input sources of funds are in Apps C and D. The total annual per capita cost for the RVN Army for FY68 rose sharply, as did the percentage for materiel and maintenance. This increase is due to the greatly increased deliveries of US MASF materiel in FY68. The increase in this support apparently more than compensated for the upsurge in assigned strength in the last half of FY68 and the piaster devaluation. The FY68 total annual per capita costs of the RF and PF were less than those in FY67 because of the relatively high proportion of devalued piaster expenditures for these forces and the increase in assigned strength in the second half of FY68.

## Chapter 1

### INTRODUCTION

#### PURPOSE

(U) The aim of this study is to analyze the resource allocations in support of RVN land-combat armed forces during FY68 to accomplish the following:

(a) Determine the resource allocations in support of the RVN Army, RF, and PF.

(b) Derive planning factors for estimating resource requirements for comparable future operations.

(c) Provide inputs to other studies such as force-structure planning for counterinsurgency land-combat operations, planning for stability operations, cost-effectiveness analyses of various aspects of counterinsurgency operations, and methods of estimating resource requirements for future counterinsurgency operations.

#### SCOPE

(U) This study provides estimates of past resource allocations and planning factors in terms of personnel, dollars, and materiel for the forces examined. The effectiveness or efficiency of these forces is not considered in this study. The interrelations among military and civilian programs in the RVN are examined only as necessary to develop the resources expended on the forces studied.

(U) This study is a continuation of comparable studies covering the period 1 July 1957-30 June 1967. References 2 to 4 list the documentation of these studies, and detailed background material contained in those documents is not repeated here except when necessary for clarity. Specific references to the earlier studies are made where deemed appropriate.

(U) As in previous years, there were many inconsistencies within the source documents examined in the course of this study. The data reported by the headquarters most probably having direct knowledge of the subject were used when inconsistencies were present. In a few instances there are minor inconsistencies in totals because of the varying rounding procedures used by different sources. Overall, the data presented in this study are

(U)

considered sufficiently reliable to warrant the use of the estimated resource allocations for the purposes stated.

#### METHODOLOGY

(U) The resources made available for each force studied are traced from each source by estimating the cost of pertinent activities such as provision of materiel and maintenance, construction and maintenance of facilities, training, and pay and allowances. The estimates derived for FY68 were used to calculate planning factors, such as annual per capita costs and ammunition expenditures, and to illustrate trends by comparison with the available data for FY66-FY67.

(U) The data in this report represent estimated actual annual deliveries of materiel and services, regardless of when programmed, and obligations of RVN defense budget funds. The time lag between actual deliveries resulting from previously approved programs cannot be readily determined from the available data. Further, actual deliveries do not fully reflect actual authorizations, but rather reflect the approved funding levels and the availability of materiel and services. No distinction has been made between investment costs (nonrecurring) and operating costs (recurring) as the source data do not always make these distinctions.

(U) Many of the data on resources pertinent to this study are available only in such an aggregated form that it was necessary to make allocations among the recipient forces. The major resource sources falling into this category are the funds provided through the RVN defense budget and materiel provided through the US military assistance programs. Appendix B describes the allocations made and the rationale.

(U) The planning factors given in this report have been developed for use as annual factors so that they will be compatible with the funding cycle. Many of the planning factors have been developed as per capita cost factors from the average annual strength (average of the monthly end strengths) for the applicable period. It is recognized that many of the costs are not solely functions of personnel strength. However, the forces studied have no aircraft or missiles and very little armor. For this reason most of the materiel is for support of personnel, and costs can therefore be considered personnel-dependent. The per capita planning factors of this paper are not designed for cost-effectiveness analysis of the subelements of the force structure, i.e., for comparison of maneuver battalions.

(U) All data presented are in terms of US fiscal years (1 July-30 June) unless otherwise indicated.

#### ASSUMPTIONS AND FACTORS

(U) Listed in the following paragraphs are the general assumptions used in this study, with explanatory material where required. Specific assumptions are stated in the appropriate chapter.

### Funding

(U) (a) All expenditures and deliveries of materiel within a calendar or fiscal year were made at a uniform rate.

(U) (b) The total costs of a construction project were incurred during the fiscal year in which construction started.

(U) (c) The costs of offshore school training were incurred during the fiscal year in which instruction started.

### Military Assistance Materiel

(U) (d) All military assistance materiel delivered in Vietnam in fulfillment of a program was assigned as programmed. (Undoubtedly there were changes between programmed and actual recipients. These changes are virtually impossible to trace, and any significant changes would probably be compensated for in subsequent programming, which includes consideration of the in-country assets.)

(U) (e) The cost of supply operations for US military assistance materiel delivered to Vietnam was 13 percent of the dollar value of the materiel delivered.\* Supply-operations costs include charges for transportation, packing, crating, handling, operation and maintenance of US depots, storage and maintenance, offshore procurement, and logistics management.

### RESOURCES

(U) The resources for support of RVN counterinsurgency land-combat operations during FY68 were derived from the following sources:

- (a) US Army appropriations
- (b) US economic assistance programs under the auspices of AID
- (c) RVN governmental appropriations (defense budget)
- (d) AID in-country programs
- (e) Other

(U) The flow of these resources to the RVN forces is shown schematically in Fig. 5.

### US Army

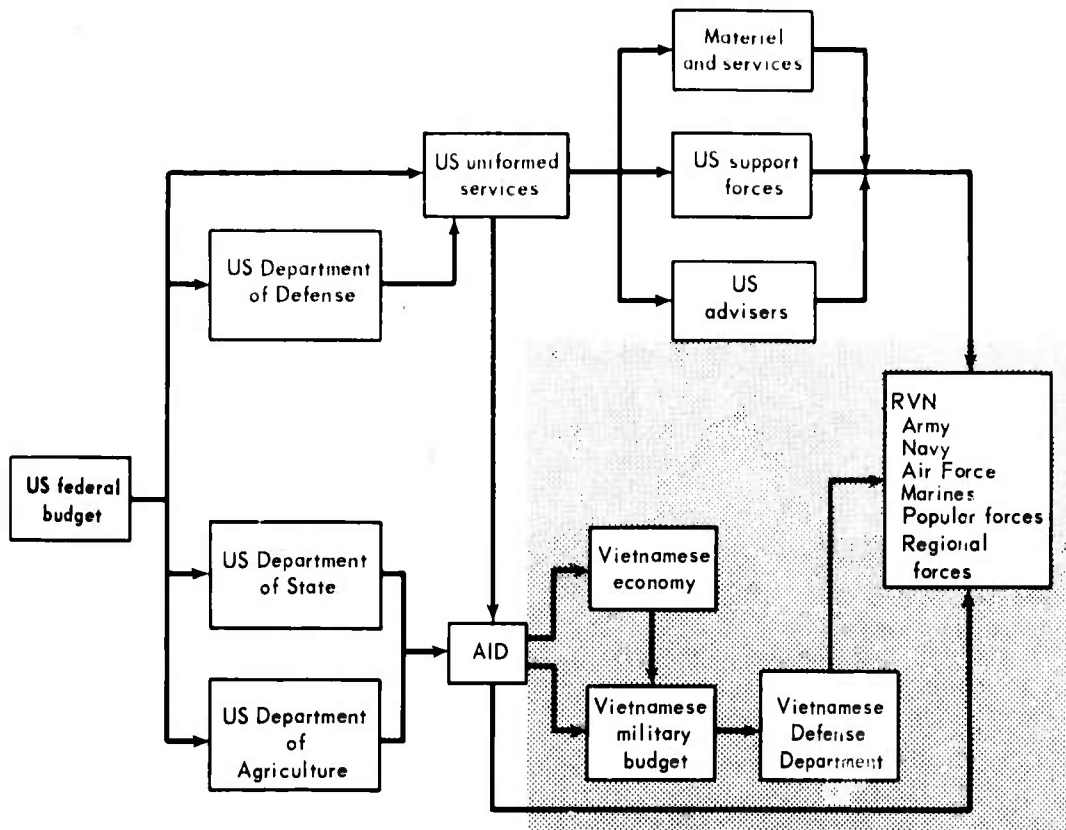

(U) The US Army is responsible for furnishing military assistance materiel and services, including funding, for support of the RVN Army, RF, and PF.<sup>5</sup> The US Army is also responsible for furnishing Army-type ammunition to all RVN Armed Forces (RVNAF). The funds for this military assistance are included in the US Army annual military functions appropriations [operation and maintenance, Army (OMA), procurement of equipment and missiles, Army (PEMA), military personnel, Army (MPA), and military construction, Army (MCA)]. The general procedures used for carrying out this responsibility are described in App A.

\*Based on estimates furnished by Department of Defense (DOD) personnel.

## US Economic Assistance Programs

(U) Defense-support funds for military-budget support of the RVN are made available through the economic assistance programs sponsored by AID. The major programs for furnishing economic aid to the RVN during FY68 were the Commercial Import and Food for Freedom (Peace) programs. These economic aid programs generate local-currency funds, usually known as counter-

(U)

Fig. 5—US Assistance to the RVN, FY68

part funds. The counterpart funds are used primarily to support the RVN defense budget and development projects. Descriptions of each of the assistance programs and the various counterpart funds are contained in App B of RAC-TP-232.<sup>3</sup>

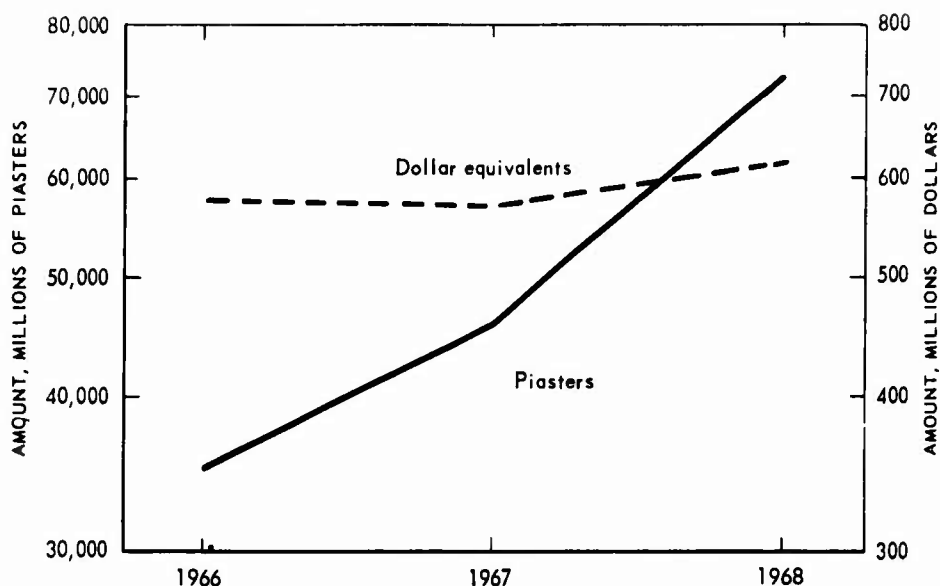

### RVN Defense Budget

(U) The defense budget of the RVN provides funds primarily for annual operating expenses and is prepared on a calendar-year basis, which is the RVN fiscal year (1 January–31 December). The defense budget covers the expenses of the RF and PF as well as the regular forces (RVN Army, Navy, Air Force, Marine Corps). The support furnished by the US Army, Navy, and Air Force is not included in the RVN defense budget.

# CONFIDENTIAL

(U) US support of the RVN defense budget comes from local currencies generated as a result of US economic assistance programs. The preparation and the execution of the RVN defense budget are closely monitored by the US Military Assistance Command, Vietnam (USMACV), and the budget is subject to approval by US authorities in Vietnam. Details on the development, preparation, and review of the budget are contained in RAC-TP-232<sup>3</sup> and a MACV handbook.<sup>9</sup> Detailed data on the RVN defense budgets for CY67 and CY68 are in App B.

(U) In this study on FY68 costs, piasters (the RVN monetary unit) have been converted to dollar equivalents at the effective rate of 118 piasters to \$1 U.S. The previous effective rate of exchange was 80 piasters to \$1 US. As a result of this change in exchange rate, the costs in terms of aggregated dollars and dollar equivalents appear to be lower than in previous fiscal years. This same situation occurred at different times in earlier years when the piaster was devalued in relation to the US dollar. Figure 6 shows the total RVN defense budget in piasters and dollar equivalents for CY66-CY68. The data in Fig. 6 include expenditures for other RVNAF as well as the RVN Army, RF, and PF. Budget data applicable to the RVN Army, RF, and PF and an explanation of the conversion into a US fiscal year basis are in App B.

(C) Fig. 6—Comparison of RVN Defense Budgets

## AID In-Country Programs

(C) AID conducts within the RVN a number of programs that are financed, by direction of the Secretary of Defense, by the US military services primarily through their operations and maintenance appropriations.<sup>7</sup> Of these programs, only one, conducted in FY68, contributed directly to the RVN forces studied by furnishing materials for a self-help construction project for housing for PF dependents. This project is discussed in more detail in Chap. 3.

Other

(U) In addition to the sources just described the RVN Army receives some materiel on an emergency or special basis from the in-country stocks of the USARV. Additionally, the RVNAF receive materiel unofficially from these stocks as a result of the efforts of US Army advisers to improve the status and capabilities of the units they are advising. There are no data to indicate the amount of this unofficial support furnished to the RVNAF.

Chapter 2

RVN ARMY

FORCE STRUCTURE

(C) During FY68 the RVN Army was expanded significantly in size, but only a few new units were added. It remained a conventional force built around 10 triangular infantry divisions with supporting nondivisional units. RVN infantry divisions normally have three infantry regiments, and most regiments have four infantry battalions. The major nondivisional combat elements of the

(U) Fig. 7—Assigned Strengths of Combat and Noncombat Units of the RVN Army on Various Dates

■ Noncombat units    ▨ Divisions    ▩ Nondivisional combat units

RVN Army are airborne, separate infantry, armored, and ranger units. Figure 7 shows the assigned strength of infantry divisions and other combat units relative to the total assigned strength of the RVN Army. Detailed data are in App C.

(U) Detailed data on the authorized force structure of the RVN Army are in App C. The latest available organizational charts with major equipment items of selected RVN Army units are in RAC-TP-333.<sup>1</sup> Many of these charts, although not superseded, are no longer current because of the introduction and wider issue of new items of equipment and weapons during FY68.

# CONFIDENTIAL

## STRENGTH

(U) The authorized and assigned strength of the RVN Army increased significantly in FY68. The greatest increase occurred in the second half of FY68 following the Communist Tet offensives. Figure 8 shows the monthly average and year-end assigned strengths for the period FY66-FY68. Detailed

(C) Fig. 8—RVN Army Monthly Average and Year-End Assigned Strengths, FY66-FY68

■ Monthly average  
▨ Year-end

data are in App C. The unprogrammed surge in assigned strength during the second half of FY68 tends to distort factors based on annual average per capita strength because many expenses lag the personnel increases, in particular, US materiel which is usually delivered a year after it has been programmed, has frequently arrived after the using personnel have been assigned.

(U) The RVN Army has been characterized by considerable personnel turnover. Detailed data on assigned strengths and personnel turnover are in App C.

## MATERIEL AND MAINTENANCE

(U) Most of the materiel for the RVN Army was furnished by the US through MASF (see App B). Some minor amounts of materiel are furnished from USARV stocks. All other materiel and maintenance costs of the RVN Army were met from the RVN defense budget to which the US made significant contributions using funds generated by the economic assistance programs described in Chap. 1. The major RVN expenditures for materiel and maintenance

(U)

have been for expendable materiel and pay and allowances of civilian employees. Figure 9 shows the estimated total expenditures for materiel and maintenance (exclusive of facilities) for the RVN Army for the period FY66-FY68. Detailed data are in App C. The data in Fig. 9 and the subsequent figures on materiel and maintenance in this chapter include some relatively small expenditures for the RF, PF, and other RVN elements, as explained in Chap. 1. Data on RVN Army inventories and densities of weapons and vehicles are in App C. Data on maintenance float and attrition factors are contained in a MACV report.<sup>h</sup>

(U) Figure 10 shows the estimated cost of major categories of materiel furnished by the US for the RVN Army for the period FY66-FY68. The increase in the expenditures for FY68 represents the deliveries to support the modernization and expansion of the RVN Army planned before FY68. For example, large numbers of the M16 rifle and the M60 machinegun were delivered. In FY68, unlike previous years, few weapons and little ammunition in excess of US needs were furnished. Little offshore depot maintenance was accomplished. Appendix C contains detailed data on specific items within each general category and their relation to the total cost, estimated average per capita costs, and allocations by functional grouping of RVN Army units and activities.

(U) The available data on materiel and maintenance costs funded through the RVN defense budget are based on technical services and do not permit separation of materiel and maintenance costs. Figure 11 shows the estimated materiel and maintenance costs for the RVN Army funded through the RVN defense budget for the period FY66-FY68. Detailed data, including extent of US support, are in App C.

#### CONSTRUCTION AND MAINTENANCE OF FACILITIES

(U) Figure 12 shows the estimated cost of construction and maintenance of facilities for the RVN Army. Detailed data are in App C. The data on construction are based on information furnished by HQ USMACV, Engineer Advisory Division, and not on the RVN defense budgets. The data on maintenance are based on the RVN defense budgets. The decrease in FY68 is attributed primarily to the aftereffects of the Tet offensive of February 1968.

(U) In FY68, unlike other years, there was considerable construction of housing, funded through the RVN defense budget, for dependents of RVN Army personnel. However, the AID RVN Army self-help dependent housing construction program, funded through the OMA, was not operative in FY68.

#### TRAINING

(U) The training programs of the RVN Army follow the usual US Army patterns of schools and unit training. To overcome shortages in facilities and qualified personnel, use is made of offshore schools for training selected RVN Army personnel. One of the major forms of US training support is the provision of US military personnel as advisers to various activities, headquarters, and units. About 6000 US Army personnel were assigned to field advisory duties with the RVN Army and sector and subsector headquarters at the end

(C) Fig. 9—Estimated Total Cost of Materiel and Maintenance for the RVN Army, by Materiel Category and Source of Funds, FY66–FY68

# CONFIDENTIAL

(U)

of May 1968.<sup>9</sup> The costs associated with this field advisory effort are not included in this study.

(U) The major sources of funding for RVN Army training are US MASF programs and the RVN defense budget. US military assistance programs provide all the funds for offshore schooling and some of the funds for in-country training, particularly for construction of training facilities and provision of some training equipment. It is surmised that most training equipment was drawn from general stocks. Figure 13 shows the estimated costs of RVN Army training. Detailed data are in App C.

## MILITARY PAY AND PERSONAL ALLOWANCES

(U) The greatest part of the RVN defense budget is devoted to the pay of RVN Army military personnel and personal allowances. In CY66-CY68 about 75 percent of the RVN defense budget (in piasters) was devoted to pay and allowances of military personnel. Figure 14 shows the estimated costs of the RVN Army pay, personal allowances, and subsistence. The portrayal of the data in Fig. 14 is affected by the devaluations of the piaster. Detailed data including average pay scales are in App C. The RVN Army pay system is described in Ref 10.

## OTHER RVN ARMY COSTS

(U) In addition to the costs described, there were additional costs for a variety of miscellaneous activities and agencies. These costs for FY68 are estimated to be about \$8.6 million, less than 2 percent of the estimated total cost of support of the RVN Army. Detailed data are in App C.

## RECAPITULATION

(U) Figures 15 and 16 show the estimated total cost of support of the RVN Army in dollars and dollar equivalents in terms of distribution by major functional categories and annual per capita costs. The annual piaster increase in expenditures for pay and allowances tends to be masked by the devaluations of the piaster during the period FY66-FY68 and the fact that over half the expenditures for pay and allowances came from RVN funds. Figure 17 shows the fund sources for the total costs of the RVN Army. RVN funds increased each year in terms of piasters and in the percentage of the total in terms of dollars and dollar equivalents.

(U) During FY66-FY68 there were significant variations in the expenditures for US MASF materiel. In FY68 the total expenditures and the percentage for weapons increased greatly because of deliveries made in support of expansion and modernization of the RVN Army. The variations in selected categories are shown in Fig. 18. Ammunition was the highest-cost single item of

 materiel and maintenance for the RVN Army. Figure 19 shows the distribution of the ammunition costs, less cost of supply operations. Figure 20 shows the distribution of ammunition costs in terms of annual per capita costs. The variation among years in Fig. 20 is due in part to changes in annual average assigned strengths.

# CONFIDENTIAL

## Chapter 3

### REGIONAL FORCES AND POPULAR FORCES

#### BACKGROUND

(U) The RF are a lightly equipped force designed for rural area operations in company and platoon strengths within the protective shield of the RVN Army. RF personnel are normally recruited and stationed in their home provinces. The PF are a rural militia, with the platoon as the largest unit, normally stationed in the villages where they are recruited.

(U) Both the RF and PF were initially under the control of the president of the RVN and his appointees such as the province chiefs. Over the years the RF and PF were integrated into the RVN Army structure. Despite the nominal command assumed by the RVN Joint General Staff and the RVN Army, the RF and the PF remained under the control of the province and district chiefs respectively. Figure 21 shows the ostensible control of the RF and PF at the end of FY68. References 1 and 2 contain brief accounts of the development of the RF and PF, and Ref 11 contains descriptions of their tactical operations and administrative support.

#### FORCE STRUCTURE

(U) The force structure of the RF is based primarily on rifle companies, boat companies for inland waterway patrol, separate mechanized platoons, and administrative and direct-support logistic companies. In FY68 a new element, the RF/PF Group Headquarters, was created to control RF companies and PF platoons at either the province or district level as required. The platoon is the only force-structure unit in the PF. Detailed data on the authorized force structures for the RF and PF are in App D. Organizational charts, including major equipment items, are in RAC-TP-333.<sup>1</sup>

#### STRENGTH

(C) The assigned strength of the RF and the PF increased during FY68 with the greatest increase occurring during the second half. The increase in strength resulted in about 20 percent more RF rifle companies and PF platoons

(C) Fig. 21—Control of Regional Forces and Popular Forces

\*Employed either at province or district level.

■ Monthly average    ▨ Year-end

(C) **Fig. 23—Popular Forces Monthly Average and Year-End Assigned Strengths, FY66–FY68**

■ Monthly average    ▨ Year-end

(C) at the end of the fiscal year. Figures 22 and 23 show the monthly average and year-end assigned strengths of the RF and PF, respectively. Detailed data are presented in App D. The unprogrammed surge in assigned strength during the second half of FY68 tends to distort factors based on annual average per capita strength. This distortion is particularly true for factors related to US materiel, which is usually delivered a year after it has been programmed.

## CONFIDENTIAL

(U) Both the RF and PF have been characterized by considerable personnel turnover. Detailed data on personnel turnover are in App D.

### LOGISTICS

(U) Logistical functions for the RF and PF are performed by the provincial administrative and direct-support logistical company. Functions include requisitioning, transporting, and issuing supplies, equipment, and materials; transporting troops; and second-echelon and limited third-echelon maintenance of the equipment of the supported units. Limited medical treatment is also provided. The company is logistically supported by the RVN Army technical service direct-support units and field depots of the Area Logistics Command (ALC).

### MATERIEL AND MAINTENANCE

(U) All the weapons, equipment, and ammunition for the RF and PF are furnished through US MASF programs. In addition to the materiel identified in Ref 12 as being shipped for the RF and PF, it is believed that additional materiel is provided by the RVN Army. There are no known data on costs of maintenance, repair parts, and attrition replacement specifically for the RF and PF. These costs are included in the data on the RVN Army described in Chap. 2, and it is surmised that they are less than 4 percent of the total RVN Army expenditures for materiel and maintenance.

(U) The available data on materiel and maintenance costs of the RF and PF funded through the RVN defense budget are based on technical services and do not permit separation of materiel costs from maintenance costs. Additionally, most of these costs were estimated by allocation procedures described in App B. In FY68 almost all the materiel and maintenance expenditures for the RF and PF funded by the RVN defense budget were from RVN funds. Data on inventory and densities of weapons and vehicles of the RF and PF are in App D.

(U) Figure 24 shows the estimated total expenditures for materiel and maintenance for the RF and PF. Detailed data are in App D. The increase in US military assistance materiel reflects the increased US emphasis in strengthening the RF and PF. The decrease in support funded through the RVN defense budget reflects the devaluations of the RVN piaster during the period FY66-FY68.

### CONSTRUCTION AND MAINTENANCE OF FACILITIES

(U) During FY68 there was considerable construction of cantonments and housing for dependents for the RF funded by military assistance funds. Construction for the PF, except for training facilities, was limited to the AID program for self-help construction of dependent housing through OMA funds. The cost of construction in FY68 for the RF was about 4 percent of the estimated total cost of the RF. The cost of construction for the PF in FY68 was about 3 percent of the estimated total cost of the PF. Detailed data are in App D.

(C)

# CONFIDENTIAL

## TRAINING

(C) Expenditures for training of the RF and the PF were primarily for in-country costs at national and provincial training centers. (See Ref 11 for a list of these centers.) Training outside the RVN was negligible. The largest single item of cost was construction of training facilities—about 45 percent of \$424,000 for training of the RF and about 84 percent of \$1,003,000 for training of the PF. The total costs are probably a little understated, because it is probable that some training aids and equipment were made available from RVN Army stocks. Detailed data on all costs of training are in App D.

## PAY AND ALLOWANCES

(C) The largest single item in the costs of the RF and PF is pay and allowances. Figure 25 shows the estimated costs of pay and allowances for the RF and PF. The data in Fig. 25 showing US support of the RVN budget include the cost of the US surplus agricultural commodities distributed to PF personnel and their dependents through the Catholic Relief Services. These commodities are considered in this study to be a form of pay. This distribution of commodities by the Catholic Relief Services ended in July 1968.<sup>13</sup> The portrayal of the data in Fig. 25 is distorted because of devaluations of the piaster. The decrease in total pay and allowances for the PF in FY68 is also due to lower expenditures for gratuities and subsistence furnished through the Catholic Relief Services. Detailed data on pay and allowances, including average pay scales, are in App D. Reference 10 describes the RF and PF pay system.

## OTHER COSTS

(C) In addition to the costs previously described, there were others for a variety of miscellaneous activities and agencies. These costs were determined by the use of allocation procedures described in App B. It is estimated that these costs in FY68 were about \$240,000 for the RF and \$160,00 for the PF. Detailed data are in App D.

## RECAPITULATION

(U) Figures 26 and 27 show the estimated total cost of support of the RF and PF in dollars and dollar equivalents in terms of distribution by major functional categories and annual per capita costs. The apparent general decrease in expenditures for pay and allowances both in absolute costs and percentage of total costs reflects the devaluation of the piaster during the period FY66–FY68 and the fact that about 77 percent of the RF and about 65 percent of the PF pay and allowances came from piaster funds that are portrayed as dollar equivalents.

(C)

## CONFIDENTIAL

(U) Figure 28 shows the fund sources for the total costs of the RF and PF. The total level of US support in FY68 for the RF was a little lower than in FY67, and the total level of US support for the PF increased slightly over FY67. The cost of materiel furnished in FY68 through US MASF programs for the RF changed little from FY67 and increased slightly for the PF.

(U) During FY66-FY68 there were significant variations in the expenditures for US MASF materiel as shown in Fig. 29. For example, the expenditures for weapons delivered in FY68 were a smaller percentage of the total cost than in FY67. This decrease is probably due to the completion of an earlier phase in the program to increase the effectiveness of the RF and the PF. Detailed data on these variations are in App D.

## US ARMY MILITARY ASSISTANCE SERVICE FUNDED OPERATIONS IN SUPPORT OF THE RVNAF<sup>14-16</sup>

### Introduction

(C) US Army MASF operations for support of the RVNAF are patterned after those used when such military assistance was funded through the Department of Defense (DOD) Military Assistance Program (MAP). The MASF System is designed to relieve the MAP program of support of active hostilities and to eliminate distortion in MAP programs of other countries due to diversion of MAP funds to meet requirements in the RVN. The MASF procedures used by the US Navy and US Air Force to support the RVNAF do not exactly parallel those of the US Army.

(U) The US Army materiel and services furnished under MASF are funded by the appropriations PEMA, OMA, MCA, and MPA with some procurement through the Army stock funds. Under MASF, RVN requirements are financed as direct requirements as opposed to reimbursable requirements under MAP procedures. US Army ammunition supply for RVN forces parallels the normal procedures used for US forces and is described in AR 725-55.<sup>17</sup>

(U) Figure A1 shows the flow of planning for procurement of US military assistance materiel from the continental US (CONUS). Figure A2 shows the supply of US Army military assistance materiel from CONUS for the RVNAF.

### Responsibilities for Programming

(U) The headquarters and agencies involved in MASF operations and their basic responsibilities are as follows:

(U) Office Secretary of Defense (OSD) and Joint Chiefs of Staff (JCS). Approves the force structure and major equipment items to be supported.

(U) HQ USMACV. Approves RVNAF tables of organization and equipment (TOEs) and tables of allowances (TAs) in coordination with the RVN.

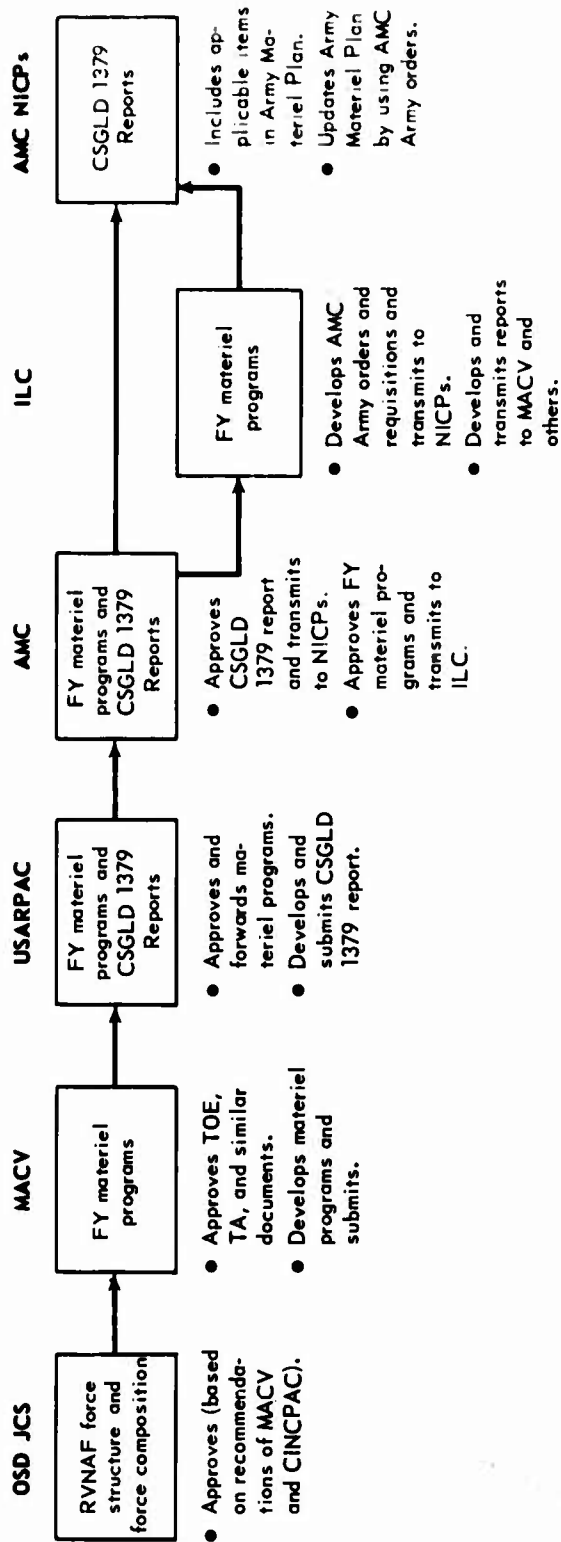

(U) Develops requirements for maintenance float and replacement of losses.

(U) Develops a program of total requirements for materiel and services for the current fiscal year and 4 consecutive years. The total requirements for any given year are known as the program for that year. The program is stated in terms of defined and dollar-value lines. A defined line lists specific end items by quantity and unit of issue other than dollars. A dollar-value line represents a requirement for certain services or commodities (normally repair parts and secondary items) for which the requirement is measured only in dollars.

(U) Submits total program to US Army, Pacific (USARPAC) and Commander in Chief, Pacific (CINCPAC).

**RAC**

# CONFIDENTIAL

(U) **Fig. A1—Procurement Planning for US Army Military Assistance Materiel for the RVNAF from the CONUS**

Fig. A2—Supply of US Army Military Assistance Materiel to the RVNAF from the CONUS

(U)

## CONFIDENTIAL

(U) USARPAC. Approves, in coordination with Pacific Command (PACOM), the HQ USMACV program and submits it to HQ Army Materiel Command (AMC) and Department of the Army (DA) through the facilities of the CINCPAC MAP data base. (The CINCPAC MAP data base puts the approved program into the computer formats prescribed by Refs 18 and 19.)

(U) Prepares estimates of future materiel requirements.

(U) AMC. Approves and directs materiel requirements and programs.

(U) HQ AMC approves the USMACV program pertaining to materiel requirements (principal and secondary items) and transmits the approved program to the International Logistics Center (ILC). The ILC develops and transmits AMC/Army orders and requisitions to the appropriate AMC commodity commands and non-AMC supply agencies. The ILC also receives from all supply agencies data on value of requisitions and shipments and prepares and distributes supply status delivery and program progress reports. The commodity commands and non-AMC supply agencies take appropriate procurement and shipment action on the materiel requirements. They also take necessary action with HQ USMACV to suggest the use of substitute or alternate items to expedite procurement or facilitate maintenance. The commodity commands, through their National Inventory Control Points (NICPs), also include proposed requirements (prepared by USARPAC) in appropriate DA programming documents such as the Army Materiel Plan.

(U) Deputy Chief of Staff for Military Operations (DCSOPS). Approves those parts of the USMACV program pertaining to offshore training after review and recommendations by Commander in Chief, US Army, Pacific (CINC-USARPAC) and CINCPAC. The expenditure of MPA funds (primarily for subsistence supplies) and OMA for training is approved by the Deputy Chief of Staff for Personnel (DCSPER).

### FUNDING

(U) Funding of PEMA (including secondary items) and Army-managed stock fund items are budgeted for and managed by AMC. Stock funds are reimbursed for items issued from OMA funds managed by USARPAC. OMA funds in support of RVNAF (BP 2000, BP 2100, BP 2200, BP 2300, BP 2400)\*,<sup>20</sup> are budgeted for and managed by USARPAC. BP 2200 funds for accessorial changes, logistics management, and related expenses are also budgeted for by Deputy Chief of Staff for Logistics (DCSLOG) and AMC. MPA funds are budgeted for and managed by DCSPER. MCA funds are budgeted for and managed by Office, Chief of Engineers (OCE).

(C) In the operation of MASF, the MACV program is revised frequently. Within the limitations of the force structure and major equipment items approved by OSD/JCS, there were flexible ceilings on funds for military assistance for the RVNAF during FY68. As necessary, additional funds were made available by reprogramming actions by the DA staff within the total US Army appropriation.

\*(U) See Army regulation 37-100<sup>20</sup> for definition of these BP funds. BP 2100 funds for school costs within the CONUS are managed by DCSPER.

## CONFIDENTIAL

# CONFIDENTIAL

## THE RVNAF LOGISTICAL SYSTEM<sup>21</sup>

### Overall Organization

(U) Figure A3 shows the logistics organizational structure of the RVNAF at the end of FY68.

(U) The Minister of National Defense is responsible to the Prime Minister for national defense and the armed forces. His responsibilities include:

(a) Proposing to the Prime Minister all tentative budgets, plans, and general projects on the distribution and use of resources and means.

(b) Proposing plans for mobilization of national resources, manpower, and materials to meet national defense and armed forces requirements and to carry out these plans.

(U) The Chief, Joint General Staff, RVNAF, is responsible to the Prime Minister and the Minister of National Defense for the command of the armed forces including:

(a) Publishing logistics plans and national resources plans.

(b) Executing the budget for the entire armed forces.

(U) Air Force and Navy Headquarters are responsible for the organization, training, logistical support, and employment of their subordinate units in compliance with the common policy of the RVNAF.

(U) The Office of the Deputy Chief of Staff for Logistics, Joint General Staff, handles joint logistics problems and also acts as the logistics staff for the RVN Army, which has no separate headquarters as such. The DCSLOG guides or operates logistic activities in all units, coordinates within the Joint General Staff to establish joint logistics plans, and directs all logistic activities throughout the RVNAF. He is also the Commander of the Central Logistics Command and directly controls and commands these logistical organizations:

(1) Central Procurement Office, RVNAF

(2) Quartermaster Agency

(3) Ordnance Agency

(4) Transportation Agency

(5) Medical Agency

(6) Signal Agency

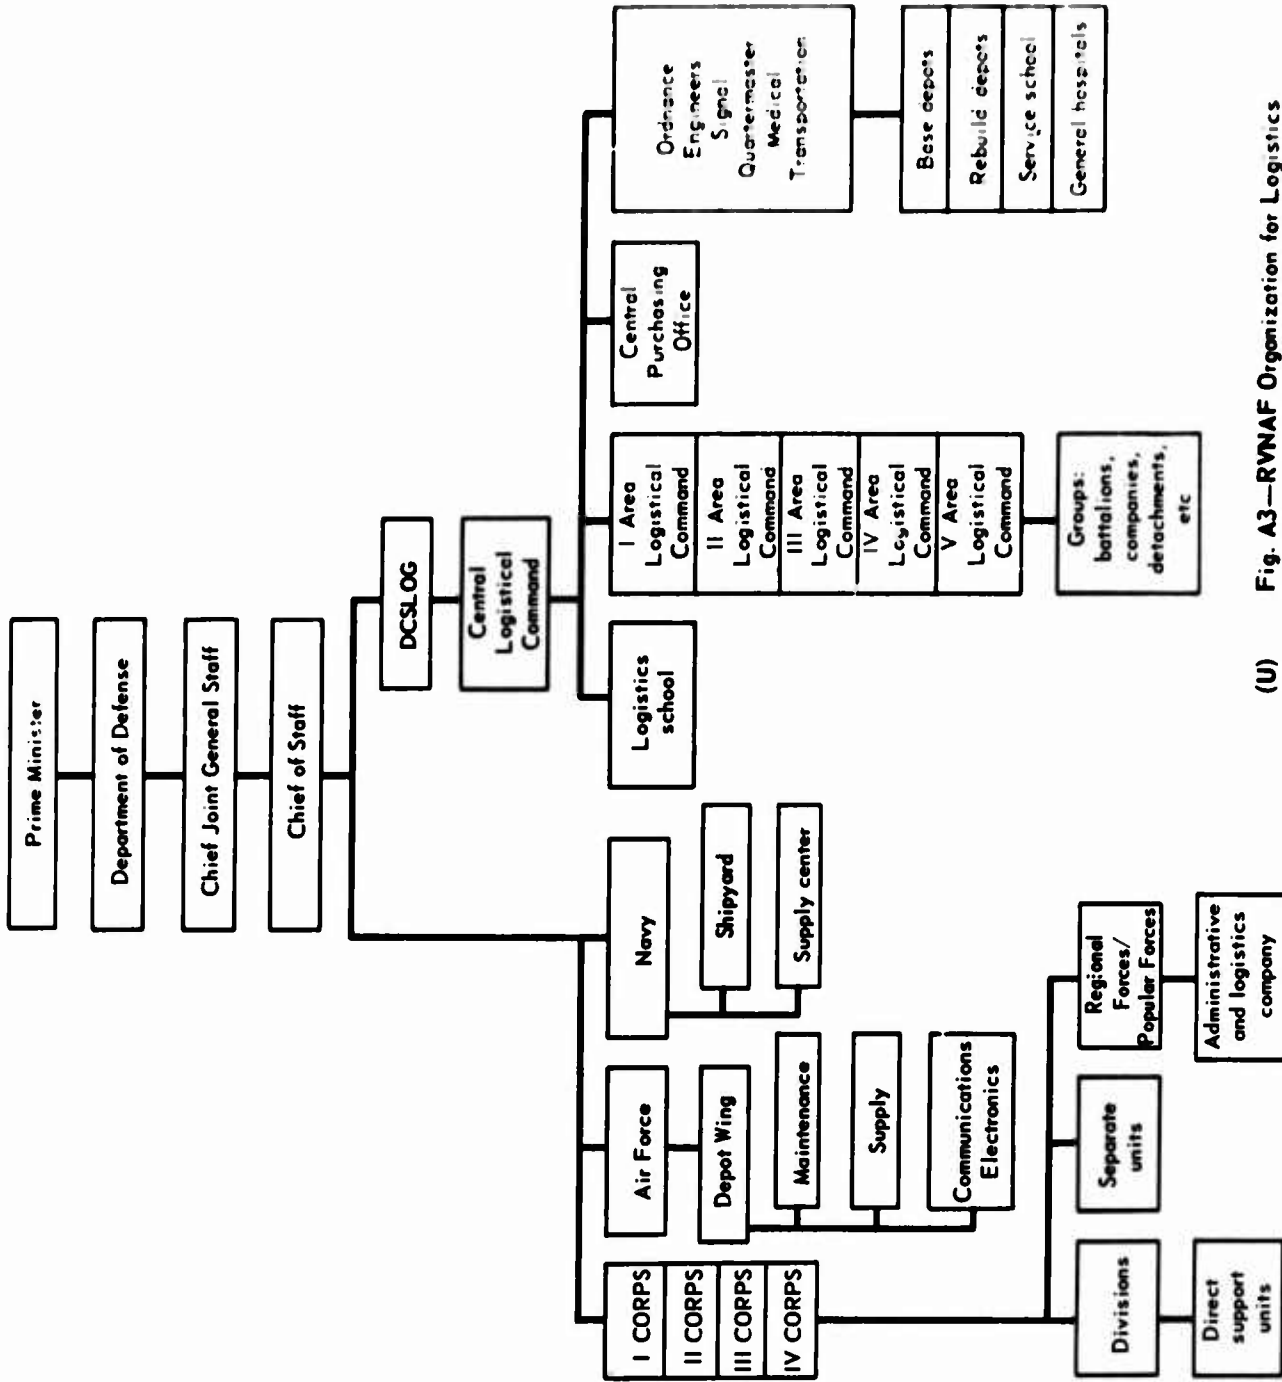

(7) Engineer Agency

(8) Commissary Directorate, RVNAF

(9) Logistical Management School, RVNAF

(10) ALC

(U) There are five technical services (Signal, Ordnance, Quartermaster, Engineer, and Medical) that provide common item supply support to the Army, Navy, and Air Force. Activities of these technical services are directed by the DCSLOG/Commander, Central Logistics Command, RVNAF. The commanders of the Air Force and Navy have under their command installations that provide logistic support peculiar to aircraft and naval vessels respectively. Five ALCs provide direct and general support to the Corps Tactical Zones and the Capital Military District. These logistics commands are commanded by the DCSLOG in his role as Commander of the Central Logistics Command.

(U) Fig. A3—RVNAF Organization for Logistics

# CONFIDENTIAL

## RVN Army Logistical Organization

(C) The logistic system centers around a complex of five technical service base depots located in the Saigon area. The base depots issue to the field depots in the respective corps areas, which in turn issue either directly to the using units or direct support companies. The various Technical Services command the base depots and logistic units not assigned to the Corps or the ALCs and exercise technical supervision, including technical inspection, over the technical service units assigned to ALCs.

(C) The logistic support for the Corps and Capital Military District is provided by five ALCs, which command and control logistic units and installations, including the Military Property Construction Offices in their areas. ALC boundaries are not the same as the Corps boundaries in all cases. ALCs support the RVN Army, Air Force, Navy, RF, and PF on common service items and Free World Military Assistance Forces (FWMAF) on designated items. Each ALC has various field depots, general support maintenance units, and direct support units that provide logistic support on an area basis.

## RVN Army Technical Services

(C) The Engineer Agency is immediately subordinate to the DCSLOG/Commander, Central Logistics Command for both command and staff matters. The Chief, Engineer Agency, fills a dual role of commander and staff officer. In his capacity of commander he commands the 40th Engineer Base Depot, the National Geographic Service and 1st Topographic Company, and exercises technical supervision of the 12 area Military Property Construction Offices, and operational control of certain engineer construction groups. All other engineer organizations are under Corps or ALCs. In his staff role the Chief, Engineer Agency, advises all echelons on engineer doctrine, employment, topography, construction, and supply and maintenance matters.

(U) The Medical Agency exercises command control over the 70th Medical Base Depot and technical control over field medical depots in the ALCs. Hospitals, separate dispensaries, and divisional medical units are provided logistic support from field depots located in each Corps Tactical Zone. The RVN medical depots serve all RVNAF including the RF and PF.

(C) The Signal Agency commands the RVN Army Signal Corps (except communication operations) and provides logistical service. As Commander of the Signal Corps, the Chief, Signal Agency, RVNAF, is responsible to the Joint General Staff. He is responsible to the Central Logistics Command for signal logistical support of the RVN Army and for signal items common to all elements of the RVNAF. He directly commands the 60th Signal Base Depot and exercises technical supervision over the signal units assigned to the ALCs. The RVN Army Signal logistical organization consists of a base depot located in Saigon, a Capital Military District Direct Support Company, and five support battalions, one located in each ALC. Each signal support battalion consists of a supply and maintenance company and a direct-support company. Most signal supplies are received in-country through the 60th Signal Base Depot, which issues to the Capital Military District Support Company and the five Signal Field Depots. The Signal Field Depots issue to the units and activities in their area of responsibility. The 60th Signal Base Depot performs backup

## CONFIDENTIAL

(C)

fourth- and fifth-echelon maintenance to include rebuild of selected items. The direct-support units perform third echelon and fourth echelon maintenance. Evacuation of equipment requiring higher echelon maintenance is the reverse of supply distribution.

(U) The Quartermaster Agency operates under direction of DCSLOG/Commander, Central Logistics Command, RVNAF and is responsible for logistic operations of its services and installations. The Chief, Quartermaster Agency exercises technical supervision of quartermaster units within the ALCs.

(C) The Ordnance Agency is immediately subordinate to the DCSLOG/Commander, Central Logistics Command, RVNAF, and is responsible for technical supervision of the Ordnance School and all ordnance logistic support provided through ordnance base and field units. He is also responsible for technical inspection of ordnance equipment. The Chief of Ordnance Agency exercises command supervision over the 20th Ordnance Supply Base Depot, the 80th Ordnance Rebuild Base Depot, the 50th Ammunition Storage Base Depot, the 55th Ammunition Storage Base Depot, and the 801st Collection and Classification Company. All other ordnance organizations are under the command of divisions and ALCs. Each ALC is authorized a medium-support ordnance battalion (commonly referred to as an ordnance service center or OSC) and supporting ordnance maintenance, supply, and ammunition companies.

(C) The Directorate of Defense Transportation (Military Transportation Agency) is a special staff section under the DCSLOG/Commander, Central Logistics Command. The Director is responsible for providing transportation services for the movement of persons and things for the RVNAF and other governmental agencies as directed. This Directorate has operational planning and training functions but does not have a supply mission.

B9. US Military Assistance Materiel Expenditures for Non-RVN Forces in the RVN, FY68	80

## INTRODUCTION

(U) This appendix explains the procedures used to allocate the RVN defense expenditures and US military assistance materiel among the RVN Army, RF, and PF. Allocations are necessary because in a number of instances the basis for requisitioning is not a specific recipient but a theaterwide inventory of weapons or other classes of materiel. In the case of the RVN defense budget some expenditures are for classes of persons (e.g., officers) regardless of assignment to a specific military force.

## RVN DEFENSE BUDGET

(U) Table B1 shows the total RVN defense budgets for CY67 and CY68. Details of the subdivisions of articles of the RVN defense budgets are not shown. Totals are shown in thousands of piasters. Table B2 shows the expenditures by chapter and article considered not in support of the RVN Army, RF, and PF. In the preparation of Table B2 each item was examined and those not supporting the RVN Army, RF, and PF were identified. The FY68 average monthly assigned strengths were used to determine allocations among the RVN Army, RF, and PF for those expenditures that are stated in aggregate for the RVNAF, and depend on personnel strength, e.g., pay of officers. The strengths used and the resulting factors are listed in Table B3.

(U) The RVN defense budgets were converted from a calendar year basis to US fiscal year basis by adding the RVN July-December totals to the totals for the following January-June.

(U) Tables B4, B5, and B6 show the derived budgets for the RVN Army, RF, and PF respectively for FY67 and FY68 in terms of thousands of US dollars. The effective exchange rate for FY68 was 118 piasters per US dollar. In deriving the FY68 budgets it was assumed, based on the estimate of the Chief, Vietnam Advisory Division, Office of the Comptroller, HQ USMACV, that only 45 percent of the CY68 RVN defense budget was expended during the period 1 January-30 June 1968.

## US MILITARY ASSISTANCE MATERIEL, LESS AMMUNITION

(U) The specification of all US military assistance materiel, except ammunition, ordered for support of RVN forces includes an element code. This code identifies the intended recipient in terms of specific units or certain general-support purposes including attrition, modernization, and general support. The general-support-purpose materiel is provided primarily in support of the RVN Army. No data are available to indicate the amount of this support

(U)

materiel provided for the RF and PF or other services. It is believed that the general-support materiel used for support of non-Army forces is a relatively small part of the total. The accompanying tabulation gives the allocation of element codes as used in this study. The specific identification of each element code is contained in Refs 18 and 22.

Category	Element code of specific recipient
RVN infantry divisions and separate infantry regiments and battalions	3AAB, 3AAC, 3AAD, 3AAE, 3AAF, 3AAK, 3AAL, 3AAM, 3AAN, 3AAO, 3AAQ, 3AAR, 3AAS
RVN Army noninfantry combat units	3AAT, 3AEA, 3AEO, 3AQA, 3AQB, 3AQC, 3AQF, 3AQO
RVN Army combat-support units	3AGA, 3AQR, 3ARB, 3ARC, 3ARD, 3ARH, 3ARJ, 3ARK, 3ARO, 3ARR, 3ART, 3ARU, 3ARV, 3ARW, 3ARX, 3ARY, 3ARZ, 3ASD, 3ASO
Support of RVN Army individual training and schools	3BBX, 7ABC, 7ABD, 7ABX, 7ACE
RVN Army intelligence units and activities	7BAC, 7BAD, 7BAO, 7BEO
RVN Army service-support and command units	3APO, 3BAD, 3BAE, 3BAM, 3BAO, 3BAS, 3BBA, 3BBB, 3BBD, 3BBO, 3BBP, 3BBQ, 6BCA, 6BCB, 7BDA, 7CBB, 7DAB, 7DAC, 7DBL, 7DBP, 7DCD, 7DBT, 7DCA, 7EAC, 7EAM, 7FAB, 7FAH, 7FBA, 7FBB, 7FCB, 7FCD, 7FCM
General support of RVN forces	3AHO, 3AOO, 3AUB, 3BUB, 3BUD, 3BUG, 3BVI, 3BVO, 7DBD, 7DBG, 7DBH, 7DBJ, 7DBZ, 7DCJ, 7GFF
Regional Forces	3NAA, 3NAD, 3NAF, 3NBB, 3NDA, 3NDB, 3NDJ, 3NDN, 3NDO, 7BEF
Popular Forces	3NAB, 3NAE

## US MILITARY ASSISTANCE MATERIEL--AMMUNITION

(U) Ammunition provided by US military assistance programs for RVN forces is not identified by an element code to indicate the intended recipient in terms of specific units or forces. Procedures used by the US Army for programming ammunition for the RVN are described in Ref 23. The total ammunition delivered by the US Army to the RVN for RVN forces in FY67 and FY68 is shown in Table B7.<sup>24</sup> The generic code<sup>18</sup> is used to identify general classes of materiel and services provided through US MAPs. The materiel described in the column "Reimbursable" represents new procurement.

(U) Ammunition was allocated primarily on the basis of the reported inventory of the appropriate weapons in the units of the RVN Army, RF, and PF, as shown in Table B8.<sup>25</sup> The totals in all cases do not equal 100 percent because of weapons in the units of other RVNAF or provided for various revolutionary development programs. Hand grenades and land mines and explosives were allocated as shown in the accompanying tabulation, based on qualitative judgment. The resulting allocations are given in Apps C and D.

Recipient	Percent received
RVN Army	50
Regional Forces	30
Popular Forces	20

<b>Total Army</b>	<b>286,800</b>	<b>100.0</b>	<b>357,959</b>	<b>100.0</b>

(U) The authorized force structure of the RVN Army is frequently modified. Table C2 shows the authorized force structures at the end of FY67 and FY68. It is believed that most of the units indicated were organized but not all were maintained at the authorized force levels. Detailed data on the authorized composition and major mission items of selected units are in App C of Ref 1.

(U) Table C3<sup>27</sup> shows a functional analysis of the authorized RVN Army force structure in FY67 and FY68.

(C)

<sup>a</sup>Based on Refs 1, 28, 29.

<sup>b</sup>Total desertions.

<sup>c</sup>Killed in action.

**LOGISTICS**

(U) The logistical system of the RVN Army in effect during FY68 is described in App A. References 1, 2, and 4 contain descriptions of the logistical system in earlier years.

**Materiel and Maintenance**

(U) Many of the tables that follow contain data for the period 26 March 1966 to 30 June 1967 in order to provide a comparison with the data for FY68. The data for the former period are repeated from RAC-TP-333.<sup>1</sup> The change from the DOD MAP to service funding of military assistance for the RVN on 25 March 1966 has resulted in the unavailability of data on deliveries of specific items of materiel (except ammunition) for FY66 and FY67. The estimated total cost for FY67 was calculated on the basis that deliveries during the period 26 March 1966-30 June 1967 were made at a uniform rate.

(U) Table C5<sup>30</sup> shows the estimated cost of materiel and maintenance for the RVN Army. The estimate in Table C5 includes some repair parts for RVN

**CONFIDENTIAL**

(U)

Navy, Marines, and Air Force equipment for which the RVN Army furnishes maintenance support. Most of this equipment consists of vehicles and Army-type weapons. The data in Table C5 also cover an unknown amount of repair parts, consumables, and attrition replacement items for the RF and PF. It is surmised that the cost of the materiel for non-RVN Army elements does not exceed 3 percent of the total.

(C)

TABLE C5

**Estimated Total Cost of Materiel and Maintenance for RVN Army, FY67-FY68**

Description and generic code	FY67 <sup>1</sup>			FY68 <sup>12</sup>		
	Cost, thous of dollars	Percent of total cost	Annual per capita cost, dollars	Cost, thous of dollars	Percent of total cost	Annual per capita cost, dollars

<sup>a</sup>Based on Ref 30.

**Materiel, less Ammunition**

(U) Table C6 shows the estimated total US military assistance expenditures for materiel and maintenance (less ammunition) for the RVN Army. Tables C7 to C12 show these expenditures by functional grouping of recipient units and activities. No data are available to relate deliveries of US military assistance materiel to inventories of materiel in the hands of the RVN Army, because US data refer to constructive deliveries (turned over to a common carrier in the CONUS for delivery to the RVN) and not to actual receipts by RVN authorities.

**CONFIDENTIAL**

<sup>a</sup>Depot stocks include items awaiting issue or repair for all RVN armed forces but exclude holdings of known obsolete weapons.

<sup>b</sup>Primarily M1911A1.

(U)

Tables C13 and C14<sup>31</sup> show respectively the available data on inventories of weapons and vehicles in the RVN Army at the end of FY67 and FY68.

### Ammunition

(U) All ammunition for the RVN Army was funded through US Army military assistance and furnished by the US Army. Table C15 shows the annual delivery of ammunition for FY67 and FY68. The method used to determine the ammunition allocation for the RVN Army is described in App B. The data in Table C15 do not include the 13 percent additional cost factor to cover supply operations. Table C16 shows per capita factors on cost and amounts of the ammunition for the RVN Army. The cost factors do not include the costs of supply operations.

Land mines	—	4.0	1.3	0.1	1.1	0.3
Bulk explosives	—	—	—	—	0.1	—
Chemical agents	—	4.1 <sup>d</sup>	1.3 <sup>d</sup>	—	3.6	1.1
Pyrotechnics	—	—	—	—	0.3	0.1
Miscellaneous	—	4.6	1.5	—	0.2	0.1
<b>Total</b>	—	<b>316.0</b>	<b>100.0</b>	—	<b>334.8</b>	<b>100.0</b>

<sup>a</sup>Based on average monthly assigned strength.

<sup>b</sup>Cartridge only.

<sup>c</sup>For FY67, included in "fuzes and primers" under 105-mm and 155-mm howitzer and cartridges.

<sup>d</sup>Includes pyrotechnics.

## USARV Support

(U) HQ USARV provides some support from its resources to the RVN Army on a nonprogrammed basis. The cost of this support, mostly supplies, is charged to OMA and other funds controlled by HQ USARPAC.<sup>28</sup> The total costs reported for this support are given in Table C5. The available reports do not permit specific identification of the supplies furnished. It is surmised that the actual total cost of supplies furnished from USARV sources greatly exceeds that reported.

# CONFIDENTIAL

## RVN Expenditures for Materiel

(U) The only available data on RVN expenditures for materiel are contained in the RVN defense budgets. Table C17 shows the data derived from those budgets that pertain to the RVN Army (see App B for the derived RVN defense budget for the RVN Army). The materiel costs shown in Table C17 are believed to be primarily for consumables. Most of the funds in the RVN defense budget for the technical services are for pay and allowances of civilian personnel. It is surmised that many of these civilians are maintenance personnel.

## Maintenance of Materiel

(U) There are few data on maintenance, separate from materiel. The available data cover foreign technicians funded by the RVN defense budget and the costs of repair and rehabilitation of military assistance equipment (generic code M2). These data are shown in Table C5.

## CONSTRUCTION AND MAINTENANCE OF FACILITIES

(U) Reference 33 describes the responsibilities, procedures, and standards of US-supported construction for the RVNAF.

(U) Table C18 shows the total estimated expenditures for construction and maintenance of facilities for the RVN, including principal sources of funds. Tables C19<sup>34</sup> and C20<sup>35</sup> show respectively the construction and maintenance expenditures from US military assistance funds and from the RVN Army defense budget sources. The data in these tables are based on information furnished by HQ USMACV, Engineer Advisory Division, except where otherwise indicated.

## TRAINING

(U) Table C21 shows the estimated total expenditures for training of the RVN Army to include sources of funds and average annual per capita costs.

(U) Table C22<sup>36</sup> shows in greater detail the estimated costs of offshore training. Table C23 shows the reported attendance at various US Army schools and training centers. Table C24 shows the estimated costs of US military assistance materiel furnished for RVN Army training and schools.

(U) Table C25 shows the estimated expenditures for training of the RVN Army funded by the RVN defense budget.

## MILITARY PAY AND PERSONAL ALLOWANCES

(U) The military pay system of the RVN Army is complex and includes various allowances based on family status, cost of living, area of assignment, duties performed, and length of service. Detailed data and information on the RVN Army pay scales and system are contained in Ref 10.

(C) TABLE C17  
 Estimated RVN Army Materiel Costs Funded by the RVN Defense Budget, FY67-FY68<sup>a</sup>

## FORCE STRUCTURE

(U) The authorized force structures of the RF and PF are under constant modification, and complete tabulations are published at different times. These tabulations usually do not fully reflect in all detail the force structure at the time of publication. One factor accounting for these perturbations is the incorporation of other formations within the RF and PF. For example, units of the Civilian Irregular Defense Group Program were incorporated into the RF in FY68.

(U) Table D1 shows the authorized force structures of the RF and PF at the end of FY67 and FY68. Detailed data on the authorized composition and major mission items of selected units are in RAC-TP-333.<sup>1</sup>

## STRENGTH

(U) Tables D2 and D3 show respectively the assigned strength and other data on personnel turnover of the RF and PF.

## MATERIEL AND MAINTENANCE

### General

(U) Tables D4 and D5 show the estimated total costs of materiel and maintenance for the RF and PF respectively. The data in these tables do not cover the costs of some materiel, mostly repair parts and other consumables and items, furnished to the RVN Army but intended for the RF and PF. It is surmised that these costs are not significant compared with the total costs.

### Materiel, less Ammunition

(U) Tables D6 and D7 show the estimated total US military assistance expenditures for materiel and maintenance for the RF and PF respectively.

(U) There are no data available to relate deliveries of US military assistance materiel to inventories in the hands of the RF and PF for the same reasons given in App C for the RVN Army. Table D8 shows the available data on inventories of weapons in the RF and PF units. Depot stocks for the RVNAF are shown in App C. Table D9 shows the available data on inventories of selected vehicles in RF and PF units.

## Ammunition

(U) All ammunition for the RF and PF since about 1961 has been furnished by the US. Tables D10 and D11 show, respectively, ammunition deliveries for the RF and PF. The method used to determine these ammunition allocations is described in App B. The data in Tables D10 and D11 do not include the 13 percent supply operations (see App B).

(U) Tables D12 and D13 show respectively per capita factors on the cost and amounts of ammunition for the RF and PF. The cost factors do not include the cost of supply operations (13 percent).

## RVN Expenditures for Materiel

(U) The only available data on RVN expenditures for materiel are contained in the RVN defense budgets. Table D14 shows the data derived from those budgets that pertain to the RF and PF.

## Construction and Maintenance of Facilities

(U) Table D15<sup>37</sup> shows the total estimated expenditures for construction and maintenance of facilities for the RF and PF to include sources, average annual per capita costs, and percent by major category. There are no data for FY68 on expenditures for maintenance of facilities for the RF and PF.

## TRAINING

(U) Table D16 shows the estimated total expenditures for training of the RF and PF to include sources and average annual per capita cost. The RVN expenditures for training were primarily for expendables and construction of training facilities. US expenditures were all for construction of training facilities.

(U) Training equipment and aids were also probably made available to the RF and PF from RVN Army stocks.

## PAY AND ALLOWANCES

(U) Table D17 shows the estimated total expenditures for pay and allowances for the RF and PF.

(U) Table D18 shows the average military pay and allowances of RF and PF personnel as of June 1968.

(U) The available data on subsistence furnished to PF personnel and their dependents through the Catholic Relief Services are shown in Table D19.<sup>38</sup>

13. ABSTRACT

**Resource allocations in support of the RVN Army, Regional Forces, and Popular Forces in the RVN for FY68 are identified. The study traces the flow and interrelation of the resources made available from sources to end use in support of the forces studied. The cost of each force is estimated by examining the resource implications of activities such as deployment, provision of materiel, operations, maintenance, training, construction, and pay and allowances. A comparison is made of the time-phased costs of each force by source and activity and significant high-cost items. Data on RVN land-combat forces for the period FY67-FY68 are included.**
