PREFACE

THE PURPOSE OF CRESS

As the U.S. national interest becomes increasingly involved in both multi-lateral and bilateral international relationships, a major challenge is posed to the behavioral and social sciences to provide the methods and knowledge upon which effective foreign area programs can be built. The purpose of the Center for Research in Social Systems (formerly the Special Operations Research Office) of The American University is to conduct research and development studies and to acquire, store, retrieve, and analyze information which will assist U.S. defense agencies with programs requiring knowledge of the societal dynamics of foreign areas.

CRESS ORGANIZATIONS

Two CRESS organizations operate under contract to the U.S. Government. The Social Science Research Institute (SSRI) performs in-depth research and development studies, and the Cultural Information Analysis Center (CINFAC) provides, on a rapid response basis, information, analyses, and syntheses requested by qualified U.S. Government agencies and governmental contractors. (The Foreign Area Studies Division, producer of the area handbooks series and a division of SORO until July 1, 1966, is now known as Foreign Area Studies, The American University. *)

PROGRAMS

CRESS research programs are both problem and country oriented and may be grouped according to the substantive content of the research involved. Some general areas of research are as follows: cross-cultural communication, orientation and adaptation of personnel to foreign cultures, measurement of

* For reader convenience, this issue of the CRESS bibliography carries a list of FAS publications; see Appendixes A and B.

effectiveness in U.S. overseas programs, unconventional applications of force, military roles in socio-economic development and political change, and methodologies for study of foreign cultures.

In these program areas, both applied and basic research are conducted as dictated by the general state of scientific knowledge and by operational requirements.

Some CRESS studies focus on specific countries and peoples, particularly in the developing nations; other, more general studies focus on broad geographical areas or on cross-cultural subjects.

CRESS DOCUMENTS

Documents resulting from CRESS research are of two basic types: technical reports and rapid responses. If found to be of general interest, documents initially produced on a rapid response basis may be reprocessed as technical reports to permit wider distribution. The technical reports listed herein are available through the Defense Documentation Center or the Clearinghouse for Federal Scientific and Technical Information (see p. v).

The Annotated Bibliography of CRESS Publications is published semiannually. This issue, which contains publications as of July 31, 1966, supersedes the February 1966 edition, DDC No. AD 633-520. Questions or comments concerning the publications are welcomed.

A "For Official Use Only" supplement, superseding DDC No. AD 483-433L, is available to authorized requesters from the Defense Documentation Center (see p. v). The supplement contains a complete listing of classified technical reports and a listing of rapid responses produced by CINFAC.

This brief study provides a picture of the culture of the San Blas Cuna Indians living in the archipelago situated off the eastern Caribbean coast of the Republic of Panama. The study is intended to provide background information to military personnel responsible for military civic action programs designed to ameliorate unsatisfactory health conditions among the San Blas Cuna Indians. Casebook on Insurgency and Revolutionary Warfare: 23 Summary Accounts. Paul A. Jureidini, Norman A. LaCharité, Bert H. Cooper, and William A. Lybrand, December 1962. DDC No. AD 416-553.

This study summarizes 23 revolutions that have occurred in 7 major geographic areas, primarily during the post-World War II period. Each summary is outlined in a standard format to facilitate comparison of the revolutions. The material developed under the outlines consists of a brief survey of geographical, historical, political, economic, and sociocultural factors and proceeds to a consideration of each revolutionary movement's leadership, the methods it used to undermine the authority of the government, the countermeasures taken by the government, the propaganda techniques employed by both sides, the climactic events leading to the overthrow of the government or the collapse of the insurrection, and finally, the short- and long-term consequences.

TECHNICAL REPORTS

Case Studies in Insurgency and Revolutionary Warfare: Algeria 1954-1962.

Paul A. Jureidini, December 1963. DDC No. AD 436-814.

Case Studies in Insurgency and Revolutionary Warfare: Cuba 1953-1959. Nor-

man A. LaCharité, September 1963. DDC No. AD 436-813.

Bert Cooper, John Killigrew, and Norman A. LaCharité, January 1964.
DDC No. AD 436-429.

Although sufficiently self-contained to allow for their independent use, the case studies are meant to supplement the Casebook on Insurgency and Revolutionary Warfare: 23 Summary Accounts, by analyzing and relating in detail certain causal factors identified in prior studies. These factors, grouped in political, social, and economic categories, are analyzed through time as a test of their "fit" to each revolution, either as a primary cause or as a contributive cause.

Case Studies in Insurgency and Revolutionary Warfare: Guatemala 1944-1954.

Norman A. LaCharité, Richard O. Kennedy, and Phillip M. Thienel, November 1964. DDC No. AD 456-199.

A case study of the events in Guatemala between 1944 and 1954. Examines and attempts to analyze the rise and demise of the Communist Party in relation to the political activities of Guatemalan military officers during a period between two revolutions: the 1944 revolution, which brought to power a liberal government within which the Communist Party gained power; and the 1954 revolution, which made a conservative military officer head of state. The study also examines economic, social, and political factors which have been identified as being generally related to the rise of communism in Guatemala.

Case Study in Guerrilla War: Greece During World War II. D. M. Condit,
October 1961. DDC No. AD 272-833.

The Greek resistance during World War II was particularly important because of the issue of Communist involvement and its post-war ramifications. This study covers the strategy and politics of the guerrilla war, organizational and logistic support for the Greek guerrillas and Allied liaison officers, behind-the-lines problems, tactical guerrilla operations, and Axis counter-guerrilla warfare. A summary contains study conclusions and implications concerning the control of a guerrilla movement.

Reviews the development of the protective status for irregulars, partisans, and guerrillas, and describes the treatment they historically have been accorded in warfare. Their present status under The Hague and Geneva conventions and the interpretations of status made by the courts are discussed.

Four models of urban insurgency are developed from historical evidence on its role, importance, and tactics. Incident patterns are developed and suggested as a means of evaluating the nature of insurgency, predicting future activities, and guiding counterinsurgency planning. These patterns are applied to the current situation in Thailand to suggest the existence of "Phase One" insurgency. An annotated bibliography on urban insurgency and Thailand is included.

It is highly desirable that the abstract of classified reports be unclassified. Each paragraph of the abstract shall end with an indication of the military security classification of the information in the paragraph, represented as (TS), (S), (C), or (U).

There is no limitation on the length of the abstract. However, the suggested length is from 150 to 225 words.

14. KEY WORDS: Key words are technically meaningful terms or short phrases that characterize a report and may be used as index entries for cataloging the report. Key words must be selected so that no security classification is required. Identifiers, such as equipment model designation, trade name, military project code name, geographic location, may be used as key words but will be followed by an indication of technical context. The assignment of links, roles, and weights is optional.
