## ABSTRACT

→ This report summarizes the salient characteristics of the M44 LISP 1.5 System. The technical details of the system are described in the User's Manual and the System Manual.

A LISP 1.5 system has been constructed for the M44 digital computer operated on a time-shared basis by IBM at the Thomas J. Watson Research Center at Yorktown Heights, New York. Because the technical details of M44 LISP are fully described in the User's Manual and System Manual, this report merely briefly summarizes the salient characteristics of the system. The details will be found in these two manuals. Complete listings of the system are in the possession of cognizant technical personnel at the Air Force Cambridge Research Laboratory.

M44 LISP was produced by a bootstrapping technique using the Q32 computer at the System Development Corporation at Santa Monica, California. The system itself contains a bootstrapping facility. M44 LISP has attempted to combine the best features of the LISP 1.5 systems operating on the IBM 7094, the Univac M-460, and the Q32, but it most closely resembles the Q32 system. The facilities for operating upon list structures and upon numerical quantities are quite similar among existing systems, and have been copied in M44 LISP. The basic library of LISP functions as specified in the LISP 1.5 Manual is available within M44 LISP, though certain functions peculiar to the 7094 system have been omitted.

The area in which M44 LISP differs most markedly from the other systems (and in which they differ the most from each other) is the input-output. The unit selection mechanism is essentially that of Q32 LISP, though the M44 executive system must be used to open files. Input-Output is programmed in terms of characters, and most of the input-output programs are themselves written in LISP. The function PACK converts a list of characters to an array of characters, while the function UNPACK converts an array of characters to a list of characters. The function MOVEIN brings a single record into core in the form of an array of characters, while the function MOVEOUT writes an array of characters from core in the form of an external record. There are also two functions for converting lists of characters to numbers, and conversely.

On input, MOVEIN is used in order to bring in a record. LISP functions are then used in order to unpack and interpret it. The process is reversed on output.

The system has a total of 256K (approximately) devoted to storage of data structures. This amount is larger than any existing LISP system, though it should be recognized that at any given time, most of this memory will be virtual, i. e., in the form of a core image on disc. Though the administration of memory is performed by the executive system, it does consume time. List structures and arrays are stored in two areas that move towards each other; when they meet, a compacting garbage collector is called. The garbage collector can also be called explicitly.

DOCUMENT CONTROL DATA - R&D

(Security classification of title, body of abstract and indexing notation must be entered when the overall report is classified)

1. ORIGINATING ACTIVITY (Corporate author) Information International, Inc. 119 West 23rd Street New York, New York 10011	2a. REPORT SECURITY CLASSIFICATION Unclassified
	2b. GROUP n/a

3. REPORT TITLE

INSTRUCTIONS

1. **ORIGINATING ACTIVITY:** Enter the name and address of the contractor, subcontractor, grantee, Department of Defense activity or other organization (*corporate author*) issuing the report.

2a. **REPORT SECURITY CLASSIFICATION:** Enter the overall security classification of the report. Indicate whether "Restricted Data" is included. Marking is to be in accordance with appropriate security regulations.

2b. **GROUP:** Automatic downgrading is specified in DoD Directive S200.10 and Armed Forces Industrial Manual. Enter the group number. Also, when applicable, show that optional markings have been used for Group 3 and Group 4 as authorized.

3. **REPORT TITLE:** Enter the complete report title in all capital letters. Titles in all cases should be unclassified. If a meaningful title cannot be selected without classification, show title classification in all capitals in parentheses immediately following the title.

4. **DESCRIPTIVE NOTES:** If appropriate, enter the type of report, e.g., interim, progress, summary, annual, or final. Give the inclusive dates when a specific reporting period is covered.

5. **AUTHOR(S):** Enter the name(s) of author(s) as shown on or in the report. Enter last name, first name, middle initial. If military, show rank and branch of service. The name of the principal author is an absolute minimum requirement.

6. **REPORT DATE:** Enter the date of the report as day, month, year, or month, year. If more than one date appears on the report, use date of publication.

7a. **TOTAL NUMBER OF PAGES:** The total page count should follow normal pagination procedure, i.e., enter the number of pages containing information.

7b. **NUMBER OF REFERENCES:** Enter the total number of references cited in the report.

8a. **CONTRACT OR GRANT NUMBER:** If appropriate, enter the applicable number of the contract or grant under which the report was written.

8b, 8c, & 8d. **PROJECT NUMBER:** Enter the appropriate military department identification, such as project number, subproject number, system numbers, task number, etc.

9a. **ORIGINATOR'S REPORT NUMBER(S):** Enter the official report number by which the document will be identified and controlled by the originating activity. This number must be unique to this report.

9b. **OTHER REPORT NUMBER(S):** If the report has been assigned any other report numbers (*either by the originator or by the sponsor*), also enter this number(s).

10. **AVAILABILITY/LIMITATION NOTICES:** Enter any limitations on further dissemination of the report, other than those imposed by security classification, using standard statements such as:

- (1) "Qualified requesters may obtain copies of this report from DDC."
- (2) "Foreign announcement and dissemination of this report by DDC is not authorized."
- (3) "U. S. Government agencies may obtain copies of this report directly from DDC. Other qualified DDC users shall request through \_\_\_\_\_."
- (4) "U. S. military agencies may obtain copies of this report directly from DDC. Other qualified users shall request through \_\_\_\_\_."
- (5) "All distribution of this report is controlled. Qualified DDC users shall request through \_\_\_\_\_."

If the report has been furnished to the Office of Technical Services, Department of Commerce, for sale to the public, indicate this fact and enter the price, if known.

11. **SUPPLEMENTARY NOTES:** Use for additional explanatory notes.

12. **SPONSORING MILITARY ACTIVITY:** Enter the name of the departmental project office or laboratory sponsoring (*paying for*) the research and development. Include address.

13. **ABSTRACT:** Enter an abstract giving a brief and factual summary of the document indicative of the report, even though it may also appear elsewhere in the body of the technical report. If additional space is required, a continuation sheet shall be attached.

It is highly desirable that the abstract of classified reports be unclassified. Each paragraph of the abstract shall end with an indication of the military security classification of the information in the paragraph, represented as (TS), (S), (C), or (U).

There is no limitation on the length of the abstract. However, the suggested length is from 150 to 225 words.

14. **KEY WORDS:** Key words are technically meaningful terms or short phrases that characterize a report and may be used as index entries for cataloging the report. Key words must be selected so that no security classification is required. Identifiers, such as equipment model designation, trade name, military project code name, geographic location, may be used as key words but will be followed by an indication of technical context. The assignment of links, rules, and weights is optional.
