1.0 INTRODUCTION

This report presents the results from wind tunnel tests of a one-eighth scale conventional model of the U.S. Army XV-5A Lift Fan Flight Research Aircraft. This is the second of three volumes.

Thi Volume II presents hinge moment coefficients and pressure data in plotted and tabular form with pertinent detail explanatory information Pressure and hinge moment data were not recorded during the second phase of the low speed testing.

2.0 TEST PROCEDURE AND RESULTS

A complete description of the model is given in Volume I of this report under separate cover, therefore, information pertinent only to interpretation of pressure and hinge moment data is included in this Volume II.

Presented in the Appendix (Section 3.0) of Volume II is a detailed listing of symbols and nomenclature, and a description of model components applicable to Phase I tests. Inlet throttling plate geometry and wing and body orifice locations are also given.

The right-hand wing and the fuselage were equipped for the recording of pressure profile data; the right-hand aileron and elevator were equipped with internal seals and with pressure orifices in the upper and lower simulated balance cavities. The rudder had pressure orifices but no seal. The left-hand flap, aileron (with internal seal), elevator, and the rudder were instrumented to record control surface hinge moments. An engine duct exit pressure rake was used to record duct internal flow for three different engine intake areas, altered by the insertion of area-reducing orifice plates.

In general, external control surface gaps were left unsealed because a seal would have interfered with pressure and hinge moment measurements. Notes on the Run Index indicate the special occasions when external seals were applied. The right-hand elevator and both ailerons were equipped with internal seals to facilitate recording upper and lower balance cavity pressures and hinge moments. However, at the end of the test the Mylar seals in the aileron cavities were found to have failed; the time of failure is not known.

Pressures were read directly through five 48-port Scanivalves with pressure transducers installed inside the model; digitized output from the five transducers was simultaneously printed and punched into IBM data cards. Trial determined that the recording of other data simultaneously with pressure data was inadvisable because the long running time required to scan forty-eight Scanivalve ports at each model test

point made it difficult to obtain a zero return on the external balance. The hinge moments also were digitized directly, and readings from all four instrumented control surfaces were simultaneously printed and punched into IBM data cards.

All strain gages and pressure transducers received a complete calibration prior to the test and a check calibration in the tunnel before and after the test, with the exception of the #2 pressure transducer (#2 Scanivalve) which was disconnected after Scanivalve failure during the test. The check calibrations were performed on the identical instrumentation as that used during the test.

The #2 Scanivalve which was reading wing pressures at 45% and 55% wing semispan stations showed signs of leaking under high pressure during Runs 157 and 158; the pressure coefficients from these runs should be used and interpreted with caution. During Run 160 the #2 Scanivalve failed; it was disconnected for the remainder of the test.

While external balance force and moment data, pressure data, control surface hinge moment data, and tuft data were recorded during the first series of tests, not all available types of data were recorded for every configuration. A run index is presented as Table 2.1 immediately preceding all test results, which shows the model configuration and the data recorded during the run. Whenever hinge moments were recorded, they were recorded for all 4 control surfaces. Figure 2.26 of Table 2.3 "Key to Tabulated Pressure Coefficients" will be found in Volume II preceding the tabulated pressure data. This key provides a location and identification code and clues to the metric status of the individual orifices and Scanivalve ports.

Wing pressure data recorded during pitch and yaw runs are presented as plotted pressure coefficients in Figures 2.1 through 2.25. An index to the wing pressure plots is given in Table 2.2. All pressure data with the exception of duct pressures, but including wing and fuselage pressures and control surface cavity pressures, are presented in tabular form in Table 2.3 in run number sequence. Duct internal flow data are presented in Table 2.4 in pounds per square inch.

Selected control surface hinge moment coefficients have been plotted as functions of angle of attack and yaw angle and are shown in Figures 2.27 through 2.37. All hinge moments are presented in coefficient form in Table 2.5.

3.0 APPENDIX

3.1 NOMENCLATURE

Definition of Tests

P	Pitch Test; pitch angle variation (ψ_g = constant). Subscript 6 indicates that six-component force and moment data were recorded.
Y	Yaw Test; yaw angle variation (α_g = constant). Subscript 6 indicates that six-component force and moment data were recorded.
HM	Hinge Moment; denotes that hinge moment data were recorded at each model test point. The left flap, left aileron, left elevator and the rudder were instrumented.
Press	Pressure; denotes that pressure data were recorded at each model test point. The model was instrumented with orifices, five 48-port Scanivalves, and pres· transducers for digitized punched card output.
Duct Press	Duct Pressure; denotes that duct exit pressure data were recorded at each model test point from a rake and wall static orifices at the duct exit. These data also were read through the Scanivalve and transducer system.
Pix	Tuft Pix; visible flow patterns recorded photographically at each model test angle. Flow patterns were made visible by affixing two-strand floss tufts to the model by means of cellophane tape.

Coefficients

NOTE: Model force and moment coefficients presented on the figure in Volume I of this report are referred to stability axes through the model moment reference center as shown in Figure 4.15 of Volume I.

C_L — Lift coefficient, Lift/qS to stability axes, or normal force coefficient on body axes tabulations.

C_D — Drag coefficient, Drag/qS to stability axes, or axial force coefficient on body axes tabulations.

C_m — Pitching moment coefficient, Pitching moment/$qS\bar{c}$.

C_ℓ — Rolling moment coefficient, Rolling moment/qSb.

C_C — Side-force coefficient, Side-force/qS to stability axes and on body axes tabulations.

C_n — Yawing moment coefficient, Yawing moment/qSb.

Sta. 30.75 — Subscript "Sta. 30.75" on moment coefficients indicates that the longitudinal location of the model moment reference center is at model station 30.75 with the vertical location as shown in the moment reference diagram shown in Figure 4.15 of Volume I.

NOTE: A_f, c_f, A_a, c_a, A_e, c_e, A_r and c_r are explicitly defined in "Data Reduction Reference Dimensions" in Section 3.4 of Volume I.

C_{h_f} — Flap hinge moment coefficient, Flap hinge moment/qA_fc_f, identified on tabulations as CH.M F.

C_{h_a} — Aileron hinge moment coefficient, Aileron hinge moment/qA_ac_a, identified on tabulations as CH.M A.

C_{h_e} — Elevator Hinge moment coefficient, Elevator hinge moment/qA_ec_e, identified on tabulations as CH.M E.

C_{h_r} — Rudder hinge moment coefficient, Rudder hinge moment/qA_rc_r, identified on tabulations as CH.M R.

$\frac{p - p_o}{q_o}$	Pressure coefficient where p is the measured local pressure and p_o is the test-section free-stream static pressure, and q_o equals q; on the tabulated pressure coefficients this is noted as PR; also noted as $\Delta p/q$.

Symbols

α_g	Geometric angle of attack of the model wing reference plane relative to the tunnel axis. (Degrees); noted as ALF. G on tabulated hinge moment coefficients and tabulated pressure coefficients.
α	Angle of attack of the model wing reference plane relative to the equivalent free air stream (Degrees).
ψ_g	Geometric angle of yaw of the model plane of symmetry relative to the tunnel axis. (Degree); noted as PSI. G on tabulated hinge moment coefficients and tabulated pressure coefficients.
δ_f°	Flap deflection in degrees relative to the wing reference plane.
δ_a°	Aileron deflection in degrees relative to the wing reference plane, positive when the trailing edge is down and noted individually L/R, Left/Right.
δ_e°	Elevator deflection in degrees relative to the horizontal tail reference plane, positive when the trailing edge is down.
δ_r°	Rudder deflection in degrees relative to the vertical tail reference plane, positive when the trailing edge is to the left.
q_m	Uncorrected dynamic pressure.
q	Dynamic pressure, $\rho V^2/2$.
R. N.	Reynolds Number (2.21 million for this test) $= \rho V\bar{c}/\mu$ where ρ is the mass density of air, μ is the absolute viscosity of air, and V and $\bar{c}$ are as defined elsewhere is this report.

x/c	Symbol denoting wing orifice location, the distance aft from the wing leading edge expressed as a decimal fraction of the local chord; on the tabulated pressure coefficients x/c is noted under column headings K 1., K 2., and K3, and is expressed as a percent of the local chord.
V	Average airstream velocity, $\sqrt{2q/\rho}$.

3.2 DESCRIPTION OF MODEL COMPONENTS

Symbol	
a_0	Aileron
a_1	Aileron: Same as a_0 except rounded (in chordwise section) at leading edge of outboard end.
B_0	Fuselage: With canopy and overhead jet intake with simulated ducts.
D_0	All landing gear doors
M_0^f	Main Landing Gear: Superscript f denotes forward location, Fuselage Station 34.40.
N_0	Nose Landing Gear: Located at Fuselage Station 17.10.
F_0	Trailing Edge Flaps: Fowler-type flaps extending spanwise from Wing Station 3.00 to Wing Station 12.594.
H_0^x	Horizontal Tail of tapered planform mounted for a "tee" tail at the top of the vertical tail; the pivot point for horizontal tail incidence is at Fuselage Station 62.073 and Water Line 25.125. The superscript denotes incidence, positive when the trailing edge is down, relative to the wing reference plane.
IMAGE	Reflection image of the two-strut support for tare evaluation. For the "wing alone" configuration the image included a center-mounted image sting.

IMAGE STING	Image Sting - Center mounted image sting for the "wing alone" configuration used in tare evaluation.
INV	Inverted: to denote model inverted in the test section.
P_1	Orifice Plate inserted at the engine intake with twin side-by-side orifices of 1.750-inch internal diameter.
P_2	Orifice Plate: Same as P_1 except orifice internal diameter was 1.375 inch.
R_0	Pressure Rake: Inserted at the aft end of the right-hand duct and instrumented with total head orifices. Static orifices were provided in the duct wall. The center of the rake was located at Fuselage Station 49.80.
S_0^X	Symbol designating simulated Wing Fan Cover configurations; on the wing upper surface, the simulated wing fan covers, when closed, form a bump that protrudes above the surface of the wing; on the lower surface the cover is characterized by the spanwise corrugations of retracted or closed louvers. The superscript denotes: W, with support struts, and N, without support struts.
S_1^X	Simulated Wing Fan Cover configuration, with superscripts as defined for S_0. S_1 was tested only as S_1^N, without struts. S_1 denotes "bumps" on the upper surface and depressed louvers on the lower surface. The outboard edges of the louvers were depressed .10-inch below the wing surface.
S_2^X	Simulated Wing Fan Cover configuration, with superscripts as defined for S_0. S_2 was tested only as S_2^N, without struts. S_2 denotes the "bumps" depressed condition on the wing upper surface and louvers on the lower surface depressed as per S_1; the outboard edges only of the upper surface bumps were depressed 0.10-inch below the wing surface.

S_3^x Simulated Wing Fan Cover configuration, with superscripts as defined for S_0. S_3 was tested only as S_3^N, without struts. S_3 denotes the absence of bumps on the wing upper surface and the presence of retracted louvers on the lower surface.

TUFTS Tufts of two-strand floss affixed to the model with cellophane tape to observe and/or record visible flow patterns.

T_1 Transition Grit (Carborundum) on designated model parts at all times. The superscript denotes fineness and varied only during the grit studies. During most of the test #150 grit was used exclusively. The pattern was as follows:

Transition Grit Strip	Width	Location
Wing at Root	1/2"	1/2" from L. E.
Wing at Break Chord	3/8"	3/8" from L. E.
Wing at Tip	1/4"	1/4" from L. E.
Vertical Tail at Root	3/8"	3/8" from L. E.
Vertical Tail at Tip	1/4"	1/4" from L. E.
Horiz. Tail at Root	3/8"	3/8" from L. E.
Horiz. Tail at Tip	1/4"	1/4" from L. E.
Duct	3/8"	3/8" from L. E.
Nose	1/2"	1-1/2" from Fus. Sta. 0

T_2 Transition Strip of sheet aluminum .35-inch high mounted normal to the surface at Fuselage Station 26.47. The strip extended over the fuselage and duct intake on each side to the wing upper surface.

V_0 Vertical Tail of tapered planform with the rudder hinge line at the 82% chord line. The horizontal tail was attached to a vertical plate which inserted into the vertical tail in such a way that a portion of the vertical mounting plate was left exposed as a section of flat plate when the horizontal tail was on the model.

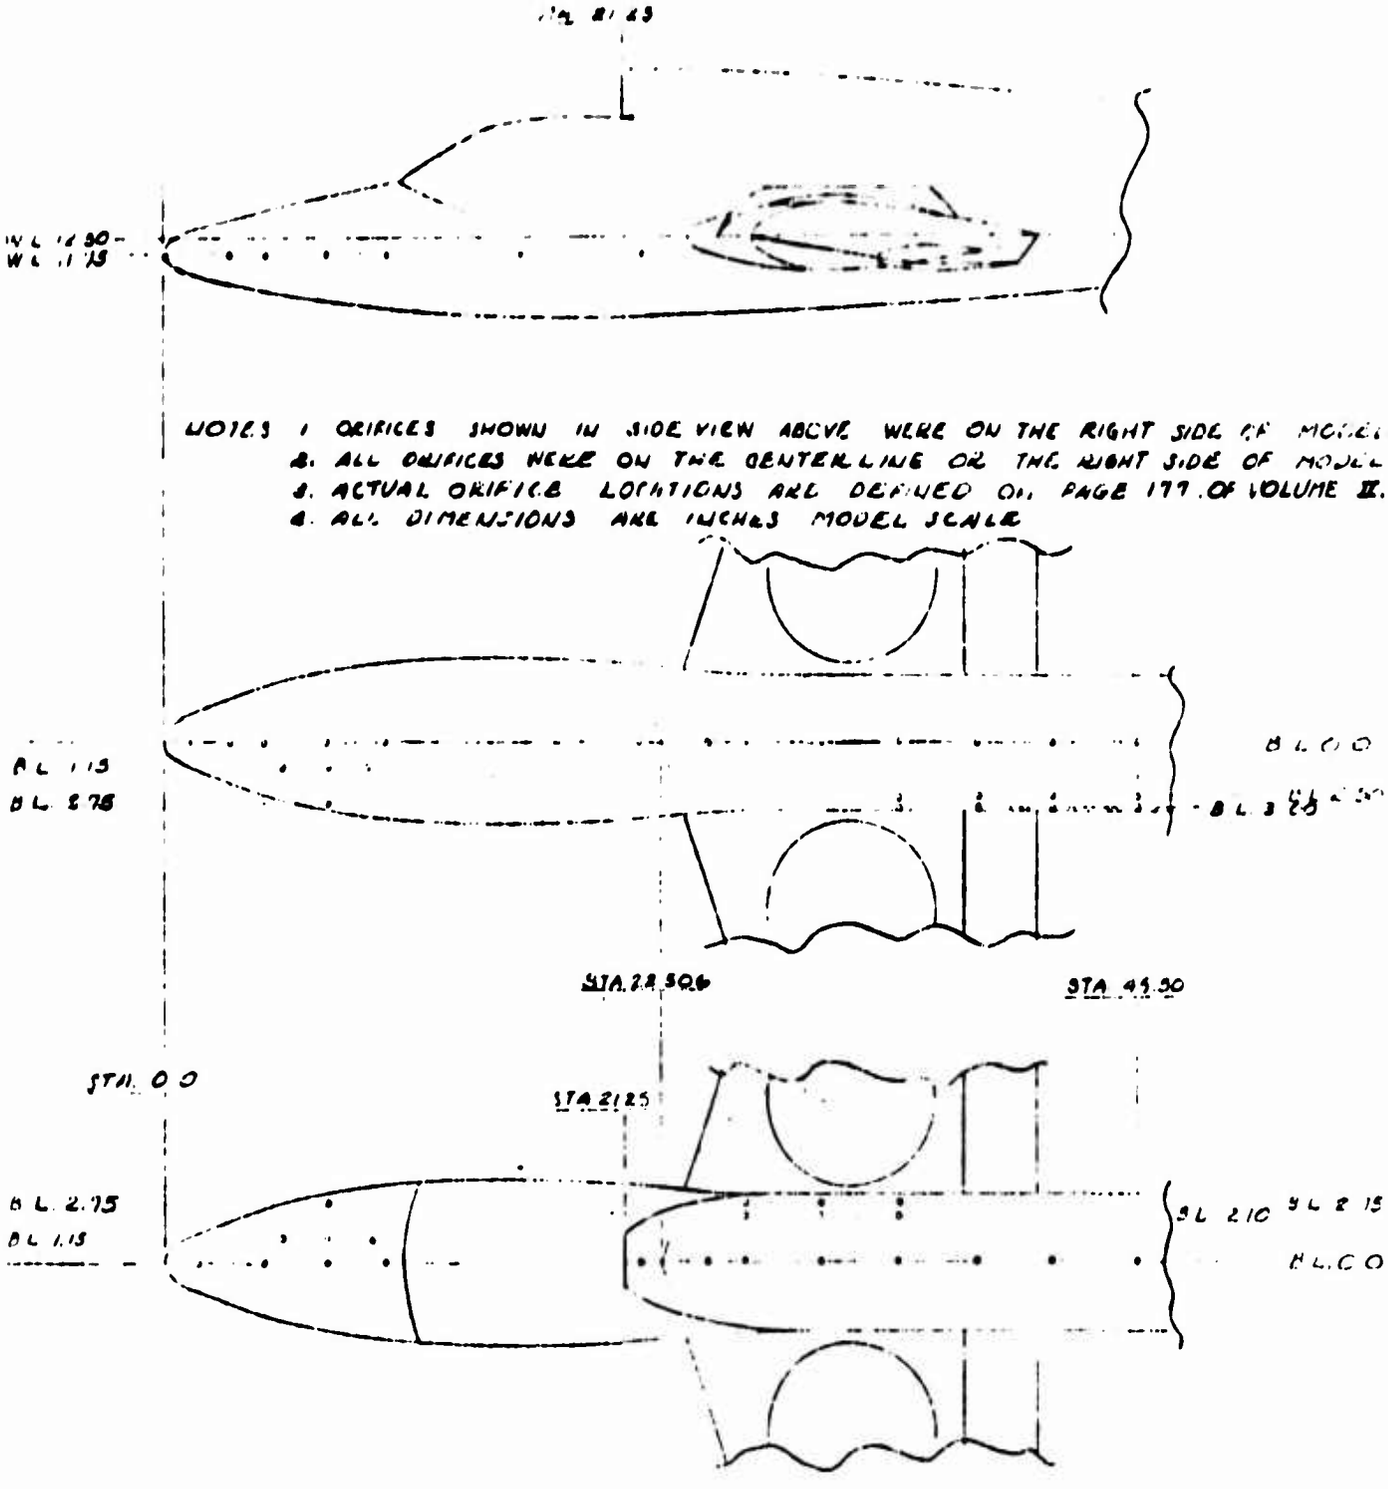

V_1 Vertical Tail: Same as V_0 except the horizontal tail mounting plate was faired with model wax to match the vertical tail airfoil section.

W_0 Wing: Generally tapered with rounded tips; the leading edge and trailing edge sweeps are increased at wing mid-semispan. The wing was designed to accommodate a vertical lift fan on each side of the fuselage and was equipped with ailerons and Fowler-type flaps; outboard of the wing break chord, the wing panels were bent downward 6°. The outboard panels were twisted (leading edge down) 3° from the break chord to the tip chord about the quarter-chord with non-linear distribution.

3.4 DATA REDUCTION REFERENCE DIMENSIONS

External Balance

S	Wing Area: 4.068 square feet
$\bar{c}$	Wing Mean Aerodynamic Chord: 14.115 inches
b	Wing Span: 44.750 inches
AR	Aspect Ratio: 3.42

Hinge Moments

A_f	Flap Area (one only): 0.1975 square feet
c_f	Flap Root Mean Square Chord: 2.965 inches
A_a	Aileron Area Aft of Hinge Line (a_0 configuration) (one only): 0.160 square feet.
c_a	Aileron Root Mean Square Chord Aft of Hinge Line (a_0 configuration): 2.353 inches
A_e	Elevator Area Aft of Hinge Line (one only): 0.0951 square feet
c_e	Elevator Root Mean Square Chord Aft of Hinge Line: 1.661 inches.
A_r	Rudder Area Aft of Hinge Line: 0.087 square feet
c_r	Rudder Root Mean Square Chord Aft of Hinge Line: 1.869 inches.
