CLEARINGHOUSE
for Federal Scientific & Technical
Information, Springfield, Va. 22151

USAF

BUILDING 159
NAVY YARD ANNEX
WASHINGTON, D.C., 20333

36

Purpose

USAF ETAC Technical Notes are published by the USAF Environmental Technical Applications Center to disseminate aerospace sciences information to units of the Air Weather Service. Subject matter contained in these Technical Notes, while pertinent, is not deemed appropriate for publication as Air Weather Service Technical Reports which are confined to those studies, reports, techniques, etc., of a more permanent and specific nature. Technical Notes include such material as wing seminar listings, bibliographies, special data compilations, climatic studies, and certain USAF ETAC project reports which may be of special interest to units of the AWS organization. This series is published under the provisions of AFR 6-1 and AWSR 80-2, as amended.

Distribution

Technical Notes will normally be given the same distribution as AWS Technical Reports which includes all AWS units through detachment level. Additional special distribution may be provided certain issues when the subject matter is believed to warrant wider dissemination within the scientific community. A smaller distribution of the Notes will be made when the area of interest and applicability is considered limited.

Non-AWS organizations desiring copies of USAF ETAC Technical Notes should submit their request to Federal Clearinghouse of Scientific & Technical Information, Springfield, Virginia 22151.

Preface

One of the primary functions of the Technical Information Section of the USAF Environmental Technical Applications Center (ETAC) is to locate reference material requested by the various governmental agencies and those civilian organizations completing government contracts. The requests are generally initiated to aid in the solution of specific problems. However, many of these bibliographies represent a substantial listing of pertinent sources which, having been compiled, could prove very beneficial to other researchers with similar interests in subject matter or area of coverage. It is with this in mind that USAF ETAC publishes certain reference listings such as this bibliography. It is believed that, by publication and distribution of these consolidated reference lists, much of the time-consuming reference-searching of the researcher can be eliminated.

Inclusion of an item in this listing does not constitute an indorsement of the information included therein by the DOD, USAF, Air Weather Service, or USAF ETAC. It also must be noted that references selected for this bibliography should not be construed as being the best or only references available as many excellent papers, reports, etc. were no doubt overlooked during the limited search period allotted the author for this project.

The valuable assistance obtained from personnel of the various libraries in the Washington, D.C. area is gratefully acknowledged; their efforts facilitated the task of reference searching for this publication.

INTRODUCTION

This bibliography was compiled as a by-product of the regular reference-searching that is one aspect of the normal work-load of the Technical Information Section, USAF ETAC. Many of the abstracts herein were taken from the publications themselves, many others, or parts of abstracts, from Meteorological and Geostrophysical Abstracts (Am. Met. Soc.), and others were prepared by members of the Technical Information Section of USAF ETAC. The individuals below are credited with the preparation of one or more abstracts shown in this publication.

<u>Initials</u>		<u>Initials</u>	
AHK	Ajmal H. Khan	ILD	Isadore L. Dordick
ALS	Alvin L. Smith, Jr.	MLW	Marie L. Weight

DLB	Dennis L. Boyer	RES	Robert E. Stadjuhar
EK	Elemer Kiss	SN	Sylvia Nowinska
EZS (ES)	Evelyn Z. Sinha	VJC	Vincent J. Creasi

Since only a limited time was available to the authors to compile this reference listing, it is very possible that, in some cases, an author's best work is not the item we have included. Furthermore, some important papers, reports, summaries, etc., undoubtedly have been completely overlooked in our search and we offer our apologies for such unintentional oversights.

All items are numbered consecutively throughout the bibliography and arranged alphabetically by author into five segments: General References, Iraq, Jordan, Lebanon, and Syria. Those studies not available in English have the applicable language entered opposite the abstract in the left-hand margin. For the readers convenience, a subject index is provided. Each item lists a source at which the publication may be located either by library card catalogue number, AD number, or other indicator. Generally, most of the listed items were located within the Washington, D.C. area. Abbreviations denoting the various libraries are identified under Index to Source Symbols below.

Index to Source Symbols

Census	Census Bureau Library, FOB 3 Suitland, Md.
DAS	Atmospheric Sciences Library ESSA, Silver Spring, Md.
DAS P col	Periodical Collection Atmospheric Sciences Library Silver Spring, Md.
DLC	Library of Congress
DNAL	National Agricultural Library Dept. of Agriculture Beltsville, Md.

Certain departments within the governmental structures of the subject countries issue periodic publications concerning the Meteorological or Climatological parameters. The publications listed below are some of these periodicals.

IRAQ

Meteorological Department

Monthly publication:

"Monthly Climatological Data," 1937-

Occasional publications:

"Publication Nos.," 1-14

JORDAN

Meteorological Service

Monthly publication:

"Climatological Data," 1955-

Central Water Authority

Annual publication:

"Rainfall in Jordan," 1953-

Dept. of Statistics

"Quarterly Bulletin of Current Statistics"
1962- to date

LEBANON

Meteorological Service

Monthly publication:

"Climate of Lebanon-Monthly Statistical Bulletin,"
1953-

LIBRARY (cont)

Climatological Service

Monthly publication:

"Bulletin Climatologique Mensuel," 1944-

SYRIA

Meteorological Department

Monthly publication:

"Monthly Climatological Data," 1955-

DAS MO9.22 B515n.
German
...This paper discusses cyclonic activity in the eastern Mediterranean region. Statistical investigations of cyclonic activity in this region conducted from 1954-1964 are included. Summarized climatological conditions are also given. (DLB)

2. Ardekani, H., Synoptic Situations on Mar 9-12, 1962 for Iran and Neighbouring Countries. World Meteorological Organization, Technical Note No. 69, 1965, pp 225-233. Figs. DAS M(06) W927p.
...The period, Mar 9-12, 1962, was chosen to study the movement of locusts in the region of Iran in relation to the synoptic period. An analysis was undertaken at the Forecasting Office at Mehrabad Airport, Tehran, of surface and upper air maps for an area extending from 25°N to 45°N and from 20°E to 60°E. Midday charts were drawn for the surface, 850, and 700 mb. At the two upper levels, both streamlines and contours were drawn. Some of the charts are reproduced and a detailed account is given of the progress of the synoptic situation. The rainfall and temperature distribution is also discussed. (RB)

3. Ashbel, Dov, Climate of the Great Rift-Arava, Dead Sea, Jordan Valley. Hebrew Univ, Jerusalem, 1966, 228 p, maps. DLC Q3990.P3A927.
...Consists of a general description of the climate of the Jordan Valley area. A number of parameters have been tabulated: mean monthly temperature (wet bulb and dry bulb); relative humidity and absolute relative humidity; evaporation; sunshine (hrs); rainfall and rainfall percentage frequency. (DLB)

4. Ashbel, Dov, Frequencies of Temperature Thresholds (Hours per Month) and Maximum-Minimum Graphs. Jerusalem, Hebrew Univ, 1967. Unpaged. Numerous charts and tables Text in English and Hebrew. DAS M24.36 A819fr.
...Contains graphs of daily mean, maximum, and minimum plus tables of frequencies for varying periods at ~100 listed stations mostly in Israel, and a few in Turkey, Syria, Iraq, and Lebanon. (DBK)

May 1970

5. Ashbel, D., Rain and Snow in the Near East (Turkey, Iraq, Syria, Lebanon, Jordan, Israel and Egypt) 1875-1967, Hebrew Univ, Jerusalem, 1968, 124 p. 10 figs. IPB Files.

...Consists of summarized precipitation statistics for the Near East. Included are: mean monthly rainfall; days with rain per month; and monthly and annual rainfall, by year. A map of average annual precipitation (mm) is also included. (DLB)

6. Ashford, O.M., Agroclimatology in the Near East: Technical Conference in Beirut, World Meteorological Organization, WMO Bulletin 14(2), pp 115-118. Apr 1965. Figs, refs. DAS M(05) W927v.

...Reports on the technical conference held in Beirut, Sep 28-Oct 9, 1964. The first part of the conference was devoted to lectures and discussions on the importance of agroclimatology in general and on the particular methods developed earlier. The need for taking full account of climatological factors in agricultural planning and operating was stressed. The methods of analyzing precipitation and temperature data were described and special attention was also given to methods used in studies of the water balance. Practical exercises were conducted. (ES)

7. Atlas of the Arab World and the Middle East. (With an introduction by C.F. Beckingham), London, Macmillan, 1960, (69 p), Maps (in color) pp 2-40. DAS 912.1 D623at and DNAL Folio 278.185At6.

...This atlas contains a series of maps of North Africa and the Middle East. In addition to the physical/political maps, climatic maps are also included. The distribution of the mean annual precipitation over the entire area is shown. Separate maps show: precipitation, temperature, and winds in Jan and Jul in the entire area; mean annual precipitation in North West Africa, the Nile Region, Syria, northern region of the U.A.R., and Lebanon. Maps of mean temperature in Jan and Jul for the latter group are included; mean annual precipitation in the Jordan Region; climatic maps of Iraq show mean annual precipitation, mean maximum temperature in Jul, mean minimum in Jul and mean maximum and minimum temperature in Jan. Climatic maps of the Arabian Peninsula and Iran show mean annual precipitation in these regions. (EZ3)

8. Boulangier, R., The Middle East: Lebanon, Syria, Jordan, Iraq, Iran. Trans. by J.S. Hardman, Hachette, Paris, 1966, 1060 p, maps. DLC DS43.M681j 1966.

...Not available for abstracting.

9. Boyko, H., Ancient and Present Climatic Features in South-West Asia and the Problem of the Antique Mounds of Grapes ("Teleilat el-'Anab") in: The Negev Inst. J. of Biometeor., Vol. 10, No. 3, 1966, pp 223-231. DAS M(05) I6.in.

...Compares the South-West Asia climate of the present with that of 2000 years ago. A number of elements are compared: precipitation (days with rain), winds, thunder, and hot spells. (DLB)

10. Brice, William C., A Systematic Regional Geography Vol. VIII South-West Asia, University of London Press Ltd., London, 1966, 448 p. DLC Q125.G57 Vol. 8.

...Contains a section on the physical geography of South-west Asia. Within this section are diagrams, charts, and maps on the climate of the area. In addition to these graphic climatological depictions, there are general descriptions of the area environment. (DLB)

11. Berdes, David J. and Safadi, Ghafic, Has-El-Ain: The Great Karst Spring of Mesopotamia. "Journal of Hydrology", (Amsterdam) Vol. 1, No. 1, 1963, pp 48-57. DLC GB651.J6.

...Contains extensive data on precipitation in addition to spring discharge information. Regional precipitation (annual) is given on a map covering 34°N to 39°N and 34°E to 44°E. (DLB)

12. Burtzer, K.W., Dynamic Climatology of Large-scale European Circulation Patterns in the Mediterranean Area. Meteorologische Rundschau, Vol. 13, Heft 4, Jul/Aug, 1960, pp 97-105. DAS M(05) M587.

...The author sketches the major dynamic climatological features of each large-scale weather pattern for the Mediterranean area. This study is intended to be an aid in short-range forecasting. The Middle East area is given as an area of secondary cyclogenesis. (DLB)

13. Cressey, George Babcock, Crossroads: Land and Life in Southwest Asia, N.Y., Lippincott, 1960. 593 p. Numerous figs and photos, Bibliog at end of each chap, tables. DAS 915.6 C922cr.

...An illustrated textbook on the economic and human resources of the Near or Middle East. Water figures heavily in all of the chapters. The chapter on climate (pp 93-117) includes a discussion of the Mediterranean-type climate of the region, pressure and air masses, local winds, temperature, precipitation, water balance and climatic regions, and some tabular data for 37 representative stations. Each chapter on the separate regions named above also contains an extensive section on climate with climograms for a number of stations within the country or area. The climograms show the extremes of temperature and the monthly potential evapotranspiration as well as the means and daily range of temperature and average monthly precipitation. (NR)

French

...General description of climatic conditions are given. This study devotes special attention to rainfall and the length of the rainfall season. (DLB)

15. Dodd, A.V., Some Aspects of the Climate of South-West Asia. Met. Mag., Vol. 94, No. 1110, Jan 1965, pp 38-47. DAS M(05) G786n.

...Consists of a general description of the climate of southwest Asia. The area is defined as including Iran, Iraq, Israel, Jordan, Lebanon, Saudi Arabia,

15. (cont)

Syria, Turkey, and Yemen. Isohyetal maps give mean precipitation for January and July. Isotherm maps give absolute maximum and minimum and mean daily maximum and minimum temperatures for January and July. (DLB)

16. Doron, E. and A. Cohen, Mountain Lee Waves in the Middle East; Theoretical Calculations Compared with Satellite Pictures. Meteorological Satellite Data-Final Report of Studies, Hebrew Univ, Dept. of Meteorology, Contract CWB-11055 (U.S. Weather Bureau), Jerusalem, 1967, 12 p. DAS M(051) J56re final.

...Four cases of mountain-lee waves in the Middle East are discussed. The wavelengths, as observed on satellite pictures, are compared with calculation of wavelengths based on several different assumptions. Results show that the theory most applicable in the region is the one assuming an exponential increase in the wind speed with height. (Pt. Auth. Abs.)

17. Fisher, W.B., The Middle East, A Physical, Social, and Regional Geography, 1966 ed. (originally published in 1950) Methuen and Co. Ltd, London, 1966, 514 p. DLC DS49.F56.

...Contains an extensive section on climate. Tables and maps of mean temperatures, precipitation, and mean cloud amount (cloud amounts for Beirut and Damascus, only) are given. A descriptive climatology of the area is also included. (DLB)

18. Great Britain Meteorological Office, Weather in the Mediterranean. Vol. II [Climatic tables] M.O. 391b, 1964, 372 p. DAS M82/262 G786 1964.

...This source consists entirely of climatic tables for countries in the Mediterranean Sea area including Gibraltar, Morocco, Algeria, Tunisia, Malta, Libya, Egypt (UAR), Israel, Lebanon, Syria, Cyprus, Turkey, Crete, Greece, Albania, Yugoslavia, Italy, Corsica, Sardinia, France and Spain, also included is a BIBLIOGRAPHY used in compiling the climatic tables. (VJC)

19. Guss, Hans, Statistische Charakteristiken des Höhenwindes für den Raum Nordatlantik-Europa-Näher Osten [Statistical Characteristics of Upper Air Winds for the North Atlantic-European-Near Eastern Area], Berichte des Deutschen Wetterdienstes, No. 105, Band 14, Offenbach a.M., 1967, 8 tables, 44 maps. DAS M(055) G373ba.

...The circulation conditions of the lower stratosphere in the North Atlantic-European-Near Eastern Region and upper wind conditions at 225 mb and 96 mb have been examined. Radiowind measurements mainly were taken as a base. To obtain a network of points of intersection of coordinates, these measurement results were completed from synoptic upper-air charts -- for the above-mentioned levels -- by using cyclostrophic wind and by interpolation to a universe of wind values free of gaps. On the basis of such homogeneous material some statistical characteristics of upper wind have been computed and represented on regional maps for the North Atlantic-European Region with windroses, isotachs, mean vector wind, and persistence as well as zonal and meridional standard deviation. In doing so, the representativeness of the basic material was checked. Considerations based on the comparisons of these results yielded some essential features of the regional distribution of these upper-wind parameters which appear interesting in relation to atmospheric circulation. (Pt. Auth. Abs.)

German

20. Hills, R.S. (edited by), Arid Lands, A Geographical Appraisal Methuen and Co., Ltd., London, 1966, 461 p. DLC Q611.H5.

...Contains sections on the climatology, geomorphology, water supply, and soils of arid regions. Much of the descriptive material on desert regions is applicable to the Middle East area. Several maps of terrain classification include the Middle East and adjacent areas. (DLB)

21. Howe, George H. et al., Classification of World Desert Areas. The Travelers Res. Center, Inc., U.S. Army Matich Labs., Contract DA 19-129-AMC-1008(M), Tech. Rpt. 69-38-ES, ESL ES-44, Matich, Mass., 104 p. AD 683603.

...Contains maps of aridity and thermal classification for 8 continental and sub-continental areas, among them Southwestern Asia. Aspects of climate and terrain that are of significance to Army operations are described. (Pt. Arth. Abs.)

22. Jordan (Hashimite Kingdom). Central Water Authority, Pt. I 30-Year Average Rainfall in Jordan 1931-60, Pt. II. Rainfall in Jerusalem 1846-1964. Technical Paper No. 34, Amman, Dec 1964. 10 refs, 3 figs, enfolded map. DAS 77.21/569.4 J62th.

...The text describes the history of rainfall records in Jordan. Part I gives an explanation of the table, map, and the rain-gauge exposures and records. The table lists the average annual rainfall for the 30-year period for 189 Jordan, 18 Syrian, and 31 stations in Palestine (Israel). Part II has an explanation of the tables, figures, and records. Table 2 contains the annual hydrologic-year rainfall, year-by-year, from 1846/47 to 1963/64; it also lists the 30-year standard period rainfall and the highest and lowest 10-year average. Figure 1 is a graph of the annual rainfall 1861-1961, year-by-year, for Jerusalem. An enfolded polychrome map shows the annual average rainfall in Jordan based on 1931-1960. (VJC)

23. Kaka, George; Sakka, Rajah; and Al-Basri, Abdul Wahed Mohammed, A Case of Jet Stream Activity over Eastern Mediterranean Sea and the Middle East. Iraq, Meteorological Dept., Meteorological Memoirs 1, 1962, Issued Baghdad, pp 149-158. 6 figs, 2 tables, 2 refs. DAS W(055) 165mc.

...Discusses a case of jet-stream activity over the eastern Mediterranean Sea and the Middle East region during the last week of March, 1962. Vertical cross-sections of 2 air-routes between southern Europe and the Middle East have been discussed along with vertical time-section charts of 4 of the representative stations over the area. It is seen that the sub-tropical jet stream had two branches over the Middle East region which were separated by about 10° of latitude. During the week there was a succession of active low pressure waves across the sea. (Author)

Armenian

...Atmospheric flow in Assyria and Babylonia is compared with contemporary atmospheric flow in Iraq. The wind roses for the ancient cities are deduced from their city plans and from cuneiform tablets. No marked differences could be distinguished between the ancient and new wind roses for the period 1100 to 90 B.C. (Translation of German Abstract) (ILD)

issued

...This publication will contain an introduction to the synoptic climatology of the southern and western Asia areas. The text will be divided into three parts: the southeast Asia area; the Indian sub-continent-Himalayan area; and the Near East area.

27. Lauseher, F., Agrarklimatologie der semi-ariden Gebiete des mittleren Ostens [Agroclimatology of the Semi-Arid Regions of the Middle East], Wetter und Leben, Vienna, 14(9/10)1962, pp 220-222. DAS MO6 W542.

German

...This author summarizes the final report of the FAO, UNESCO and of the WMO on the program for investigation of agroclimatic conditions in the semi-arid regions of southwest Asia proposed during the seventh meeting of the FAO in 1953. In the countries of this region (Jordan, Lebanon, Syria, Iraq, etc.), there are about 40 stations with sufficiently long temperature observations and about 10 stations with phenological data. Potential evaporation was measured for 22 stations by Penman's method. Also, climatic homologues to reference areas such as Cyprus, Israel, Spain, etc. were established. The circulation regime over this region and the resulting temperature and precipitation characteristics are described; the precipitation amounts and temperatures required for agroclimatic purposes, the water balance regimes, etc. are discussed with the aid of data for particular areas. (ILD)

French

...Contains daily mean, maximum, and minimum temperatures and total rainfall amount with monthly summaries for 4-6 stations (number of stations greatly increased in later years) in Lebanon and several stations in Syria for September 1928-August 1930. Presents monthly summaries of mean, mean extreme, and absolute extreme temperatures; total precipitation; days with miscellaneous phenomena (lightning, thunderstorms, lightning and thunderstorms, snow cover, gales or strong winds, sandstorms, fog); evaporation amount; relative humidity; % of clear and cloudy days; duration of sunshine; wind direction frequency; wind speed frequency; mean cloud amount at 0800, 1300, 1800 and mean of the 3 observations; mean low cloud amount at 0800, 1300, 1800 and mean of the 3 observations; and daily rainfall amount for approximately 5-16 stations in Lebanon and for several stations in Syria for all or part of the period (September 1930-August 1941, September 1944-December 1958). Maps for each month with mean isotherms and mean isotherms are presented for the more recent years. Graphs of individual elements are also included for several stations. (VJC)

...Textual description of local winds over the lands surrounding the Mediterranean Sea. A map shows the direction, season, moisture or dryness, and accompanying weather of these local winds. (DLB)

30. Levi, Michael, On the Moisture Sources of Clouds Connected with the Subtropical Jetstream in the Middle East. Meteorological Satellite Data-Final Report of Studies, Hebrew Univ., Dept. of Meteorology, Contract CMB-11055 (U.S. Weather Bureau), Jerusalem, 1967, 6 p. Fig. DAS M(051) J56ra final.

...This study investigates middle and high-level clouds which accompany the subtropical jetstream in the Middle East. The clouds are analyzed by means of satellite photographs of the Middle East area. (DLB)

31. Levi, Michael, The Dry Winter of 1962-63: A Synoptic Analysis, Israel Exploration Journal, Vol. 13, No. 3, Jerusalem, 1963, pp 229-241. DLC D811.A1187.

...A meteorological study of cyclone frequency and synoptic analysis in the Eastern Mediterranean as it affected the winter drought in the area. (DLB)

32. Meigs, P., Geography of Coastal Deserts, UNESCO, Arid Zone Research, XXVII, Paris, 1966, 140 p. DLC GB612.M4.

...Contains general discussions on coastal deserts. More specifically, the climates of a number of deserts are discussed. Among these are the Mesopotamian littoral, the Negev, and the Sinai deserts. Descriptive climatologies are presented with a limited amount of data (mean daily temperatures, annual rainfall, etc.) (DLB)

33. Neumann, J. et al., Studies in the Synoptic Uses of Meteorological Satellite Data, Jerusalem, Hebrew Univ., Dept. of Meteorology, Contract CMB-10834, Report No. 1, Mar 1964-Feb 1965. 84 p. Figs (2 fold.) DAS M(055) J56re.

...The general area of the Mediterranean and the Middle East includes extensive sea and desert areas where the density of reporting stations is extremely small. The synoptic maps prepared on the basis of conventional meteorological data are reexamined in the light of the additional information presented by both the Tiros photographs and radiation data (8-12 μ) where, of all the orbits studied, the results of 14 such orbits are described. (Pt. Auth. Abs.)

34. Ritter, G.W., Climate and Visibility in the Middle East, Naval Missile Center, AIRTASK A30303303, TN-67-29, Point Mugu, Calif., Jul 1967, 18 p. 5 refs. AD 816828L.

...This report provides a brief description of those climatic conditions which are believed to be significant to visibility for one region of the world, the Middle East. The report contains general descriptive material and a representative amount of tabulated data (temp, RH, precip, etc.) for the Middle East. The data are seasonal (Jan, Apr, Jul, Oct). (Pt. Auth. Abs.)

35. Rosenan, M., Climatic Fluctuations in the Middle East During the Period of Instrumental Record. UNESCO, Arid Zone Research, Vol. 20, pub. 1963, pp 67-73. 4 figs, 3 tables, 15 refs. French summary p 73. DAS M83 R763ch.

Also in UNESCO-WMO Symposium on Changes of Climate with Special Reference to the Arid Zones, Rome, Oct 1961. [Provisional Programme and Selected Preprints of Contributions]. 8 p. Misc. 4 figs, 3 tables. At head of p 1: UNESCO/WB/AZ/575, Rome Symposium, Paper No. 5. DAS M77.38 U586cL1.

...Modern meteorological records were started in the Middle East in 1860. The analysis was carried out by using as parameters the annual averages of temperatures and the annual totals of precip. for 10-yr periods. The fluctuations of 10-yr averages of annual temperature for six stations in the Middle East, Rome, and Athens were tabulated. A fair agreement was found between climatic tendencies in southern Europe and the Middle East, while marked differences in climatic variations and their phase were recorded between maritime and continental stations. - ...Contains maps of high temperatures: warmest month, mean monthly maximum; percentage frequency of maximum temperatures $> 100^{\circ}\text{F}$, 105°F , 110°F , 115°F , and 120°F ; frequency of hourly temperatures $\geq 100^{\circ}\text{F}$, 105°F , 110°F , and 115°F ; mean duration of hot spells; and mean daily maximum wet bulb $> 70^{\circ}\text{F}$. The dry-bulb temperature maps are pertinent to the Middle East area. (DLB)
-
44. U.S. Naval Oceanographic Office, Sailing Directions for the Mediterranean, Vol. IV, publication no. 55. Washington, D.C. 1963. DAS 82/262 U58s v.4.
- ...This publication gives regulations, climatology, oceanography, and general navigation for all countries in the Mediterranean area, including Libya, Israel, Lebanon, Syria, and others. General information is given on land and coastal features, with brief descriptions of winds, weather, and climatology for several port cities. (VJC)

45. U.S. Navy, Fleet Intelligence Center, FICHER Enroute Weather Guide for Mediterranean Area. U.S. Naval Forces, Europe, U.S. NAS, Jacksonville, Fla., Dec 1969, 36 p. IPB Files.

...Climatological data are summarized for 5° squares in the Mediterranean area. The data consist of: mean monthly air temperature; mean number of days per month with measurable precip; mean number of days per month with measurable snowfall; and prevailing visibility in statute miles. The 5° squares extend into the Middle East. Additional maps present seasonal scalar mean wind speed - direction and seasonal percentage of cloud cover at and below 5,000 ft (area, 50°N to 30°N, 0° to 50°E). (DLB)

46. Wallen, C.C., Agroclimatology in the Near East, World Meteorology Organization, WMO Bull. 11(3) Jul 1962, pp 116-123. Fig, table. DAS M(05) W927v.

See also: Arid Zone Research No. 17, Sep 1962, pp 1-7. Table.
DLC GB841.89.

...A joint report was published by FAO/UNESCO/WMO on the agroclimatological conditions of the Near East, including Lebanon, Jordan, Syria, Iraq and Iran. For studies of temperature conditions, only 8-10 yrs of data were available. Only 70 stations have records longer than 15-20 yrs. The report shows that western and southern parts of the region receive winter rainfall due to winter depressions from the west. In the eastern and northern areas, the rainfall season extends into spring and early summer. In Jordan, rainfall ends in spring, while in Syria and Iraq it lasts until the beginning of May. The increase in the rainfall season while proceeding from south to north is due to the passage of the jet stream over the region in spring. (Pt. AHK)

47. Wallen, C.C. and Perrin de Brichambaut, Ch., G. Perrin, Technical Report on a Study of Agroclimatology in Semi-arid and Arid Zones of the Near East, Food and Agriculture Organization, Jul 1962. 185 p + appendices. Figs, tables, bibliogs. DAS M86:63 W197te.

...The technical report includes a general presentation of the agriculture and climate of the region covered (Jordan, Lebanon, Syria, Iraq and Iran), a study of the various climatic factors and their relation to cereal production, a classification of agroclimatic regions and, finally, a comparative study of several reference stations. Annexes on the vegetation, soils and some important crops are included. A general study of the circulation over the region and a careful analysis of the temp. conditions were first carried out, later a special investigation was made on the duration and the periods of development of winter cereal crops in various parts of the region. On this basis, the relation of temp. to development of winter cereal crops was studied. (EK)

52. Al-Rifai, M.S., Statistical Forecasting of Minimum Temperatures in the Baghdad Area. Rep. of Iraq, Met. Dept., "Met. Memoirs," Vol. II, Baghdad 1964, pp 46-55. Tables, fig. DAS M(055) I65me.
 ...The daily normal minimum temperatures for Baghdad are listed in Table 1 for the months of November through March. (VJC)
-
53. Ashbel, Dov, Frequencies of Temperature Thresholds (Hours per Month) and Maximum-Minimum Graphs. Hebrew University, Jerusalem, 1967. Graphs, tables, Hebrew-English. DAS M24.36 A819fr.
 ...A brief climatological description of Iraq is given. Graphs show the daily mean and the absolute maximum and minimum temperature for five Iraqi cities. Tables list the mean monthly maximum, minimum, average, range, absolute maximum, and minimum temperature at Baghdad, Basra, Habbania, Mosul, and Rutba. Annual and monthly mean frequencies of temperature thresholds (in hours) are shown by 5 degree intervals from 0 to 45°C for Baghdad, Basra, and Habbania. (VJC)

54. Awad, Ali, Dust Phenomena at Baghdad Airport. Iraq, Meteorological Dept., Meteorological Memoirs, Vol. 1, 1962, pp 1-6. DAS M(055) I65ms v.1.

...The hourly weather data of Baghdad Airport Weather station for Jan 1950 through Jun 1960 were examined for occurrences of dust storms, dust-raising winds, and dust haze. The results are presented in this paper. Among the data are: monthly and annual number of days with dust storms, number of occasions with dust phenomena, number of occasions of dust phenomena with visibility 100 meters, and maximum duration of poor visibility encountered with dust phenomena. It is seen that towards the end of the decade examined there was a marked increase in the incidence of dust phenomena. Possible explanations are given. (VJC)

55. Aziz, Ibrahim S., "A Study of the Beginning and End of the Rainy Season in Iraq," Meteorological Dept. Studies of Rainfall and Temperature Conditions in Iraq. Meteorological Memoirs, Vol. II, Baghdad, 1964, pp 14-30. Foreign Area Section.

...Table 1 shows number of 10-day periods in which the total rainfall exceeded 2.0, 5.0, 10.0 and 20.0 mm for last time in spring and first time in autumn for Mosul, 1937-63. Geographical maps of Iraq, with isolines, show the "mean date" for first and last seasonal rainfall exceeding 2.0-, 5.0-, and 10.0-mm/10 days. For nine stations, graphs show empirical probabilities of various rainfall amounts after any date in spring and before any date in autumn/winter. (RES)

56. Babakan, M.E., The Diurnal Variation of Rainfall in Central Iraq. Rep. of Iraq, Met. Dept., "Met. Memoirs," Vol. II, Baghdad, 1964, pp 31-33. Table, 2 graphs. DAS M(055) I65ms.

...A number of pluviograms derived from rainfall measurements taken at Baghdad West Airport (POR 1949-1960) were examined for evidence of a systematic diurnal rainfall variation. Results reveal that most rainfall in central Iraq is due to frontal or cyclonic convergence. (DLB)

57. Buringh, P., Soils and Soil Conditions in Iraq. Rep. of Iraq, Ministry of Agriculture, Baghdad, 1960, 322 p. 167 figs, maps, 38 tables. DNAL 56.25 Irl.

...Contains extensive information on the soils of Iraq. Chap 2 has sections on climate, soil climate, and hydrology. A rainfall map, based on data 1938-1950, is given. Another rainfall map illustrates rainfall variation. Temperatures (monthly mean, mean maximum, mean minimum, and extremes), soil temperatures, monthly and annual evaporation, and wind diagrams are also given. (DLB)

59. Quest, E., Flora of Iraq - Vol. I Introduction to the Flora. Iraq, Ministry of Agriculture, 1966, 213 p. Maps. DLC Q6379.V56.

...An account of the geology, soils, climate, and ecology of Iraq. (Pt. Auth. Abs.)

60. Hassoon, K., An Analysis of a Violent Squall at Baghdad Airport in "Met. Memoirs" Vol. 1, Baghdad, 1962. pp 112-121. Ref, 6 figs, table. DAB M(055) 165ms v.1.

...This paper discusses the main synoptic features associated with a squall on 29 April 1961 at Baghdad. Maps and graphs illustrate the role of low-pressure waves moving toward the northeast or north across Saudi Arabia and the frontal activity over central Iraq and adjoining areas. Some features of the associated jet stream also are discussed. Table 1 lists the monthly and total frequency of squalls with a speed exceeding 25 knots at Baghdad. (Pt. Auth. Abst.)

61. Iraq, Statistical Abstract 1965, Ministry of Planning, Central Bureau of Statistics, Section of Research and Publicity, Baghdad, 1966, 445 p. Tables. Census IR2A84, 1965 and DNAL (DC) 269.8 I-1.

...In addition to a general discussion of the weather for 1965, summarized mean monthly values of pressure (mb), temperature (°C), relative humidity (%); mean daily maximum and minimum temperatures (°C), monthly rainfall; mean number of days with rain, snow, hail, thunder, fog, dust storms, and sunshine hours; highest maximum and lowest minimum temperatures (with dates), and maximum rainfall, with dates, FOR 15-45 yrs. (ALS)

62. Iraq. Meteorological Department. Climatological Atlas for Iraq. Publication No. 13, Baghdad (1961). DAS M82.2/567 I65p, no. 13.

...This atlas is a revision of the 1945 issue, Publication No. 8. At least 12 years of more recent data (up to 1956) have been added. Data are based on reports from 19 first-order stations and 59 precipitation stations over a varying period from 1923-1956; this data will be issued in a special publication at a later date. A station list shows coordinates, elevation, and period of record. It contains the following polychromatic map, mostly on a scale of 1:5,000,000: Precipitation - mean monthly and annual isohyets and number of days with rain; mean annual number of days with hail and snowfall. Temperature - mean annual and bi-monthly isotherms; monthly maximum and minimum; mean annual number of days with minimum $\leq 0^{\circ}\text{C}$, $\leq 5^{\circ}\text{C}$, maximum $\geq 25^{\circ}\text{C}$, 30°C , 40°C and 45°C ; mean monthly and extreme maximum and minimum by bar graphs. Humidity (mixing ration in gm/kg) - mean annual and bi-monthly isopleths; mean monthly relative humidity at 03 and 12 Z by pie graphs. Pressure - mean bi-monthly isobars; mean monthly sea level pressure by bar graphs. Clouds - mean monthly low and total amount at 03, 06, 12Z by pie graphs in oktas and mean annual isonephs. Mean monthly duration of daylight and hours of sunshine by bar graphs (for Baghdad and Mosul). Dust (visibility less than 1 km), Fog and thunderstorms - mean monthly and annual number of days by isopleths. Wind roses with average monthly frequency from specified directions for selected station at 03, 06 and 12Z and mean monthly number of occurrences of concurrent wind speed and direction within specified ranges for Baghdad at 12Z. (VJC)

63. Iraq. Meteorological Department. Climatological Means for Iraq. Publication No. 11, Baghdad 1960, 56 p. DAS M82.2/567 I65, no. 11.

...For ten principal stations (Mosul, Kirkuk, Khanaqin, Baghdad, Habbaniya, Hai, Diwaniya, Nasiriya, Basrah), tables of monthly values of climatological data as follows: Rel. Humidity, Vapor Pressure, Low Cloud Amount, Total Cloud Amount, Wind Direction Frequencies -- mean of each at 8 hours of the day and for day as a whole; Temperature -- means as above, and, in addition, the mean and absolute extremes; Rainfall -- mean, and maximum 24-hr amount, no. of days with > 1 or > 10 mm; Pressure -- mean at each of 8 hrs, mean for day, absolute extremes; also, mean number of days with snow, hail, thunder, fog, duststorms, and clear and cloudy sky. Finally, for about 60 stations, in a special table, mean rainfall amounts. Basic period of record is 1935-56. (Pt. Auth. Abs.)

64. Iraq. Meteorological Department. Climatological Normal for Iraq. Publication No. 14, Baghdad 1965. DAS M82.2/567 I65.

... Climatic data for the following stations: Mosul, Kirkuk, Khanaqin, Rutbah, Habbaniya, Baghdad, Hai, Diwaniya, Nasiriya, and Basra. POR is 1931-60 but varies within this period for specific stations. Monthly and annual normals are given by 3-hourly periods. Various data are given in the following tables: (a) average values of temperature, pressure, relative humidity, vapor, low cloud and total cloud amount at each hour for each month and for the year, together with means of these values; (b) average daily max and min temperature plus extremes of max and min; (c) the average relative frequencies of winds from specified direction for each hour, for each month and the year, expressed as percentages; (d) averages monthly rainfall in millimeters, max rainfall in 24 hours with date of occurrence, mean number of days with at least 1 mm and at least 10 mm; (e) section headed "Mean Number of Days" giving the average number of days when the specified phenomena occurred. A day of rain is one on which total rainfall is ≥ 0.2 mm. Days of fog or dust are those on which the range of vision is < 1000 meters at any time of day. Clear days are those on which the average cloud amount at all observations is $0-1/8$, and cloudy days are those with average cloud amount $7/8$ or more. (Author)

65. Iraq (Rep.) Met. Dept. Monthly Climatological Data, (Title varies; Monthly Weather Report for Iraq), Jun 1955-Apr 1966, Vol. 29, No. 3 & 4, 1966, Baghdad. Tables. DAS M06.1/567 I65no.
- ...The number of stations vary from 8-13 over the period. Daily data of temperature - maximum, minimum, mean; pressure; relative humidity; precipitation; evaporation; minimum grass and soil temperature. Monthly mean data are in tables of dry and wet bulb temps, dewpoint, vapor pressure, relative humidity, pressure (MSL), and total and low cloud amount. The newer publications include daily radiosonde data (1200 GMT) at Basrah and Baghdad airports at standard levels. The number of days occurrence (by month) for 12 phenomena are tabulated. (VJC)

70. Jewitt, T.M., A Comparison of Sub-soil Water Conditions and Salinity in the Sudan and Iraq. United Nations Scientific, Educational, and Cultural Organization, Arid Zone Research Series, No. 14, 1961, pp 57-60. 7 tables, 3 refs. French summary p 60. DLC GB841.89.

...Presents a brief comparison of subsoil water conditions and salinity in the Sudan Gezira and the lower Diyala area of Iraq. The plains of Iraq have been irrigated in part and at times since the third millenium B.C., whereas irrigation in the Sudan Gezira started in 1912. The soils of the Gezira contained large quantities of salt before irrigation and this salt, only slightly changed in distribution and amount, is still present. The basic reason why there has been no deterioration in the soil is because the water table is deep and is not rising. In Iraq, the water table is sharply influenced by irrigation and there are many instances of a high-water table having caused salinization of the upper soil. In both Gezira and Iraq, the lower soil from a depth of 1 to 2 m is generally quite dangerously saline. If the Gezira soil were more permeable, the menace of a mounting water table would arise and, since the subsoil is saline, the consequence to agriculture would be disastrous. Fortunately, there is sufficient downward movement of water to prevent the accumulation of salt and to keep the salts of the subsoil at a safe distance from the surface. The lower Diyala of Iraq has fair drainage but there are considerable areas of highly saline soil where the soil was more permeable than the Gezira soils. (E28)

71. Kneder, Jamil, A Note on Some Climatic Features of Iraq. Iraq Meteorological Dept., Meteorological Memoirs, Vol. 1, 1962, pp 53-86. DAS M(055) I65me, v.1.

...This detailed study of the climate of Iraq includes; physical features, climatic regions, climatic elements, upper-air climatology, jet stream, and principal aspects of the synoptic climatology of Iraq. Tabular data, month-by-month and by year, include; mean rainfall; frequency of thunderstorms, hailstorms, duststorms, and fog; mean pressure and temperatures, including highest and lowest pressure and temperature on record; duration of daylight; surface air density with lowest possible; and pressure altitude. Upper-air tables include; mean heights, temperatures and dewpoints for Habbaniya and Baghdad to 100 or 150 mbs; height of freezing level over Baghdad; height of the top of inversion layer over Baghdad; average height and temperature of tropopause; also, gives distribution of air density over Baghdad-Habbaniyah area. At head of p 1: UNESCO/NS/AZ/586, Rome Symposium, Paper No. 16). DAS M77.38 U586cL1.

...The effect of climatic variations on the geological and morphological evolution of desert areas, mountain regions, and major river systems of Iraq were studied for several years. Three main morphological units were described: the Tauros-Zaros mountain chain, the Mesopotamian Syncline, and the Western Desert. Landslides and solifluction in the mountains, deep, gravel-filled valleys in Mesopotamia, and elevated shorelines on the slopes of desert depressions strongly suggest the occurrence of pluvial periods in Iraq during the Quaternary. The results of human inference with nature are not negligible. Such achievements as creation of huge lakes and other major works stimulates tendencies already existent in nature and increases the intensity of natural processes. (SN)

81. VoÛte, C. Climate and Landscape in the Zagros Mountains (Iraq). International Geological Congress, 21st, Copenhagen, Report 4, 1960, pp 81-87. DLC QEL.I6 1960em.

...The morphology of the Subimaniyah Valley in the Zagros mountains is described. Climate is discussed as it affects the landscape (by erosion). Descriptions of climatic changes since prehistoric times are given. (DLB)

82. Wartena, L. and Borghorst, A.J.W., The Energy Balance of An Evaporation Pan and the Measurement of the Reflectivity of Its Bottom. Royal Meteorological Society, Quarterly Journal, London, 87(372), Apr 1961, pp 245-249. 2 figs, table, 8 refs. DAS M(055) R888g.

...A U.S. Weather Bureau Class A evaporation pan was used for micrometeorological measurements in Iraq. Because it seemed doubtful if the method of the U.S. Weather Bureau could be used for working up the data in the desert climate of Iraq, the energy balance of the pan was studied, and details are published elsewhere. The considered items are summed up in this contribution and the results are given in a table. The problem of the albedo for sunlight of the shallow water in the pan was studied in the laboratory. Measurements were taken with a filtered light-beam and a silicon photo-cell. In a zinc pan filled with 0.175 m water, 8% of the direct and diffuse sunlight with wavelengths < 1 which has penetrated through the water surface is reflected. (Author)

...The water properties of the alluvial-meadow irrigated soils formed under high water-table conditions in the Euphrates River Valley were studied at 3 locations. In this paper the soil profiles at each site are described and the mechanical analysis and the water properties are tabulated for the investigated sites. Water-physical properties of irrigated alluvial-meadow and periodically inundated soils and of solonchaks on the 7th day after irrigation are shown in a series of diagrams and infiltration curves. Conclusions drawn from an analysis of the presented data include the following. The intensified capillary rise in the summer brings salts, into the top horizons. The heavy soil texture is responsible for the low infiltration (0.9 to 0.1 m/day) rates and poor accretion at field capacity. Leaching must be done to prevent resalinization. Drains must be 3.5 m deep with 100 m spacing in a heavy clay soils and 200 m in lighter soils. (DBK)

Polish

...The characteristics of the climate of Iraq are described using data of the meteorological variables presented on maps and tables. Meteorological recommendations for use in the city planning of Baghdad are presented. The northern and northeastern areas are climatically the most favorable parts of the city. The planning of green protective zones on SW, W, and NW sides is indispensable for reducing wind velocities, increasing humidity and mitigating discomfort caused by sand and dust storms. On the SW side, the green belts along the Euphrates can be used for this purpose. The construction of green belts and water surfaces is discussed in detail. (ILD)

German

...The dependence on the temperature and the water budget of the growth of wheat in Jordan is investigated. The fluctuations from year to year of the yield are similar to the fluctuations of some of the weather elements. The relation is marked between the amount of yield to the balance of rain (rain minus evapotranspiration) during the climatic time of growth. It becomes especially good in connection with the duration of positive values of the summed daily water balance. The possibility is examined to fix the extension of wheat cultivation according to the meteorological conditions until the beginning or middle of December. The daily observed and summed values of the water balance allow an early well-established prediction of the coming yield to be made. (Author)

Table 2 gives monthly temperatures, (absolute maximum, average minimum, average maximum, average, absolute minimum) for same stations. Table 3 lists precipitation, dust (sand) storms, thunderstorms, hail, snow, rain, precipitation in 24-hrs, monthly total, etc., same stations, year includes July 1966-June 1967. (ALS)

111. Syrian Arab Republic, Ministry of Planning, Statistical Abstract 1964, 17th ed., Directorate of Statistics, Damascus, 1965, 413 p, tables. DNAL (DC) 269.8 Sy 8S (available for 1967, DLC SY8A841967).

...Contains summarized pressure, total hours of sunshine, average daily evaporation, and relative humidity for 1964 at 16 stations. Temperature is summarized in the following categories: monthly average, absolute maximum, absolute minimum, and deviation from absolute minimum and absolute maximum. Within the precipitation tables the number of days with dust and sandstorms, hail, snow, rain, and thunderstorms are given. The number of occurrences of surface winds within specified ranges of speed and direction is given for 1964. In addition to the climatological data, soil types and groups are given by region. (DLB)

112. van Liere, W.J., Stratigraphical, Prehistorical, paleo-botanical and faunal evidence of Major Climatic Oscillations in Syria. (In: UNESCO-WMO Symposium on Changes of Climate with Special Reference to the Arid Zones, Rome, Oct 1961, (Provisional Programme and Selected Preprints of Contributions), 5 p. Mimeo. At head of p 1: UNESCO/NS/AZ/590, Rome Symposium Paper No. 20). DAS M77.38 U586cLi.

...An attempt was made to reconstruct climatic oscillations in Syria by studying its paleobotanical and faunal fossils. Prehistorical abundance of paleolithium in the Syrian desert suggests that it was once a rich hunting ground. A number of climatic oscillations are supposed to have occurred in the early Pleistocene. The middle Pleistocene exhibited tectonic stability under tropical conditions. A major climatic oscillation in Syria is believed to be related to a climatic optimum in West Europe. (SN)

DOCUMENT CONTROL DATA - R & D

(Security classification of title, body of abstract and indexing annotation must be entered when the overall report is classified)

1. ORIGINATING ACTIVITY (Corporate author)		2a. REPORT SECURITY CLASSIFICATION	
USAF Environmental Technical Applications Center		Unclassified

13. ABSTRACT			
<p>This bibliography contains 112 references to Environmental Studies concerning four Middle East Countries, Iraq, Jordan, Lebanon, and Syria. Approximately 50 items are general references that pertain to one or more of the subject Countries. Sixteen additional bibliographies of a meteorological and climatological nature are listed. Entries are listed alphabetically by author. A subject index is included for convenience of use.</p>
