15. Supplementary Notes					
16. Abstract Values of Runway Visual Range (RVR) have been developed for various atmospheric transmittances utilizing Allard's Law and Koschmieder's Law. Commonly employed constant's of pilot's contrast threshold and visual illuminance threshold are utilized in the appropriate RVR equations. Computations are based on a 250 foot baseline transmissometer with light target intensities of 10,000, 2,000 and 400 candela, values which are presently used in the United States. Information is presented in tabular form showing transmittances corresponding to runway visual range readings from 600 feet to 7000 feet in 50 foot increments. Each table includes data for each of the three light target intensities. A total of eight tables is provided. The computer program which was utilized to develop each set of data is included with each table.

## INTRODUCTION

In the United States, Runway Visual Range (RVR) is a value determined normally by instruments located alongside and about 14 feet higher than the centerline of the runway and calibrated with reference to the sighting of high intensity runway lights or the visual contrast of other targets -- whichever yields the greater visual range.

Under certain bright daytime conditions when the contrast of visibility markers yields a greater visual range than light targets, RVR is derived from the equation, Koschmieder's Law, which follows:

$$e = (t_b)^{v/b}$$

where

- e = pilot's contrast threshold
- t = atmospheric transmittance
- b = path length over which transmittance is sampled
- v = visual range from pilot to appropriate target (RVR)

Present United States instrumentation for CAT II runways employs a constant  $e = .055$  and a path length of 250 feet.

At night and under daytime conditions when the high intensity runway edge lights are the most dominant targets for the pilot's sighting, RVR is derived from Allard's Law given by the equation:

$$E_m = \frac{I(t_b)^{v/b}}{\left(\frac{v}{5280}\right)^2}$$

where

- $E_m$  = pilot's visual illuminance threshold (mile candles)
- I = intensity of light target (candela)
- t = atmospheric transmittance
- b = path length over which the atmospheric transmittance is sampled
- V = visual range from the pilot to the appropriate target in feet

Present instrumentation in the United States for Category II runways employs the following values:

**Preceding page blank**

b = 250 feet

I = 40<sup>7</sup> candela for High Intensity Light Setting 3  
2,000 candela for High Intensity Light Setting 4  
10,000 candela for High Intensity Light Setting 5

To simplify solution of the equation, it is restated as shown below. RVR is introduced as a constant, and the equation solved for atmospheric transmittance.

$$t_b = \left( \frac{E_m}{I} \right)^{b/v} \left( \frac{V}{5280} \right)^{2b/v}$$

With the equipment baseline and high intensity edge light parameters determined, it is evident that for a given atmospheric transmittance, the resulting runway visual range values will be a function of the value assigned to the pilot's visual illuminance threshold,  $E_m$ , when Allard's Law is utilized and to the pilot's contrast threshold when Koschmieder's Law is employed. A listing of pilot's visual illuminance threshold currently used by several states as reported in Appendix E to AN 10/11.5-57/180 dated 13 November 1967 follows:

Threshold Values used by Different States

State	Illuminance Threshold In Lumens/ Square Meter		Illuminance Threshold In Mile Candles	
	Day	Night	Day	Night
Denmark	$1 \times 10^{-4}$	$1 \times 10^{-7}$ to $2 \times 10^{-6}$	260	0.26 to 5.18
France	$1 \times 10^{-4}$	$1 \times 10^{-6}$	260	2.6
Germany (Federal Republic)	$3 \times 10^{-4}$	$1 \times 10^{-7}$	780	0.26
Japan	$3.9 \times 10^{-4}$	$7.7 \times 10^{-7}$	1000	2
Netherlands	$3 \times 10^{-4}$	$6 \times 10^{-6}$	780	1.55
USA	$3.9 \times 10^{-4}$	$7.7 \times 10^{-7}$	1000	2

For conversion purposes 1 mile candle =  $3.85 \times 10^{-7}$  lumens/sq. meter.  
Pilot's Contrast Threshold .055 and .050 are commonly used.

The following tables report the various RVR obtained when commonly utilized constants for pilot's contrast threshold and pilot's visual illuminance threshold are inserted in the visibility equations. The computer program

utilized in the preparation of each set of tables is also attached for informational purposes. While the value of transmittance is derived to a degree of accuracy which is not obtainable in real life conditions, the data is provided for purposes of information.

Data runs were made for the following data sets which represent a spread of the constants used by the various countries:

<u>Pilot's Contrast Threshold</u>	<u>Pilot's Illuminance Threshold In Mile Candles</u>
.055	1000
.050	1000
.050	780
.050	260
.055	2.0
.050	2.6
.050	1.55
.050	0.26

TABLE I

Runway Visual Range (RVR) Conversion Table  
Computed with Constants used in  
the United States

Day Conditions

Pilot's Contrast Threshold = 0.055

Pilot's Illuminance Threshold = 1000 mile candles

Transmissometer Baseline = 250'

L.S. 3 = 400 candelas

L.S. 4 = 2000 candelas

L.S. 5 = 10000 candelas

Note: The term E-02 following the value of atmospheric transmittance indicates  $\times 10^{-2}$ .

**Preceding page blank**

RUNWAY VISUAL RANGE (RVR)  
CONVERSION TABLE

COMPUTED WITH CONSTANTS USED IN  
THE UNITED STATES

CONSTANTS USED IN CALCULATIONS:

KOSCHMIEDER'S LAW CONSTANTS:

PILOT'S VISUAL THRESHOLD = 0.055

TRANSMISSOMETER BASELINE = 250'

ALLARD'S LAW CONSTANTS:

TRANSMISSOMETER BASELINE = 250'

PILOT'S ILLUMINANCE THRESHOLD = 1000 MILE CANDLES

DAY CONDITIONS

L.S.3 = 400 CANDELAS

L.S.4 = 2000 CANDELAS

L.S.5 = 10000 CANDELAS

KOSCHMIEDER'S LAW AND ALLARD'S LAW ARE APPLIED FOR EACH SET OF CONDITIONS. THE EQUATION GIVING THE HIGHER RVR IS UTILIZED IN THE DERIVATION OF EACH PRINTED VALUE.

TABLE II

Runway Visual Range (RVR) Conversion Table  
Computed with Constants used in  
the United States

Night Conditions

Pilot's Illuminance Threshold 2.0 mile candles

Transmissometer Baseline = 250'

L.S. 3 = 400 candelas

L.S. 4 = 2000 candelas

L.S. 5 = 10000 candelas

Note: The term E-03 following the value at atmospheric transmittance indicates  $\times 10^{-3}$ . Similarly, E-02 indicates  $\times 10^{-2}$ .

TABLE III

Runway Visual Range (RVR) Conversion Table  
Computed with Constants used in  
the United States  
with Pilot's Visual Threshold Modified

Day Conditions

Pilot's Contrast Threshold = 0.050

Pilot's Illuminance Threshold = 1000 mile candles

Transmissometer Baseline = 250'

L.S. 3 = 400 candelas

L.S. 4 = 2000 candelas

L.S. 5 = 10000 candelas

**Preceding page blank**

RUNWAY VISUAL RANGE (RVR)  
CONVERSION TABLE

COMPUTED WITH CONSTANTS USED IN  
THE UNITED STATES  
(PILOT'S VISUAL THRESHOLD MODIFIED)

CONSTANTS USED IN CALCULATIONS:

KOSCHMIEDER'S LAW CONSTANTS:

PILOT'S VISUAL THRESHOLD = 0.050

TRANSMISSOMETER BASELINE = 250'

ALLARD'S LAW CONSTANTS:

TRANSMISSOMETER BASELINE = 250'

PILOT'S ILLUMINANCE THRESHOLD = 1000 MILE CANDLES

DAY CONDITIONS

L.S.3 = 400 CANDELAS

L.S.4 = 2000 CANDELAS

L.S.5 = 10000 CANDELAS

KOSCHMIEDER'S LAW AND ALLARD'S LAW ARE APPLIED FOR  
EACH SET OF CONDITIONS. THE EQUATION GIVING THE  
HIGHER RVR IS UTILIZED IN THE DERIVATION OF  
EACH PRINTED VALUE.

RVR	ATMOSPHERIC TRANSMITTANCE

TABLE IV

Runway Visual Range (RVR) Conversion Table  
Computed with Modified Constants

Day Conditions

Pilot's Contrast Threshold = 0.050

Pilot's Illuminance Threshold = 780 mile candles

Transmissometer Baseline = 250'

L.S. 3 = 400 candelas

L.S. 4 = 2000 candelas

L.S. 5 = 10000 candelas

**Preceding page blank**

RUNWAY VISUAL RANGE (RVR)  
CONVERSION TABLE

CONSTANTS USED IN CALCULATIONS:

KOSCHMIEDER'S LAW CONSTANTS:

PILOT'S VISUAL THRESHOLD = 0.050  
TRANSMISSOMETER BASELINE = 250'

ALLARD'S LAW CONSTANTS:

TRANSMISSOMETER BASELINE = 250'  
PILOT'S ILLUMINANCE THRESHOLD = 780 MILE CANDLES

DAY CONDITIONS

L.S.3 = 400 CANDELAS  
L.S.4 = 2000 CANDELAS  
L.S.5 = 10000 CANDELAS

KOSCHMIEDER'S LAW AND ALLARD'S LAW ARE APPLIED FOR EACH SET OF CONDITIONS. THE EQUATION GIVING THE HIGHER RVR IS UTILIZED IN THE DERIVATION OF EACH PRINTED VALUE.

TABLE V

Runway Visual Range (RVR) Conversion Table  
Computed with Modified Constants

Day Conditions

Pilot's Contrast Threshold = 0.050

Pilot's Illuminance Threshold = 260 mile candles

Transmissometer Baseline = 250'

L.S. 3 = 400 candelas

L.S. 4 = 2000 candelas

L.S. 5 = 10000 candelas

**Preceding page blank**

RUNWAY VISUAL RANGE (RVR)  
CONVERSION TABLE

CONSTANTS USED IN CALCULATIONS:

KOSCHMIEDER'S LAW CONSTANTS:

PILOT'S VISUAL THRESHOLD = 0.050

TRANSMISSOMETER BASELINE = 250'

ALLARD'S LAW CONSTANTS:

TRANSMISSOMETER BASELINE = 250'

PILOT'S ILLUMINANCE THRESHOLD = 260 MILE CANDLES

DAY CONDITIONS

L.S.3 = 400 CANDELAS

L.S.4 = 2000 CANDELAS

L.S.5 = 10000 CANDELAS

KOSCHMIEDER'S LAW AND ALLARD'S LAW ARE APPLIED FOR EACH SET OF CONDITIONS. THE EQUATION GIVING THE HIGHER RVR IS UTILIZED IN THE DERIVATION OF EACH PRINTED VALUE.
