13. ABSTRACT

This publication contains isoline charts showing monthly mean and extreme temperatures, mean number of thunderstorm days, precipitation amounts, frequencies of two categories of flying conditions, and other parameters, all for the European-Northern Africa-Mid East area.

EUROPEAN CLIMATOLOGICAL GUIDE

This pamphlet provides summarized data of some of the most important meteorological parameters affecting Europe. Both mean and extreme values of temperatures by month are shown in isotherm form. Other factors, as precipitation and thunderstorm activity, are reflected in charts of average values. The pamphlet will be useful in general planning for military operations throughout the year.

SECTION 1

Introduction

1-1. General. This pamphlet is intended to provide both meteorologists and operations personnel a ready climatological and planning reference for the European theater. It is largely an extension and continuation of the data presented on charts in 2 Weather Wing Pamphlet 105-6, Climatology, 15 November 1965. The main areas of concern in that earlier publication were the eastern portions of Europe. In this more complete volume data for western Europe, northern Africa and Near East have been added.

The elements shown in this publication are frequently considered in the inital planning stage for various military operations. The charts show average frequencies and limits of weather phenomenon computed from observations taken over a period of years. They are not a forecast of conditions for any particular year, month or day. Application of these climatic data to planning detailed specific operations is often unwarranted. In case of doubt, an applied climatology study of a specific problem should be requested.

The assistance of Mr. Willi Laun in compiling, editing and plotting the thousands of pieces of data for this publication is gratefully acknowledged. His work has been indispensable to the completion of this project.

1-2. Data and Analysis Limitations. The isolines on the charts in this pamphlet were drawn after summarized data from various sources were plotted at numerous points. The most current climatological data available were used; however, many of the original weather observations were made prior to World War II. Increased urbanization and industrialization affect some parameters, particularly visibility values, which have probably decreased near industrial areas in recent years. The visibility values shown here are therefore more representative of present day rural and smaller industrial areas than of large industrial areas. The magnitude of the effect obviously depends on the size of the industrial area and the distance from it. Thus, precise quantitative values of the effect would not be meaningful over any large area, even if they were available.

Isoline analyses are always somewhat unsatisfactory because the plotted data are strictly representative only for individual stations. The use of synoptic observations from standard instrument shelters reduces this effect, except for visibility which is highly discontinuous. The effects from all factors which tend to make observations non-representative for a large area are not known for each station. Therefore, unless an obvious reason for non-representativeness (such as a mountain station) existed, the data have been accepted as representative. In mountainous areas, often only one isopleth was drawn because the gradients were too great to be adequately described by the isopleth interval used. In some cases, "spot" values were plotted to depict the large differences encountered with changes in elevation.

Extreme maximum and minimum temperature, sometimes termed absolute extremes, vary greatly from point to point and from year to year. Another aspect which tends to confuse these presentations is that the period of record of the original data varied considerably from one station to another. As a rough estimate the indicated extreme values may be expected to occur approximately once in 20 years.

SECTION 2

Chart Descriptions and Data Sources

2-1. Temperature (48 charts). Temperature charts include

a. Monthly mean daily maximums.

b. Monthly mean daily minimums.

c. The monthly extremes of temperature, all in degrees fahrenheit.

2-2. Precipitation (24 charts).

a. Monthly mean precipitation in inches.

b. Monthly mean number of days with measurable precipitation (at least 0.004 inches liquid).

2-3. Thunderstorms (12 charts). These show the monthly mean number of thunderstorm days for each month. A thunderstorm day is a day in which thunder is audible from the point of observation.

2-4. Ceiling and Visibility (48 charts). These charts for each month show the percent frequency of occurrence of ceiling and/or visibility less than 300 feet/1 mile and 1500 feet/3 miles at 0800 and 1400 local standard time.

2-5. Sea Temperature (24 charts). These charts for each month show the mean water temperature and mean minimum water temperature for each month. They have been extracted from the Oceanographic Atlas of the North Atlantic Ocean, Section II, Physical Properties, of the U.S. Naval Oceanographic Office.

2-6. Aircraft Icing (12 charts). One chart has been included for each of the four seasons for aircraft flying at 5,000, 10,000 and 15,000 feet MSL. Very little icing, if any, should be expected above 15,000 feet except near large cumulus-type buildups. Data on these charts have been taken from Air Weather Service Technical Report 194, Climatological Probability of Aircraft Icing. Methods of determining these probabilities are described therein.

2-7. Data Sources and References

a. Air Weather Service Technical Report 194, Climatological Probability of Aircraft Icing, 1967.

b. U.S. Naval Oceanographic Office, Pub No. 700, Oceanographic Atlas of the North Atlantic Ocean, Section II, Physical Properties, 1967.

c. Great Britain Meteorological Office, Tables of Temperature, Relative Humidity and Precipitation for the World, Part III, Europe and the Atlantic Ocean North of 35°N, 1958.

d. NIS Weather Summaries for many countries, (dates vary).

e. 3 Weather Wing SS, Ceiling - Visibility Summaries (Europe), 1964.

f. USAF Environmental Technical Applications Center, Worldwide Airfield Climatic Data, Volumes II, IX, X, 1968-71.

g. 2 Weather Wing Pamphlet 105-6, Climatology, 1965.

2-7 Snowfall Days (12 charts).
A snowfall day is one during which falling snow is observed, regardless of wether there is snow accumulation.

SECTION 3

Climatic Charts

3-1. Chart Numbering System. The first digit of the following page numbers indicates the section which corresponds to the month, except for section 13 which contains seasonal charts. The second digit indicates the type of chart, which remains the same throughout all months. For example, chart 5-4 is the May Extreme Minimum Temperature and chart 11-5 is the November Mean Precipitation. The order of the charts, which is shown below, is the same in all months.

a. Monthly Charts:

1 Extreme Maximum Temperature

2 Mean Maximum Temperature

3 Mean Minimum Temperature

4 Extreme Minimum Temperature

5 Mean Precipitation (Inches)

6 Mean Number of Days with Precipitation

7 Mean Number of Thunderstorm Days

8 Frequency of Ceiling/Visibility Below 300 ft/1 mi, 0800 LST

9 Frequency of Ceiling/Visibility Below 300 ft/1 mi, 1400 LST

10 Frequency of Ceiling/Visibility Below 1500 ft/3 mi, 0800 LST

11 Frequency of Ceiling/Visibility Below 1500 ft/3 mi, 1400 LST

12 Minimum Sea Surface Temperature (°F)

13 Mean Sea Surface Temperature (°F)

14 Mean Number of Snowfall Days

b. Season Charts

13-1 Icing Probability, 5000 ft, Winter

13-2 Icing Probability, 10,000 ft Winter

13-3 Icing Probability, 15,000 ft, Winter

13-4 Icing Probability, 5,000 ft, Spring

13-5 Icing Probability, 10,000 ft Spring

13-6 Icing Probability, 15,000 ft Spring

13-7 Icing Probability, 5,000 ft Summer

13-8 Icing Probability, 10,000 ft Summer

13-9 Icing Probability, 15,000 ft Summer

13-10 Icing Probability, 5,000 ft Autumn

13-11 Icing Probability, 10,000 ft Autumn

13-12 Icing Probability, 15,000 ft Autumn

c. Locator Charts

14-1 For Ceiling/Visibility and Thunderstorm Days

14-2 For Precipitation and Temperature

14-3 For Snowfall Days

3-2 Charts. The climatic charts follow in numerical order.

CHANGE 1
2WWP 105-13
15 April 1972

Weather

EUROPEAN CLIMATOLOGICAL GUIDE

2WWP 105-13, January 1972, is changed as follows:

1. Page Changes And Additions

Remove (Jan 72)	Insert	Add
3	3	
1-7/1-8	1-7/1-8	1-14
2-7/2-8	2-7/2-8	2-14
3-7/3-8	3-7/3-8	3-14
4-7/4-7	4-7/4-8	4-14
5-7/5-8	5-7/5-8	5-14
6-7/6-8	6-7/6-8	6-14
7-7/7-8	7-7/7-8	7-14
8-7/8-8	8-7/8-8	8-14
9-7/9-8	9-7/9-8	9-14
10-7/10-8	10-7/10-8	10-14
11-7/11-8	11-7/11-8	11-14
12-7/12-8	12-7/12-8	12-14
		14-1
		14-2
		14-3

2. Pen And Ink Changes

Page	Paragraph	Line	Action
2	2-4	3	Change "...500 feet/1 mile..." to "...300 feet/1 mile..."
2	2-7		Change paragraph number from 2-7 to 2-8.
2			Add paragraph 2-7: "Snowfall Days (12 charts). A snowfall day is one during which falling snow is observed, regardless of whether there is snow accumulation."
2	3-1a	8	Change "...Below 500 ft/1 mi..." to "...Below 300 ft/1 mile..."
2	3-1a	9	Change "...Below 500 ft/1 mi..." to "...Below 300 ft/1 mi..."
2	3-1	3	Change "14" to "13".
2-3			Change label on isopleth south of French Riviera from 30 to 50.
1-9	7-9		Change legends from "...Less Than 500 Feet/1 Mile..." to "...Less Than 300 Feet/1 Mile..."
2-9	8-9		
3-9	9-9		
4-9	10-9		
5-9	11-9		
6-9	12-9		

3. Filing. After posting the changes, file this change sheet in back of the manual.

CHANGE 2
2WWP 105-13
8 March 1978

Weather

EUROPEAN CLIMATOLOGICAL GUIDE

2WWP 105-13, 31 January 1972, is changed as follows:

1. Page Change:

Remove	Date
13-1 thru 13-12	31 Jan 72

2. Write-in Changes:

Page	Paragraph	Action
2	2-6	Change to read: The latest available climatological information on icing is contained in AWS TR 220 (June 1972). Charts showing the probability of encountering icing conditions are given by months for 1000, 850, 700 and 500mb.

19 April 1982

Weather

EUROPEAN CLIMATOLOGICAL GUIDE

2WWP 105-13, 31 January 1972, is changed as follows:

Write-In Changes:

Page	Paragraph	Line	Action
1	1-1	3 thru 7	Delete 2d and 3rd sentences. Change 4th sentence to read: "It provides data for western Europe, northern Africa and the Near East."
2	3-1	3	Delete "except for section 13 which contains seasonal charts."
3	4-1b	1 thru 13	Delete.
