SORT HOSP2 #THOSP2#,STATUSN,NAMED,NOKRS.
SELECT NOKRS.

This RASP retrieves all Air Force PW/MIAs, sorts by Hospital Assignment, Status (PW/MIA) and Name. The OP Table (THOSP2) is entered in the sort key for use in the header of the RIT.

REPORTED BY _____
REPORT NO. _____

TITLE RW003/003.
IF
SORT ' _____ ', NAMED.
SELECT RECID.

This RASP is designed to select candidates best matching the description of unknowns and no matches. The IF statement must be written to match the data known about the unknown or no match, i.e., hair color, eye color, shootdown date, weight, height, etc.

The sort key is designed to provide the RIT with part of the title headers. The first four characters of the sort key should contain the unknown or no match indicator of the unknown or no match to be identified. The next four characters contain the rank of the returnee reporting the unknown or no match. The next ten characters contain the last name of the returnee. The next four characters contain the DIA ID of the returnee. The last two characters will contain the report number (i.e., 01, 02 for first, second, etc.).

A typical RASP could be the following:

IF RANKCF EQ 03 AND HAIRC EQ BL AND EYEC EQ BL.
SORT 'NM01CAPTBEAMANN000B27501', NAMED.
SELECT RECID.
