AWARD NUMBER: CDMRPL-16-0-DM167102

TITLE: Evaluation of Hypotensive Resuscitation +/- Aeromedical Evacuation and the Effects of Oxygen Therapeutics During Prolonged Field Care in a Swine Polytrauma Model

PRINCIPAL INVESTIGATOR: Dr. Anke H. Scultetus

CONTRACTING ORGANIZATION: Naval Medical Research Center

Silver Spring, MD 20910

REPORT DATE: August 2018

TYPE OF REPORT: ANNUAL

PREPARED FOR: U.S. Army Medical Research and Materiel Command

Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for public release; distribution is unlimited.

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

REPORT DOCUMENTATION PAGE

Form Approved OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.

1. INTRODUCTION: Narrative that briefly (one paragraph) describes the subject, purpose and scope of the research.

The objective of this study is to confirm our hypotheses related to the possible adverse effects of Prolonged Field Care (PFC) and aeromedical evacuation (AE) on polytrauma patients, and to evaluate if the use of an Oxygen Therapeutic (OT) during PFC can improve oxygenation and outcomes. We will test this hypothesis in a swine polytrauma model. Data from this study could potentially aid in the improvement of safety recommendations for prolonged field care, en route care, and aeromedical evacuation of combat casualties.

Specific aims:

This study aims at addressing the following research questions:

- 1) How does prolonged hypotensive resuscitation over 72 hours affect physiology and neurophysiology in polytrauma casualties?
- 2) What are the effects of transport/aeromedical evacuation after prolonged hypotensive resuscitation on physiology and neurophysiology in polytrauma casualties?
- 3) Does an OT improve systemic and cerebral oxygen delivery under conditions of prolonged hypotension in polytrauma patients?
- **2. KEYWORDS:** *Provide a brief list of keywords (limit to 20 words).*

Prolonged field care; hypotensive resuscitation; hemorrhagic shock; aeromedical evacuation; oxygen therapeutics

3. ACCOMPLISHMENTS: The PI is reminded that the recipient organization is required to obtain prior written approval from the awarding agency grants official whenever there are significant changes in the project or its direction.

What were the major goals of the project?

List the major goals of the project as stated in the approved SOW. If the application listed milestones/target dates for important activities or phases of the project, identify these dates and show actual completion dates or the percentage of completion.

	Timeline	NMRC Status	USUHS Status
1) Specific Aim 1: Determine effects of 72-h prolonged hypotensive resuscitation (PHR) on physiology/			
neurophysiology in swine polytrauma model.			
Major Task 1: Obtain regulatory approvals (IACUC/ACURO) [for all 3 Phases]	Months		
Subtask 1: write/submit/obtain approval - IACUC protocol	1-2	In process	-
Subtask 2: Submit animal protocol to ACURO and obtain approval	2-3	In process	-
Milestone(s) Achieved: obtained IACUC and ACURO approvals	3	In process	

	Timeline	NMRC	USUHS
	Timemic	Status	Status
Major Task 2: Perform pilot study – optimize PHR swine model			
Subtask 1: determine optimal PHR experimental conditions for 77-h swine study	4-8	Ongoing, Leveraged through other protocols	-
Subtask 2: prepare team for prolonged experiments	4-8	ongoing	-
Subtask 3: Phase 1 histopathology & immunohistopathology preparation/analysis	4-10	-	
Milestone(s) Achieved: Swine model optimized.	10		
Major Task 3: Perform Phase 1 experiments – determine safety/efficacy of PHR vs prolonged hypotensive			
Subtask 1: perform Phase 1 in-life experiments	8-18		-
Subtask 2: Phase 1 histopathology & immunohistopathology	8-20	-	
Milestone(s) Achieved: completed Phase 1 experiments.	20		
2) Specific Aim 2: Determine effects of aeromedical			
Major Task 4: Perform Phase 2 experiments – determine safety/efficacy of AE following PHR/PNR.	10.26		
Subtask 1: perform Phase 2 in-life experiments	18-26		-
Subtask 2: Phase 2 histopathology & immunohistopathology preparation/analysis	18-28	-	
Milestone(s) Achieved: completed Phase 2 experiments.	28		
2) Crosific Aire 2. Determine officets of adding an annual			
3) Specific Aim 3: Determine effects of adding an oxygen therapeutic (OT) to PHR regimen on physiology/and neurophysiology in swine polytrauma model.

What was accomplished under these goals?

For this reporting period describe: 1) major activities; 2) specific objectives; 3) significant results or key outcomes, including major findings, developments, or conclusions (both positive and negative); and/or 4) other achievements. Include a discussion of stated goals not met. Description shall include pertinent data and graphs in sufficient detail to explain any significant results achieved. A succinct description of the methodology used shall be provided. As the project progresses to completion, the emphasis in reporting in this section should shift from reporting activities to reporting accomplishments.

During this reporting period animal use protocol was submitted and passed through the regulatory approval process. Due to institutional changes, this process took longer than anticipated. In the meantime, we leveraged on other ongoing studies to collect information for the prolonged hypotension optimization phase of this study. We do not foresee any overall delays of this project as we are able to increase the number of experiments over the next performance year. We were able to procure necessary new equipment to invasively, continuously and remotely measure blood pressure. This system was custom made for this study.

What opportunities for training and professional development has the project provided? If the project was not intended to provide training and professional development opportunities or there is nothing significant to report during this reporting period, state "Nothing to Report."

Describe opportunities for training and professional development provided to anyone who worked on the project or anyone who was involved in the activities supported by the project. "Training" activities are those in which individuals with advanced professional skills and experience assist others in attaining greater proficiency. Training activities may include, for example, courses or one-on-one work with a mentor. "Professional development" activities result in increased knowledge or skill in one's area of expertise and may include workshops, conferences, seminars, study groups, and individual study. Include participation in conferences, workshops, and seminars not listed under major activities.

This project so far provided several one-on-one training activities for new employees who will work as junior scientists or research assistants on this project. Through literature search and regular discussion groups within our team we were able to significantly increase their knowledge platform in regards to battlefield care, physiology and damage control resuscitation.

How were the results disseminated to communities of interest?

If there is nothing significant to report during this reporting period, state "Nothing to Report."

Describe how the results were disseminated to communities of interest. Include any outreach activities that were undertaken to reach members of communities who are not usually aware of these project activities, for the purpose of enhancing public understanding and increasing interest in learning and careers in science, technology, and the humanities.

Nothing to report.

What do you plan to do during the next reporting period to accomplish the goals? If this is the final report, state "Nothing to Report."

Describe briefly what you plan to do during the next reporting period to accomplish the goals and objectives.

- complete regulatory approval
- establish wireless, remote blood pressure monitoring system (Transonic)
- initiate animal experiments
- **4. IMPACT:** Describe distinctive contributions, major accomplishments, innovations, successes, or any change in practice or behavior that has come about as a result of the project relative to:

What was the impact on the development of the principal discipline(s) of the project? *If there is nothing significant to report during this reporting period, state "Nothing to Report."*

Describe how findings, results, techniques that were developed or extended, or other products from the project made an impact or are likely to make an impact on the base of knowledge, theory, and research in the principal disciplinary field(s) of the project. Summarize using language that an intelligent lay audience can understand (Scientific American style).

Nothing to report.

What was the impact on other disciplines?

If there is nothing significant to report during this reporting period, state "Nothing to Report."

Describe how the findings, results, or techniques that were developed or improved, or other products from the project made an impact or are likely to make an impact on other disciplines.

Nothing to report.

What was the impact on technology transfer?

If there is nothing significant to report during this reporting period, state "Nothing to Report." Describe ways in which the project made an impact, or is likely to make an impact, on commercial technology or public use, including:

- transfer of results to entities in government or industry;
- instances where the research has led to the initiation of a start-up company; or
- adoption of new practices.

This project will likely have an impact on revisiting current practices in prolonged field care and possibly result in adoption of new practices. There is a dearth of knowledge on the feasibility and impact of prolonged hypotensive resuscitation for up to 72 hours and this study will provide much needed information to plan for future patient care scenarios.

Describe how results from the project made an impact, or are likely to make an impact, beyond the bounds of science, engineering, and the academic world on areas such as:

- improving public knowledge, attitudes, skills, and abilities;
- changing behavior, practices, decision making, policies (including regulatory policies), or social actions; or
- improving social, economic, civic, or environmental conditions.

	Nothing to Report.
5.	CHANGES/PROBLEMS: The PD/PI is reminded that the recipient organization is required to obtain prior written approval from the awarding agency grants official whenever there are significant changes in the project or its direction. If not previously reported in writing, provide the following additional information or state, "Nothing to Report," if applicable:
	Changes in approach and reasons for change Describe any changes in approach during the reporting period and reasons for these changes. Remember that significant changes in objectives and scope require prior approval of the agency.

Actual or anticipated problems or delays and actions or plans to resolve them

Describe problems or delays encountered during the reporting period and actions or plans to resolve them.

There was a delay in the animal protocol approval process in addition to a unanticipated personnel turnover. This did not result in any changes to the project. We will increase our weekly work load for the next reporting period.

Changes that had a significant impact on expenditures

N/A

Describe changes during the reporting period that may have had a significant impact on expenditures, for example, delays in hiring staff or favorable developments that enable meeting objectives at less cost than anticipated.

There were no changes that impacted expenditure during this reporting period.

Significant changes in use or care of human subjects, vertebrate animals, biohazards, and/or select agents

Describe significant deviations, unexpected outcomes, or changes in approved protocols for the use or care of human subjects, vertebrate animals, biohazards, and/or select agents during the reporting period. If required, were these changes approved by the applicable institution committee (or equivalent) and reported to the agency? Also specify the applicable Institutional Review Board/Institutional Animal Care and Use Committee approval dates.

N/A Significant changes in use or care of vertebrate animals N/A
N/A
Significant changes in use of biohazards and/or select agents
N/A
6. PRODUCTS: List any products resulting from the project during the reporting period. If there is nothing to report under a particular item, state "Nothing to Report."
• Publications, conference papers, and presentations
Report only the major publication(s) resulting from the work under this award.
Journal publications. List peer-reviewed articles or papers appearing in scientific, technical, or professional journals. Identify for each publication: Author(s); title; journal; volume: year; page numbers; status of publication (published; accepted, awaiting publication; submitted, under review; other); acknowledgement of federal support (yes/no).
Nothing to report.

Books or other non-periodical, one-time publications. Report any book, monograph, dissertation, abstract, or the like published as or in a separate publication, rather than a

periodical or series. Include any significant publication in the proceedings of a one-time conference or in the report of a one-time study, commission, or the like. Identify for each one-time publication: author(s); title; editor; title of collection, if applicable; bibliographic information; year; type of publication (e.g., book, thesis or dissertation); status of publication (published; accepted, awaiting publication; submitted, under review; other); acknowledgement of federal support (yes/no).

Nothing to report.

Nothing to report.	
publications, conferen status of the publicatio	onference papers and presentations. Identify any other ce papers and/or presentations not reported above. Specify the on as noted above. List presentations made during the last year l, local societies, military meetings, etc.). Use an asterisk (*) if a manuscript.
Nothing to report.	
A short description of	nternet site(s) Internet site(s) that disseminates the results of the research activities. If each site should be provided. It is not necessary to include the pecified above in this section.
Nothing to report.

7. PARTICIPANTS & OTHER COLLABORATING ORGANIZATIONS

What individuals have worked on the project?

Provide the following information for: (1) PDs/PIs; and (2) each person who has worked at least one person month per year on the project during the reporting period, regardless of the source of compensation (a person month equals approximately 160 hours of effort). If information is unchanged from a previous submission, provide the name only and indicate "no change".

Has there been a change in the active other support of the PD/PI(s) or senior/key personnel since the last reporting period?

If there is nothing significant to report during this reporting period, state "Nothing to Report."

If the active support has changed for the PD/PI(s) or senior/key personnel, then describe what the change has been. Changes may occur, for example, if a previously active grant has closed and/or if a previously pending grant is now active. Annotate this information so it is clear what has changed from the previous submission. Submission of other support information is not necessary for pending changes or for changes in the level of effort for active support reported previously. The awarding agency may require prior written approval if a change in active other support significantly impacts the effort on the project that is the subject of the project report.

Nothing to report.	

What other organizations were involved as partners?

If there is nothing significant to report during this reporting period, state "Nothing to Report."

Describe partner organizations – academic institutions, other nonprofits, industrial or commercial firms, state or local governments, schools or school systems, or other organizations (foreign or domestic) – that were involved with the project. Partner organizations may have provided financial or in-kind support, supplied facilities or equipment, collaborated in the research, exchanged personnel, or otherwise contributed.

Provide the following information for each partnership:

Organization Name:

Location of Organization: (if foreign location list country)

<u>Partner's contribution to the project</u> (identify one or more)

- Financial support;
- In-kind support (e.g., partner makes software, computers, equipment, etc., available to project staff);
- Facilities (e.g., project staff use the partner's facilities for project activities);
- *Collaboration (e.g., partner's staff work with project staff on the project);*
- Personnel exchanges (e.g., project staff and/or partner's staff use each other's facilities, work at each other's site); and
- Other.

Nothing to report.		

8. SPECIAL REPORTING REQUIREMENTS

COLLABORATIVE AWARDS: For collaborative awards, independent reports are required from BOTH the Initiating Principal Investigator (PI) and the Collaborating/Partnering PI. A duplicative report is acceptable; however, tasks shall be clearly marked with the responsible PI and research site. A report shall be submitted to https://ers.amedd.army.mil for each unique

QUAD CHARTS: If applicable, the Quad Chart (available on https://www.usamraa.army.mil) should be updated and submitted with attachments.

Evaluation of hypotensive resuscitation ± aeromedical evacuation and the effects of oxygen therapeutics during prolonged field care in a swine polytrauma model Prolonged Field Care Research Award Log Number: DM167102

PI: Anke H. Scultetus, M.D.

Org: Naval Medial Research Center

Study Aims

This proposal aims to:

- evaluate the effects of prolonged hypotensive resuscitation up to 72 hours during prolonged field care (PFC).
- evaluate the effects of aeromedical evacuation (AE) after PFC.
- evaluate the effects of oxygen therapeutics (OTs) on oxygen delivery to vital tissues.

Approach

We propose to investigate the clinical implications of PFC and hypotensive resuscitation and test next-generation resuscitation methods. Swine will undergo initial traumatic brain injury and hemorrhagic shock. They will then be kept under prolonged hypotensive resuscitation (PHT) for 72 h. In one study arm, animals will then also undergo aeromedical transportation in a hypobaric chamber to evaluate the effects of transport after PFC. Ina third arm, we will test the efficacy of an oxygen therapeutic on oxygen delivery to vital tissues during 72 h of PFC.

Rapid evacuation of combat casualties to CONUS is current standard. However, future conflicts might require prolonged field care for up to 72 h before casualties can be transported to a higher level of care.

Timeline and Cost
