TITLE:
Effect of Diet on Gulf War Illness: A Pilot Study

PRINCIPAL INVESTIGATOR:
Ashok Tuteja, M.D. M.P.H.

CONTRACTING ORGANIZATION:
Western Institute for Biomedical Research
Salt Lake City, UT 84148

REPORT DATE: October 2018

TYPE OF REPORT: Annual

PREPARED FOR: U.S. Army Medical Research and Materiel Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release;
Distribution Unlimited

# Effect of Diet on Gulf War Illness: A Pilot Study

**Abstract**

The overall objective of the study is to determine the efficacy of a Low FODMAP (modified healthy) diet relative to a High FODMAP (typical healthy) diet in reducing the 1) Intestinal symptoms of Irritable Bowel Syndrome and 2) Non-intestinal symptoms (fatigue, joint pain, insomnia, general stiffness and headache) in Veterans with Gulf War Illness. We will also determine if the change in gut flora is a mechanism for improvement in symptoms of IBS and GW illness while on the study. We screened our first participant in September 2016. Overall, we have screened 23 and enrolled 17 Gulf War Veterans so far. Three patients are on screening. Our efforts are ongoing to recruit more Gulf War veterans.

**Subject Terms**

Irritable bowel syndrome, FODMAP, Gulf War Illness, diarrhea, Diet

Introduction:

New onset of gastroenteritis during deployment is a risk factor for the development of irritable bowel syndrome (IBS) after deployment. Gulf War (GW) Veterans with IBS are more likely to report fatigue, joint pains, general stiffness and headaches; symptoms that are indistinguishable from GW Illness. Diet is a major factor that influence gut bacteria along with gastroenteritis, travel, and stress factors which are relevant to GW Veterans. This suggests that foods as well as an alteration in intestinal microbiota are involved in the pathogenesis of IBS in GW Veterans.

The goal of this project is to compare a low FODMAP (modified healthy) diet to a high FODMAP (typical healthy) diet in Veterans with IBS and symptoms of GW illness. Both diets will be healthy.

Body:

During the past year the following goals were accomplished:

- We have screened 23 Gulf War Veterans and have enrolled 17 from the beginning of the study. Of the 17 Veterans enrolled in the study, 16 have completed the study. 1 Veteran has terminated the due to co-morbid conditions affecting study assessment.
- Four veterans were screen failed due to abnormal lab test or abdominal surgery
- We have three veterans on screening.
- Stool banking has been set up at the VA Medical Center, Salt Lake City where the screened and enrolled participants’ samples have been banked.
- We have received the list of Gulf War Veterans in the Salt Lake City are from the Defense Manpower Database. We have send recruitment letters to these veterans informing them about the study.
Key Research Accomplishments

- We have recruited 16 Gulf War Veterans and continue to make progress in recruiting more Veterans.
Reportable Outcomes

Nil
Conclusion:

Study is ongoing at a good pace as we planned. We continue our recruitment efforts to increase our study enrollment.
