Approved for Public Release; Distribution Unlimited

Military personnel often face challenging situations, including being sleep deprived, having to remain focused and undistracted for long periods of time and having to respond quickly and precisely in response to different critical situations. Being able to sustain attention, even when one is sleep deprived, remain positive and calm, and being able to respond quickly, are all of crucial importance to mission success. Blue light exposure seems to be a safe and easily implemented tool to improve attention, increase cognitive functioning and enhance mood. However, the exact mechanism that explains these beneficial effects is currently unknown. Lack of knowledge makes it impossible to provide exact recommendations for how to best use blue light exposure. It is also unclear how quickly after blue light onset measurable changes in the brain are present and how they correlate with subjective and objective changes in alertness, cognitive functioning and mood. The results from this study will provide information on the exact mechanisms that underlie the positive effects of blue light exposure. Answers to these crucial questions will make it considerably easier to provide targeted and informed recommendations for how to best use blue light across a wide variety of settings in order to improve cognitive functioning.

1. INTRODUCTION:

The aim of this study is to understand the mechanism by which blue wavelength light leads to improvements of several aspects of cognitive functioning during the daytime (e.g., alertness, working memory performance, mood) that are independent of the well-established effects of blue wavelength light on circadian functioning. Previous studies have shown that blue light exposure may lead to increased activation within the locus coeruleus (LC). The LC is a small nucleus in the brainstem which, when activated, is responsible for the secretion of the neuromodulator norepinephrine which is then broadly distributed throughout the cortex. Increased levels of norepinephrine have been shown to be associated with a number of cognitive processes, including working memory performance as well as changes in mood. The aim of this study is to establish whether norepinephrine is in fact released as a function of blue light exposure, using combined functional magnetic imaging techniques as well as continuous measures of pupillary responses, which have been shown to be an index of norepinephrine release. This study will also establish how quickly these changes are apparent, and how they correlate with cognitive performance as well as functional brain activation changes on two different types of learning tasks.

For this study, 27 healthy young adults undergo two testing and functional magnetic resonance imaging (fMRI) scan sessions; once being exposed to blue wavelength light and once to amber light (a non-blue placebo condition) separated by one week. The order of the two conditions will be counterbalanced between participants. All participants must adhere to a regular sleep schedule which is monitored by sending participants an Actiwatch that measures their sleep. Participants wear the watch for one week and then attend their first visit in the laboratory. Participants who adhered to a regular sleep schedule first undergo several demographic questionnaires and surveys as well as several neuropsychological assessments, such as intelligence and memory tests. Participants then undergo a 1.5 hour long fMRI scan. Participants complete a resting state scan and working memory task in darkness. Then, they are exposed to blue (or amber) light in 30 second intervals for 12 minutes. During this scan, their pupil dilation is also be measured and will be used as an index of norepinephrine release in response to light. After this scan, light is turned on continuously and participants complete another resting state scan with their eyes open while they let their thoughts wander. They then complete the working memory task again under light exposure as well as a different type of learning task where participants are required to learn from rewarding and punishing cues (i.e., monetary rewards or losses). Participants then return to the laboratory one week later and undergo the same procedure again but with the alternate light color. Participants will serve as their own comparison group, so that the observed effects can be attributed to the effects of blue light and not high-intensity light in general. Brain activation changes in response to the two light conditions as well as performance on the different tasks will be compared to better understand the mechanism of how blue light exposure impacts cognitive functioning during the day. This information can be used to better target blue light exposure to boost cognitive performance in a variety of situations.

What was accomplished under these goals?

**Major activities:**

**Major Tasks 1 and 2: Study Preparation and Data Collection**

As outlined in the SOW, the major tasks for this reporting period were related to study preparation. Preparatory work involved hiring new research technicians and recruiting several undergraduate volunteer research assistants, and ensuring that all personnel were fully trained on all laboratory procedures and study specific procedures. All equipment required for use in the study was acquired early on in Year 1, including Actiwatches, saliva collection kits, and assessments and scales. An online platform for data management, RedCap, was outfitted for the purposes of this study and extensively tested and refined to meet the study’s needs after practice sessions were run and weaknesses identified. Further, fMRI scan sequences were built and tested multiple times in practice runs. Data obtained from each of these practice iterations was processed for use and sequences were continually refined until the resulting product was suited for the analyses planned.

**Specific Objective: Obtain IRB and HRPO approval**

As outlined in the SOW, one major objective for this reporting period was to obtain IRB and HRPO approval. We obtained IRB approval on 08/15/2019 and we obtained HRRP approval on 01/30/2020.

|
Specific Objective: Development of MRI-compatible light device

Our second main objective for this reporting period was to develop the MRI compatible bright light device. This was achieved in June 2019. This was done with the help of the University of Arizona’s Instrumentation Specialist. The different parts to build the light device had to be researched and purchased. The PI consulted with other researchers who had built similar devices in the past and bought equipment that was recommended for safe and efficient use in the sensitive environment of the MRI scanner (i.e., could not contain any metal). In addition, a design to mount the light device to the MRI’s headcoil had to be developed and 3D printed. The device also needed to go through several iterations in order to meet several requirements (e.g., material had to be strong enough not to break, design of the device had to be modified to fit with pre-existing devices in the scanner, etc.). The final system is detailed in Figure 1 (see below).
Figure 1. MRI-compatible bright light device.

The final system uses a bright (31,000 lux at light source) cold white LED light source (Edmund Optics SugarCUBE Model # 38000-M03-005) placed outside of the Faraday cage (Pic1). Light intensity is computer controlled. A 9.1 meter 25mm diameter non-metallic optical fiber (Dolan-Jenner Industries Dwg # 70-001424) (Pic2) runs from the light source/filter wheel that can switch between blue wavelength light ($\lambda = 470\,\text{nm}$) and amber wavelength light ($\lambda = 580\,\text{nm}$) (Pic3) to the head coil mounting assembly (Pic4) (BDPS 3D printed design). This assembly will be mounted to the headcoil that is part of the MRI scanner (Pic5). Monochromatic light is produced with narrow band filters (Edmund Optics stock #65-144 470nm; stock #65-161 580nm) mounted in a multi-position computer controlled filter wheel (Spectral Products AB-301T) that is mechanically attached to the LED light source.
*Specific Objective: Complete Data Collection*

We started data collection on 02/12/2020 and have therefore not met the goal of completing data collection yet. We have completed data collection for one participant and have completed the first visit for two more participants. We also started data collection for two more participants who dropped out of the study. Unfortunately, on 18th March 2020, we decided to pause data collection for this study in light of the COVID-19 outbreak.

Recruitment for this study, however, did not pose a challenge. Since recruitment started, 375 individuals filled out the online interest form and 48 individuals have been eligible. Our goal for this study is to collect data on 27 participants. We therefore have more than enough individuals who are eligible and willing to complete the study. Before the COVID-19 outbreak, we had scheduled 20 participants out until May 2020. We were therefore on track to complete data collection before the end of the study. We will pick up data collection as soon as it is safe to do so and are anticipating that we will be able to make up for the pause in data collection quickly (see more information under 5. Changes and Problems).

**Significant results and key outcomes**

As we only have a full dataset for one participant, it was not possible to do a preliminary data analysis.

However, we plan to analyze the following key outcomes:

**Key Outcome: Functional brain responses to blue light at rest**

We are currently collecting data on functional brain responses to alternating 30 seconds of blue (versus amber) light and darkness. We will use a block design to assess changes in functional brain responses between blue light and darkness and amber light and darkness. We are expecting that blue light in comparison to amber light will activate, among other regions, a small area in the brainstem, the locus coeruleus (LC). We will use Keren et al.’s (2009) region of interest of the LC in our analysis (see Figure 2). Participants also complete two resting state scans where they are asked to rest with their eyes open and let their mind wander. Participants will complete the resting state scan one time in darkness and the other time with blue (or amber) light, each for 12 minutes. We will be able to investigate changes in functional brain connectivity at rest due to blue light exposure. This data, combined with the data from the previous task (30 seconds light on/off) will give us crucial information on how long it takes for blue light to have an effect on functional brain responses and what “path” that activation takes. We hypothesize that blue light will activate subcortical structures first and after several minutes of exposure will also lead to increased activation in prefrontal areas. This data will provide important information for how long blue wavelength light should be used and how quickly changes in brain function can be expected.
**Key Outcome: Functional brain responses to cognitive tasks during blue light exposure.**

Participants are completing two tasks inside the MRI scanner. One is a working memory task, the N-back task (see Appendix). We have shown previously that individuals who were exposed to blue light thirty minutes before they completed the N-back task, showed greater activation in two areas of the prefrontal cortex during task performance (Alkozei et al., 2016) (see Figure 3). We also showed that individuals performed faster at the task. In this study, we will be able to further elucidate whether blue light exposure during the task will lead to similar boosts in performance. We will use the regions of interest from our previous study to target our analyses. This data will give us important information on whether we can boost cognitive performance with blue light exposure during the day in a relatively short time frame.

Figure 2 - Region of interest - Locus Coerulus (Keren et al., 2009)

Figure 3 - Regions of interest for N-back task analysis (taken from Alkozei et al., 2016)
The second task participants are completing in the scanner is a reward learning/decision-making task. Participants are told that they will play a game where they have to choose between different “slot machines” where they can win extra money (see Appendix). Some of the machines will lead to them winning money ($1), some machines will lead to them losing money ($1) and some will remain the same. This task is unique however in that the likelihood of a machine leading to a win or a loss can change unexpectedly. Participants need to learn from the rewarding machines (i.e., the ones that will lead to more wins) as well as need to be flexible enough to change their decision-making strategy when they realize that a machine is no longer likely to lead to a win. The task was adapted from Payzan-LeNestour et al. (2013) and it was chosen as it has been shown to lead to increased activation in the LC. As we are expecting blue wavelength light to lead to greater activation of the LC, blue light may therefore also improve performance on this task (i.e., increase learning rate for favorable machines). As blue wavelength light has also been used as a treatment for mood disorders, and individuals with mood disorders do not learn from rewarding cues (e.g., money) as well as healthy controls, this data will help us better understand how blue light may impact mood and reward learning/decision-making. We will use the regions of interest from Payzan-LeNestour et al. (2013) to guide our analysis.

**Key Outcome: Changes in pupil dilation in response to blue light exposure**

During the resting state scan, we are simultaneously tracking participants’ right eye and will analyze data for changes in pupil dilation. Activation of the LC stimulates the release of norepinephrine (NE) which significantly impacts cognitive performance, learning and memory. Increased LC activation in response to blue light exposure may therefore stimulate increase NE release which could plausibly explain increases in cognitive performance during the MRI tasks. Norepinephrine release can be measured non-invasively by measuring changes in pupil dilation. Studies have shown that NE release correlates with LC activation as well as changes in pupil dilation (Murphy et al., 2014). Using participants’ pupillary responses to light as well as their functional brain responses, we will be able to better understand how blue light might lead to an increase in cognitive performance and how quickly such increases in performance can be expected.

**Key Outcome: Changes in Melatonin concentration in response to blue light**

We are testing participants during the “dead zone” – a time when blue light exposure is not expected to impact melatonin levels (i.e., 6-8 hours after awakening). We are testing all participants at exactly the same time and are collecting saliva samples at three time points during the morning. We will analyze whether there are changes in salivary melatonin levels in response to blue light exposure. However, we are not expecting to see a change in melatonin levels during the morning as a result of blue light exposure. Rather, we are collecting this data to confirm that the observed effects of blue light exposure cannot be attributed to changes in melatonin levels and can be attributed to other effects (e.g., LC activation).

**What opportunities for training and professional development has the project provided?**

The research assistants hired for this project were able to get trained in several areas to advance their professional skills and experience. In particular, research assistants were trained on administering two common neuropsychological assessments that will be used as part of the study. Research assistants were also trained in the appropriate way to collect saliva samples, how to use an eye tracking software, and how to collect and analyze functional neuroimaging data. These are important professional skills in the area of biopsychological research that will be useful for their future clinical or academic careers in the areas of (neuro-)psychology, medicine, or physiology.

**How were the results disseminated to communities of interest?**

Nothing to report.
What do you plan to do during the next reporting period to accomplish the goals?

The forthcoming reporting period will be utilized to further bolster recruitment efforts and to continue collecting data. Our goal was to complete data collection by August 1st 2020. However, due to COVID-19, on March 18th 2020, we had to put data collection on hold. We are hoping to be able to start data collection up again as soon as possible to finish data collection by the grant’s end date.

4. IMPACT:

What was the impact on the development of the principal discipline(s) of the project?

Nothing to report.

What was the impact on other disciplines?

Nothing to report.

What was the impact on technology transfer?

Nothing to report.

What was the impact on society beyond science and technology?

Nothing to report.

5. CHANGES/PROBLEMS:

Nothing to report.

Changes in approach and reasons for change

Nothing to report.

Actual or anticipated problems or delays and actions or plans to resolve them

During this reporting period, we had a slight delay in the completion of the MRI compatible light device. We had anticipated to complete the design of the light device and submit IRB and HRPO documents by May 2019, but it took until the end of June 2019 to complete the light device. We therefore were slightly delayed in submitting the IRB application for this project, which we did on 07/01/2019. We received approval on 08/15/2019 and submitted our HRPO application, the next day, on 08/16/2019. However, it took much longer than we had anticipated to receive HRPO approval. On 01/30/2020, we received HRPO approval. We were therefore delayed in starting data collection. However, while we were waiting for HRPO approval we made sure that we would be able to start recruitment and data collection immediately and made sure study staff was trained, study materials were purchased, and several dry-runs of the study procedures were done. We also spent significant amount of time in preparing the data collection and analysis software (i.e., RedCap) to make sure data analysis will take less time later.

While we had anticipated to start data collection in June 2019, we were unable to start recruitment until 01/31/2020, the day after we received HRPO approval. We distributed flyers around the Tucson, AZ area. We
also posted some advertisements on social media (Facebook and Instagram) to reach a broader audience. Within the first month of recruitment, we had scheduled 20 participants (i.e., 40 visits). We faced some difficulty with scheduling, as the MRI scanner’s availability limited us from being able to schedule participants every day of the week. As such, we scheduled participants out until May 2020 to ensure scanner availability. Between 02/01/2020 and 03/18/2020, we ran 5 visits. Unfortunately, we only obtained a full dataset for one participant. Two participants had to be excluded from the study during their first visit due to eligibility criteria that were not apparent over the phone, and two other participants completed their first visit but were unable to return for their second visit due to the COVID-19 outbreak.

On March 18th 2020, we had to make the decision to pause data collection due to the COVID-19 outbreak. The University of Arizona advised only to run research studies that were medically necessary, and the MRI scanner’s availability was reduced to only 2 days a week. As we were also collecting biohazardous liquids (i.e., saliva samples), we decided to pause the study for the safety of the participants and research staff. We plan to resume data collection as soon as possible. We re-assess the situation every week and will lean on university guidelines when making our decision.

It should be noted that we did not have difficulty with participant recruitment and were able to schedule 20 participants (over 2/3 of the final sample) within the first several weeks of recruitment. As mentioned above, 375 individuals have completed our online interest form and 48 individuals have been eligible. We therefore do not anticipate any further delays once data collection resumes. We will work closely with the MRI Technicians to ensure that we will be able to run participants at least 4 times a week. By completing 4 visits each week, data collection for the remaining 26 participants should take approximately 12 weeks.

Changes that had a significant impact on expenditures

Nothing to report.

Significant changes in use or care of human subjects, vertebrate animals, biohazards, and/or select agents

No significant changes in use or care of human subjects to report.

**Column Sum**

**Scoring** - Sum each column. Then sum the column totals to achieve a grand score. Write that score here ____________.

**Interpretation**

A grand sum between **0 – 21** indicates very low anxiety. That is usually a good thing. However, it is possible that you might be unrealistic in either your assessment which would be denial or that you have learned to “mask” the symptoms commonly associated with anxiety. Too little “anxiety” could indicate that you are detached from yourself, others, or your environment.

A grand sum between **22 – 35** indicates moderate anxiety. Your body is trying to tell you something. Look for patterns as to when and why you experience the symptoms described above. For example, if it occurs prior to public speaking and your job requires a lot of presentations you may want to find ways to calm yourself before speaking or let others do some of the presentations. You may have some conflict issues that need to be resolved. Clearly, it is not “panic” time but you want to find ways to manage the stress you feel.

A grand sum that **exceeds 36** is a potential cause for concern. Again, look for patterns or times when you tend to feel the symptoms you have circled. Persistent and high anxiety is not a sign of personal weakness or failure. It is, however, something that needs to be proactively treated or there could be significant impacts to you mentally and physically. You may want to consult a counselor if the feelings persist.
Instructions: This questionnaire consists of 21 groups of statements. Please read each group of statements carefully, and then pick out the one statement in each group that best describes the way you have been feeling during the past two weeks, including today. Circle the number beside the statement you have picked. If several statements in the group seem to apply equally well, circle the highest number for that group. Be sure that you do not choose more than one statement for any group, including Item 16 (Changes in Sleeping Pattern) or Item 18 (Changes in Appetite).

1 I am more critical of myself than I used to be.  
2 I criticize myself for all of my faults.  
3 I blame myself for everything bad that happens. |
| 9. Suicidal Thoughts or Wishes | 0 I don’t have any thoughts of killing myself.  
1 I have thoughts of killing myself, but I would not carry them out.  
2 I would like to kill myself.  
3 I would kill myself if I had the chance. |
| 10. Crying | 0 I don’t cry any more than I used to.  
1 I cry more than I used to.  
2 I cry over every little thing.  
3 I feel like crying, but I can’t. |
11. Agitation
   0 I am no more restless or wound up than usual.
   1 I feel more restless or wound up than usual.
   2 I am so restless or agitated that it's hard to stay still.
   3 I am so restless or agitated that I have to keep moving or doing something.

12. Loss of Interest
   0 I have not lost interest in other people or activities.
   1 I am less interested in other people or things than before.
   2 I have lost most of my interest in other people or things.
   3 It's hard to get interested in anything.

13. Indecisiveness
   0 I make decisions about as well as ever.
   1 I find it more difficult to make decisions than usual.
   2 I have much greater difficulty in making decisions than I used to.
   3 I have trouble making any decisions.

14. Worthlessness
   0 I do not feel I am worthless.
   1 I don't consider myself as worthwhile and useful as I used to.
   2 I feel more worthless as compared to other people.
   3 I feel utterly worthless.

15. Loss of Energy
   0 I have as much energy as ever.
   1 I have less energy than I used to have.
   2 I don't have enough energy to do very much.
   3 I don't have enough energy to do anything.

16. Changes in Sleeping Pattern
   0 I have not experienced any change in my sleeping pattern.
   1a I sleep somewhat more than usual.
   1b I sleep somewhat less than usual.
   2a I sleep a lot more than usual.
   2b I sleep a lot less than usual.
   3a I sleep most of the day.
   3b I wake up 1–2 hours early and can't get back to sleep.

17. Irritability
   0 I am no more irritable than usual.
   1 I am more irritable than usual.
   2 I am much more irritable than usual.
   3 I am irritable all the time.

18. Changes in Appetite
   0 I have not experienced any change in my appetite.
   1a My appetite is somewhat less than usual.
   1b My appetite is somewhat greater than usual.
   2a My appetite is much less than before.
   2b My appetite is much greater than usual.
   3a I have no appetite at all.
   3b I crave food all the time.

19. Concentration Difficulty
   0 I can concentrate as well as ever.
   1 I can't concentrate as well as usual.
   2 It's hard to keep my mind on anything for very long.
   3 I find I can't concentrate on anything.

20. Tiredness or Fatigue
   0 I am no more tired or fatigued than usual.
   1 I get more tired or fatigued more easily than usual.
   2 I am too tired or fatigued to do a lot of the things I used to do.
   3 I am too tired or fatigued to do most of the things I used to do.

21. Loss of Interest in Sex
   0 I have not noticed any recent change in my interest in sex.
   1 I am less interested in sex than I used to be.
   2 I am much less interested in sex now.
   3 I have lost interest in sex completely.

**Recent Risk of Dozing Off (ESS)**

How likely are you to doze off or fall asleep in the following situations, in contrast to just feeling tired? This refers to your usual way of life in the last two weeks. Even if you have not done some of these things recently, try to work out how they would have affected you. Use the following scale to choose the most appropriate number for each situation.

0 - Would never doze  
1 - Slight chance of dozing  
2 - Moderate chance of dozing  
3 - High chance of dozing

<table>

GRAT -R

Please provide your honest feelings and beliefs about the following statements which relate to you. There are no right or wrong answers to these statements. We would like to know how much you feel these statements are true or not true of you. Please try to indicate your true feelings and beliefs, as opposed to what you would like to believe. Respond to the following statements by filling in the number that best represents your real feelings in the blank provided next to each statement. Please use the scale provided below, and please choose one number for each statement (i.e. don't circle the space between two numbers).

1.   ___ I couldn't have gotten where I am today without the help of many people.
2.   ___ I think that life has been unfair to me.
3.   ___ It sure seems like others get a lot more benefits in life than I do.
4.   ___ I never seem to get the breaks or chances that other people do.
5.   ___ Often I'm just amazed at how beautiful the sunsets are.
6.   ___ Life has been good to me.
7.   ___ There never seems to be enough to go around and I never seem to get my share.
8.   ___ Often I think, "What a privilege it is to be alive."
9.   ___ Oftentimes I have been overwhelmed at the beauty of nature.
10.  ___ I feel grateful for the education I have received.
11.  ___ Many people have given me valuable wisdom throughout my life that has been important to my success.
12.  ___ It seems like people have frequently tried to impede my progress.
13.  ___ Although I think it's important to feel good about your accomplishments, I think that it's also important to remember how others have contributed to my success.
14.  ___ I really don't think that I've gotten all the good things that I deserve in life.
15.  ___ Every Fall I really enjoy watching the leaves change colors.
16.  ___ Although I'm basically in control of my life, I can't help but think about all those who have supported me and helped me along the way.
17.  ___ Part of really enjoying something good is being thankful for that thing.
18.  ___ Sometimes I find myself overwhelmed by the beauty of a musical piece.
19.  ___ I'm basically very thankful for the parenting that was provided to me.
20.  ___ I've gotten where I am today because of my own hard work, despite the lack of any help or support.
21.  ___ Over the December holidays, the presents I get aren't as good or as many as others seem to get.
22.  ___ Sometimes I think, "Why am I so fortunate so as to be born into the family and culture I was born into?"
23.  ___ One of my favorite times of the year is Thanksgiving.
24.  ___ I believe that I am a very fortunate person.
25.  ___ I think that it's important to "Stop and smell the roses."
26.  ___ More bad things have happened to me in my life than I deserve.
27.  ___ I really enjoy the changing seasons.
28. ___ Because of what I've gone through in my life, I really feel like the world owes me something.
29. ___ I believe that the things in life that are really enjoyable are just as available to me as they are to the very rich.
30. ___ I love to sit and watch the snow fall.
31. ___ I believe that I've had more than my share of bad things come my way.
32. ___ Although I think that I'm morally better than most, I haven't gotten my just reward in life.
33. ___ After eating I often pause and think, "What a wonderful meal."
34. ___ Every spring, I really enjoy seeing the flowers bloom.
35. ___ I think it's important to pause often to "count my blessings."
36. ___ I think it's important to enjoy the simple things in life.
37. ___ I basically feel like life has ripped me off.
38. ___ I feel deeply appreciative for the things others have done for me in my life.
39. ___ I feel that God, or fate, or destiny, doesn't like me very well.
40. ___ The simple pleasures of life are the best pleasures of life.
41. ___ I love the green of spring.
42. ___ For some reason I never seem to get the advantages that others get.
43. ___ I think it's important to appreciate each day that you are alive.
44. ___ I'm really thankful for friends and family.
KAROLINSKA SLEEPINESS SCALE

Please, indicate your sleepiness during the 5 minutes before this rating through circling the appropriate description

1=extremely alert
2=very alert
3=alert
4=rather alert
5=neither alert nor sleepy
6=some signs of sleepiness
7=sleepy, but no effort to keep awake
8=sleepy, some effort to keep awake
9=very sleepy, great effort to keep awake, fighting sleep

If used electronically, please make sure that the wording of the scale is presented at each rating for easy reference

PITTSBURGH SLEEP QUALITY INDEX

INSTRUCTIONS:
The following questions relate to your usual sleep habits during the past month only. Your answers should indicate the most accurate reply for the majority of days and nights in the past month. Please answer all questions.

1. During the past month, what time have you usually gone to bed at night?
   
   BED TIME ___________

2. During the past month, how long (in minutes) has it usually taken you to fall asleep each night?
   
   NUMBER OF MINUTES ___________

3. During the past month, what time have you usually gotten up in the morning?
   
   GETTING UP TIME ___________

4. During the past month, how many hours of actual sleep did you get at night? (This may be different than the number of hours you spent in bed.)
   
   HOURS OF SLEEP PER NIGHT ___________

5. During the past month, how often have you had trouble sleeping because you . . .

   a) Cannot get to sleep within 30 minutes
      
      Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____

   b) Wake up in the middle of the night or early morning
      
      Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____

   c) Have to get up to use the bathroom
      
      Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____
d) Cannot breathe comfortably

Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____

e) Cough or snore loudly

Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____

f) Feel too cold

Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____

g) Feel too hot

Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____

h) Had bad dreams

Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____

i) Have pain

Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____

j) Other reason(s), please describe________________ __________________________ 
___________________________________________________ _______________________

How often during the past month have you had trouble sleeping because of this?

Not during the past month_____ Less than once a week_____ Once or twice a week_____ Three or more times a week_____

6. During the past month, how would you rate your sleep quality overall?

    Very good       
    Fairly good       
    Fairly bad       
    Very bad
7. During the past month, how often have you taken medicine to help you sleep (prescribed or "over the counter")?

Not during the past month_____ once a week_____ a week_____ times a week_____

8. During the past month, how often have you had trouble staying awake while driving, eating meals, or engaging in social activity?

Not during the past month_____ once a week_____ a week_____ times a week_____

9. During the past month, how much of a problem has it been for you to keep up enough enthusiasm to get things done?

No problem at all __________
Only a very slight problem __________
Somewhat of a problem __________
A very big problem __________

10. Do you have a bed partner or room mate?

No bed partner or room mate __________
Partner/room mate in other room __________
Partner in same room, but not same bed __________
Partner in same bed __________

If you have a room mate or bed partner, ask him/her how often in the past month you have had . . .

a) Loud snoring

Not during the past month_____ once a week_____ a week_____ times a week_____

b) Long pauses between breaths while asleep

Not during the past month_____ once a week_____ a week_____ times a week_____

c) Legs twitching or jerking while you sleep

Not during the past month_____ once a week_____ a week_____ times a week_____
d) Episodes of disorientation or confusion during sleep

Sleep Diary

Reflecting on the previous day and this morning, please fill out all required and applicable questions on the diary below. We will send you an email on the last day of sleep diaries notifying you that all of the needed questionnaires are complete.

If you have any questions or have trouble loading the survey, please call us immediately at 520-428-5131.

At times in this questionnaire, you will be required to write down a time in military time. To make this task easier, consult this chart:

Sleep Diary 1

Today's Date:

______________________________

Bedtimes

What time did you wake up for the day?

Military Time (00:00 - 23:59 )

What time did you get out of bed today? (Note: this may be different from the time you woke up)

Military Time (00:00 - 23:59 )

What time did you get into bed last night?

Military Time (00:00 - 23:59 )

What time did you try to go to sleep?

Military Time (00:00 - 23:59 )

It took me____(hr):____(min) to fall asleep
I woke up ___ times during the night (i.e. woke up, then fell asleep again afterward - DOES NOT include your final awakening for the day)

☐ 1
☐ 2
☐ 3
☐ 4
☐ 5 or more

My first awakening lasted ___ minutes (e.g. 1.5 hours = 90)

My second awakening lasted ___ minutes (e.g. 1.5 hours = 90)

My third awakening lasted ___ minutes (e.g. 1.5 hours = 90)

My fourth awakening lasted ___ minutes (e.g. 1.5 hours = 90)

My fifth awakening, or subsequent awakenings, lasted ___ minutes each (if applicable, separate each time with a comma) (e.g. 1.5 hours = 90)

Nightmares

Did you have a nightmare last night?

☐ Yes
☐ No

How distressing was the nightmare?

☐ 1 (Not at all)
☐ 2
☐ 3 (Distressing)
☐ 4
☐ 5 (Very distressing)

Napping

I took a nap yesterday

☐ Yes
☐ No

How many naps did you take?

☐ 1
☐ 2
☐ 3

Nap 1

I started napping at:

(Military Time 00:00 - 23:59)
AM or PM

☐ AM
☐ PM

I finished napping at:

Military Time 00:00 - 23:59

AM or PM

☐ AM
☐ PM

---

**Nap 2**

I started napping at:

Military Time 00:00 - 23:59

I finished napping at:

Military Time 00:00 - 23:59

---

**Nap 3**

I started napping at:

Military Time 00:00 - 23:59

I finished napping at:

(Military Time 00:00 - 23:59)
AM or PM

☐ AM
☐ PM

Caffeine

I consumed ___ caffeinated beverages yesterday

I consumed caffeine yesterday:

☐ Morning
☐ Afternoon
☐ Evening
☐ Not Applicable

General Questions

I woke up this morning feeling:

☐ Refreshed
☐ Somewhat refreshed
☐ Fatigued

For most of yesterday I felt:

☐ 1 (Very Sleepy)
☐ 2
☐ 3
☐ 4 (Neutral)
☐ 5
☐ 6
☐ 7 (Very Alert)

Yesterday my mood was:

☐ 1 (Very Poor)
☐ 2
☐ 3
☐ 4 (Neutral)
☐ 5
☐ 6
☐ 7 (Very Good)

Did you use any electronic media (e.g. computer, television, mobile phone) after 9:00 PM last night?

☐ Yes
☐ No
Actiwatch

Did you press the marker button on your actiwatch last night before going to bed?

- Yes
- No

Did you press the marker button on your actiwatch when you got out of bed for the day?

- Yes
- No
Purpose  Consisting of 28 items, the SQS evaluates six domains of sleep quality: daytime symptoms, restoration after sleep, problems initiating and maintaining sleep, difficulty waking, and sleep satisfaction. Developers hoped to create a scale that could be used as an all-inclusive assessment tool – a general, efficient measure suitable for evaluating sleep quality in a variety of patient and research populations.

Population for Testing  The scale has been validated in individuals aged 18–59 years.

Administration  Requiring between 5 and 10 min for administration, the scale is a simple self-report, pencil-and-paper measure.

Reliability and Validity  An initial psychometric evaluation conducted by Yi and colleagues [1] found an internal consistency of .92, a test-retest reliability of .81. The SQS is strongly correlated with results obtained on the Pittsburgh Sleep Quality Index (Chap. 67). Scores achieved by the insomnia sample were significantly higher than those of controls, indicating good construct validity.

Obtaining a Copy  A list of the scale’s 28 items can be found in the original article published by developers [1].

Email: shinchol@pol.net

Scoring  Using a four-point, Likert-type scale, respondents indicate how frequently they exhibit certain sleep behaviors (0 = “few,” 1 = “sometimes,” 2 = “often,” and 3 = “almost always”). Scores on items belong to factors 2 and 5 (restoration after sleep and satisfaction with sleep) and are reversed before being tallied. Total scores can range from 0 to 84, with higher scores demoting more acute sleep problems.
Sleep Quality Scale

The following survey is to know the quality of sleep you had for the last one month. Read the questions and check the closest answer.

Examples

Rarely: None or 1-3 times a month
Sometimes: 1-2 times a week
Often: 3-5 times a week
Almost always: 6-7 times a week

SSQ

Instructions: This scale is made up of a list of statements each of which may or may not be true about you. For each statement circle "definitely true" if you are sure it is true about you and "probably true" if you think it is true but are not absolutely certain. Similarly, you should circle "definitely false" if you are sure the statement is false and "probably false" if you think it is false but are not absolutely certain.

1. If I wanted to go on a trip for a day (for example, to the country or mountains), I would have a hard time finding someone to go with me.
   1. definitely false  2. probably false  3. probably true  4. definitely true

2. I feel that there is no one I can share my most private worries and fears with.
   1. definitely false  2. probably false  3. probably true  4. definitely true

3. If I were sick, I could easily find someone to help me with my daily chores.
   1. definitely false  2. probably false  3. probably true  4. definitely true

4. There is someone I can turn to for advice about handling problems with my family.
   1. definitely false  2. probably false  3. probably true  4. definitely true

5. If I decide one afternoon that I would like to go to a movie that evening, I could easily find someone to go with me.
   1. definitely false  2. probably false  3. probably true  4. definitely true

6. When I need suggestions on how to deal with a personal problem, I know someone I can turn to.
   1. definitely false  2. probably false  3. probably true  4. definitely true

7. I don't often get invited to do things with others.
   1. definitely false  2. probably false  3. probably true  4. definitely true

8. If I had to go out of town for a few weeks, it would be difficult to find someone who would look after my house or apartment (the plants, pets, garden, etc.).
   1. definitely false  2. probably false  3. probably true  4. definitely true

9. If I wanted to have lunch with someone, I could easily find someone to join me.
1. definitely false  
2. probably false  
3. probably true  
4. definitely true

10. If I was stranded 10 miles from home, there is someone I could call who could come and get me.
   
1. definitely false  
2. probably false  
3. probably true  
4. definitely true

11. If a family crisis arose, it would be difficult to find someone who could give me good advice about how to handle it.
   
1. definitely false  
2. probably false  
3. probably true  
4. definitely true

12. If I needed some help in moving to a new house or apartment, I would have a hard time finding someone to help me.
   
1. definitely false  
2. probably false  
3. probably true  
4. definitely true

SELF-EVALUATION QUESTIONNAIRE STAI Form Y-1
Please provide the following information:

Subject ID __________________________ Date ____________ S ______
Age __________________________ Gender (Circle) M F T ______

DIRECTIONS:
A number of statements which people have used to describe themselves are given below. Read each statement and then circle the appropriate number to the right of the statement to indicate how you feel right now, that is, at this moment. There are no right or wrong answers. Do not spend too much time on any one statement but give the answer which seems to describe your present feelings best.

1. I feel calm ............................................................................................................................ 1 2 3 4
2. I feel secure ........................................................................................................................... 1 2 3 4
3. I am tense .............................................................................................................................. 1 2 3 4
4. I feel strained ........................................................................................................................ 1 2 3 4
5. I feel at ease ......................................................................................................................... 1 2 3 4
6. I feel upset ............................................................................................................................. 1 2 3 4
7. I am presently worrying over possible misfortunes ............................................................ 1 2 3 4
8. I feel satisfied ....................................................................................................................... 1 2 3 4
9. I feel frightened .................................................................................................................... 1 2 3 4
10. I feel comfortable ............................................................................................................... 1 2 3 4
11. I feel self-confident ......................................................................................................... 1 2 3 4
12. I feel nervous .................................................................................................................... 1 2 3 4
13. I am jittery ........................................................................................................................... 1 2 3 4
14. I feel indecisive .................................................................................................................. 1 2 3 4
15. I am relaxed....................................................................................................................... 1 2 3 4
16. I feel content ....................................................................................................................... 1 2 3 4
17. I am worried ....................................................................................................................... 1 2 3 4
18. I feel confused.................................................................................................................... 1 2 3 4
19. I feel steady....................................................................................................................... 1 2 3 4

State-Trait Anxiety Inventory for Adults Scoring Key (Form Y-1, Y-2)

Developed by Charles D. Spielberger in collaboration with R.L. Gorsuch, R. Lushene, P.R. Vagg, and G.A. Jacobs

To use this stencil, fold this sheet in half and line up with the appropriate test side, either Form Y-1 or Form Y-2. Simply total the scoring weights shown on the stencil for each response category. For example, for question # 1, if the respondent marked 3, then the weight would be 2. Refer to the manual for appropriate normative data.

For Dissertation and Thesis Appendices:

You cannot include an entire instrument in your thesis or dissertation; however you can use up to five sample items. Academic committees understand the requirements of copyright and are satisfied with sample items for appendices and tables. For customers needing permission to reproduce five sample items in a proposal, thesis, or dissertation the following page includes the permission form and reference information needed to satisfy the requirements of an academic committee.

Putting Mind Garden Instruments on the Web:

If your research uses a Web form, you will need to meet Mind Garden’s requirements by following the procedure described at http://www.mindgarden.com/how.htm#instrumentweb.

All Other Special Reproductions:

For any other special purposes requiring permissions for reproduction of this instrument, please contact info@mindgarden.com.
To whom it may concern,

This letter is to grant permission for the above named person to use the following copyright material for his/her thesis or dissertation research.

Instrument:  *State-Trait Anxiety Inventory for Adults*

Authors:  *Charles D. Spielberger, in collaboration with R.L. Gorsuch, G.A. Jacobs, R. Lushene, and P.R. Vagg*

Copyright:  *1968, 1977 by Charles D. Spielberger*

Five sample items from this instrument may be reproduced for inclusion in a proposal, thesis, or dissertation.

The entire instrument may not be included or reproduced at any time in any other published material.

Sincerely,

Robert Most

List A Immediate Free Recall Trial 1
I'm going to read a list of words to you. Listen carefully, because when I'm through, I want you to tell me as many of the words as you can. You can say them in any order, just say as many of them as you can. Are you ready?

Read List A at an even pace, taking slightly longer than one second per word, so the entire list takes 18 to 20 seconds. Then say: Go ahead.

There should be approximately a 10-minute delay between the completion of Yes/No Recognition and the start of Forced-Choice Recognition. Do not inform the examinee that there will be a later CVLT-II trial.
List A Long-Delay Forced-Choice Recognition (Optional)

Earlier, I read some lists of words to you, remember? Now I am going to read some words two at a time. After I read both words, say which of the words was from the first list, the one I read to you several times. It may be difficult to remember which one to pick, but even if it's hard for you, just try your best. Ready?

Was boat or flag on the first list?

Was ___ or ___ on the first list?

Circle the examinee's responses.

- Ages 9-90: 71
## 2. Vocabulary

**Start**
Ages 6–90: Item 4

**Reverse**
Ages 6–65: Does not obtain a perfect score on either Item 4 or Item 5, administer the preceding items in reverse order until two consecutive perfect scores are obtained.

**Discontinue**
After 3 consecutive scores of 0.

**Stop**
- Age 6: After item 22.
- Ages 7–11: After item 25.
- Ages 12–14: After item 28.

**Record & Score**
- Items 1–3: Score 0 or 1 point.
- Items 4–5: Score 0 or 2 points.
- Items 6–31: Score 0, 1, or 2 points.

See the Manual for sample responses.

Behavioral Observations

Referral source/Reason for referral/Presenting complaint(s)

Physical appearance

Language (e.g., first/native language, other language, English fluency, expressive and receptive language ability, articulation)

Attention and concentration

Attitude toward testing (e.g., rapport, eager to speak, working habits, interest, motivation, reaction to success/failure)

Affect/Mood

Unusual behaviors/Verbalizations (e.g., perseverations, stereotypic movements, bizarre and atypical verbalizations)

Other notes
Emotional Reward task

Each of the below slot machines are unique and different from each other.

For each trial, you can choose one slot machine.

Each time you select a slot machine, it will return with one of these three possible outcomes:

- Win 1 dollar
- Lose 1 dollar
- No change
You will play with all 6 different machines throughout the game, but only with a maximum of 2 at one time.

The game will randomly select 2 machines for you to play with at a time, and you will be able to select from these two machines which to play.

You will usually be presented with two machines to choose between.

Sometimes, you will only be presented with one machine.
EDUCATION

2013 University of Reading, Reading, United Kingdom

Ph.D. in Psychology with a focus on Developmental Psychopathology under the supervision of Dr Creswell and Prof Cooper

Thesis Title: Autonomic Arousal and Interpretation of Physical Symptoms in Childhood Anxiety Disorders

2010 University of Reading, Reading, United Kingdom

BSc. Psychology (First Class – equivalent to a GPA: 4.0)

PROFESSIONAL EXPERIENCES

03/2019- present University of Arizona, Department of Psychiatry, Tucson, AZ, USA

Research Assistant Professor

2019-2020 Pima Community College, Tucson, AZ, USA

Adjunct Faculty

2014-2019 University of Arizona, Department of Psychiatry, Social, Cognitive and Affective Neuroscience (SCAN) Laboratory, Tucson, AZ, USA

Postdoctoral Research Associate (Social, Cognitive and Affective Neuroscience)

2013-2014 Harvard Medical School, Brigham and Women’s Hospital, Department of Pediatric and Newborn Medicine, Boston, MA, USA

Postdoctoral Research Associate (Developmental Psychopathology)

GRANTS AWARDED

2019 U.S. Department of Defense

“Understanding the Mechanisms of Blue Light Exposure on Cognitive Processes”

Principal Investigator (Total Award: $306, 902).

COMPLETED

2015 The Arizona Area Health Education Centers (AHEC) Program Award

“The Effects of Blue Light on Melatonin and EEG Power Density Spectrum”

Principal Investigator (Total Award: $4373.00)
POSTDOCTORAL RESEARCH TRAINING

2014-2019 University of Arizona, Department of Psychiatry, Tucson, AZ, USA

Postdoctoral Research Fellow

- Responsible for data collection and analysis, manuscript preparation of functional magnetic brain imaging data (fMRI) and (neuro-) psychological outcomes in individuals with posttraumatic stress disorder (PTSD)
- Conduct structured diagnostic interviews with individuals with posttraumatic stress disorder using the Structured Clinical Interview for DSM5 (SCID-5)
- Train and supervise research assistants on data analysis, conference abstract preparation, and academic writing

2013-2014 Harvard Medical School, Brigham and Women’s Hospital, Department of Pediatrics and Newborn Medicine, Boston, MA, USA

Postdoctoral Research Fellow

- Responsible for data collection and analysis of physiological and psychological outcomes of premature infants and their mothers enrolled in an intervention aimed at improving premature infants’ brain growth and development

PRE-DOCTORAL RESEARCH TRAINING

2012-2013 University of Arizona, Department of Psychology, Tucson, AZ, USA

Short Term Scholar

- Developing in-depth knowledge on how to derive measures of cardiac vagal control in the Psychophysiology Laboratory under the supervision of Dr John J.B. Allen

07/2009-09/2009 University of Reading, Department of Psychology, Reading, United Kingdom

Research Assistant

- Wellcome Trust funded summer research placement
- Responsible for recruitment of participants, and data collection, including the measurement of heart rate and skin conductance response, in younger and older (60 and above) adults

2009-2010 Berkshire Child Anxiety Clinic, Reading, United Kingdom
Research Assistant

- Responsible for various administrative and research tasks including extensive work with SPSS, Excel and transcription of mother-child narratives

AWARDS

2012 Psychology Postgraduate Affairs Group (PsychPag) Conference Travel Award

EDITORIAL ROLES

SCIENCE MENTOR/REVIEW EDITOR

2018- present Frontiers for Young Minds

AD HOC REVIEWER

Frontiers in Psychology (2018)
Personality and Individual Differences (2018, 2016)
Biological Psychology (2017)
Psychiatry Research: Neuroimaging (2017)
Scientific Reports (2017)
Parenting: Science and Practice (2017)
European Child & Adolescent Psychiatry (2016)
