Major Goals: This award supported the travel costs and registration for 9 invited participants from the US to give talks in a mini-symposium entitled "Physics of dense granular media" as a part of the 10th European Solid Mechanics Conference (ESMC) July 2-6, 2018 in Bologna, Italy. The ESMC series, which occurs every three years, is the premier conference for researchers in the vibrant solid mechanics and granular materials communities in Europe. ESMC 2018 featured 54 mini-symposia spanning continuum mechanics, particulate media, metamaterials, and composites. The "Physics of dense granular media" mini-symposium was co-organized by the PI, Prof. Robert Behringer, and Prof. Lou Kondic, who are leaders in the fields of experimental and computational studies of granular media and have a strong history of collaboration and co-organizing conferences, workshops, and symposia. The mini-symposium featured experimental, theoretical, and computational work from researchers in the US and European granular materials communities focused on the structural and mechanical properties of static granular packings, as well as the dynamics of slowly driven granular systems. Key topics included static packings of non-spherical and entangled grains, preparation protocol dependence of the jamming transition, characterization of force chain networks, continuum descriptions of dense granular flows, shear thickening, fluid-driven granular beds, sediment transport, and geophysical flows. Many of these topics are directly related to the main goal of ARO's Program on Earth Materials and Processes, which seeks to understand the dynamic and mechanical properties of near-surface Earth materials.

Accomplishments: The 10th European Solid Mechanics Conference was held in Bologna, Germany July 2-6, 2018. The conference was held at the Palazzo della Cultura e dei Congressi. 1100 abstracts were presented during 55 mini-symposia devoted to topics in mechanics and materials science.

The award supported the mini-symposium, "The physics of dense granular media", which included 5 two-hour sessions, each with six 20-minute talks. The sessions were held Wednesday, July 4 10:15 AM - 12:15 PM; Thursday, July 5, 10:15AM - 12:15PM; Thursday, July 5, 2:30PM - 4:30PM; Thursday, July 5, 5:00PM - 7:00PM; and Friday, July 6, 10:15AM - 12:15PM.

The ESMC also allowed numerous opportunities for discussion and collaboration including a welcome reception on July 2 from 7:15PM to 9:00PM, a gala dinner on July 5 from 8:00PM to 11:00PM at the Palazzo Re Enzo. In addition, lunch and poster sessions were held each day from 12:15PM to 1:45PM and coffee breaks were held each day from

Article Title: The role of deformability in determining the structural and mechanical properties of bubbles and emulsions

Authors: Arman Boromand, Alexandra Signoriello, Janna Lowensohn, Carlos S. Orellana, Eric R. Weeks, Fangfu

Keywords: bubbles, emulsions, jamming

Abstract: We perform computational studies of jammed particle packings in two dimensions undergoing isotropic compression using the well-characterized soft particle (SP) model and deformable particle (DP) model that we developed for bubbles and emulsions. In the SP model, circular particles are allowed to overlap, generating purely repulsive forces. In the DP model, particles minimize their perimeter, while deforming at fixed area to avoid overlap during compression. We compare the structural and mechanical properties of jammed packings generated using the SP and DP models as a function of the packing fraction ϕ , instead of the reduced number density ϕ . We show that near jamming onset the excess contact number $\gamma_z = z - z_J$ and shear modulus G scale as $\gamma_z \sim 0.5$ in the large system limit for both models, where $\gamma_z = \gamma_J$ and $z_J \approx 4$ and $\gamma_J \approx 0.842$ are the values at jamming onset. γ_z and G for the SP and DP models begin to differ for $\phi > 0.88$. In this regime, $\gamma_z \approx G$ can be described by a sum of two power laws.

Article Title: Critical scaling near the yielding transition in granular media

Authors: Abram H. Clark, Jacob D. Thompson, Mark D. Shattuck, Nicholas T. Ouellette, Corey S. O'Hern

Keywords: yielding transition, sediment transport

Abstract: We show that the yielding transition in granular media displays second-order critical-point scaling behavior. We carry out discrete element simulations in the low inertial number limit for frictionless, purely repulsive spherical grains undergoing simple shear at fixed nondimensional shear stress Σ in two and three spatial dimensions. To find a mechanically stable (MS) packing that can support the applied Σ , isotropically prepared states with size L must undergo a total strain $\gamma_{\text{ms}}(\Sigma, L)$. The number density of MS packings ($\propto \gamma_{\text{ms}}^{-1}$) vanishes for $\Sigma > \Sigma_c \approx 0.11$ according to a critical scaling form with a length scale $\xi \propto |\Sigma - \Sigma_c|^{-\nu}$, where $\nu \approx 1.7-1.8$. Above the yield stress ($\Sigma > \Sigma_c$), no MS packings that can support Σ exist in the large system limit, $L/\xi \gg 1$. MS packings generated via shear possess anisotropic force and contact networks, suggesting that Σ

PROGRAM BOOK

WELCOME TO ESMC 2018

Dear Colleagues,

It is our pleasure to welcome you to Bologna for the 10th European Solid Mechanics Conference. The conference, organized by the Universities of Bologna and Trento, under the auspices of EuroMech, will be held at the "Palazzo della Cultura e dei Congressi" in Bologna, during July 2-6, 2018.

The European Solid Mechanics Conference is organized every three years and constitutes the major event for the solids mechanics community in Europe, providing a unique forum for scientists and engineers to exchange ideas on the current state-of-the-art in the mechanics of solids, on new concepts and ideas and to identify new research directions.

Previous European Solid Mechanics Conferences were held in Munich, Genova, Stockholm, Metz, Thessaloniki, Budapest, Lisbon, Graz, and Madrid. This 10th edition in Bologna will feature 6 plenary lectures given by Prof. Bernhard Schrefler (General Lecturer), Prof. Katia Bertoldi, Prof. Odd Sture Hopperstad, Prof. Ray W. Ogden, Prof. Thomas Pardoen, Prof. Zhigang Suo, together with the lecture of the recipient of the Solid Mechanics Prize, Prof. Erik van der Giessen. In addition, the status of Euromech fellow will officially be conferred to three distinguished scientists on July 4th.

More than 1300 abstracts were received and approximately 1100 were accepted after the review process to ensure the quality of the contributions. They will be presented in 20 parallel sessions, which encompass general sessions and 55 mini-symposia devoted to the most important topics in the areas of biomechanics, composite materials and homogenization theory, computational mechanics, continuum mechanics, dynamics, waves and metamaterials, experimental mechanics, mechanics of materials, multifield and multiscale problems, and structural mechanics.

Looking forward to a fruitful European Solid Mechanics Conference, receive our best regards,
