Psychosocial Assessment and Care

1515-1630
12 September 2019
Presenter(s)/Moderator

Ann Hryshko-Mullen, PhD, ABPP-CHP, CBSM
Director, Psychology Training
Director, Clinical Psychology Residency

Captain John Blue Star, Ph.D.
Fellow, Clinical Health Psychology

Major Marc Patience, Ph.D.
Fellow, Clinical Health Psychology

USAF
Wilford Hall Ambulatory Surgical Center
JBSA Lackland
Disclosures

- Ann Hryshko-Mullen, John Blue Star, and Marc Patience have no relevant financial or non-financial relationships to disclose relating to the content of this activity.

- The views expressed in this presentation are those of the authors and do not necessarily reflect the official policy or position of the Department of Defense, nor the U.S. Government.

- This continuing education activity is managed and accredited by the Defense Health Agency J7 Continuing Education Program Office (DHA J7 CEPO) in collaboration with the Professional Education Services Group/AffinityCE (PESG/ACE). DHA J7 CEPO and PESG/ACE as well as all accrediting organizations do not support or endorse any product or service mentioned in this activity.

- DHA J7 CEPO and PESG staff, as well as activity planners and reviewers have no relevant financial or non-financial interest to disclose.

- Commercial support was not received for this activity.
Learning Objectives

At the conclusion of this knowledge-based activity, participants will be able to:

- Identify challenges to outstanding clinical outcomes
- Describe Motivational Interviewing (MI) and its relation to Shared Decision Making (SDM)
- Discuss role of the Internal Behavioral Health Consultant (IBHC)
- Review brief psychosocial outcome measures options
the war on diabetes
the war on diabetes

So how’s it going?
You might begin to wonder...

What’s the password to human compliance!?
Emotions

https://www.teacherspayteachers.com/Product/Emotions-Clipart-4642885
Emotional Reactions: Depression

• Increased rate of depression/depressive symptoms
  • Major Depressive Disorder more common among persons with diabetes (vs. community adults)\(^1\)
    • 60% when use structured clinical interviews vs. 2-3x higher rate initially described
    • Symptoms of depression more common and also associated with poor self-care, increased risk of complications, and early mortality
  • Among working Danish adults ages 18-54:\(^2\)
    • Increased antidepressant filled prescriptions within one year (2.6%)
    • Increased antidepressant filled prescriptions within five years (10.4%)
    • Rates highest for females and lower SES individuals

---

Emotional Reactions: Diabetes-Related Distress

• Significant negative emotional reactions to the diagnosis of diabetes, threat of complications, self-management demands, unresponsive providers and/or unsupportive interpersonal relationships

• Depressive symptoms distinct from diabetes-related distress
  • Share 23% variance

Considering Emotional Reaction in Supporting Diabetes Self-Management

• Acknowledge emotional distress is a common component of the experience of diabetes
• Interventions addressing both distress and diabetes management are likely to have stronger effects than those focusing on only one
  • Understanding diabetes-related factors contributing to distress will aid in effective intervention development
• Levels of distress can vary significantly over time and should be evaluated regularly
• Strive to treat distressed patients within diabetes practice setting

When considering human factors (emotions, challenges with behavior change), what models/approaches to patient interaction have you heard about that could be helpful?
VA/DoD Clinical Practice Guideline for the Management of Type 2 Diabetes Mellitus in Primary Care

A. General Approach to T2DM Care

Recommendation

1. We recommend shared decision-making to enhance patient knowledge and satisfaction.

Definition

• Provider and patient decide to together the best treatment option
• Optimal decision takes into account evidence-base about options, the provider’s knowledge and experience, and the patient’s values and preferences.

http://comarochronicle.co.za/108946/working-together-achieves-success/
Will my patient follow our plan?

http://clipartmag.com/justice-clipart
Will my patient follow our plan?

Shared understanding is critical to the SDM process. Health coaching and motivational interviewing strategies can assist clinicians to understand patients' perceptions, values and beliefs regarding their condition, treatment and self-management options, particularly when patients appear to be reluctant to fully participate in decisions and care.
Learning Objectives

At the conclusion of this knowledge-based activity, participants will be able to:

- Identify challenges to outstanding clinical outcomes
- Describe Motivational Interviewing (MI) and its relation to Shared Decision Making (SDM)
- Discuss role of the Internal Behavioral Health Consultant (IBHC)
- Review brief psychosocial outcome measures options

MI is more like this...

Good example video here
Is this MI?

• Jacob: I got on the scale the other day and started thinking about getting back into exercise. My knee is messed up which limits what I can do. Honestly, I hate exercising anyway and am exhausted after 5 minutes.

• Practitioner: Exercise would be great! What a wonderful idea! Did you know that this will also help you with your A1C?

Is this MI? Why or why not?
Is this MI?

• Jane: I know I missed the last two appointments... I am just so busy with my kids going off to college and I’m not really prioritizing me right now.

• Practitioner: I understand that, but just know we have a strict no-show policy to keep and we also can’t help you if you don’t make it in.

Is this MI? Why or why not?
Is this MI?

• Frank: I’m scared if I don’t do something about my diabetes—my wife is going to just watch me get sicker and sicker.

• Practitioner: You really want to make a positive change not just for you, but for your wife too.

Is this MI? Why or why not?
Is this MI?

• Mac: I feel so stuck and don’t know what to do. I have so many medical problems it’s really hard to focus on this nutritional plan. The cardiologist said they “saw something” when they were monitoring me but I can’t get a follow-up until next month. All my teenagers like different food and my oldest keeps bringing Pepsi home and Pepsi helps me get through the day. I’m sick and tired of being in this rut but there is too much going on.

• Practitioner: Sounds like you are facing real challenges with your health and nutrition for your whole family and you feel stuck. At the same time, it’s important to you to figure out a way forward.

Is this MI? Why or why not?
Is this MI?

• Tanya: I need to come up with some sort of plan to help myself get back on track. This health crisis has thrown me for a loop. I can’t think about anything else. What do you think I should do?

• Practitioner: You’re really excited to make some changes, I have just the thing!

Is this MI? Why or why not?

DIRECTIONS: Living with diabetes can sometimes be tough. There may be many problems and hassles concerning diabetes and they can vary greatly in severity. Problems may range from minor hassles to major life difficulties. Listed below are 17 potential problem areas that people with diabetes may experience. Consider the degree to which each of the 17 items may have distressed or bothered you DURING THE PAST MONTH and circle the appropriate number.

Please note that we are asking you to indicate the degree to which each item may be bothering you in your life, NOT whether the item is merely true for you. If you feel that a particular item is not a bother or a problem for you, you would circle "1". If it is very bothersome to you, you might circle "6".

There are challenges to managing diabetes whether you are a patient or a provider.

Using Motivational Interviewing (MI) and Shared Decision Making (SDM) help overcome those challenges.

Utilize your resources, i.e., Internal Behavioral Health Consultant (IBHC).

Utilize tools to identify psychosocial issues and to facilitate discussions/interventions.

VA/DoD (2017) Clinical Practice Guideline for the Management of Type 2 Diabetes Mellitus in Primary Care
How to Obtain CE Credits

To receive CE credits you must complete the course posttest and evaluation before collecting your certificate. The posttest and evaluation will be available from 10-24 April 2020 at 2359 ET. Please complete the following steps to obtain CE credit:

1. Go to URL https://www.dhaj7-cepo.com/
2. In the search bar on the top left, copy and paste the activity name: **Diabetes Champion Course #16**. This will take you to the activity home page.
3. Click on the REGISTER/TAKE COURSE tab.
   a. If you have previously used the CEPO LMS, click login.
   b. If you have not previously used the CEPO LMS click register to create a new account.
4. Verify, correct, or add your profile information.
5. Enter the Access code
6. Follow the onscreen prompts to complete the post-activity assessments:
   a. Read the Accreditation Statement
   b. Complete the Evaluation
   c. Take the Posttest
7. After completing the posttest at 80% or above, your certificate will be available for print or download.
8. You can return to the site at any time in the future to print your certificate and transcripts at https://www.dhaj7-cepo.com/
9. If you require further support, please contact us at dha.ncr.j7.mbx.cepo-lms-support@mail.mil
