**Short Description:** IF | MONITR4U is a SaaS-based application to be used by organisation to assess and manage the cybersecurity maturity of their supply chain. It supports compliance to standards such as NIST and ISO 27001. Compliance to the CMMC maturity model is in progress.

**Technology Readiness Level (fielded, lab tested, operational test):** operational test

**Countries using this product:** Canada

**Application: (the so what?)** The Supply Chain has become the cybersecurity weakest link for all organizations small, mid and large. Larger organizations deal with several hundred suppliers, if not with more than a thousand. Selecting the suppliers to address first cannot be done haphazardly. The ones dealing with their most sensitive information shall be prioritized. IF | MONITR4U's first feature eases the selection process using a tailor-made score-based questionnaire.

Next, how can they confirm/certify their suppliers' compliance against a standard or a maturity model and then ensure they continuously comply? With IF | MONITR4U's full compliance questionnaire as part of its second feature, they can request their suppliers to perform a self-assessment accompanied by evidences, manage non-compliance with generated follow-ups and request annual assessment reviews using the follow-up function.

**Science (how it works):** There are two web base questionnaires to answer: one to identify an organisation's critical providers and one for the provider to answer. Both questionnaires can be easily customised as each organisation may have its own security requirements. The multiple choice answers are designed to cover the most possible situations and each answer is given a unique weight in the overall evaluation. No human interaction is required to evaluate the answers and the provider risk score is instantly obtained when the last question is answered. An organisation can easily know which provider induce risks and where the corrective actions should be aimed.

**Data (key tested performance metrics):** IF | MONITR4U is in operational test mode. Dashboards are included in the solution for following the overall and individual supplier compliance performance.

**U.S. Partners:** None so far.

**Previous work with DoD:** No previous work with DoD
