

Applied Nanotech Inc. 8200 Cameron Rd Austin, TX 78754-3832 Single POC: Richard Fink Phone: 512-339-5020 x130 Email: dfink@nanomagic.com

Technology / Capability Overview:

The technology presented is nanoparticle dispersions (inks and pastes) of indium sub-micron particles for printing indium circuits and solder joints for next-generation electronics packaging and quantum computing.

- 10x smaller indium particle size vs commercially available solder powder.
- Printing smaller features size and higher solder joint density for improved SWaP.
- Robust even at cryogenic temperatures (Space) and high-G (Weapons).
- Superconductor for quantum computing
- Indium alloys also possible.

Past Performance of Technology and Company:

Development of Indium ink is built on our demonstrated capability of producing and selling a wide variety of ink and paste formulations, including:

CuNi Strain Gauge

SBGA600

- Copper
- Nickel
- Copper-nickel alloys
- Aluminum
- Silver

Developed formulations for a wide variety of printing platforms.

Niobium*

Zirconium*

Molybdenum*

Indium Inks and Pastes for High-Resolution, High-Density Printed Electronics

Relevance to Combatant Command or other Need:

Category*: C2/C4I/Cyber, Operations & Mission Support, Weapons

- Development of materials for next generation electronic packaging to reduce SWaP across all sensor modalities (C2/C4I/Cyber – Sensors & Radar).
- Materials capable of printing less than 20-micron resolution for high density interconnects for next-generation electronic packaging leading to more Persistent ISR (**Operations & Mission Support**).
- Materials for operation in high temperature (400°C), including hypersonic weapons (Weapons, Kinetic Engagement Options), cryogenic temperatures (Space), and high neutron-flux (core of nuclear reactor) environments.

Maturity / Scalability / Cost / Schedule

TRL: 4 for Indium ink products

We have a unique indium ink formulations today but need additional effort to add flux chemistry for electronic packaging applications.

SCALING CONSIDERATIONS: Can produce 25kg/year. Minimum order is 100gm for all our inks.

TIME TO MARKET WITH CURRENT FINANCIAL PLANS: Indium ink product about 12-24 months away. Prototype sales already at \$10,000 in 2021. Other ink and paste materials are being sold <u>today</u> (\$100,000 annual product sales).

TIME TO MARKET WITH FINANCIAL ASSISTANCE: Indium ink product 3-6 months with financial and technical assistance.
