20. ABSTRACT (Continue on reverse side if necessary and identify by block number)

This bibliography concentrates on the subject of the shrapnel shell as covered by the lithographic collections of the Morris Swett library, U.S. Army Field Artillery School, Ft. Sill, Ok. The 54 citations are dated from 1859-1972.

16

FORWARD

This inclusion in the special bibliography series is intended to introduce materials in the Morris Swett Library which cover the study of shrapnel. Holdings are considered under the categories of books - including theses, periodicals, and vertical file materials.

Henry Shrapnel, 1761-1842, was an officer in the British Royal Artillery who rose from Second Lieutenant to Lieutenant General in fifty-eight years, however, his fame was associated with the invention of the shrapnel shell which today bears his name and which he used his own funds to develop. Messrs. Krupp and Ehrhardt later modified the projectile by developing ring shell and high-explosive shell segments. In addition to shells, Gen. Shrapnel invented brass tangent slides, parabolic chambers, disappearing ordnance mounts, and some fuses. Also, he compiled range tables. Today, one may research the topic by examining the Morris Swett Library card catalog under the subject of "Ammunition, Shrapnel." As the use of shrapnel has been developed through time, this is reflected by three other subject categories. They are "Ammunition, Canister," "Ammunition Shell," and "Explosives, Military." Studies may be requested from the DDC - Defense Documentation Center, by citing the topic as "Ammunition Fragments."

This bibliography is not intended to cover the subject in an exhaustive sense. Inclusion of an item, or accidental omission, does not imply USAFAS indorsement or sanction of the compiler's view. Not does it guarantee accuracy of content. Comment and criticism concerning this list is solicited. Arrangement in the listing which follows is alphabetical by author.
