USAAVRADCOM TECHNICAL SOURCES AND NATURE DATA BASE REFERENCE

Thomas R. Rogers

DECEMBER 1977
INTERIM REPORT

APPROVED FOR DISTRIBUTION UNLIMITED

PREPARED FOR
U. S. ARMY AVIATION RESEARCH AND DEVELOPMENT
Directorate for Plans and Analysis
Systems and Cost Analysis Division
PO Box 209
St. Louis, Mo. 63166
Sources and Nature of Cost Analysis Data Base Reference Manual

Thomas R. Rogers

US Army Aviation Research and Development Command
Directorate for Plans and Analysis, Systems and Cost Analysis Division
PO Box 209, St. Louis, MO

Approved for public release; distribution unlimited.

This report supersedes USAAVSCOM Technical Report 75-37A.

Cost Analysis, Data Base, Data, Reports

Citing specific examples, the report examines, evaluates, analyzes and portrays the sources and nature of the Cost Analysis data base emphasizing important interrelationships between process (gathering, normalization, evaluation), professional skill requirements, the planning of future report revisions, and the development of new data sources. For analysis, the main body of the report employs an expanded 13-step format. Entries on the format were obtained from personnel interviews. The report is organized to permit future changes and to facilitate cross-referencing.
DISCLAIMER STATEMENT

The findings in this report are not to be construed as an official Department of the Army position unless so designated by other authorized documents.
ACKNOWLEDGEMENTS

Appreciation is expressed to all personnel of the Cost Analysis Division. Without their diligence, attention to detail, perseverance, and outstanding cooperative assistance, this report would not have been possible.

PURPOSE

To examine, evaluate, analyze, and portray, with specific examples, the sources and nature of the Cost Analysis data base emphasizing important interrelationships between processes (gathering, normalization, evaluation), professional skill requirements, the planning of future report revisions, and the development of new data sources; all of which intend to improve the data base.
INTRODUCTION

Data is defined as "facts, information, or statistics, either historical or derived by computation or experimentation, from which conclusions may be drawn." Without data, no conclusions could be drawn. Without data, Cost Analysis could not perform its mission. In short, data is absolutely essential to analysis. Important as it is, however, little has been done, to now, to analyze its sources or nature. This report attempts to correct this deficiency. However, since no report can cover all possible data sources, this report presents a representative sampling of the more important sources used in the Cost Analysis Division. Such a sample is subject to continuous revision and expansion, for which this report represents the first phase. For this reason the organization of this report has been designed to easily accept future changes.
BACKGROUND

The basic objective of this technical report is to provide the capability for a standardized, meaningful, comprehensive and valid posture in the conduct and presentation of cost analysis data. This data base will provide the necessary related data source on programs structure elements in a concentrated, accurate, up-to-date and readily accessible form.

It should be noted that no amount of sophisticated statistical analysis can compensate for gross inadequacy in the data base. Since the data problem is a fundamental one, analysts devote most of their time collecting data to make adjustments in the raw data to insure consistency and comparability.

Without an effective capability of collecting and storing data it is virtually impossible to develop an operational, or cost estimating relationship. An estimating relationship requires a great detail of planning and many manhours of effort in development. A basic foundation of storing and collecting data is needed. In many instances gaps exist in data and some of the information is completely in the wrong format. It also may be incompatible from one agency to another.

The level of accuracy is determined by the supervisor. This means that the data should be checked before it is used in an estimate. Unfortunately little, if any, information is supplied in relation to the level of accuracy of data published or otherwise.

There are numerous sources of error that can arise in the collection of data. It has been found that these errors originate from several main sources: (a) sampling methods, (b) Measurement errors, (c) hidden information, (d) Poorly designed questionnaires/requirements, (e) data aggregates, (f) classification and definition, and (g) the time factor. These errors can arise in original data collection situations as well as in published data.

Tremendous interest is being generated in the establishment of a data base. This would allow collection of different types of variables stored in an easily accessible system. Three areas of interest in the estimating relationship field would include (a) data needed for existing requirement, (b) data that is currently available but not currently required, (c) data that may be required in the future, but not currently available. This type of data base could be expanded at a minimal cost with little or no effort.
The basic approach in designing a data base system is to make a data base useful through an easy method of assessing, organizing, formulating, modifying and summarizing its information content. The improvement of cost analysis studies and cost estimates is an adequate integrated cost data base within AVRADCOM.
ORGANIZATION OF REPORT

The report is organized to facilitate cross-referencing of data sources. First, data documents are divided into sections representing general categories of application. Then, within each section, data documents are arranged in order of sources preparing the data as follows:

Department of Defense

Department of the Army
   Comptroller of the Army
      Directorate of Cost Analysis

US Army Materiel Development and Readiness Command
   Comptroller
      Budget Division
      Cost Analysis Division
   Office of Project Management
   Individual Personnel Concerned

US Army Aviation Systems Command
   Comptroller
      Cost Analysis Division
      Review and Analysis Division
   Directorate for Maintenance
   Directorate for Materiel Management
   Directorate for Personnel, Training and Force Development
   Directorate for Procurement and Production
   Directorate for Product Assurance
   Systems Analysis Office
   Weapons System Management Office
   Should Cost Teams
   Reports Control Officer
   Individual USAAVSCOM Personnel

Other Army Sources
   Training and Doctrine Command (TRADOC)
   US Army Test and Evaluation Command
   US Army Aviation Test Board
   Product/Project Managers
   Depot Activities
   Field Activities
Defense Sources (Excluding Army)
  Defense Research Organizations
  Defense Documentation Center

Other Defense Sources
  Department of the Air Force
  Department of the Navy
  Defense Contract Audit Agency (DCAA)
  Field Operating Cost Agency

      Public Transportation and Travel Division
  Contractors
  Authors and Editors
    Kenneth Munson
    John W. R. Taylor

Various
PAGE NUMBERING

The system for numbering pages of the main body of the report has been designed to

(1) Be consistent with the organization of the report

(2) Permit further expansion of the report without requiring a drastic change in page numbering.

The basic structure of the page numbering system consists of three numbers separated by decimal points as follows:

X.Y.Z

where

X corresponds to the section number.

Y is the sequential number representing the preparer source.

Z is the sequential number of the page within the group of pages reserved for a specific preparer source.

1.0.2
1. Source.

5. Level of Detail. Not applicable.

7. Evaluation Techniques Required. Understanding of determining factors causing variance in supply statistics, as well as a knowledge of the theory behind their development, estimation, and application.

8. Limitations. Not applicable.

10. Supplemental Sources Required. Various Industrial Research Offices, RAND Corporation, and other technical studies and reports.

1. **Source.**
   

   b. **Preparer.** Department of Defense.

2. **Application.** Provides guidance for developing in outline form a method of classifying the work tasks for a particular project.

3. **Status.** Operational.

4. **Nature of Data.** Provides representative Work Breakdown Structure for several systems.

5. **Level of Detail.** By Work Breakdown Structure elements, level III.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Unique Work Breakdown Structures must be designed for each project.

8. **Limitations.** Often difficult to compare WBS line items between different projects.

9. **Deficiencies.** Not applicable.

11. **Use in Cost Analysis.** Determines detail of estimate for Baseline Cost Estimate. In conjunction with AR 11-18 also provides organizational framework for other estimates particularly Independent Parametric Cost Estimates (IPCEs).

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   b. **Preparer.** Department of the Army.

2. **Application.** Standard for assigning budgetary codes.

3. **Status.** Operational. Updated annually or more frequently.

4. **Nature of Data.** Description of budgetary code accounts used, performance factors assigned, and other information.

5. **Level of Detail.** Determined by budgetary account.

6. **Normalization Processes Required.** When developing a cost data base, comparison with accounting codes used in previous years.

7. **Evaluation Techniques Required.** Coordination with accounting and budgetary officers to determine with certainty the exact accounting conventions followed.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Frequent changes.

11. **Use in Cost Analysis.** Useful in analyzing some cost data.

12. **Remarks.** Not applicable.

13. **Suggestions.** None.
1. **Source.**
   
   b. **Preparer.** Department of the Army.

2. **Application.** Standardization of terms used within the Army.

3. **Status.** Operational.

4. **Nature of Data.** Definitions for each term.

5. **Level of Detail.** Not applicable.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Not applicable.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** AR 310-50, Authorized Abbreviations and Brevity Codes, 3 November 1975.

11. **Use in Cost Analysis.** See **Application** above.

12. **Remarks.** In some cases, standard Army definition may vary from common civilian usage. Therefore, care must be exercised to insure that terms are not used loosely.

13. **Suggestions.** None.
1. Source.
   b. Preparer. Department of the Army.

4. Nature of Data. See Application above. Also contains policy regarding commercial and industrial type functions, both contractor and in-house.

5. Level of Detail. Not applicable.

8. Limitations. Not applicable.

11. Use in Cost Analysis. Provides much useful information with respect to the performance of an Economic Analysis, particularly in evaluating contractor vs in-house operations. Examples of such useful guidance include estimating procedures for personnel benefits, corporate tax determination, methods for selecting alternative discount rates, determination of economic life and depreciation.

12. Remarks. Not applicable.

1. **Source.**
   
b. **Preparer.** Comptroller of the Army.

2. **Application.** Provide organizational framework for cost estimate.

3. **Status.** Operational.

4. **Nature of Data.** See Application above.

5. **Level of Detail.** Not applicable.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Not applicable.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

11. **Use in Cost Analysis.** Organization of cost estimates, particularly Baseline Cost Estimates (BCEs) and Independent Parametric Cost Estimates (IPCEs).

12. **Remarks.** None.

13. **Suggestions.** None.
1. Source.

2. Application. Guidance for preparation of documentation and presentations for weapon system Independent Parametric Cost Estimates (IPCEs), Cost and Operational Effectiveness Analysis (COEA) and Baseline Cost Estimates (BCEs).

5. Level of Detail. Includes cost elements, methodologies, and reporting formats reflecting current costing techniques and includes direct and indirect operating costs.

8. Limitations. Not applicable.

1.4.1
10. **Supplemental Sources Required.** Cost data obtained from such sources as Contract Cost Data Reports (CCDRs) and Cost/Schedule Control System Criteria Reports.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**

2. **Application.** Provides guidance for preparation and submission of Selected Acquisition Reports (SAR).

3. **Status.** Operational. Regularly revised, as required, and annually.

4. **Nature of Data.** Contains narrative instructive material, standard formats, and inflation rates for use on SARs.

5. **Level of Detail.** See above.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Proper interpretation of instructions and appropriate mathematical and cost estimating techniques.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Other guidance as published.

11. **Use in Cost Analysis.** Forms a basis for validation procedures of SARs.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   
   a. **Document.** Cost to Order Studies.
   

2. **Application.** Estimating cost of ordering an item of supply and determination of optimum supply policy with respect to reorder frequencies.

3. **Status.** Annual.

4. **Nature of Data.** Manhour and Cost Estimates for Cost to Order. Also contains narrative material.

5. **Level of Detail.** By organization, type of cost, and dollar values of item ordered.

6. **Normalization Processes Required.** Analytical judgment required.

7. **Evaluation Techniques Required.** Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory.

8. **Limitations.** Some values of report were estimated, thus limiting the accuracy of the published figures.

9. **Deficiencies.** See Limitations above.

10. **Supplemental Sources Required.** Not applicable.

11. **Use in Cost Analysis.** Used in certain cost estimates.

12. **Remarks.** None.

13. **Suggestions.** Report should be developed along standard report procedures, possibly automated to insure accurate measurement of values, thus negating the necessity for estimation.
1. **Source.**

2. **Application.** To determine feasibility of managing certain low dollar items by computer.

3. **Status.** Not applicable.

4. **Nature of Data.** Costs to Order, manhour, and number of actions for Procurement Work Directives (PWDs) at various dollar thresholds for the items managed. Data is used to compare automated and manual systems.

5. **Level of Detail.** See Nature of Data above.

6. **Normalization Processes Required.** Report resulted in changes to management system, thus estimates developed in report no longer apply. To adapt data base to future studies, analytical judgment required. Furthermore, data base may require adjustments for changes in productivity.

7. **Evaluation Techniques Required.** Analytical judgment required. Higher mathematical skills coupled with knowledge of theoretical applications. Monte Carlo simulation techniques frequently required. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory.

8. **Limitations.** See Evaluation Techniques Required.

9. **Deficiencies.** See Evaluation Techniques Required.

10. **Supplemental Sources Required.** Varies with application.

11. **Use in Cost Analysis.** Report more useful for its methodology than for its numerical (cost) data.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   
a. **Document.** Cost and Operational Effectiveness Analysis.

b. **Preparer.** Normally compiled by US Army Training and Doctrine Command (TRADOC).

2. **Application.** To analyze the cost and operational effectiveness of several alternatives proposed for a weapons system.

3. **Status.** Operational.

4. **Nature of Data.** Life cycle costs and operational effectiveness are analyzed. Data concerning advanced technology and perception of threat frequently carries a security classification.

5. **Level of Detail.** Variable.

6. **Normalization Processes Required.** Analytical judgment required.

7. **Evaluation Techniques Required.** Variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis. This technique requires the ability to track detailed cost data to previous estimates. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory.

8. **Limitations.** Data at too high a level of the Work Breakdown Structure (WBS).

9. **Deficiencies.** Lack of data source identification makes determination of proper supplemental sources difficult.

10. **Supplemental Sources Required.** Cost data obtained from such sources as Contract Cost Data Reports (CCDR) and Cost/Schedule Control Systems Criteria (C/SCSC) reports.

11. **Use in Cost Analysis.** Important source of data for methodology development and basis from which to develop other estimates, especially quick-reaction studies. Also useful as supplemental background material.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   b. **Preparer.** Department of Labor, Bureau of Labor Statistics.

2. **Application.** Reference book describing methodologies used in all BLS publications.

3. **Status.** Operational.

4. **Nature of Data.** See Application above.

5. **Level of Detail.** Not applicable.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Economic background helpful to aid understanding of economic terminology and concepts. Higher mathematical skills coupled with knowledge of theoretical applications.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Not applicable.

11. **Use in Cost Analysis.** Broadens understanding of various reports on economic time series prepared by Bureau of Labor Statistics, serves as an aid towards eliminating misinterpretation and misunderstanding of economic statistics. Also serves to guide methodologies for Cost Analysis use.

12. **Remarks.** Inaccurate estimates may result from indiscriminate application of analytical techniques.
1. **Source.**

2. **Application.** To present the latest developments in statistical analysis.

3. **Status.** Operational. Updated quarterly.

4. **Nature of Data.** Original articles submitted on statistical analysis. Articles consist essentially of two types: articles concerning new applications of existing statistical processes and articles concerning the development of new statistical processes.

5. **Level of Detail.** Not applicable.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Higher mathematical skills and in-depth academic statistical background.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Statistical texts and handbooks, publications referenced by article contributions.

11. **Use in Cost Analysis.** Development of statistical methodologies. Articles on time-series analysis and regression techniques particularly useful.

12. **Remarks.** Most articles are extremely difficult to comprehend, thus requiring a very advanced level of academic understanding.

13. **Suggestions.** An intensive effort to simplify the language of the contributed articles would tremendously improve their usefulness. Visual aids resembling the charts and graphs of *Scientific American* would also be of tremendous help.
1. **Source.**
   b. **Preparer.** General Research Corporation.

2. **Application.** Development of Avionics/Electronics Cost Estimating Relationships (CERs) for the Air Force Avionics Laboratory.

3. **Status.** Operational.

4. **Nature of Data.** CERs based on several different electronic performance parameters. Published in several volumes including a SECRET volume.

5. **Level of Detail.** By type of avionics/electronics equipment.

6. **Normalization Processes Required.** Adjustment for inflation to change base year dollars for CERs.

7. **Evaluation Techniques Required.** Technical expertise required.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Consultation with report preparer essential to the development of accurate estimates. Cost data obtained from such sources as Contract Cost Data Reports (CCDRs) and Cost/Schedule Control Systems Criteria (C/SCSC) reports.

11. **Use in Cost Analysis.** Enlargement of data base for development of Cost Estimating Relationships (CERs), Baseline Cost Estimates (BCEs), Independent Parametric Cost Estimates (IPCEs), Economic Analysis (EA), Cost and Operational Effectiveness Analysis (COEA) and other studies.

12. **Remarks.** Technological advancements in production techniques may require reassessment of engineered and parametric estimates.

13. **Suggestions.** None.
1. **Source.**

   b. **Preparer.** A report prepared for Assistant Secretary of Defense (Program Analysis and Evaluation).

2. **Application.** Cost estimation of fixed wing military aircraft.

4. **Nature of Data.** This report includes cost estimating relationships (CER's) for estimating development and production cost of fixed-wing airframes. Separate CERs are included for engineering, development support, flight test operations, tooling, manufacturing labor, manufacturing material and quality control. A set of CERs are also included for prototype production. Cost data from which the CERs were derived were obtained from ten airframe contractors and are included in Appendix A of this report.

5. **Level of Detail.** The CERs are presented with a sufficient amount of detail and statistics. The cost data base used in developing the CERs on fixed-wing aircraft are provided by aircraft. For each aircraft the quantity of aircraft procured is subdivided by lot. For each lot, the following information is provided: AMPR weight, engineering hours, tooling hours, manufacturing hours, material cost in 1970 dollars, and deliveries per month.

6. **Normalization Processes Required.** All CERs are in calendar year 1970 dollars therefore, they require inflation to present day dollars. The aircraft included in the data base are constructed primarily of aluminum alloy. If these CERs are to be used for estimating fixed wing aircraft with a different type of construction, i.e., titanium, advanced composite materials, adjustment may be required.

7. **Evaluation Techniques Required.** Application of standard regression analysis techniques can be applied to the actual fixed-wing data in the Appendix.

8. **Limitations.** The report only includes cost data on fixed-wing aircraft.

9. **Deficiencies.** None apparent.
10. **Supplemental Sources Required.** Other technical information may be required in developing CER's utilizing the basic data.

11. **Use in Cost Analysis.** The cost data on cargo fixed-wing aircraft have been utilized in developing CERs for airframe development and production. These CERs were utilized in establishing confidence in R&D cost estimates for the HLH and in evaluating the effect of low production rates for the HLH in the investment phase.

12. **Remarks.** None.

13. **Suggestions.** None.
1. Source.

4. Nature of Data. Data base consists primarily of Air Force RPVs. Contains data not available anywhere else. Data base has been adjusted for accounting differences, inflation, and learning effects as described in the narrative. Data reflects direct costs/manhours only.

5. Level of Detail. By cost category.

6. Normalization Processes Required. Author unable to separate non-recurring from recurring costs in some cases. May require some adjustment before application. Data base consists of large RPVs. Extrapolation of CERs to small RPVs requires sound analytical judgment and technical expertise. CERs expressed in FY 73 dollars, requiring adjustment for inflation. In the development of Cost Estimating Relationships (CERs) for aircraft with material compositions differing from those constituting the data base, adjustments may be required. Trend analysis may be required for changes in such ratios as overhead or engineering to direct labor manhours and costs.

7. Evaluation Techniques Required. Variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis. Estimation factors must be developed to enable conversion of direct to total cost and/or manhour data. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory. Technical expertise required.

8. Limitations. Data may not be comparable to that maintained by the Army. Data reflects direct costs and/or manhours only. Data at too high a level of the Work Breakdown Structure (WBS).
9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Various technical studies and reports such as those prepared by the Industrial Research Office and RAND Corporation. Consultation with report preparer essential to the development of accurate estimates. Cost data obtained from such sources as Contract Cost Data Reports (CCDRs) and Cost/Schedule Control Systems Criteria (C/SCSC) reports.

12. **Remarks.** Technological advancements in production techniques may require reassessment of engineered and parametric estimates. Technical expertise required.

13. **Suggestions.** None.
1. **Source.**
   b. **Preparer.** Studies and Analysis Division, Research Analysis Corporation.

2. **Application.** Develops documentation for CER methodology.

3. **Status.** Operational.

4. **Nature of Data.** Textual narrative. Provides technical guidance for CER developments.

5. **Level of Detail.** Not applicable.

6. **Normalization Processes Required.** Analytical judgment required.

7. **Evaluation Techniques Required.** Higher mathematical skills coupled with knowledge of theoretical applications. Monte Carlo simulation techniques frequently required. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Cost and performance data obtained from other sources. Table of learning curves.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   a. **Document.** The *Pocket Encyclopedia of World Aircraft in Color, Helicopters and Other Rotorcraft Since 1907*.
   b. **Preparer.** Kenneth Munson.

2. **Application.** Handy reference guide for history of helicopters.

3. **Status.** Not applicable.

4. **Nature of Data.** Historical narrative. Data includes years and quantities or production. Helicopters are illustrated in color.

5. **Level of Detail.** By aircraft type.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Not applicable.

8. **Limitations.** Not applicable.

9. **Deficiencies.** No cost data.

10. **Supplemental Sources Required.** Cost data.

11. **Use in Cost Analysis.** Useful as background supplemental material.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   b. **Preparer.** Various. Tables in common use have been developed by MICOM and RAND Corporation.
2. **Application.** Adjustment of production data (recurring costs, manhours) for quantity.
3. **Status.** Not applicable.
4. **Nature of Data.** Unit, cumulative averages, and cumulative totals in tabulated form. Mathematical equations also included.
5. **Level of Detail.** By unit.
6. **Normalization Processes Required.** Not applicable.
7. **Evaluation Techniques Required.** Higher mathematical skills coupled with knowledge of theoretical applications.
8. **Limitations.** Applies only to recurring data associated with production.
9. **Deficiencies.** Not applicable.
10. **Supplemental Sources Required.** Table of logarithms.
11. **Use in Cost Analysis.** See Application.
12. **Remarks.** Learning curves also called experience curves, progress curves, improvement curves, cost-quantity relationships.
13. **Suggestions.** None.

SOCIETY OF AERONAUTICAL ENGINEERS

Society of Aeronautical Engineer's Handbook, January 1975 2.7.1

CONTRACTORS

Critical Item Development Specification 2.8.1
Prime Item Development Specification (Detailed Specifications for Aircraft) 2.8.2
Technical Manuals (TMs) 2.8.3

AUTHORS AND EDITORS

JOHN W. R. TAYLOR

Janes All the World Aircraft, January 1977 2.9.1
1. **Source.**

2. **Application.** Engineering design.

3. **Status.** Operational.

4. **Nature of Data.** Prescribes organization of Model Specifications, testing procedures, qualification requirements, design standards. Also provides technical guidance for helicopter changes.

5. **Level of Detail.** Published in several volumes. Very detailed guidance for engineering design.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Technical expertise required.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Cost data from such sources as Contract Cost Data Reports (CCDRs) and Cost/Schedule Control Systems Criteria (C/SCSC) reports.

11. **Use in Cost Analysis.** Useful in determining the extent of test program.

12. **Remarks.** None.

13. **Suggestions.** None.
1. Source.

2. Application. To determine problem areas for a system, identify components high failure rates, and to make recommendations for component improvement.

4. Nature of Data. Analysis of Mean Time Between Failure, Removal, Overhaul, Action, etc. for major component items of a system.

5. Level of Detail. Data arrayed by major component part and frequency of action by intervals of 100-hour increments.

7. Evaluation Techniques Required. New estimating techniques are required to adapt historical data to the new three level maintenance concept (MS+). Variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis. Need to separate wartime from peacetime data in order to develop estimates applicable to the peacetime environment. Failure codes aid in the elimination of combat induced failures from the data base so that estimates can be developed for peacetime environments. Higher mathematical skills coupled with knowledge of theoretical applications. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory. Analytical judgment required.

9. Deficiencies. Implemented improvements are buried with this data base.

10. Supplemental Sources Required. Associated cost data from Federal Stock Number Master Data Record (FSNMDR).

2.2.1
11. Use in Cost Analysis. For Economic Analysis of Engineering Change Proposals (ECPs) and Product Improvement Programs (PIPs).

12. Remarks. Not applicable.

13. Suggestions. More frequent revisions required. Higher levels of summarization would also be useful in Cost Analysis.
1. **Source.**
   a. **Document.** Flat Rate Manual (a RAMMIT report).

2. **Application.** Provides statistical manhour parameters for the performance of tasks involved at each maintenance level for each aircraft system.

3. **Status.** Operational. Updated periodically.

4. **Nature of Data.** See Application above. Data arrayed depicts mean, median, mode, standard deviation, and sample size.

5. **Level of Detail.** By part and major task for each level of maintenance.

6. **Normalization Processes Required.** Data base may require adjustments for changes in productivity. Trend analysis may be required for changes in such ratios as overhead or engineering to direct labor manhours and costs. Possible development cost and/or manhour-quantity relationships through application of learning curves, also known as progress or experience curves, enabling adjustments for alternative procurement quantities, and improving the accuracy of time phased estimates.

7. **Evaluation Techniques Required.** New estimating techniques are required to adapt historical data to the new three-level maintenance concept (MS+). Analytical judgment required. Variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis. Estimation factors must be developed to enable conversion of direct to total cost and/or manhour data. Intelligent application of standard statistical analysis techniques such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory.

8. **Limitations.** Data reflects direct costs and/or manhours only. Smallness of sample size may render inaccurate data.

9. **Deficiencies.** Report does not identify costs and/or manhours expended by Military Occupational Specialty. Does not include all the maintenance actions required for a particular system.

2.2.3
10. **Supplemental Sources Required.** None.

11. **Use in Cost Analysis.** Useful as a means for estimating cost for various maintenance actions provided that the tasks are well defined.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   

2. **Application.** To inform interested defense agencies of significant armament subsystems and components having application to Army aircraft.

3. **Status.** Operational.

4. **Nature of Data.** Tabular data concerning general description, application, characteristics, and other data on weapon subsystems. Illustrated.

5. **Level of Detail.** Primarily by weapon subsystems.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Variations in configuration, such as modification of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis. Technical expertise required.

8. **Limitations.** Greater level of detail may be required in some cases.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Cost data obtained from such sources as Contract Cost Data Reports (CCDRs) and Cost/Schedule Control Systems Criteria (C/SCSC) reports.

11. **Use in Cost Analysis.** Aids Cost Analysis understanding of weapons systems thus assuring a greater degree of estimating realism.

12. **Remarks.** None.

13. **Suggestions.** None.

2.3.1
1. **Source.**
   
   a. **Document.** Operational Test Reports (formerly called Service Test Reports).

2. **Application.** To determine the degree to which a prototype meets the specified mission stated in the Required Operational Capability (ROC) document. Emphasis is on field suitability rather than engineering.

3. **Status.** Operational.

4. **Nature of Data.** Variable. Contains technical parameters for estimating operating cost data. Also contains narrative material.

5. **Level of Detail.** Variable.

6. **Normalization Processes Required.** Estimates developed from prototype in a test environment. Technical expertise and identification of differences in accounting conventions; data may require some adjustments. Historical cost data, expressed in incurred (or current) year dollars, requires stratification into classes of similar price behavior prior to selection and application of appropriate inflation indices which convert costs to constant (base year) dollars.

7. **Evaluation Techniques Required.** Technical expertise required. Higher mathematical skills coupled with knowledge of theoretical applications. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory. Variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis.

8. **Limitations.** Data developed from a test environment, adapting data to operating environment may differ considerably.

9. **Deficiencies.** See Limitations above.

10. **Supplemental Sources Required.** Not applicable.

11. **Use in Cost Analysis.** Developing estimates for operating costs.

12. **Remarks.** None.

13. **Suggestions.** None.

2.4.1
1. **Source.**
   b. **Preparer.** Army field activities prepare The Army Maintenance Management System (TAMMS) and The Army Equipment Reporting System (TAERS) reports, and Depots prepare the Program Status Reports (PSR).

2. **Application.** Logistics performance measurement and evaluation.

3. **Status.** Operational.

4. **Nature of Data.** Historical maintenance manhour and parts cost are available.

5. **Level of Detail.** Direct manhours by type of aircraft for airframe, engine, and components, by Organizational, Direct and General levels.

6. **Normalization Processes Required.** Adjustment for inflation, elimination of Vietnam casualties from data.

7. **Evaluation Techniques Required.** Regression analysis. Methodology to effectively eliminate Vietnam casualties from data. Data identification by depot has been effective in this area.

8. **Limitations.** See above.

9. **Deficiencies.** Unable to readily adjust data to make it comparable to that of either the Navy or Air Force. Report does not identify manhours expended by Military Occupational Specialty (MOS).

10. **Supplemental Sources Required.** Not applicable.

12. **Remarks.** See above.

13. **Suggestions.** None.
1. **Source.**
   b. **Preparer.** McGraw-Hill Inc.

2. **Application.** General technical information related to aerospace hardware.

3. **Status.** Operational. Updated annually.

4. **Nature of Data.** Provides technical and engineering data for aircraft, missiles and engines currently in development or production by the US, USSR and other international countries.

5. **Level of Detail.** The aviation items are divided into three geographical areas: US, USSR, and International. The aviation items produced by the US are subdivided into the following areas: Military aircraft, missiles, spacecraft, launch vehicles, RPV and Target Drones, VTOL and VSTOL aircraft, agricultural aircraft, rotary wing aircraft, reciprocating engines, gas turbine engines, commercial transports and research rockets. The aviation items produced by the U.S.S.R are subdivided into Military and Civil aircraft and missiles. The International category includes spacecraft, launch vehicles, missiles, aircraft, rotary wing aircraft, surface effect machines, gas turbine engines and research rockets. The US Rotary Wing aircraft are subdivided by manufacturer. An example of the information provided is as follows: name and address of manufacturer, popular name of aircraft, number of crew members, number of passengers, rotor diameter, maximum length of aircraft blades unfolded, maximum height, empty weight, normal gross weight, number of engines, engine model, horsepower, hover ceiling in ground effect, still-air range, and preceding aircraft models.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Varies with application.

8. **Limitations.** Only cost data included is for U.S. Business, Personal Aircraft.

9. **Deficiencies.** Technical information is presented per model only.

10. **Supplemental Sources Required.** *Janes' All the World Aircraft* can provide supplemental technical data.

11. **Use in Cost Analysis.** Data used in developing CERs.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   

b. **Preparer.** Society of Aeronautical Engineers.

2. **Application.** Provides useful conversion factor, characteristics of physical matter, and other useful engineering data.

3. **Status.** Operational.

4. **Nature of Data.** See Application above.

5. **Level of Detail.** Variable.

6. **Normalization Processes Required.** Varies with application.

7. **Evaluation Techniques Required.** Varies with application.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Varies with application.

11. **Use in Cost Analysis.** Varies with application. Develops basis from which to develop other estimates. Useful as supplemental background material. Enlargement of data base for development of Cost Estimating Relationships (CERs), Baseline Cost Estimates (BCEs), Independent Parametric Cost Estimates (IPCEs), Economic Analysis (EA), Cost and Operational Effectiveness Analysis (COEA) and other studies.

12. **Remarks.** None.

13. **Suggestions.** None.
1. Source.
   b. Preparer. Contractor.

4. Nature of Data. Report applicable to components of systems and includes physical characteristic data, technical data, design criteria, deviations granted, narrative material, etc. Report similar to Prime Item Development Specification which is for systems.

5. Level of Detail. Very detailed.

6. Normalization Processes Required. Must insure incorporation of revisions into data. Contains estimated data which is frequently conservatively estimated since contractor must insure performance stated in the report.

7. Evaluation Techniques Required. Proposed variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis pending revision of data contained in the report.

8. Limitations. Some values are estimated by vested interests and therefore subject to bias. Estimates tend to be conservative for reasons stated in Normalization Processes Required above.

9. Deficiencies. Data not revised in a timely manner and therefore is frequently obsolete.

10. Supplemental Sources Required. Contract and contract modification cost data obtained from such sources as Contract Cost Data Reports (CCDRs) and Cost/Schedule Control Systems Criteria (C/SCSC) Reports.

11. Use in Cost Analysis. Quick response studies and other cost estimates for critical items.

1. **Source.**

   a. **Document.** Prime Item Development Specification. (Detailed specifications for aircraft.)

   b. **Preparer.** Contractor.

2. **Application.** Source document for detailed specifications for aircraft systems. Provides listing of detailed requirements, characteristics and description of aircraft.

3. **Status.** Operational.

4. **Nature of Data.** Physical characteristic data, technical data, listings of Government Furnished Material, design criteria, deviations granted, narrative material, etc.

5. **Level of Detail.** Very detailed.

6. **Normalization Processes Required.** Must insert incorporation of revisions into data. Report contains conservatively estimated data which may also require revision.

7. **Evaluation Techniques Required.** Proposed variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis pending revision of detailed specification.

8. **Limitations.** Some values are estimated by vested interests and therefore subject to bias. Estimates tend to be conservative because contractor must guarantee stated performance.

9. **Deficiencies.** Data not revised in a timely manner, frequently obsolete.

10. **Supplemental Sources Required.** Contract and contract modifications. Cost data from Contractor Cost Data Reports (CCDRs), Cost/Schedule Control Systems Criteria (C/SCSC) reports, and others.

11. **Use in Cost Analysis.** Provides weight and performance data which, in conjunction with historical cost data, form data bases for parametric estimates, quick-response studies.

12. **Remarks.** None.

2.8.2
1. **Source.**
   
a. **Document.** Technical Manuals (TMs).

   b. **Preparer.** Normally prepared by contractor.

2. **Application.** Reference source for maintenance, engineering, and configuration of a system.

3. **Status.** Operational.

4. **Nature of Data.** Narrative material concerning standard operating and maintenance procedure.

5. **Level of Detail.** As detailed as required by the system.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Technical expertise required.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Consultation with report preparer essential to the development of accurate estimates. Cost data obtained from such sources as Contract Cost Data Reports (CCDRs) and Cost/Schedule Control Systems Criteria (C/SCSC) reports.

11. **Use in Cost Analysis.** Limited use. May be used in some instances where very specific configuration data is needed.

12. **Remarks.** None.

13. **Suggestions.** None.

2.8.3
1. **Source.**
   b. **Preparer.** John W. R. Taylor, Editor.

2. **Application.** General reference work.

3. **Status.** Operational. Updated annually.

4. **Nature of Data.** Listing of aircraft manufacturers by country. Historical technical data on each aircraft model. Illustrated. Also contains narrative material. Contains data not available anywhere else.

5. **Level of Detail.** Performance and physical characteristic by model for each aircraft and engine.

6. **Normalization Processes Required.** None required.

7. **Evaluation Techniques Required.** Variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) and Product Improvement Programs (PIPs) require additional analysis. Higher mathematical skills coupled with knowledge of theoretical applications. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory. Technical expertise required.

8. **Limitations.** Current production aircraft frequently not included. More detail frequently needed, as for example, engine weight, AMPR weight, etc.

9. **Deficiencies.** See Limitations above.

10. **Supplemental Sources Required.** Cost data obtained from such sources as Contract Cost Data Reports (CCDRs) and Cost/Schedule Control Systems Criteria (C/SCSO) reports.

11. **Use in Cost Analysis.** Enlargement of data base for development of Cost Estimating Relationships (CERs), Baseline Cost Estimates (BCEs), Independent Parametric Cost Estimates (IPCEs), Economic Analysis (EA), Cost and Operational Effectiveness Analysis (COEA) and other studies.

12. **Remarks.** Inaccurate estimates may result from indiscriminate application of analytical techniques. Analytical judgment required.

13. **Suggestions.** None.

3.0.1
1. Source.

4. Nature of Data. Unit costs for rotary and fixed wing aircraft with electronics and armament costs identified separately.

5. Level of Detail. By type of aircraft.

6. Normalization Processes Required. Costs require adjustments for both inflation and quantity (learning curve). Variations in configuration as, for example, modifications of armament, engine, or implementation of Engineering Change Proposals (ECP) or Product Improvement Programs (PIP) require additional analysis.

8. Limitations. Data sources not identified. Consequently, information necessary for normalization processes is not readily obtainable.

10. Supplemental Sources Required. Identification of procurement action, quantity involved, year procured, quantity previously produced, narrative detailing inclusions/exclusions, separate listing of engine costs.

11. Use in Cost Analysis. Provides useful starting point for obtaining unit cost data. Data is of limited usefulness as a basis for developing accurate estimates.

1. Source.
   b. Preparer. Directorate for Procurement and Production.
5. Level of Detail. Determined by needs of data. Presently, data and detail defined by form of computerized system.
6. Normalization Processes Required. Historical cost data, expressed in incurred (or current) year dollars, require stratification into classes of similar price behavior prior to selection and application of appropriate inflation indices which convert costs to constant (base year) dollars. Development of cost - and/or - manhour-quantity relationships through application of learning curves, also known as progress or experience curves, enabling adjustments for alternative procurement quantities, and improving the accuracy of time phased estimates.
7. Evaluation Techniques Required. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory for development of cost estimates.
8. Limitations. Data not continuously prepared, resulting in several gaps in the continuity of a particular procurement history.
9. Deficiencies. See Limitations above. Inability to portray costs and/or manhours because of late establishment of report procedures.

3.2.1
1. Source.
   b. Preparer. Department of Commerce.

4. Nature of Data. Contains many microeconomic time series by month or quarter.

5. Level of Detail. Very detailed.

6. Normalization Processes Required. Adjustments for inflation, and changes in productivity in some cases.

7. Evaluation Techniques Required. Economic background most appropriate.

8. Limitations. Occasionally, more detail is required.

10. Supplemental Sources Required. Varies with application.

11. Use in Cost Analysis. Useful adjunct to data base for development and forecasting of inflation and productivity indices.

1. **Source.**
   
a. **Document.** Employment and Earnings.

   b. **Preparer.** Department of Labor, Bureau of Labor Statistics.

2. **Application.** Public information.

3. **Status.** Operational. Updated monthly.

4. **Nature of Data.** Labor data including earnings.

5. **Level of Detail.** By industry subgroupings.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Same as for Wholesale Price Indexes. Adjustments required for changes in productivity.

8. **Limitations.** Administrative and other overhead labor rates not measured.

9. **Deficiencies.** See Limitations.

10. **Supplemental Sources Required.** Same as for Wholesale Price Indexes. Also, Wholesale Price Indexes are a supplemental source.

12. **Remarks.** Considerable errors can result from improper use of evaluation techniques.

13. **Suggestions.** None.
1. **Source.**
   a. **Document.** Monthly Labor Review.
   b. **Preparer.** Department of Labor, Bureau of Labor Statistics.

2. **Application.** Public economic information.

3. **Status.** Operational. Updated monthly.

4. **Nature of Data.** See Level of Detail below. Also contains technical and academic narrative material useful to economic analysis.

5. **Level of Detail.** Detailed. Wholesale, consumer price, employment, and earnings industry subgroupings.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Knowledge of higher mathematical theoretical basis for developing indexes---to include Paasche, Laspayre, and Fisher Ideal Indexes, seasonal adjustment methodology, trend, and time series analysis including Box-Jenkins autoregressive integrated moving averages, Fourier power spectra analysis, and methods for constructing averages including arithmetic, geometric, and harmonic means, and exponentially weighted moving averages (smoothing techniques). Also, how to develop transfer function models utilizing leading indicators. Economic background also essential.

8. **Limitations.** Greater level of detail often required.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Wholesale Prices and Price Indexes, Employment and Earnings.

11. **Use in Cost Analysis.** A useful one-source document to trace the historical behavior of certain economic time series particularly price indices. By contrast, Wholesale Prices and Price Indexes show price index level only for the month in question, requiring a considerable effort to search through volumes of pamphlets to trace the historical behavior of an index.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   b. **Preparer.** Department of Labor, Bureau of Labor Statistics (BLS).

2. **Application.** Public information.

3. **Status.** Operational. Updated monthly.

4. **Nature of Data.** Wholesale price and price indexes for specific commodity and type of industry groupings.

5. **Level of Detail.** Considerable. Commodities subdivided to specific item level identified by BLS developed code. Example of typical level of detail: "Aluminum Extrusion Rod, Circle Size 4 to 5 inches". Various levels of summarization also developed.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation of Technical Processes Required.** Application of various mathematical, statistical, economic, and econometric processes including weighted arithmetic and harmonic means, construction techniques for construction of price indices (including Laspeyres, Paasche, typical year, and Fisher ideal indices), non-linear regression, time series analysis, autoregressive integrated moving average models, forecasting with leading indicators (transfer function models), supply and demand concepts, relationships to monetary and fiscal policy, relationships to international trade, effect of change of base and weighting factors to BLS published indices. Ability to distinguish between techniques requires understanding of theory as well as processes. Judgemental analysis and knowledge of helicopter construction required in identifying indexes which parallel historical cost behavior. Ability to perform statistical tests of hypothesis also required.

8. **Limitations.** Published BLS indices do not necessarily measure the same items, nor involve the same weighting factors as found in Army helicopters.

9. **Deficiencies.** Base price often not available for specific commodities.

10. **Supplemental Sources Required.** Textual material on statistics, time series analysis, economics, econometrics, Cost Information Reports (CIR), now replaced by Contractor Cost Data Reports (CCDR), utilized to develop weighting factors for AVSCOM indices.

12. Remarks. Considerable errors can result from the improper use of techniques previously discussed.

1. **Source.**
   b. **Preparer.** Contractor.

2. **Application.** Provides actual and estimated cost and other data for Army Helicopter systems. Designed as a DOD information system to provide agencies with engineering, development and procurement data necessary to develop estimates.

3. **Status.** Operational. Updated quarterly.

4. **Nature of Data.** Portrays recurring and non-recurring actual cost data to date and estimated costs to completion. Also provides production lot, direct manhour and direct cost data for progress curve.

5. **Level of Detail.** Costs by major WBS element are functional cost categories.

7. **Evaluation Techniques Required.** Regression analysis; knowledge to adjust for contractor accounting conventions.

8. **Limitations.** Inability to portray costs of older system because of late establishment of report procedures.

9. **Deficiencies.** Since data requested by form does not in each instance conform to contractor's accounting system, entries are frequently "best guesses". Cost data sometimes at too high of a WBS level. Data portrayed are often inconsistent or incomparable WBS basis.

10. **Supplemental Sources Required.** Data Plan, Historical inflation factors, WBS dictionary.

12. **Remarks.** Not applicable.

13. **Suggestions.** None.
1. Source.
   b. Preparer. Contractors

4. Nature of Data. Cumulative and noncumulative actual expenditures, approved budget, and contractor estimate to complete for RDTE and Procurement appropriations.

5. Level of Detail. Work Breakdown Structure (WBS) Level III.

6. Normalization Processes Required. Varies with application. Costs are in incurred year dollars, requiring adjustments for inflation. Learning curve adjustments may be required for certain applications involving investment costs. Also, modifications for changes in scope of work may be required.

8. Limitations. Data reflects direct costs only.

10. Supplemental Sources Required. Direct contact with Project/Product Manager's Office. Must explore reasons for change in estimates due to changes in scope of work and other factors.

12. Remarks. This is one of the Cost/Schedule Control Systems Criteria (C/SCSC) reports. Good analytical judgement required to identify similar WBS elements for TRACE factor development.

13. Suggestions. Reasons for changes in estimates should be more explicitly stated.

3.5.2
1. **Source.**
   a. **Document.** Miscellaneous contractor cost and manhour data.
   b. **Preparer.** Contractor.

2. **Application.** Variable.

3. **Status.** Operational.

4. **Nature of Data.** Examples include prototype actual data, cost and direct labor manhours for material, subcontract, assembly and test.

5. **Level of Detail.** Varies with application.

6. **Normalization Processes Required.** Identification of differences in accounting conventions. Ability to adjust data base for these differences. Historical cost data, expressed in incurred (or current) year dollars, requires stratification into classes of similar price behavior prior to selection and application of appropriate inflation indices which convert costs to constant (base year) dollars. Similar stratification needed before applying escalation rates to estimate the effect of inflation on future costs. Development of cost and/or manhour-quantity relationships through application of learning curves, also known as progress or experience curves, enabling adjustments for alternative procurement quantities, and improving the accuracy of time phased estimates. Cost adjustments for differences or changes in the scope of work may be required. Trend analysis may be required for changes in such ratios as overhead or engineering to direct labor manhours and costs. Technical expertise required. Data base may require adjustments for changes in productivity between fabrication of prototype and first production unit.

7. **Evaluation Techniques Required.** Variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis. Estimation factors must be developed to enable conversion of direct to total cost and/or manhour data. Higher mathematical skills coupled with knowledge of theoretical applications. Monte Carlo simulation techniques frequently required.

8. **Limitations.** Data frequently portrayed on an inconsistent or incomparable Work Breakdown Structure (WBS). Values are estimated by vested interests and therefore subject to bias.

9. **Deficiencies.** Possible inability to portray costs and/or manhours because of late establishment of report procedures.
10. **Supplemental Sources Required.** Defense Contract Audit Agency (DCAA) methodology for adjustment of changes in manufacturing techniques between prototype and first production unit.

11. **Use in Cost Analysis.** Develops basis from which to develop other estimates. Also enlarges cost data base for development of Cost Estimating Relationships (CERs), Baseline Cost Estimates (BCEs), Independent Parameteric Cost Estimates (IPCEs), Economic Analysis (EA), Cost and Operational Effectiveness Analysis and other studies. Also useful in developing some analogy estimates.

12. **Remarks.** None.

13. **Suggestions.** None.

4.0.1
1. **Source.**
   
   
b. **Preparer.** Department of the Army.

2. **Application.** Determines personnel and equipment authorizations for specific Army functions.

3. **Status.** Operational.

4. **Nature of Data.** List of number of personnel authorized by job title and number and specific types of equipment for each Army mission.

5. **Level of Detail.** See Nature of Data above.

7. **Evaluation Techniques Required.** Higher mathematical skills coupled with knowledge of theoretical applications. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory. New estimating techniques are required to adapt historical data to the new three-level maintenance concept (MS+).

8. **Limitations.** Data frequently obsolete.

9. **Deficiencies.** Not applicable.

11. **Use in Cost Analysis.** Development of operating cost estimating techniques for Baseline Cost Estimates (BCEs), Cost and Operational Effectiveness Analysis (COEA), Economic Analysis (EA), and other studies.

12. **Remarks.** None.

13. **Suggestions.** None.

4.1.1
1. **Source.**

   b. **Preparer.** Headquarters, Department of the Army.

2. **Application.** Aviation planning guide.

3. **Status.** Operational. Revised regularly.

4. **Nature of Data.** Gives aircraft authorizations, flying hour programs, attrition rate, standard aircraft characters, maximum allowable operating times for major components, ferrying and shipping, tools, fuel and oil used, maintenance manhours and categories, personnel requirements, costs per flying hour, unit flyaway costs, avionics and armament costs.

5. **Level of Detail.** By aircraft series and model.

6. **Normalization Processes Required.** Historical cost data, expressed in incurred (or current) year dollars, requires stratification into classes of similar price behavior prior to selection and application of appropriate inflation indices which convert costs to constant (base year) dollars. Development of cost and/or manhour-quantity relationships through application of learning curves, also known as progress or experience curves, enabling adjustments for alternative procurement quantities, and improving the accuracy of time phased estimates. In the development of Cost Estimating Relationships (CERs) for aircraft with material compositions differing from those constituting the data base, adjustments may be required. Application of standard accounting techniques such as depreciation. Data base may require adjustments for changes in productivity.

7. **Evaluation Techniques Required.** New estimating techniques are required to adapt historical data to the new three-level maintenance concept (MS+). Higher mathematical skills coupled with knowledge of theoretical applications. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory. Technical expertise required.

8. **Limitations.** Inclusion of wartime data distorts data base. PEMA parts cost excluded. No avionics or weapons maintenance statistics. Quantities of production for which standard unit prices are based are not shown. Depot labor statistics have been excluded.

9. **Deficiencies.** None.
10. **Supplemental Sources Required.** Summary Cost Data Book for Army Managers, table of inflation indices, additional data to cover gaps explained in Limitations above, manhour and POL costs also needed. Cost data obtained from such sources as Contract Cost Data Reports (CCDRs) and Cost/Schedule Control Systems Criteria (C/SCSC) reports.

11. **Use in Cost Analysis.** Enlargement of data base for development of Cost Estimating Relationships (CERs), Baseline Cost Estimates (BCEs), Independent Parametric Cost Estimates (IPCEs), Economic Analysis (EA), Cost and Operational Effectiveness Analysis and other studies. Also used in creation of computer models.

13. Suggestions. Manual should include additional data covering gaps explained in Limitations above.
1. **Source.**
   b. **Preparer.** Comptroller of the Army.

2. **Application.** Gives direct and indirect operating cost and manhour factors for indirect costs. Contains data not available anywhere else.

3. **Status.** Operational. Regularly updated.

4. **Nature of Data.** See Application above. Also contains narrative material.

5. **Level of Detail.** Cost and manhours portrayed by appropriation, cost category, budgetary account, rank, aircraft model, flying hour, ton, year, or other performance factor.

6. **Normalization Processes Required.** Historical cost data, expressed in incurred (or current) year dollars, requires stratification into classes of similar price behavior prior to selection and application of appropriate inflation indices which convert costs to constant (base year) dollars.

7. **Evaluation Techniques Required.** Higher mathematical skills coupled with knowledge of theoretical applications. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory.

8. **Limitations.** Data not portrayed in a Work Breakdown Structure (WBS) format. Lack of data source identification makes determination of proper supplemental sources difficult.

9. **Deficiencies.** None.

10. **Supplemental Sources Required.** Summary Cost Data Book for Army Managers; FM 101-20; AR 570-2, Organization and Equipment Authorization Tables; Military Occupational Specialty Training Cost Handbook; specific Table of Organization and Equipment (TOE).

11. **Use in Cost Analysis.** Development of operating cost estimating techniques for Baseline Cost Estimates (BCEs), Independent Parametric Cost Estimates (IPCEs), Cost and Operational Effectiveness Analysis (COEA), Economic Analysis (EA), and other studies.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   

   b. **Preparer.** Prepared jointly by Directorate for Materiel Management and Directorate for Maintenance.

2. **Application.** Portrays workload efforts associated with depot overhaul. For program review. Aids in scheduling and assigning of work.

3. **Status.** Operational. Computerized. Updated with changes in flying hour scenario or workload mixes. Updated at least annually.

4. **Nature of Data.** Computer printout listing manhours, dollars for systems and major components. Only source from which anticipated overhaul quantities can be obtained.

5. **Level of Detail.** By facility, by system, component with separate overhaul action for end item as an entity.

6. **Normalization Processes Required.** Occasionally, learning curve adjustments are required upon the introduction of a new item of equipment. Must adjust for changes in flying hour program and aircraft density.

7. **Evaluation Techniques Required.** Technical expertise required. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory. Higher mathematical skills coupled with knowledge of theoretical applications. New estimating techniques are required to adapt historical data to the new three-level maintenance concept (MS3). Variations in configuration, such as modifications of armament, avionics, engine, or implementation of Engineering Change Proposals (ECPs) or Product Improvement Programs (PIPs) require additional analysis.

8. **Limitations.** Published values are projected. Inefficiencies and recent product improvements not accounted for.

9. **Deficiencies.** None.

10. **Supplemental Sources Required.** Need depot labor rates and Material Review List of Components consumed.
11. **Use in Cost Analysis.** Used as data base for Economic Analysis.

12. **Remarks.** Report has specific emphasis for organic and cross-service support. Although commercial sources are separated, contractor not identified.

13. **Suggestions.** None.
1. **Source.**
   b. **Preparer.** Should Cost Teams.

2. **Application.** Provides government with a firmer contractual negotiation position.

3. **Status.** Operational, as required.

4. **Nature of Data.** Detailed minimum, expected, and maximum estimates of contractor cost and manhours.

5. **Level of Detail.** Usually tailored to elements of contractor proposal.

7. **Evaluation Techniques Required.** Varies with application.

8. **Limitations.** Negotiated contract may not resemble Should Cost estimates.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Supplemental reports to Should Cost Report.

11. **Use in Cost Analysis.** Develops basis from which to develop other estimates.

12. **Remarks.** Not applicable.

13. **Suggestions.** None.
1. **Source.**
   b. **Preparer.** United States Air Force.

3. **Status.** Operational.

4. **Nature of Data.** Similar to Army's TANS and Navy's 3-M reporting system. Data includes maintenance manhour and parts cost data for Air Force aircraft.

5. **Level of Detail.** Not applicable.

6. **Normalization Processes Required.** Adjustment for inflation. Air Force data includes indirect support but excludes Vietnam in contrast to Army data which excludes indirect support but includes Vietnam. Technical estimates needed to adjust data.

7. **Evaluation Techniques Required.** Regression analysis.

8. **Limitations.** Data not strictly comparable with that of Army.

9. **Deficiencies.** See Limitations.

10. **Supplemental Sources Required.** Not applicable.

12. **Remarks.** See above.

13. **Suggestions.** None.
1. **Source.**

   a. **Document.** Catalog of Aviation 3-M Information Reports. (MSO Report Number 4790.1)

   b. **Preparer.** Department of the Navy, Maintenance Support Office, Mechanicsburg, Pennsylvania.

2. **Application.** Analyses within the Department of the Navy.

3. **Status.** Operational.

4. **Nature of Data.** Manhours and parts costs associated with maintenance and operational mission support for Naval aircraft.

5. **Level of Detail.** Not applicable.

6. **Normalization Processes Required.** Data needs adjustment for inflation. Navy data includes indirect support manhours, Vietnam battle damage, and is based on definitions differing from those of the Army. As a result, technical estimates are needed to adjust data to a common base.

7. **Evaluation Techniques Required.** Regression analysis.

8. **Limitations.** Data not strictly comparable to that of Army.

9. **Deficiencies.** See Limitations.

10. **Supplemental Sources Required.** Not applicable.

12. **Remarks.** See above.

13. **Suggestions.** None.
1. Source.

2. Application. Provides actual data base for training costs by MOS.

4. Nature of Data. Depicts fixed and variable costs along with weighted average cost.

5. Level of Detail. By appropriation. Report does not identify costs and/or manhours expended by Military Occupational Specialty.

6. Normalization Processes Required. Historical cost data, expressed in incurred (or current) year dollars, requires stratification into classes of similar price behavior prior to selection and application of appropriate inflation indices which convert costs to constant (base year) dollars.

7. Evaluation Techniques Required. Ability to adapt given cost data to proposed Military Occupational Specialties.

8. Limitations. Not applicable.

11. Use in Cost Analysis. Development of operating cost estimating techniques for Baseline Cost Estimates (BCEs), Cost and Operational Effectiveness Analysis (COEA), Economic Analysis (EA), and other studies.

1. **Source.**
   a. **Document.** Contractor Proposal.
   b. **Preparer.** Contractor.

2. **Application.** Source Selection Evaluation Boards (SSEBs).

3. **Status.** Operational.

4. **Nature of Data.** Prepared in several volumes. Technical specifications, detailed cost, management plant, capital machinery, tooling, requirements, plant space, and capability data.

5. **Level of Detail.** Variable.

6. **Normalization Processes Required.** Application of inflation indices, learning curve adjustments, and breaks in production.

7. **Evaluation Techniques Required.** Technical understanding of elements of proposal.

8. **Limitations.** Values are estimates. Contractor assessment therefore subject to bias. Data subject to variable and therefore noncomparable accounting systems.

9. **Deficiencies.** Data is at too high a Work Breakdown Structure (WBS) level.

10. **Supplemental Sources Required.** Historical inflation factors, government evaluation of proposal, report of error, omission and clarification.

12. **Remarks.** Not applicable.

13. **Suggestions.** None.

5.0.1
1. **Source.**
   
a. **Document.** Military Personnel Pay Tables.

b. **Preparer.** Department of Defense.

2. **Application.** Determination of military pay.

3. **Status.** Operational. Updated annually or by legislation.

4. **Nature of Data.** Self-explanatory.

5. **Level of Detail.** By grade, years of creditable military service. Also includes special rates for hazardous duty, flight pay, combat pay, jump pay, etc.

6. **Normalization Processes Required.** May need to normalize for differences in grade structures when analyzing certain systems over time.

7. **Evaluation Techniques Required.** Must make accounting adjustments for special pay categories mentioned in Level of Detail above. Must also make necessary adjustments for pay-in-kind such as billeting, messing, medical care, reenlistment bonuses, uniform, transportation, etc. Also must make adjustments for leave, awaiting orders, overtime hours, non-productive hours, etc.

8. **Limitations.** None.

9. **Deficiencies.** None.

10. **Supplemental Sources Required.** Data on relative proportions of indirect support or pay-in-kind for military personnel.

11. **Use in Cost Analysis.** Develops method for estimating military pay costs from manhour data.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**

   b. **Preparer.** Individual AVSCOM personnel.

2. **Application.** Provides manhour and work unit data of AVSCOM personnel. Enables identification of areas for improvement of efficiency. Provides data available nowhere else on distribution of labor effort by functional category and aircraft supported. Details nonproductive time. Also used to justify staffing.

4. **Nature of Data.** By cost/work center, social security number, name, nonproductive hours, productive hours by work unit, customer, aircraft systems model, shift, and transaction code.

5. **Level of Detail.** Manhour and work unit data for each individual within AVSCOM.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Processes Required.** Understanding of applicable directives.

8. **Limitations.** Subject to proper interpretation by personnel responsible for completing input data worksheet.

9. **Deficiencies.** No effective corrective feedback mechanism for errors resulting from misinterpretation of directives. Inability to account for all work under unified coding structure. Lack of interface with time and attendance records. Lack of formal validating and cross-referencing procedures.

10. **Supplemental Sources Required.** AVSCOM Regulation 1-21, AR 1-50.

11. **Use in Cost Analysis.** Used in estimating in-house support hours for specific subsystems and processing action since data is available nowhere else.

12. **Remarks.** Data frequently inaccurately recorded.

13. **Suggestions.** Establishment of feedback procedures, miscellaneous coding categories, interface with time and attendance records, and improved validation procedures would vastly improve the data in this report.

1. **Source.**
   a. **Document.** Table of Organization and Equipment.
   b. **Preparer.** US Army Training and Doctrine Command.

2. **Application.** Develops authorizations for men and equipment for an operational unit.

3. **Status.** Operational. Periodically reviewed.

4. **Nature of Data.** Personnel authorizations by Specialty (MOS), grade authorized, and equipment National Stock Number (NSN).

5. **Level of Detail.** See Nature of Data above.

6. **Normalization Process Required.** Not applicable.

7. **Evaluation Techniques Required.** Not applicable.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Not applicable.

11. **Use in Cost Analysis.** Used as a basis for Operating and Support (O&S) costs.

12. **Remarks.** Analytical judgement required. Care to avoid double counting when weapons systems compete for costs. Requires mathematical skills to apportion costs.

13. **Suggestions.** None.
1. **Source.**
   a. **Document.** Civilian Personnel Pay Tables.
   b. **Preparer.** Civil Service Commission.

2. **Application.** Determination of civilian pay.

3. **Status.** Operational. Updated annually or by legislation.

4. **Nature of Data.** Self-explanatory.

5. **Level of Detail.** By grade and step.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Proper techniques to account for annual and sick leave, overtime, and nonproductive time. Methods for determining personnel benefits.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Not applicable.

11. **Use in Cost Analysis.** Provides means for development of costs from civilian manhour data.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   a. **Document.** Federal Employees Almanac.
   b. **Preparer.** Edited by Joseph Young, Federal Employee's News Digest.

2. **Application.** Handy quick reference guide concerning employee benefits and working conditions.

3. **Status.** Operational. Updated annually.

4. **Nature of Data.** Narrative and tabular material concerning take home pay, retirement, health, insurance, injury compensation benefits, jobless benefits, Social Security, labor-management relations, appeals, grievances, promotion procedures, veteran's preference, and many others.

5. **Level of Detail.** See Nature of Data above.

6. **Normalization Processes Required.** None.

7. **Evaluation Techniques Required.** None.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Civilian Personnel Regulations when more detail is required.

11. **Use in Cost Analysis.** See Application above. Useful in determining some estimates such as retirement, relocation, or severance costs and also as a quick guide for personnel matters.

12. **Remarks.** None.

13. **Suggestions.** None.
1. Source.
   

   b. **Preparer.** Public Transportation and Travel Division, Ziff-Davis Publishing Company.

6.0.1
1. **Source.**

2. **Application.** To provide management with data about trends in personnel, workload, and funds as well as related productivity indices based upon an hour per unit ratio. It consolidates into a single document information about the Command which is not otherwise readily available in such a compact form.

3. **Status.** Operational. Updated regularly.

4. **Nature of Data.** Narrative, tabular, and graphical material concerning various indication trends for a five year period. Much personnel data for HQ, U.S. Army Aviation Systems Command (USAAVSCOM).

5. **Level of Detail.** By indication, by fiscal year.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Not applicable.

8. **Limitations.** Data pertains preponderately only to Headquarters, U.S. Army Aviation Systems Command.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Depends on area of application. Generally, much more detail is required.

11. **Use in Cost Analysis.** Of limited use within Cost Analysis Division. Appropriate primarily to studies about Headquarters, USAAVSCOM.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.**
   

   b. **Preparer.** Directorate for Materiel Management, based upon input received from operating units.

2. **Application.** Supply management.

3. **Status.** Operational, computerized data bank. Updated continuously. Timeliness of update questionable.

4. **Nature of Data.** Nomenclature, previous Federal Stock Number, part numbers, standard prices, procurement history, status of assets, requirement objectives, safety levels, retention limits, procurement lead times, administrative lead times, programmed overhaul, item managers, manufacturers, demand rates, cost to hold ratios, and many other aspects of specific items of supply are included. Data available on video display terminal and by keyed inquiry.

5. **Level of Detail.** Considerable. Virtually all relevant data concerning individual items of supply are listed by Federal Stock Number (FSN) and Part Number (PN).

6. **Normalization Processes Required.** Standard prices need adjustments for inflation and quantity buy. Other factors, such as transportation costs, costs to order, costs to hold, length of surplus supply, administrative and procurement lead times, and estimated terminal value must also be considered.

7. **Evaluation Techniques Required.** Varies with application.

8. **Limitations.** Standard prices reflect average of most recent procurement actions. Thus, may not represent present requisition price. When several items are analyzed, effects of inflation can cause considerable bias, particularly with long supply items.

9. **Deficiencies.** Data concerning "rebuild monthly demand" frequently not functional, requiring estimating techniques based on procurement history.

10. **Supplemental Sources Required.** Mathematical equations developed in the "Cost to Hold" study prepared by the Inventory Research Office (IRO) were necessary in the specific Cost Analysis applications cited below.

11. **Use in Cost Analysis.** Preparation of study for Directorate for Research, Development and Engineering concerning economic feasibility of providing certain long supply items at discount to a contractor as Government Furnished Materiel (GFM).
12. Remarks. Continuous consultation with supply management experts required before utilization of data.

1. **Source.**

   b. **Preparer.** Reports Control Officer, US Army Aviation Systems Command.

2. **Application.** To provide a listing of all approved controlled recurring reports prepared by all elements of this Command consisting of United States Army Aviation Systems Command (AVSCOM) recurring reports initiated by and required by this Command and recurring external reports required of AVSCOM by other Army elements and Federal agencies.

3. **Status.** Operational. Updated regularly.

4. **Nature of Data.** List of recurring reports with separate sections on new and recently discontinued reports. Also contains applicable directives for each report.

5. **Level of Detail.** Cross-referenced by Reports Control Symbol (RCS number), report title, preparer, and receiver.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Not applicable.

8. **Limitations.** Contains no description of data reported.

9. **Deficiencies.** None.

10. **Supplemental Sources Required.** The reports referenced by this pamphlet.

11. **Use in Cost Analysis.** Provides a bibliographical source for obtaining additional data when other sources have become exhausted.

12. **Remarks.** See **Limitations** above.

13. **Suggestions.** In addition to a description of the data contained in each report, a keyword cross-referencing system would make this pamphlet a more powerful tool.

6.3.1
1. Source.
   b. Preparer. Product/Project Manager.

2. Application. Provides higher authority with summarization of data concerning project progress useful to managers.

4. Nature of Data. Data is prepared in narrative, tabular, and graphical form in standard formats. Depicts project managers independent estimate and approved program and program cost.

5. Level of Detail. Cost data reported by appropriation with a detailed explanation of changes in cost since last RECAP.

6. Normalization Processes Required. Cost adjustments for differences or changes in the scope of work may be required. Trend analysis may be required for changes in such ratios as overhead or engineering to direct labor manhours and costs. Analytical judgment required.

7. Evaluation Techniques Required. The ability to track detailed cost data to previous estimates. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions, and sampling theory.

8. Limitations. Values are estimated by vested interests and therefore subject to bias.

9. Deficiencies. Identified in "Reservations" section of Validation Levels II and III.

11. Use in Cost Analysis. Quick reference guide for general information concerning a project. Validation process assures continuous flow of information necessary to perform improved analyses.

12. Remarks. This report will soon be superceded by Department of the Army Progress Review which will eliminate some duplication of data sources.

1. **Source.**
   a. **Document.** DDC. Retrieval and Indexing Terminology.
   b. **Preparer.** Defense Documentation Center, Cameron Station, VA.

2. **Application.** To provide a referencing system to publications maintained by the Defense Documentation Center.

3. **Status.** Operational. Updated annually.

4. **Nature of Data.** Provides a list of key words for computerized referencing of the publication contained at the Defense Documentation Center.

5. **Level of Detail.** Not applicable.

6. **Normalization Processes Required.** Not applicable.

7. **Evaluation Techniques Required.** Familiarly with outline structure employed, similar to a biological classification system. Ability to recognize and select applicable key words. Computer terminal operational techniques also required.

8. **Limitations.** Not applicable.

9. **Deficiencies.** Not applicable.

10. **Supplemental Sources Required.** Not applicable.

11. **Use in Cost Analysis.** Provides useful tool for obtaining additional data, often in extraordinary amounts.

12. **Remarks.** Relevant data may be contained within the scope of a longer report for other purposes and consequently not identified.

13. **Suggestions.** None.

6.5.1
1. **Source.** Defense Documentation Center.

2. **Application.** Variable.

3. **Status.** Variable.

5. **Level of Detail.** Varies with application, although a tremendous amount of data on almost any military subject is stored here.

6. **Normalization Processes Required.** Varies with application.

7. **Evaluation Techniques Required.** Varies with application.

8. **Limitations.** Varies with application.

9. **Deficiencies.** Varies with application.

10. **Supplemental Sources Required.** Varies with application. Generally, a vast collection of inter-supporting documents can be obtained here.

11. **Use in Cost Analysis.** Varies with application.

12. **Remarks.** None.

13. **Suggestions.** None.
1. **Source.** Contacts with Defense Contract Audit Agency (DCAA) personnel.

2. **Application.** Varies with application.

3. **Status.** Not applicable.

4. **Nature of Data.** Varies with application.

5. **Level of Detail.** Varies with application.

6. **Normalization Processes Required.** Identification of difference in accounting conventions. Ability to adjust data base for their differences. Ability to identify and adjust for breaks in production. Historical cost data, expressed in incurred (or current) year dollars, requires stratification into classes of similar price behavior prior to selection and application of appropriate inflation indices which convert costs to constant (base year) dollars. Similar stratification needed before applying escalation rate to estimate the effect of inflation on future costs. Development of cost– and/or manhour–quantity relationships through application of learning curve also known as progress or experience curves, enabling adjustments for alternative procurement quantities, and improving the accuracy of time phased estimates. Data base may require adjustments for changes in productivity. Trend analysis may be required for changes in such ratios as overhead or engineering to direct labor manhours and costs.

7. **Evaluation Techniques Required.** The ability to track detailed cost data to previous estimates. Variations in configuration such as modification of armament, avionics, engine, or implementation of Engineering Change Proposals (ECP) or Product Improvement Programs (PIPs) require additional analysis. Higher mathematical skills coupled with knowledge of theoretical application. Intelligent application of standard statistical analysis techniques, such as correlation and regression analysis, analysis of variance, prediction interval estimation, sensitivity and uncertainty analysis, probability distributions and sampling theory.

8. **Limitations.** Variable.

9. **Deficiencies.** Variable.

10. **Supplemental Sources Required.** Varies with application.

12. **Remarks.** None.

13. **Suggestions.** None.

6.6.1
1. **Source.**

2. **Application.** Preservation of historical data base for reference purposes.

3. **Status.** Operational. Updated continually.

4. **Nature of Data.** Subject data is a compilation of the historical aircraft data maintained by the RAND Corporation. Includes much data destroyed by the services. Nature of data is variable; includes program costs by Fiscal Year and units produced in some cases, in other cases not. Also contains narrative material.

5. **Level of Detail.** By aircraft type. Further detail in some cases.

6. **Normalization Processes Required.** Inflate historical costs to constant dollars, learning curve adjustments. Need to assure that accounting standardization has been applied.

7. **Evaluation Techniques Required.** Regression analysis, analogy methods, etc.

8. **Limitations.** Variable.

9. **Deficiencies.** Variable.

10. **Supplemental Sources Required.** Cross-references whenever possible.

12. **Remarks.** See Supplemental Sources Required.

13. **Suggestions.** None.
SECTION 7
GLOSSARY OF COST ANALYSIS
TERMS
GLOSSARY OF COST ANALYSIS

AIRFRAME WEIGHT. Airframe unit weight for airplanes and rotocraft is the weight empty, as configured in the aircraft detail specification and tabulated in Military Standard 1374, Parts I & II, minus the weight of items listed below regardless of their method of acquisition. The weight of useful load or alternate equipment items is not to be included in the airframe unit weight.

Items to subtract from Empty weight include wheels, brakes, tires and tubes; engines—main and auxiliary; rubber or nylon fuel cells; starters—main and auxiliary; propellers; auxiliary power plant unit; instruments; batteries and electrical power supply and conversion; avionics group; turrets and power operated mounts; air conditioning anti—icing and pressurization units and fluids; cameras and optical viewfinders; trapped fuel and oil. Source: DARCOM Pamphlet AMCP 715-8.

*See AR 310-25, Dictionary of United States Army Terms, and Cost Analysis Internal Policy IV-TO-PO-8, Glossary of Cost Analysis Terms, for additional explanations of terms.
ALLOCATED. An official piece of paper issued to a major command or other operating agency. It is a funding document and represents cash that you can commit and obligate. Source: DA Pamphlet 37-4.

The distribution of available resources to the various activities which must be performed in such a way that total effectiveness will be optimized. Allocation is necessary when there are limitations on either the amount of resources available or on the way in which they can be expended such that each separate activity cannot be performed in the most effective way conceivable. Also, an authorization by a designated official of a department making funds available within a prescribed amount to an operating agency for the purpose of making allotments. Source: DARCOM Pamphlet AMCP 706-191.

ALLOTMENT. This is similar to an allocation except that it is issued by a major command or operating agency to its subordinate units. Source: DA Pamphlet 37-4.

APPORITIONMENT. A cut of an appropriation given to a department by the Office of Management and Budget. This cut may be all or only part of the dollars appropriated. An apportionment is an allocation at departmental level and represents the amount that can be committed or obligated, regardless of the amounts shown in the appropriation or financial plan. Source: DA Pamphlet 37-4.

APPROPRIATION. A fund authorization set up by an Act of Congress which permits a department or other governmental agency to obligate the US Government to pay money for goods or services. By itself, the appropriation does not
cost the taxpayer a cent. Actually, the appropriation constitutes a hunting license for the department to obtain an apportionment (see definition above), i.e., the administrative authority for the department to enter into contracts or otherwise obligate the Government. The Treasury raises the money to meet expenditures and expenditures take place only after there has been performance against an obligation. These are important distinctions. Appropriations may last for different periods of time. It may be for one year, called an annual appropriation, or for a continuing period, referred to as a no-year appropriation. Source: DA Pamphlet 37-4.

ARMY SYSTEMS ACQUISITION REVIEW COUNCIL (ASARC). A Council established by the Head of a Military Department as an advisory body to him and through him to the Secretary of Defense on major system acquisitions. Source: DOD Directive 5000.2.

The ASARC provides key decisions on major Army programs. When a Defense System Acquisition Review Council (DSARC) is required, the ASARC provides the approval decision on proposed Army recommendations to the DSARC. Regular members of the ASARC are the Vice Chief of Staff of the Army (VCSA) (Chairman); Assistant Secretary of the Army (Research and Development); Assistant Secretary of the Army (Installations and Logistics); Deputy Under Secretary of the Army (Operations Research); Deputy Chief of Staff for Research, Development and Acquisition; Deputy Chief of Staff for Operations and Plans; Commander, US Army Materiel Development and Readiness Command, and the Commander, US Army Training and Doctrine Command. Special members of the ASARC who will attend on the call of the chairman are the Assistant Secretary of the Army (Financial Management); Deputy Chief of Staff for Logistics (DCSLOG); Comptroller of the Army (COA); Commander, US Army
Operational and Test Evaluation Agency (OTEA); Commander, US Army Concepts
Analysis Agency (CAA) and other Army Staff agencies and major subordinate
commands when required for review of selected systems. The Executive Sec-
retary of the ASARC is provided by the Deputy Chief of Staff for Research,
Development, and Acquisition (DCSRDA). DCSRDA is responsible to the Chair-
man (VCSA) for administrative matters with assistance by the proponent
Staff agency for the particular ASARC meeting. Such administration will
include nomination of special ASARC attendees for VCSA approval. Source:
DA Pamphlet 11-5.

**BASELINE COST ESTIMATE.** A document prepared by the materiel developer,
which is the first deliberate, detailed estimate of acquisition and owner-
ship costs. This estimate is normally performed in support of costing re-
quired for high level decisions and serves as the base point for all sub-
sequent tracking and auditing (provides traceability). Source: AR 71-9.

A detailed and fully documented estimate of materiel system life cycle
costs prepared by the system proponent. It is dynamic, appropriately re-
fined and updated, as a minimum, for each major decision point of the ac-
quision cycle. This estimate, subject to modification, if necessary, by
the ASARC decision, serves as the principal cost estimate for that system.
Source: AR 11-18.

**BENEFIT COST ANALYSIS.** An analytical approach to solving problems of choice.
It requires the definition of objectives, identification of alternative ways
of achieving each objective, and the identifications for each objective of
that alternative which yields the required level of benefits at the lowest
cost. It is often referred to as cost-effectiveness analysis when the

7.0.4
benefits of the alternatives cannot be quantified in terms of dollars. Source: AR 11-28.

BEST TECHNICAL APPROACH. A document prepared by a Special Task Force (STF) or Special Study Group (SSG) or the materiel developer assisted by the combat developer. It identifies the best general technical approach(es) based on the results of the Trade-off Determination (TOD) and Trade-off Analysis (TOA) and an analysis of trade-offs among logistical support concepts, technical concepts, life cycle costs and schedules. Source: DA Pamphlet 11-25.

BREAK-EVEN POINT. The point in time at which the cumulative quantifiable benefits equal the cost of the investment required to produce the benefits. Source: AR 11-28.

CALENDAR YEAR. The period of time from January 1 through December 31 distinguished from fiscal year. Source: Webster's Dictionary.

COMPOSITE INFLATION INDEX. An index which combines the effects of price level changes and outlay rates to convert constant year dollar costs to current year dollars. The effect of outlay rates is to account for the time difference between receipt of the obligation authority and expenditure of funds. And it is during this time difference that price levels may change; hence, this effect is included in the composite index. Source: AR 11-18.

CONCEPT FORMULATION PACKAGE. The documentary evidence that the concept formulation effort has satisfied the concept formulation objectives.
The package consists of a Trade-off Determination (TOD), Trade-off Analysis (TOA), Best Technical Approach (BTA) and Cost and Operational Effectiveness Analysis (COEA). Source: DA Pamphlet 11-25.

CONSTANT YEAR DOLLARS. A phrase always associated with a base year and reflecting the dollar "purchasing power" for that year. An estimate is in constant dollars when prior year costs are adjusted to reflect the level of prices of the base year, and future costs are estimated on the assumption that the future price level will remain the same as in the base year. Source: AR 11-28.

A statistical series is said to be expressed in "constant dollars" when the effect of changes in the purchasing power of the dollar has been removed. Usually the data are expressed in terms of some selected year or set of years. Source: AMCP 706-191.

COST. Although dollars normally are used as the unit of measure, the broad definition of cost equates to economic resources; i.e., manpower, equipment, real facilities, supplies, and all other resources necessary for weapon and support systems and programs. Source: AMCP 11-31.

Goods or services used or consumed. Source: AMCP 706-191.

COST ANALYSIS. The systematic examination of cost (total resource implications) of interrelated activities and equipment to determine the relative costs of alternative systems, organizations, and force structures. Cost analysis is not designed to provide the precise measurements required for budgetary purposes. Source: AMCP 706-191.

COST ANALYSIS IMPROVEMENT GROUP (CAIG). A DOD level group which serves as
advisor to the DSARC. This group presents its evaluation of the Military Service cost estimates of the program at each DSARC.

**COST CATEGORIES.** The three major categories of life cycle cost are Research and Development, Investment, and Operating and Support. Source: AR 11-18.

**COST ELEMENTS.** Cost elements are subdivisions of cost categories related to work areas or processes performed in developing, producing, and operating a weapon/support system. Includes such work areas as engineering tooling, manufacturing, etc. Source: DARCOM Key Cost Analysis Definitions.

**COST ESTIMATING CONTROL DATA CENTER (CEC/DC).** A function which is located in the central cost analysis activity at each commodity command. This function entails:

a. Serving as the official point of registration and control for all costs generated in that command.

b. Serving as the review and validation point for all costs generated in that command.

c. Maintaining cost tracks on major material programs. Source: DARCOM Regulation 37-4.

**COST ESTIMATING RELATIONSHIP (CER).** A mathematical expression relating cost as the dependent variable to one or more independent cost driving variables. The expression may be represented by any of several functions, e.g., linear, power, exponential, hyperbolic. Source: AR 11-18.

A numerical expression of the link between a physical characteristic, resource, or activity and a particular cost associated with it; e.g., cost 7.0.7
of aircraft maintenance per flying hour. Source: AMCP 706-191.

A functional expression which states that the cost of something may be estimated on the basis of a certain variable or set of variables. The relationship is derived by analyzing historical data on different systems to obtain a functional relationship between several system characteristics. The variable to be estimated is called the dependent variable, and the variables to which the dependent variable is related by the CER are called the independent variables.

**COST FACTOR.** A CER in which the cost is directly proportional to a single independent variable.

A brief arithmetic expression wherein cost is determined by application of a factor such as a percent, e.g., initial spares percent, or a ratio as in pay and allowance cost per man per year. Source: AR 11-18.

**COST MODEL.** An ordered arrangement of data and equations that permits translation of physical resources into costs. Source: AMCP 706-191.

A mathematical device used to develop estimates and output formats for presentations. The model consists of an input format to specify the problem; information, including both system description data and estimating relationships, and an output format. Source: AMCR 11-31.

**COST AND OPERATIONAL EFFECTIVENESS ANALYSIS (COEA).** A study which has the purpose of developing recommended rank ordering of candidate systems based on meaningful relationships between cost and operational effectiveness.

A documented investigation of: comparative effectiveness of alternative means of meeting a requirement for eliminating or reducing a force or
mission deficiency; the validity of the requirement in a scenario which has approval of HQ TRADOC and HQ DA, and the cost of developing, producing, distributing and sustaining the alternatives in a military environment for a time preceding the combat application. Source: AR 11-18.

Cost Track: A historical record of selected cost information (estimated or actual) on a weapon system basis with written analysis which explains variance among cost entries. Source: AMCR 37-4.

A top level overview of the absolute value and trend of resources being allocated to (specific) activities. Source: AR 11-18.

Cost Tracking. Establishing and maintaining permanent records of successive cost estimates made for major programs and systems together with the reasons for changes to these tracking cost estimates. Source: AMCR 11-31.

CURRENT YEAR DOLLARS. Dollars which reflect purchasing power current to the year the work is performed. Prior costs stated in current dollars are the actual amounts paid out in these years. Future costs stated in current dollars are the projected actual amounts which will be paid. Source: AR 11-18.

Also sometimes referred to as actual dollars, then year dollars, or inflated dollars.

DEFENSE CONTRACTOR PLANNING REPORT (DCPR) WEIGHT. See Airframe Weight.

DEFEENSE SYSTEMS ACQUISITION REVIEW COUNCIL (DSARC). A council within the Office, Secretary of Defense to advise the Deputy Secretary of Defense on the status and readiness of each major system under development to advance to a subsequent phase in its life cycle. Members of the DSARC include the Director of Defense Research and Engineering, the Assistant Secretary of Defense
(Installations and Logistics), Assistant Secretary of Defense (Comptroller), the Assistant Secretary of Defense (Program Analysis and Evaluation), and for programs within their areas of responsibility, the Assistant Secretary of Defense (Intelligence), and the Director Telecommunications and Command and Control Systems (DTCCS). Normally, the DSARC reviews the Service Secretary recommendations:

- initiative validation;
- initiate full-scale development;
- initiate low-rate production; and
- begin full production. TheSecretary of Defense will decide whether a DSARC or revised DCP is required for procurement of long leadtime materiel or for evaluation of low-rate initial production. Source: DA Pamphlet 11-25.

**DECISION COORDINATING PAPER**, A summary top-management document for the Secretary of Defense that presents the rationale for starting, continuing, reorienting, or stopping a major development program at each critical decision point. It identifies the issues in each decision and assesses the important factors, including threat, program plans, risks, full military and economic consequences, critical issues to be resolved by test and evaluation, acquisition strategy, costs and performance parameters that influence a decision. Once the Secretary of Defense has approved the DCP, it is a "contract" between the Secretary of Defense and the implementing Service Secretary which defines the latitude of the Service in managing the program within the thresholds of cost, performance and schedule that have been mutually agreed upon. The DCP is updated prior to each DSARC review. The DCP will be prepared in accordance with DOD15000.2 and OSIB/HQMA correspondence. (The DCP was previously entitled Development Concept Paper) Source: DA Pamphlet 11-25.

7.0.10
A document prepared by the Director of Defense Research and Engineering (DDR&E) and coordinated with key DOD officials providing a summary management document for the Secretary of Defense. DCPs reflect the Secretary of Defense decisions on important development and engineering modification programs. The document serves as a source of primary information and rationale and for updating the FYDP. Source: DA Pamphlet 37-4.

DEPARTMENT OF THE ARMY PROGRAM REPORT (DAPR). A regularly scheduled report to selected members of the Army secretariat and staff at which designated projects are discussed. The projects to be briefed are selected on the basis of project status or special interest requiring top management attention. All major programs/projects will be briefed at least once each year. Source: DA Circular 70-4.

DESIGN TO COST (DTC). A management concept wherein unit cost goals (production, operating and support) are established during development to guide hardware design and control program cost. Cost, as a key design parameter, is addressed on a continuing basis, and is an inherent part of the development and production process. Source: AR 70-1.

DESIGN TO COST GOAL. A unit cost goal to be achieved in the production phase of the life cycle and is based upon the existing best estimate of quantity, production rate, time frame, and, when available, cost-quantity relationships (learning curves). The DTC goal is expressed in constant dollars and will be established not later than entry into full scale development. Source: AR 70-1.

7.0.11
DESIGN TO UNIT PRODUCTION COST (DTUPC). Included in development contracts, this design to cost goal is the anticipated unit production price to be paid by the Government for recurring production costs and is based upon a stated production quantity, rate, and time frame. This unit cost goal will be used by the contractor as a design parameter to control system cost. In general, the DTUPC goal should only include those cost elements that are under the control, or influenced by, the contractor. Source: AR 70-1.

Current implementation of the DTUPC concept within the DoD requires DTUPC establishment at two specific levels:

1. The first level is a "contract" between the Army and the OSD. It is a program value representing the total procurement investment costs for the specific major system equipment items which collectively comprise the "flyaway" unit cost definition.

2. The second level DTUPC is the contract between the Army and industry. This DTUPC is best described as that which is most appropriate for RFP's and contracts. It includes all the investment recurring costs associated with production of an end item. It normally does not include any in-house investment costs, CPE costs, contractor nonrecurring cost, and engineering change allowances. Some flexibility driven by judgement is allowed in the establishment of this DTUPC. Source: DARCOM Guide for Design to Unit Production Cost.

DISCOUNTING. Discounting is a technique for converting various cash flows (cost streams) to economically comparable amounts at a common point in time, considering the time value of money. Once cost estimates have been generated, they must be time phased to reflect alternative expenditure patterns. The time value of money is considered by computing present value costs. Present 7.0.12
value costs are computed by applying a discount rate to each year's cost in a cost stream. The current discount rate specified by OSD is 10 percent. The present value cost is the sum of the discounted costs over time.

The purpose of discounting is to determine if the time value of money is, in any given case, sufficiently potent to change the ranking of alternatives -- a ranking that has been established on the basis of all other considerations. Source: AR 11-28.

**DISCOUNT RATE.** The interest rate used to discount or calculate future costs and benefits so as to arrive at their present values. Source: AR 11-28.

**ECONOMIC ANALYSIS.** A systematic approach to the problem of choosing who to employ scarce resources and an investigation of the full implications of achieving a given objective in the most efficient and effective manner. Source: AR 11-28.

**ECONOMIC ESCALATION.** That amount of additional dollars necessary to reflect changes in the price level (inflation) of goods and services being purchased over time; i.e., the difference between the constant dollar total and the current or projected year totals of the cost of goods and services purchased. Economic escalation may be historical (actual impact), projected (estimated future impact), or both. Source: AR 11-18.

**EMPTY WEIGHT.** Aircraft empty weight includes the weights of airframe, engines, integral avionics/electronics and weapons, and other equipment as identified by MIL STD 1374. It excludes the weights of crew, fuel, oil (except trapped fluids) and pay load. Source: MIL STD 1374.
ENGINEERING CHANGE PROPOSAL (ECP). A proposal to change the design or engineering features of material undergoing development or production. Source: AR 750-1.

In the Federal Government, the twelve-month period which begins 1 October of one year and ends 30 September of the next. (Prior to 1 July 1976, the fiscal year ran from 1 July of one year to 30 Jun of the following year.) Source: DA Pamphlet 37-4.

FIVE YEAR DEFENSE PROGRAM (FYDP). The official program which summarizes the Secretary of Defense approved plans and programs for the Department of Defense. The FYDP is published at least once annually and is also represented by a computer data base which is updated three times a year (following President's Budget submission in January, POM submission in April/May and Service Budget submission in October/November). Source: DA Pamphlet 37-4.

FLYAWAY COST. This cost concerns the major system equipment items of the Work Breakdown Structure exclusively; considers only the Procurement Appropriation supported costs; and encompasses both contract and in-house cost elements of the investment cost categories except for first destination transportation and modifications which are separate budget activities. Source: DARCOM Guide to Key Cost Analysis Definitions.

HARDWARE COST. Hardware cost concerns the major system equipment items of
the Work Breakdown Structure exclusively; considers the Procurement FCA, OMA and other appropriation supported costs; and encompasses both contract and in-house cost elements of the Investment Recurring Cost Category except for first destination transportation and modifications which are separate budget activities.

INDEPENDENT COST ESTIMATE. Any cost estimate developed in organizational channels separate and independent from program proponency channels and having the express purpose of serving as an analytical tool to validate or cross-check cost estimates developed in proponency channels. Source: AR 11-18.

INDEPENDENT GOVERNMENT COST ESTIMATE (IGCE). A presolicitation, in-house estimate of the probable price (estimated cost plus profit or fee) of a proposed procurement, and is based upon the scope of work and/or technical requirements, as appropriate, without reliance upon contractors' pricing estimates. Normally, the contracting office responsible for placing the procurement will determine when an IGCE is required. Source: DARCOM Regulation 715-22.

INDEPENDENT PARAMETRIC COST ESTIMATE (IPCE). Highly aggregated, output (physical and/or performance parameter) related material life cycle cost estimate accomplished outside of the functional control of program proponents. The IPCE is developed to test the reasonableness of the proponent's baseline cost estimate and to provide a second opinion as to the cost of a weapon system for consideration at key decision point in the acquisition cycle including ASARC and DSARC. Source: AR 11-18.

7.0.15
INFLATION. A rise in the general level of prices. Pure inflation is defined as a rise in the general level of prices unaccompanied by a rise in output (productivity). See Economic Escalation. Source: DARCOM Pamphlet 706-191.

INVESTMENT COSTS. Costs required beyond the development phase to introduce into operational use a new capability; i.e. to procure or to provide for major modification of an existing capability. Such costs are one-time in the life cycle and should include construction costs of facilities, major and minor equipment and an initial supply of fuel and parts. Initial costs of training operating and maintenance personnel is also a part of total investment costs. Source: DARCOM Regulation 11-31.

The sum of all costs resulting from the production and introduction of a materiel system into the Army's operational inventory, Includes:

1. All costs to the Government, defined as contractor costs plus in-house costs, of products and services necessary to transform the results of R&D into a fully operational system consisting of the hardware, training and support activities necessary to initiate operations.

2. Costs of both a nonrecurring and recurring nature.

3. Costs of all production products and related services, irrespective of how such costs are funded. Source: DA Pamphlet 11-3.

LEARNING CURVE. The cost quantity relationship for estimating cost of equipment. Generally used to predict or describe the decrease in the cost of a unit as the number of units produced increases. Source: DARCOM Pamphlet 706-191.

7.0.16
LETTER OF AGREEMENT (LOA). The LOA is a jointly prepared and authenticated document in which the combat developer and the materiel developer outline the basic agreements for further investigation of a potential materiel system. The purpose of the LOA is to insure agreement between the combat and materiel developers on the general nature and characteristics of the proposed system and the investigations needed to develop and validate the system concept, to define the associated operational, technical, and logistical support concepts, and to promote synchronous interaction between the combat developer and materiel developer during the conduct of these investigations. Sources: AR's 70-1, 71-9, 1000-1.

LETTER REQUIREMENT. The LR is an abbreviated procedure for acquisition of low value items and may be used in lieu of the ROC when applicable. Low value items are low unit cost, low risk developmental or nondevelopmental items for which the total RDTE expenditure will not exceed $10 million, and/or the procurement costs will not exceed $2 million for any fiscal year or $10 million for the 5-year program period. The LR is not appropriate for system components. The LR is jointly prepared and authenticated by the combat developer and materiel developer as prescribed by AR 71-9. Source: DA Pamphlet 11-25.

LIFE CYCLE COST. An approach to costing that considers all costs incurred during the projected life of the system, subsystem, or component being evaluated. The life-cycle cost of materiel includes the cost to acquire, operate, and maintain the weapon over its useful life. Materiel system life cycle cost includes all costs associated with the three life cycle phases, research and development, investment and operations.

7.0.17
The summation of all expenditures required from conception of a system until it is phased out of operational use. Source: DARCOM Pamphlet 706-201.

The total cost of ownership over the system life cycle including all research, development, test and evaluation; initial investment; and operating and maintenance costs. Source: DARCOM Pamphlet 706-201.

**MAJOR SYSTEM EQUIPMENT.** The complete flyaway equipment, including airframe, engine, and all other installed equipment. Same as air vehicle. Sources: MIL STD 881 and DARCOM Guide to Key Cost Analysis Definitions.

**MATERIEL.** Weapons, equipment, supplies, etc.; distinguished from personnel. Source: Webster's New World Dictionary.

**MATHEMATICAL MODEL.** The general characterization of a process, object, or concept, in terms of mathematical symbols, which enables the relatively simple manipulation of variables to be accomplished in order to determine how the process, object, or concept would behave in different situations. Source: DARCOM Pamphlet AMCP 706-191.

Mathematical models are characterized by the exclusive use of equations to represent the characteristics of the system. The basis for such equations can range from pure hypothesis to the analysis of data.

7.0.18
Mathematical models generally provide a great deal of flexibility, but often at the expense of simplifying the real world situation. Source: DARCOM Pamphlet 706-191.

A quantifiable representation of a system operating in a prescribed context. A mathematical model generally can be expressed as a set of equations where the known factors are constants, the independent variables are inputs, and the data sought are the dependent or output variables. Source: DARCOM Pamphlet AMCP 706-201.

MODEL. A model is a representation of the reality of a situation or condition being studied. Ideally, it would represent the real situation without error or uncertainty. (However, at best,) it can only simulate most... of the real world. (It uses) exercises, simulations, gaming and mathematical representations, and supplies... information on the effectiveness of the various alternatives under consideration. Source: DARCOM Pamphlet AMCP 706-191.

NONRECURRING INVESTMENT. Those elements of investment cost which generally occur only once in the production cycle of a weapon/support system. Source: DA Pamphlet 11-3.

OBLIGATION. The estimate of the actual amount of the cost of an authorized service or article ordered. This estimate is carried in official accounting records, and reserves funds pending completion of the contract. This reservation is required by public law. Source: DA Pamphlet 37-4.

OPERATING AND SUPPORT COST. The sum of all costs resulting from the operation, maintenance and support (including personnel support) of the 7.0.19
weapon system after it is accepted into the Army inventory. Source: DA Pamphlet 11-4.

OPERATIONS RESEARCH. A scientific approach which uses analytic methods adopted from mathematics to solve operational problems. The objective is to provide management with a logical basis for making sound predictions and decisions. Among the common scientific techniques used in operations research are mathematical programming, statistical theory, information theory, game theory, monte carlo methods, and queuing theory. Source: DARCOM Pamphlet AMCP 706-191.

PRESENT WORTH (VALUE). See Discounting.

PROCUREMENT COST. This cost concerns the entire work breakdown structure; considers only the Procurement appropriation supported costs; and encompasses all contract and in-house cost elements for the complete investment cost category. Source: DARCOM Guide to Key Cost Analysis Definitions.

PRODUCT IMPROVEMENT PROPOSAL (PIP). A proposed configuration change involving substantial engineering and testing effort on major end items and depot repairable components or changes on other than developmental items to increase system/combat effectiveness or extend the useful military life. Source: AR 70-15.

PRODUCTION COST. This cost concerns the major systems equipment items of work breakdown structure exclusively; considers the Procurement, MCA, OMA and other appropriation supported costs; and encompasses both contract and in-house cost elements of the Investment Nonrecurring and Recurring Cost.
Categories except for first destination transportation and modifications which are separate budget activities. **Source:** DARCOM Guide to Key Cost Analysis Definitions.

**PROGRAM COST.** This cost concerns the entire work breakdown structure; considers all appropriations; and encompasses all contract and in-house cost elements for the complete Research and Development and Investment Cost Categories. **Source:** DARCOM Guide to Key Cost Analysis Definitions.

**PROGRAM ACQUISITION COST.** This cost concerns the entire work breakdown structure; considers the RDTE and Procurement appropriations only; and encompasses all contract and in-house cost elements for the Research and Development and Investment Cost Categories. **Source:** DARCOM Guide to Key Cost Analysis Definitions.

**PROGRAM OBJECTIVE MEMORANDUM (POM).** A memorandum in prescribed format submitted to the Secretary of Defense by the Secretary of a Military Department (e.g., Army) or the Director of a Defense Agency which recommends the total resource requirements within the parameters of the published Secretary of Defense fiscal guidance. **Source:** DA Circular 70-4.

**PROONENT.** An (Army) organization or staff which has been assigned primary responsibility for materiel or subject matter in its area of interest (e.g., proponent school, proponent staff agency, proponent center).

**RECURRING INVESTMENT.** Those elements of investment cost which occur repeatedly during production and delivery of a weapon/support system.

7.0.21
REGRESSION ANALYSIS. The association of one or more independent variables with a dependent variable. Under static conditions the analysis is called correlation. When used for predictive purposes, it is referred to as regression. The relationships are associative only; causative inferences are added subjectively by the analysts. Source: DA Costing Methodology Handbook, April 1971.

REQUIRED OPERATIONAL CAPABILITY (ROC). An HQDA document which states concisely the minimum essential operational, technical, logistical and cost information necessary to initiate full scale development or acquisition of a materiel system. Source: AR 71-9

RESEARCH AND DEVELOPMENT COST. The sum of all costs (contractor & in-house) resulting from applied research, engineering design, analysis, development, test, evaluation and managing development efforts related to a specific materiel system. Source: DA Pamphlet 11-2.

REVIEW AND COMMAND ASSESSMENT OF PROJECTS (RECAP). Regularly scheduled briefings to selected members of the DARCOM Command Group by Project/Product Managers. The RECAP provides concise and timely information regarding program status. Source: DA Circular 70-4.

SELECTED ACQUISITION REPORT (SAR). Standard, comprehensive, summary reports on major defense systems for management within the Department of Defense. SARs are submitted to OSD for transmittal to the Congress and other Government agencies. Source: DA Circular 70-4.

7.0.22
SENSITIVITY ANALYSIS. Repetition of a (cost) analysis with different assumed quantitative values for selected cost driving parameters or other cost analysis assumptions in order to determine the effects of varying the values or assumptions for the purposes of comparison with the results of the basic analysis. If a small change in a value or assumption results in a large change in the results, then the results are said to be sensitive to that parameter or assumption. Source: DARCOM Pamphlet 706-191.

SHOULD COST.

Initial study. A Should Cost study is an approach to cost analysis (ASPR 3-801.2(b)), that challenges a contractor's cost proposal, supporting data, and rationale, by integrating into a single fully-coordinated effort the auditing, pricing, engineering, and management analysis of a contractor's manufacturing and management operations, in order to determine a realistic cost estimate on what the item and/or services should cost, assuming reasonable achievable economics and efficiencies. This coordinated analysis is accomplished on-site, at the contractor's plant, by a multi-discipline, highly qualified team of Government specialists, which reviews in-depth the contractor's activities (i.e., manufacturing, engineering, accounting, cost estimating, make-or-buy, purchasing, organizational structure and any other elements of cost and management control) required for contract performance. The in-depth analysis, which becomes the basis for the Government's negotiation position, is used to identify the contractor's historical cost on past or current contracts for the same or similar item(s), and to determine if his management controls and methods of operation reflect uneconomical practices and inefficiencies which can and should be eliminated.
The team findings and recommendations (improvement goals) may also be applied to aspects of the contractor's operation during and beyond the instant contract.

**Follow-on study.** A streamlined Should Cost study is a follow-on in-depth cost analysis which utilizes the initial and/or follow-on Should Cost study as the baseline for evaluation of the contractor's efforts and on-going performance, determines what benefits have accrued from improvements in the contractor's management and manufacturing operations, and compares this data against the contractor's cost proposal and supporting data for the purpose of establishing the Government's negotiation objectives. The team, preferably composed of members from the original team, performs an approximately 3-week on-site in-depth analysis to determine what efforts the contractor has taken to eliminate/correct uneconomical practices and inefficiencies. The analysis is to re-examine improvement goals, if any, or establish new or additional goals to improve contract performance. The team composition and procedures for conducting the follow-on study is to be patterned in accordance with the Should Cost team concept. **Source:** AMC Reg 715-92

**SOURCE SELECTION EVALUATION BOARD (SSEB).** A group of military and civilian personnel, representing the various functional and technical areas involved in a procurement, appointed by the Source Selection Advisory Council to direct, control, and perform the evaluation of proposals responsive to requirements, and to produce summary facts and findings required in the source selection process. **Source:** AR 715-6.
SPECIAL STUDY GROUP. A study group chartered by CG, TRADOC to conduct analysis, insure inclusion of all alternatives within an analysis, monitor experimentation, or undertake such tasks that may require the concentration of special expertise for a short duration. Source: AR 71-9.

SPECIAL TASK FORCE. Same as Special Study Group, except chartered by the Chief of Staff, Army. Source: AR 71-9.

SUNK COSTS. The summation of all past expenditures or irrevocably committed funds related to a given cost estimate. Sunk costs are generally not relevant to decision-making as they reflect previous choices rather than current choices. Source: AR 11-18.

SYSTEMS. An orderly study of a management system or an operating system using the techniques of management analysis, operations research, industrial engineering, or other methods to evaluate the effectiveness with which missions are accomplished, and to recommend improvements. AMCR 11-1 (p. 1), 1970 Ref. 7.

SYSTEMS ANALYSIS. Systems analysis. (SA) The application of a thorough, reasoned approach to the solution of complex military requirements, operations and management problems. The objective of SA is to provide a decision-maker with data and information (quantitative, insofar as possible) to assist his determination of which alternative policies or strategies best satisfy the definite objectives. SA can use management analysis, operations research, industrial engineering and other scientific or analytical disciplines to compare the competing courses of action. Source: DARCOM-R 11-1.

7.0.25
TOTAL RISK ASSESSING COST ESTIMATE (TRACE). The expected total cost over a specified period of a materiel development program computer on the basis of the costs of accomplishing the work elements of the program's work breakdown structure, and including specific provision for the statistical estimation of probable program costs otherwise indeterminate. The TRACE should be that estimate having a 50/50 chance of producing either a cost overrun or an underrun. Source: LTR (DAMA-PPM-P), "Letter of Instruction (LOI) for Implementation of RDTE Cost Realism for Current and Future Development Programs." Washington, DC: Department of the Army, OCSRDA, 6 March 1975.

TRADE-OFF ANALYSIS (TOA). A document prepared by a Special Task Force or Special Study Group or jointly by the combat and material developers to determine which technical approach(es) offered in the Trade-Off Determination are best. Source: DA Pamphlet 11-25.

TRADE-OFF DETERMINATION (TOD). The document normally prepared by the materiel developer and transmitted to the combat developer and transmitted to the combat developer or to a Special Task Force or Special Study Group to convey the apparent technical feasibility of a potential system, including technical risks associated with each approach, estimated RDTE, and procurement costs and schedules. Source: DA Pamphlet 11-25.

UNCERTAINTY ANALYSIS. A systematic analysis of the range of probable costs about a point estimate based on considerations of requirements uncertainty, cost estimating uncertainty and technical uncertainty. The intent of such an analysis is to provide the decision maker with information which should improve the rationality of decisions based on point...
estimates of cost. Such an analysis is not expected to improve the precision of point estimate, but rather to place it in perspective with respect to various contingencies. Sources: DA Pamphlets 11-2, 3, 4 and US Army Logistics Management Center classroom notes on uncertainty analysis (AIM-63-3728-HICA) and -H2.

(COST) VALIDATION.

(a) Cost Estimate:
Test of a cost estimate to confirm that it is sound, well-grounded on cost estimating methods and founded on fact or capable of being justified, supported, and defended. A valid cost estimate is to include the proper cost elements and have supportable rationale, or the validity is to be demonstrated by the comparison of the cost submission with the expected costs developed by the validator.

(b) Cost Data:
Resource data which are objectively analyzed and documented by the preparing agency and are coordinated with all those Department of the Army agencies with a functional responsibility for the data. Source: DA, Costing Methodology Handbook (COA), Apr 71.

WEAPON SYSTEM COST. This cost concerns the major system equipment, training, peculiar support equipment, system test and evaluation, system/project management, data, operational/site activation, common support equipment and industrial facilities of the work breakdown structure; considers only the Procurement appropriation supported costs; and encompasses both contract and in-house cost elements of the Investment cost category except for first destination transportation and modifications which are separate budget activities. Source: DARCOM Guide to Key Cost Analysis Definitions.

7.0.27
WORK BREAKDOWN STRUCTURE (WBS). A management technique for subdividing a total job into its component elements, which then can be displayed in a manner to show the relationship of these elements to each other and to the whole. It is a product-oriented family tree, composed of hardware, software, services, and other work tasks, which results from project engineering effort during the development and production of a defense materiel item, and which completely displays the project/program. Source: AR 70-32.
