PREFACE

This report presents the results of a detailed Air Force Occupational Survey of the Packaging (AFS 601X4), Passenger and Household Goods (AFS 602X0), and Freight Traffic (AFS 602X1) career ladders. This project was directed by USAF Program Technical Training, Volume 2, dated October 1976. Authority for conducting occupational surveys is contained in AFR 35-2. Computer outputs from which this report was produced are available for use by operating and training officials.

The survey instrument was developed by Captain H. Alan Trask, Inventory Development Specialist. Captain Elena J. Weber analyzed the survey data and wrote the final report. This report has been reviewed and approved by Major Walter F. Kasper, Chief, Airman Career Ladders Analysis Section, Occupational Survey Branch, USAF Occupational Measurement Center, Lackland AFB, Texas, 78236.

Computer programs for analyzing the occupational data were designed by Dr. Raymond E. Christal, Occupational and Manpower Research Division, Air Force Human Resources Laboratory (AFHRL), and were written by the Project Analysis and Programming Branch, Computational Sciences Division, AFHRL.

Copies of this report are available to air staff sections, major commands, and other interested training and management personnel upon request to the USAF Occupational Measurement Center, attention of the Chief, Occupational Survey Branch (OMY), Lackland AFB, Texas 78236.

This report has been reviewed and is approved.

Center

SUMARY OF RESULTS

1. Survey Coverage: The Packaging (601X4), Passenger and Household Goods (602X0), and Freight Traffic (602X1) job inventory was administered during the period of September 1977 through January 1978. A total of 1,787 individuals were included in the sample. This includes: 61 percent of all assigned personnel holding DAFSC 601X4, 63 percent of those holding DAFSC 60230/50, 68 percent of DAFSC 602X1 personnel, and 43 percent of DAFSC 60291 personnel.

2. Career Ladder Structure: Ninety-four percent of the survey respondents comprised seven major job groups. Career ladder members holding the 601X4, 602X0, and 602X1 AFSCs appeared in distinctively separate groups, which appears to validate the current career ladder structure. One major group consisted mainly of DAFSC 602X1 personnel who were performing tasks related to the loading, unloading, receiving, and planning of freight shipments. The DAFSC 601X4 personnel clustered in another major job group and were performing strictly packaging and crating tasks. The DAFSC 602X0 members, conversely, clustered into three major job groups. One group was performing strictly passenger movement tasks, another group concentrated on quality control and customs tasks, while the third group performed tasks related to passenger movement and personal property functions. A management and supervisory group was also identified which included 5- and 7-skill level members from all three career ladders plus DAFSC 60291 personnel.

3. DAFSC Differences: Personnel holding these three AFSCs perform very different job functions. The only common tasks found in the jobs performed by members of the three AFSCs were general administrative tasks and tasks relating to the maintenance of facilities and work areas. Within each of the three AFSCs, 5- and 7-skill level personnel did not differ substantially on the technical functions they performed.

4. AFR 39-1 Comparison to Survey Data: The AFR 39-1 specialty descriptions generally give a thorough and accurate picture of 5-, 7-, and 9-skill level duties within each of the career ladders. Exceptions to this are the following: 1) exclusion of unloading and loading functions in the DAFSC 60134/54 and 60231/51 specialty descriptions; 2) the omission of equipment operation in the DAFSC 60231/51 specialty description; and 3) the omission of the operation of material handling equipment in the DAFSC 60271 specialty description.

5. Comparison to Previous Survey: Overall, there were no major differences between the results of the current and the previous survey. Tasks performed by members of the various DAFSC and skill level groups appear to have changed very little since 1973.

OCCUPATIONAL SURVEY REPORT
PACKAGING, PASSENGER AND HOUSEHOLD GOODS, AND
FREIGHT TRAFFIC CAREER LADDERS
(AFSCs 60134, 60154, 60174, 60230, 60250, 60231,
60251, 60271, and 60291)

INTRODUCTION

This is a report of an occupational survey of the Packaging (AFS 601X4), Passenger and Household Goods (AFS 602X0), and Freight Traffic (AFS 602X1) career ladders completed by the Occupational Survey Branch, USAF Occupational Measurement Center, during May 1978.

A previous occupational survey of these career ladders was published in October 1973. The survey instrument, USAF Job Inventory AFPT 90-601-096, 90-602-089, and 90-602-090, consisted of 520 tasks grouped under 16 duty sections and a background information section of 33 history variables. The inventory was administered to 1,439 respondents holding AFSCs 601X4, 602X0, or 602X1, or approximately 44 percent of the total personnel assigned within each ladder. This Occupational Survey Report examined skill level job descriptions and differences, background information, CONUS-overseas differences at the 5-skill level, career field structure, and training. In addition, a recommendation was made in the report to redesign the training structure due to the low utilization of initial resident training.

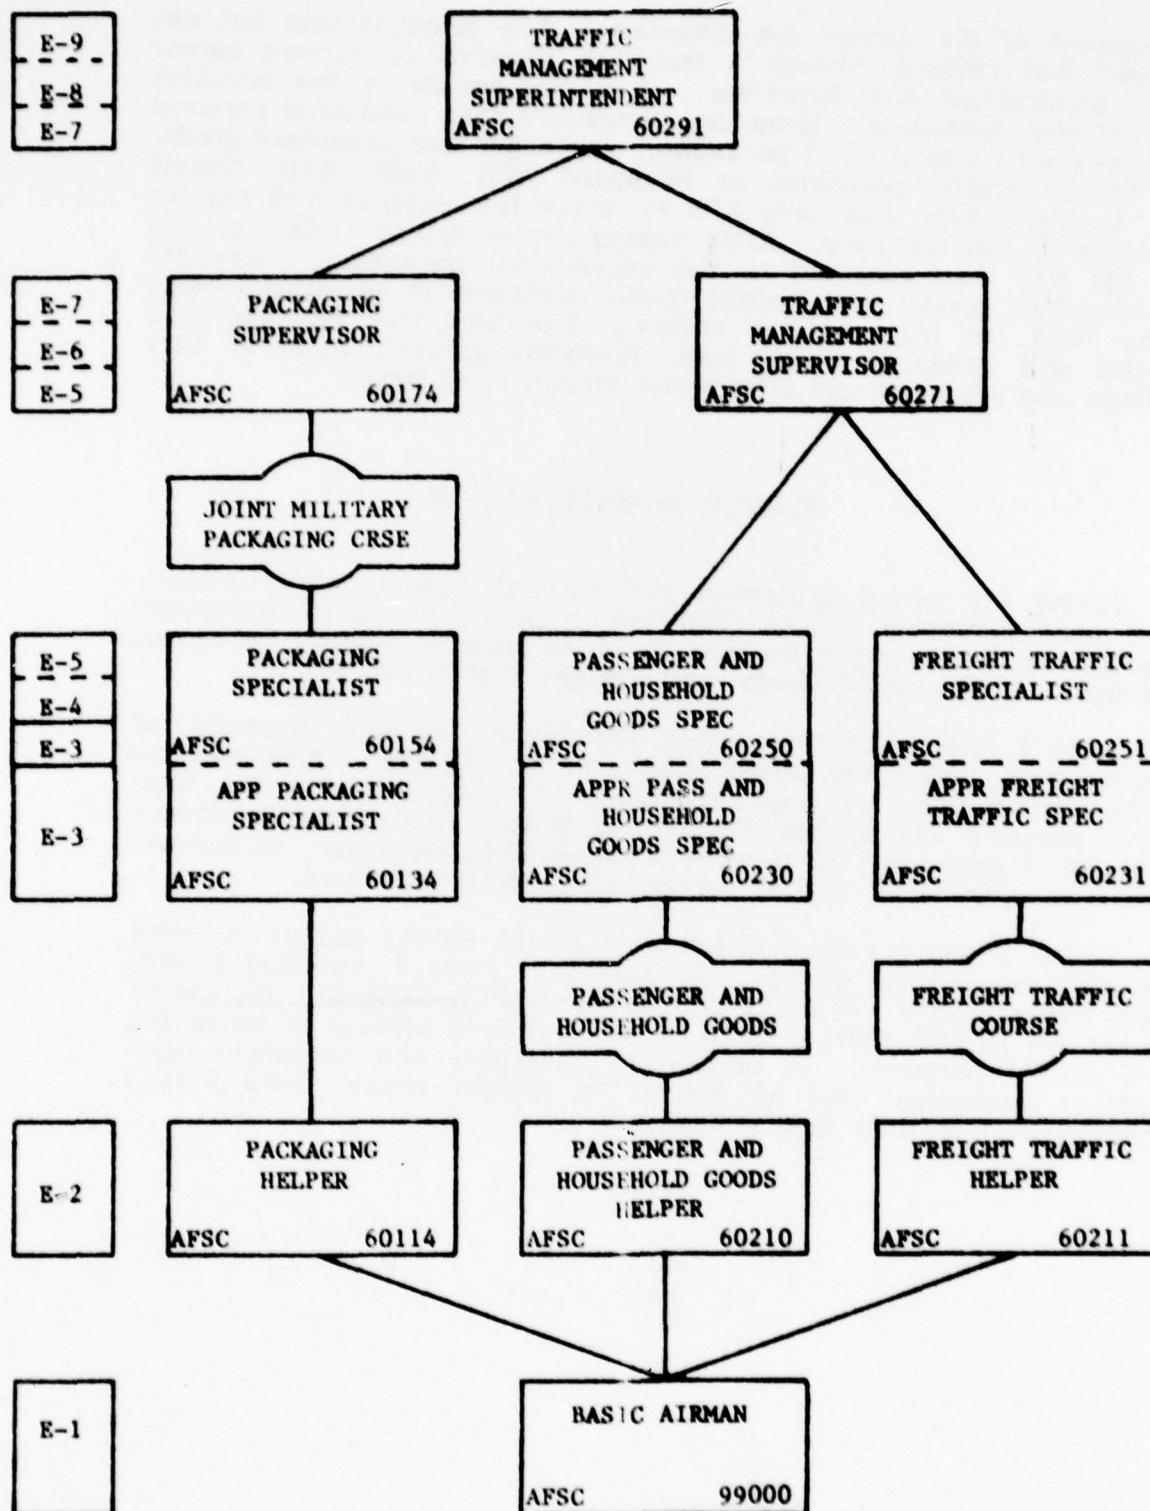

Since the 1973 survey, the career ladder has remained relatively stable with no major changes in the classification structure. Figure 1 shows the current career field chart as given in AFR 39-1, Airmen Classification Regulation. The current project was a routine survey of the career field and addresses four areas: (1) development and administration of the survey instrument; (2) the job structure found within the Packaging, Passenger and Household Goods, and Freight Traffic career ladders and how this relates to skill level and experience level groups; (3) comparisons of the job structure with current career ladder documents such as the AFR 39-1 specialty descriptions; and (4) comparisons of the current findings to the 1973 survey.

INVENTORY DEVELOPMENT

The data collection instrument for this occupational survey was USAF Job Inventory AFPT 90-601-292, 90-602-293, and 90-602-294. The task list from the 1973 study served as the starting point for the

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

FIGURE 1
CURRENT AFR 39-1 PACKAGING, PASSENGER AND HOUSEHOLD GOODS,
AND FREIGHT TRAFFIC CAREER FIELD CHART
(AS OF 1 JUNE 1977)

development of the current job inventory. The previous task list was reviewed and revised through a thorough research of current career ladder publications and directives. From this review, a new tentative task list was developed. Inventory developers then conducted personal interviews with a total of 25 packaging, passenger and household goods, and freight traffic personnel at Sheppard AFB, Nellis AFB, Travis AFB, Lackland AFB, and Kelly AFB to review the tentative task list for completeness and accuracy. After making any necessary revisions, this task list was then sent out to 106 experienced packaging, passenger and household goods, and freight traffic personnel at operational bases in the field for their written review. The final task list was then compiled and consisted of 446 task statements grouped under 17 duty headings and a background information section of 42 items.

SURVEY ADMINISTRATION

During the period September 1977 through January 1978, consolidated base personnel offices (CBPO's) in operational units worldwide administered the inventory booklets to job incumbents holding Packaging, Passenger and Household Goods, and Freight Traffic DAFSCs.

Table 1 reflects the percentage distribution, by major command, of assigned personnel in the career ladders as of July 1977. Also reflected is the distribution, by major command, of respondents in the final survey sample. The sample of 1,787 respondents represents 61 percent of all 601X4 personnel, 63 percent of all 60230/50 personnel, 68 percent of all 602X1 personnel, and 43 percent of all 60291 personnel.

Tables 2 and 3 reflect distribution of the survey sample in terms of DAFSC and TAFMS groups. As shown in Table 2, sampling of skill levels varies from a low of 43 percent for DAFSC 60291 to a high of 87 percent for DAFSC 60271. Table 3 shows that 53 percent of packaging (AFS 601X4) personnel, 54 percent of passenger and household (AFS 60230/50) personnel, and 38 percent of freight traffic (AFS 602X1) personnel were in their first enlistment.

CAREER LADDER STRUCTURE

An essential part of the USAF Occupational Survey Program is the examination of career ladder personnel in terms of the actual structure of the job functions they perform rather than the career ladder structure outlined in official documents. This examination of actual structure is made possible by the Comprehensive Occupational Data Analysis Programs (CODAP) which generate a hierarchical clustering of all jobs performed in the field based upon the similarity of tasks performed. Background factors such as DAFSC, job title, grade, position, etc. have no direct bearing on the job clustering process. Rather, these factors are used to help describe the members of job groups that the CODAP process has identified.

The career ladder structure analysis process consists of determining the functional job structure of career ladder personnel in terms of job types, clusters, and independent job types. A job type is a group of individuals who perform many of the same tasks and also spend similar amounts of time performing them. When there is a substantial degree of similarity between different job types, they are grouped together and labeled as Clusters. Finally, there are often cases of specialized job types that are too dissimilar to be grouped into any cluster. These fairly unique groups are labeled Independent Job Types.

Based on task similarity, the best division of actual jobs performed in the 601X4, 602X0, and 602X1 career ladders is illustrated in Figure 2. The seven clusters and their related job types which constitute the career ladder structure are listed below.

- I. Freight Shipping and Receiving Personnel (AFS 602X1)
(GRP090, N=445)
 - a. Freight Shippers (GRP212, N=152)
 - b. Shipping and Receiving NCOIC's (GRP418, N=57)
 - c. Freight Receivers (GRP302, N=92)
 - d. Inbound Documentation Clerks (GRP293, N=25)
 - e. Loaders (GRP243, N=24)
 - f. Shipment Planners (GRP129, N=21)
- II. Crating and Packaging Personnel (AFS 601X4)
(GRP075, N=324)
 - a. Crating and Packaging NCOIC's (GRP327, N=75)
 - b. Craters and Packers (GRP233, N=221)

FIGURE 2

PACKAGING, PASSENGER AND HOUSEHOLD GOODS, AND FREIGHT TRAFFIC CAREER LADDER STRUCTURE

AFS 601X4/602X0/602X1

- III. Supervisory and Management Personnel (GRP040, N=294)
 - a. NCOIC's, Traffic Management Office (GRP286, N=100)
 - b. Personal Property NCOIC's (GRP624, N=29)
 - c. Passenger Movement and Personal Property NCOIC's (GRP700, N=20)
 - d. Passenger Movement NCOIC's (GRP374, N=21)
 - e. OJT Supervisors (GRP187, N=31)
 - f. Wing and NAF Traffic Management Supervisors (GRP152, N=13)
- IV. Customs and Quality Control Inspectors (AFS 602X0) (GRP055, N=99)
 - a. Customs Inspectors (GRP193, N=25)
 - b. Personal Property Quality Control Inspectors (GRP160, N=55)
- V. Facility Maintainers (GRP066, N=94)
- VI. Passenger and Personal Property Personnel (AFS 602X0) (GRP048, N=342)
 - a. Passenger and Personal Property Clerks (GRP172, N=103)
 - b. Inbound Personal Property Clerks (GRP105, N=94)
 - c. Outbound Personal Property Clerks (GRP104, N=63)
 - d. Outbound Personal Property Counselors (GRP115, N=59)
- VII. Passenger Travel Clerks (AFS 602X0) (GRP271, N=102)

Ninety-four percent of the respondents in this sample perform jobs that are generally equivalent to those identified in this analysis. The remaining six percent of the sample perform unique or one-of-a-kind jobs that are not directly associated with the major groupings of this career field and are not reportable entities.

Group Descriptions

Brief descriptions of the major groups which encompass the important functions of the Packaging, Passenger and Household Goods, and Freight Traffic career ladders are given below. A detailed description of representative duties, distinguishing tasks, and common background characteristics for each group is presented in Appendix A. Discussions within this section relating to the difficulty of a particular job group refer to an index which reflects the relative difficulty of one job as compared to other jobs identified in the analysis. The average job difficulty index is 13.00. A detailed discussion of the job difficulty index can be found in the ANALYSIS OF TASK DIFFICULTY section of this report.

I. Freight Shipping and Receiving Personnel. This group comprises 25 percent of the total sample and is the largest cluster in the analysis. Ninety-four percent of the members hold DAFSC 602X1, with 72 percent holding the 5-skill level. These individuals spend 36 percent of their time loading, unloading, receiving, routing, and planning freight shipments. An additional 13 percent of their time is spent maintaining facilities, equipment, and work areas. In performing their duties, the members of this group use numerous kinds of equipment such as pallets, hydraulic pallet jacks, and skids. In addition, they operate various types of forklifts. The job performed by this group is slightly above average in difficulty, although job types within the group vary from simple to very difficult. Sixty percent of this group find their job interesting. Talents are perceived as being utilized fairly well or better by 69 percent of the group members and training by 71 percent.

Three large job types and three smaller job types were identified within this cluster. Freight shippers (GRP212) and freight receivers (GRP302) both load or unload different kinds of freight plus inspect incoming cargo and sign for shipments. In addition, the freight shippers select modes of transportation for shipments, route freight by these modes of transportation, and perform other tasks related to the planning of freight shipments. Freight receivers, on the other hand, perform very little planning or routing tasks; the large majority of their time is spent on freight receiving tasks, operating forklifts, and loading or unloading cargo. Shipping and receiving NCOIC's (GRP418) perform both technical and supervisory duties. Technical tasks performed by this job type are basically the same as those of other members in the cluster including signing for shipments, routing freight shipments, and loading or unloading freight. Supervisory duties consist of directing and implementing, planning and organizing, and evaluating unit operations.

The remaining three smaller job types within this cluster result from specialization within certain duty areas. Loaders (GRP243) operate forklifts loading and unloading freight; shipment planners (GRP129)

spend 42 percent of their time routing and planning shipments; and inbound documentation clerks (GRP293) receive shipments perform administrative tasks such as typing and maintaining government bill of lading forms.

II. Crating and Packaging Personnel. The 324 members of this group spend 50 percent of their time packing and crating. Sixty percent of the members are in their first enlistment and the group is comprised mainly of members holding AFSC 601X4. Composed of 66 percent 5-skill level personnel, this group repairs, restores, or fabricates boxes, crates, and containers in addition to labeling, weighing, consolidating, and crating cargo. In the performance of their duties, the members use such equipment as portable electric drills, power saws, and various kinds of scales. In addition, approximately 50 percent of the individuals operate forklifts. Only 49 percent of the members find their job interesting, the lowest percentage of all the clusters. Fifty-eight percent feel that their talents are fairly well utilized and 73 percent perceive their training as being utilized fairly well or better.

Two basic jobs were identified within the group. Crating and packaging NCOIC's (GRP327) perform both technical and supervisory duties, while craters and packers (GRP233) spend the majority of their time on the tasks and duties described above.

III. Supervisory and Management Personnel. Sixteen percent of the survey respondents were found to group together in this cluster. The members of this group are almost exclusively 5-, 7-, or 9-skill level personnel. They have an average grade of 5.9, an average of 13.9 years time in service, supervise an average of six airmen, and spend over 52 percent of their time performing supervisory and managerial duties. Compared to all other jobs identified in the career ladder structure analysis, these personnel perform the most difficult job. The job performed by these members consists primarily of evaluating performance and work of section personnel, counseling, assigning personnel to specific work tasks, interpreting policies and directives for subordinates, and drafting reports and correspondence. Differences between job types within this cluster exist mainly in level of supervision or management. The NCOIC's traffic management office (GRP286) and wing and NAF traffic management supervisors (GRP152) spend most of their time in duties relating to evaluating unit operations, planning, and organizing. Personal property NCOIC's (GRP624), passenger movement and personal property NCOIC's (GRP700), and passenger movement NCOIC's (GRP374) spend time in technical duties such as performing personal property shipment and receipt functions and supervisory duties relating to directing and implementing. Eighty-five percent or more of the individuals in this cluster feel that their talents and training are being used fairly well or better and 80 percent find their job interesting.

IV. Customs and Quality Control Inspectors. This group of 99 individuals constitutes five percent of the total sample and is composed primarily of individuals holding DAISC 60250. Personnel within this group spend approximately 63 percent of their time evaluating and preparing documentation and forms in addition to performing unit administration functions and personal property shipment and receipt functions. As compared to the freight shipping and receiving personnel (I above) and the crating and packaging personnel (II above), members of this group use very little equipment. Overall job difficulty for this group is slightly below average. Sixty-six percent of the group members find their job interesting, 64 percent feel that their talents are well utilized, and 72 percent perceive their training as being used fairly well or better.

Two basic jobs were identified within this group, custom inspectors (GRP193) and personal property quality control inspectors (GRP160). Both groups spend a large amount of their time inspecting personal property shipments. The two groups differ in that the customs inspectors spend a large part of their time preparing customs forms whereas personal property quality control inspectors prepare personal property loss and damage reports and evaluate carrier services.

V. Facility Maintainers. The 94 members of this group spend 39 percent of their time in one duty area - maintaining facilities, equipment, and work areas. The group is composed mainly of lower grade 3- and 5-skill level personnel who are in their first enlistment. Their job consists of cleaning and maintaining immediate work areas and facilities, mopping floors, and removing trash. Some time is spent on administrative tasks such as typing, preparing government bills of lading, and maintaining documents. These administrative duties, however, are performed by a small percentage of group members. The group as a whole performs an average of 18 tasks and their job is generally not difficult. Only fifty-five percent of the members find their job interesting, 50 percent feel that their talents are well utilized, and 59 percent perceive their training as being used fairly well or better.

VI. Passenger and Personal Property Personnel. Of the 342 members of this cluster, 72 percent hold a DAFSC of 60250. Thirty-six percent of their time is spent performing personal property shipment and receipt functions and an additional 25 percent of their time is spent on administrative duties, documentation, and records. Very few individuals use any type of equipment other than typewriters nor do they operate vehicles to any great extent. Overall difficulty of their job is about average, with some variation between job type groups within the cluster. Seventy percent of the members find their job interesting and over 70 percent feel that their training and talents are well utilized.

Within this cluster, four basic job types were identified. All four job types perform basically the same administrative tasks such as typing forms and maintaining shipping records and documents. Passenger and personal property clerks (GRP172) perform duties relating to passenger movement and the shipment of personal property. Tasks for this group include scheduling pickup and delivery of household goods, counseling personnel on the shipment of personal property, preparing travel documents, and issuing transportation requests. The remaining three job types are more specialized and perform mainly personal property shipment tasks. Inbound personal property clerks (GRP105) spend the majority of their time tracing the movement of personal property shipments, scheduling delivery of household goods, and coordinating incoming personal property shipments. The outbound personal property clerks (GRP104) prepare and maintain government bills of lading, maintain shipping documents and records, and also spend some time reviewing personal property shipment and storage applications. Outbound personal property counselors (GRP115), on the other hand, spend very little time on general administrative duties. The majority of their time is devoted to counseling personnel on personal property shipments, arranging for unaccompanied baggage shipments, and preparing or reviewing storage or shipment application forms.

VII. Passenger Travel Clerks. Eighty-six percent of the 102 members of this group hold an AFSC of 602X0. They spend 58 percent of their time performing passenger movement functions. An average of 38 tasks are performed including such items as requesting and issuing MAC transportation authorizations and transportation requests, preparing travel itineraries, making travel reservations, counseling personnel on transportation entitlements, and determining modes of transportation for passengers. Job difficulty for this group is about average when compared to all other groups, and the members, like those in the previous cluster, do not use any type of specific equipment in the performance of their duties. Eighty-one percent of the members find their job interesting, the highest percentage of any of the major job groups. Talents are perceived as being fairly well utilized by 80 percent of the members and training by 90 percent.

Summary

Results of the analysis of the data reflected distinct differences between the three career ladders. The number of jobs performed by 602X1 and 601X4 respondents is small compared to the number of jobs performed by 602X0 respondents. This indicates that the scope of jobs performed by 602X1 and 601X4 personnel is narrower than that of 602X0 personnel. Further, there was little overlap between any of the jobs performed by one career ladder group when compared to the jobs performed by any other career ladder group. The obvious exception being management and supervisory jobs where all AFS's are represented.

ANALYSIS OF DAFSC GROUPS

In conjunction with examining the job structure of the career ladder, DAFSC groups are also examined as part of each occupational analysis. This analysis allows for the identification of skill level differences and for the comparison of similar skill level personnel across the various career ladders. Furthermore, this data by DAFSC groups aid in the analysis of career field documents, such as the AFR 39-1 specialty job descriptions.

Table 4 reflects the relative percent time spent on duties by members of the various skill level groups. The percentage of members performing the major jobs identified in the CAREER LADDER STRUCTURE section are presented by DAFSC groups in Table 5. In addition, Appendix B contains tables that present tasks which distinguish between job performance of personnel in the various skill levels within each career ladder plus "representative tasks performed" tables for DAFSC 60250 and 60251 personnel. Similarities and differences between the skill levels within each ladder plus comparisons between the 601X4, 602X0, and 602X1 AFSs are discussed below.

Packaging Career Ladder (601X4)

The 3- and 5-skill level members in this ladder spend over 50 percent of their time in one duty - packing and crating. As shown in Table 5, 83 percent of these members grouped together in the crating and packaging personnel cluster (GRP075). Duties and tasks of these individuals are technically oriented. Specific tasks include such items as identifying and marking shipments, packing or crating various types of freight shipments, and assembling boxes, crates, or containers. Differences between the 3- and 5-skill level members are small, with both skill levels performing basically the same overall job (See Table I in Appendix B).

At the 7-skill level, only 26 percent of the members' total job time is spent performing tasks related specifically to packaging and crating. Forty-seven percent of their time is spent performing supervisory and management duties. Their remaining job time is divided among the operation of vehicles, unit administration duties, and tasks related to the maintaining of facilities and work areas. In relation to the career ladder structure, 59 percent of DAFSC 60174 individuals grouped together in the crating and packaging personnel cluster (GRP075). Another 22 percent of the 7-skill level members clustered together in the supervisory and management personnel cluster (GRP040). In general, the job of 7-skill level members in the 601X4 AFS involves the performance of technical and supervisory tasks such as packing or crating freight shipments, interpreting transportation packaging orders, and assigning, supervising and counseling personnel. Differences

between the job of the 5- and 7-skill level members occur mainly on the supervisory duties. The 7-skill levels spend more time on supervisory duties while 5-skill levels are performing more technical tasks (See Table II in Appendix B).

Passenger And Household Goods Specialist (60250)

DAFSC 60250 members are very diversified in the jobs that they perform. Sixty-seven percent of their job time is spread across five duty areas - evaluating unit operations (Duty C), performing unit administration and supply functions (Duty E), preparing documentation and records (Duty F), performing personal property shipment and receipt functions (Duty N), and performing passenger movement functions (Duty O). As described in the CAREER LADDER STRUCTURE section, 47 percent of DAFSC 60250 members grouped together in the passenger and personal property personnel cluster (GRP048). However, as shown in Table 5, an additional 38 percent of these members were distributed between three other major job groups. In addition, there are only 15 tasks in the inventory which are performed by 35 percent or more of DAFSC 60250 members (See Table VII in Appendix B). Generally, DAFSC 60250 members perform a technically oriented job. Their job encompasses a wide variety of tasks which include inspecting shipments, tracing the movement of household goods, scheduling delivery of personal property shipments, typing various types of forms, and making travel reservations.

Freight Traffic Specialists (60251)

The 5-skill level members in the 602X1 ladder spend very little time in any one specific duty area. Table 4 shows that the majority of their job time is spread across tasks in 12 duty areas (Duties B, C, E, F, G, H, I, K, L, M, P and Q). However, DAFSC 60251 members do not perform as many different jobs as do DAFSC 60250 members. Seventy-two percent of all DAFSC 60251 survey respondents grouped together in the freight shipping and receiving personnel cluster (GRP090). Additionally, there are a number of tasks which are performed by 50 percent or more of all DAFSC 60251 individuals (See Table VIII in Appendix B). Like other 5-skill level respondents in the survey, the DAFSC 60251 individuals job is technical in nature. The job that 5-skill level members perform in this AFSC encompasses tasks like loading or unloading freight shipments, inspecting incoming cargo, and segregating and consolidating shipments.

Traffic Management Supervisor (60271)

The 7-skill level members in the 602X1 ladder spend 51 percent of their time on supervisory and management duties. Table 5 shows that 57 percent of DAFSC 60271 respondents grouped together in the supervisory and management personnel job group (GRP040). In addition, 19 percent clustered together in the freight shipping and receiving personnel cluster (GRP090), 10 percent in the passenger and personal property cluster (GRP048) and the remaining 14 percent is spread among other job groups. In general, these personnel primarily perform such tasks as evaluating performance of airmen, preparing reports, and assigning personnel to specific work tasks.

The basic difference between DAFSC 60271 and 5-skill level individuals in AFSSs 602X0 and 602X1 is that of supervisory and management duties. The 7-skill level members perform some technical and administrative duties that the 5-skill level individual also performs but the 7-skill level spends less job time on these duties. Conversely, a large percentage of the 7-skill level job time is spent on supervisory duties (See Tables III and IV in Appendix B).

Traffic Management Superintendent (60291)

At the 9-skill level, supervisory and management duties consume 76 percent of the total job time. This is considerably more time spent in these duties than for either DAFSC 60174 or DAFSC 60271 members. These members primarily perform such tasks as working manning problems, conducting periodic inspections, planning transportation requirements, developing evaluation programs, and reviewing or indorsing APRs or personnel actions. The 7-skill level members, however, perform some technical tasks and duties which the DAFSC 60291 members do not such as performing personal property shipment and receipt tasks (DAFSC 60271) and packing and crating tasks (DAFSC 60174).

Comparisons Between The 601X4, 602X0 And 602X1 AFSSs

As indicated in the CAREER LADDER STRUCTURE section, 601X4, 602X0, and 602X1 personnel perform very different job functions. This difference is further exemplified in that only 12 of the 446 survey tasks are performed by 20 percent or more of personnel in all three AFSSs. As shown in Table 6, of the 12 common tasks, eight pertain to maintaining facilities, equipment and work areas (Duty Q). The remaining four tasks include such general functions as operating general purpose vehicles, reproducing material, and typing labels and forms. Table 7 further exemplifies the differences between the three AFSSs. Generally, those tasks performed by a high percentage of individuals in one of the AFSSs is performed by a relatively small percentage of individuals in the other two AFSSs. One further distinction exists between the three AFSSs

which is supported by the career ladder structure analysis. The 601X4 AFS is fairly homogeneous in that a high percentage of members perform the same tasks. Almost all 601X4 personnel grouped together into one job group. In contrast, the 602X0 AFS is very heterogeneous; very few 602X0 personnel perform the same tasks. This was supported by the job grouping in the CAREER LADDER STRUCTURE section in which 602X0 members were distributed across four clusters. In general, the technical portion of the job performed by members in AFS 601X4, 602X0, and 602X1 are very different.

ANALYSIS OF AFMS GROUPS

Utilization patterns for survey respondents in various AFMS groups were reviewed to determine differences in job performance requirements. No major deviations from the expected utilization patterns were found. More senior personnel performed jobs which were more supervisory in nature than those with less time in service. For individuals with less time in service, more time is spent on technically oriented duties. This trend holds for each of the three career ladders surveyed.

First enlistment personnel in each of the three career ladders performed jobs similar to members of other AFMS groups within the career ladder. In relation to the career ladder structure, the facility maintainers job group (GRP066) was the only cluster consisting of a high percentage (78 percent) of first enlistment personnel. However, this can be misleading since only nine percent of the total first enlistment sample appeared in this major job group. The large majority of first enlistment members were distributed throughout other major job groups identified in the analysis such as passenger travel clerks (GRP271), crating and packaging personnel (GRP075), and freight shipping and receiving personnel (GRP090).

COMPARISON OF AFR 39-1 SPECIALTY DESCRIPTIONS TO SURVEY DATA

In conjunction with the analysis of DAFSC groups, a comparison was made between the DAFSC job descriptions compiled from survey data and the specialty descriptions in AFR 39-1 for all DAFSCs in the 601X4, 602X0, and 602X1 career ladders.

601X4 Specialty Descriptions

In general, the AFR 39-1 specialty descriptions for AFS 601X4 personnel give a thorough and accurate picture of the jobs and tasks being performed by 3-, 5-, and 7-skill level personnel. One minor exception is the exclusion in the 60154 specialty description of unloading and loading duties. Table 8 contains a listing of loading and unloading tasks which DAFSC 60154 personnel perform. Consideration should be given to including these tasks in the specialty descriptions during the next AFR 39-1 review.

60230/50 Specialty Description

The AFR 39-1 specialty description for DAFSCs 60230/50 gives an accurate picture of the jobs and tasks performed by passenger and household goods specialists. All duties and responsibilities which these personnel were found to perform in the DAFSC group analysis section were thoroughly described.

60231/51 Specialty Description

Two minor omissions were noted in the AFR 39-1 specialty description for DAFSC 60231/51 members. The first is the exclusion of freight shipment loading and unloading tasks. Table 8 lists these tasks and gives the percent of DAFSC 60251 members which perform each task. The second omission was the operation of certain equipment. Table 9 lists the equipment used by 20 percent or more DAFSC 60251 personnel. Both loading and unloading functions and the equipment used by DAFSC 60251 are not listed in the specialty description for freight traffic specialists and should be considered for inclusion in the next AFS 60251 specialty description revision.

60271 Specialty Description

Generally, the specialty description for traffic management supervisors gives an accurate picture of the duties and jobs DAFSC 60271 members are performing. One minor exclusion, however, was noted. The specialty description does not include the operation of materials handling equipment. However, approximately 20 percent of the DAFSC

60271 survey respondents indicated that they operated various types of forklifts. Consideration should be given to reviewing this area for possible inclusion in the next revision of AFR 39-1.

60291 Specialty Description

The AFS 60291 specialty description gives an accurate picture of the duties and responsibilities of the 9-skill level superintendent. As reflected in the specialty description, the 9-skill level respondent is an administrator, planner, and manager.

ANALYSIS OF TASK DIFFICULTY

From a listing of airmen identified for this job survey, 119 members in the 7- and 9-skill levels from various commands and locations were selected to rate task difficulty. Tasks were rated on a nine-point scale from extremely low to extremely high difficulty, with difficulty defined as the length of time it takes an average airman to learn to do the task. Interrater reliability (as assessed through components of variance of standard group means) for the 42 raters who returned booklets was .92. Ratings were adjusted so that tasks of average difficulty have ratings of 5.00.

A listing of representative tasks rated above average in difficulty is given in Table 10. Generally, the tasks rated most difficult are those relating to the planning and scheduling of shipments plus passenger movement and personal property shipment functions. Supervisory tasks were also rated above average in difficulty.

Table 11 provides a listing of representative tasks rated below average in difficulty. These tasks are generally related to packing and crating plus shipment loading, unloading, and receipt functions. In addition, tasks related to unit administration and supply functions, vehicle operation, and the maintenance of facilities, equipment, and work areas are also rated as below average in difficulty.

Job Difficulty Index (JDI)

Having computed the task difficulty index for each inventory item, it is possible to also compute the Job Difficulty Index (JDI) for groups identified in the survey analysis. This index provides a relative measure of which jobs, when compared to other jobs identified, are more or less difficult. The JDI is based on an equation using number of tasks performed and the average difficulty per unit time spent. The indices are adjusted so that the average job difficulty index is 13.00. The JDI was computed for the job groups identified in the career ladder structure and several major subgroups (See Table 12).

Overall, supervisory and management jobs were rated as relatively more difficult than those jobs performed by any other job groups. In particular, supervisory and management cluster personnel and the shipping and receiving NCOIC's, and crating and packaging NCOIC's job types have JDI's of 17.4, 22.5, and 18.7, respectively. These personnel generally perform tasks with high difficulty indices, such as counseling personnel, and planning and evaluating various programs. Freight shippers and passenger and personal property clerks are the only non-supervisory job groups which have a job difficulty rating above average. The freight shippers' job includes planning tasks such as selecting modes of transportation for freight and determining means for transporting explosives which have high difficulty indices. Passenger and personal property clerks also perform some tasks with high

difficulty indexes, such as tracing the movement of personal property, reviewing travel orders for accuracy, and counseling personnel on personal property shipments. Facility maintainers and loaders, on the other hand, had JDIs of only 5.5 and 6.9, respectively. These two groups generally perform tasks with low difficulty ratings such as operating forklifts, loading and unloading freight, and cleaning work areas.

COMPARISON OF CURRENT SURVEY TO PREVIOUS SURVEY

The results of this survey were compared to those of Occupational Survey Report, AFPT 90-601-096, 90-602-089, and 90-602-090, dated October 1973. Both surveys found little overlap between the jobs performed by personnel with 601X4, 602X0, and 602X1 DAFSSs. The tasks performed by members in each of the various skill level groups was found to have changed very little since the 1973 study. The career ladder structure analysis of both the 1973 and the current study supported the existence of a separate ladder for each of the three AFSC's involved.

DISCUSSION

Based on actual task similarity, the groupings that emerged from this analysis appear to support the existing classification structure for AFSs 601X4, 602X0, and 602X1. Results of both the career ladder structure and the DAFSC group analysis indicate that there is a clear distinction between the technical jobs performed by members of each of the three career ladders. Packaging personnel, AFS 601X4, are very homogeneous in the tasks which they perform. The majority of DAFSC 601X4 members group together in the career ladder structure analysis and perform tasks in one primary duty area. Tasks performed by this group are not performed to any great extent by members of other job groups.

The 602X1 personnel also clustered together into one job group with certain tasks being unique to these members. However, unlike the 601X4 personnel, the 602X1 members' job encompasses a wide variety of different duty areas ranging from directing and implementing to loading and unloading shipments.

AFS 602X0 personnel are the most diversified of the three ladders surveyed. In addition to their job time being spread over five duty areas, the majority of 602X0 members were distributed between four major job groups such as passenger travel clerks and passenger and personal property personnel.

Contrary to the clear technical job distinctions found between the three career ladders, the managerial and supervisory job functions performed are common to personnel from each of the AFSs.

The level of difficulty of the jobs performed differs noticeably between the major job groups. Jobs such as those performed by freight shipping and receiving personnel were rated above average in difficulty. Other jobs were rated below average in difficulty such as facility maintainers. Generally, management and supervisory jobs are above average in difficulty whereas technical jobs as a whole do not appear as difficult. This pattern appears across all three career ladders.

Overall, the 601X4, 602X0, and 602X1 career ladders have not changed substantially since the last survey analysis. These specialties appear to be stable and to be functioning as specified by the existing classification structure (AFR 39-1).
