1.0 INTRODUCTION

The Geological Data Center (GDC) coordinates underway data collection; processes the digital navigation, depth and magnetics; and produces cruise reports and computer generated plots for archiving and distribution. The data center also archives, microfilms, and indexes seismic profiler (airgun), echosounder and magnetometer records. (Gravity data are archived and processed separately under the direction of LeRoy M. Dorman.)

(cont'd P 1473A)
The report on the digitized depth and magnetic data includes a cruise leg index; track charts labeled with the cruise identifiers; descriptions of the standard forms of output; and information about formats and obtaining digital data. It is essentially an updated version of the SIO Reference Report 76-4 issued in 1976.

Between 1976 when the last general index report was issued and December 1977, the cutoff date for this report, 33 legs of current Scripps cruises and 13 legs of Glomar Challenger (Deepsea Drilling Project) have been processed by the data center. Navigation, but no depth and magnetics, has also been processed for the early legs 4 through 12 of the Challenger. (Navigation = 193,734 miles; magnetics = 131,515 miles; and depth = 131,862 miles.)

The total amounts in the SIO digital underway data bank are *A* now:

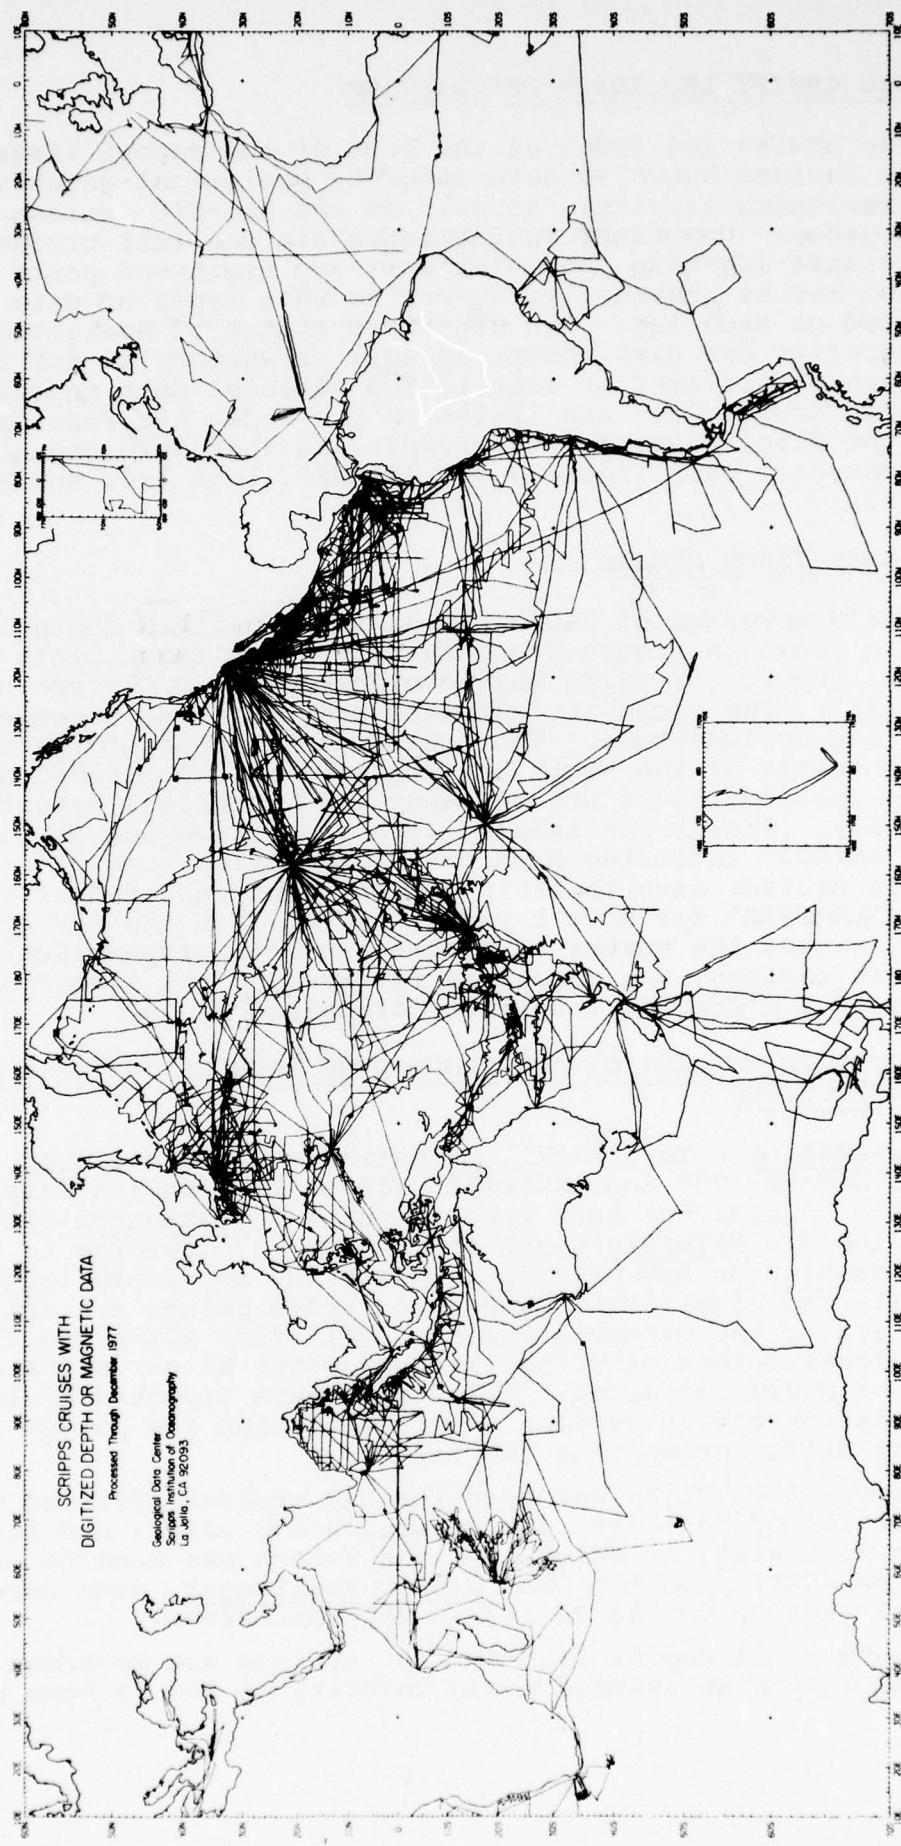

Navigation = 1,238,634 miles
Magnetics = 1,125,415 miles
Depth = 1,063,262 miles

2.0 DATA COVERAGE

2.1 SIO Data - A world track chart of Scripps cruises with digitized depth or magnetic data is shown in Figure 1. Navigation and magnetics have been digitized for essentially all the SIO cruises which collected magnetic data from 1960 through 1977. Depths are also digitized for all cruises except for some of the older cruises prior to the mid-1960's. The Deep Sea Drilling Project (DSDP) cruises of the Glomar Challenger are complete between legs 15 and 56. Depth and magnetics have been done for portions of DSDP legs 7, 8 and 9; magnetics for leg 12; and depth and magnetics provided by Lamont Geological Observatory for legs 13 and 14. Digital navigation is also available for DSDP legs 4 through 12.

2.2 Non-SIO Data - Data from a dozen cruise legs collected on non-SIO ships but processed by our group are included in the index and incorporated in the SIO data base. In addition, the data center is archiving an increasing volume of digitized data collected by other institutions in response to requests made by SIO staff for data in specific areas. Most of these data are in the merge format of the National Geophysical and Solar-Terrestrial Data Center (Boulder, Colorado) (the NGDC "merge-merge" format). These data are not indexed in this report, but individual track plots of each cruise or data set at a scale of 0.16 inches/degree longitude (the data center's "world" scale) and a world-wide composite index are available for inspection at the data center.

Figure 1

3.0 SIO CRUISE LEG INDEX DESCRIPTION

The cruise leg index at the back of the report lists all Scripps cruises known to have underway geological-geophysical data (including gravity), as well as the non-SIO cruises digitized by our group. Contained in the index are the full cruise name and ship; cruise-leg-ship abbreviations; and begin-end ports and dates. A symbol key is provided to determine what types of data were collected on each leg. The digitized status of navigation, depth and magnetics are also shown, as well as whether or not the data have been microfilmed or sent to the national data center. The following cruise legs are listed in the index but were processed after the cutoff date for the report and therefore are not on the track charts: DSDP, legs 57-59; INDOMED, legs 1-6; and GUAYMAS, legs 1-3.

4.0 INDEX TRACK CHARTS

World coverage of SIO cruises with digitized depth or magnetic data are shown in Figure 1 and on four index track plots accompanying this report (or which may be ordered from GDC - see back page of report). The plots are Mercator projection at a scale of 0.312 inches/degree longitude. The scale matches that of the two topographic charts of the North and South Pacific published by the Scripps Institution of Oceanography (IMR Technical Reports TR-17 and TR-56). Tracks are labeled with the cruise-leg abbreviation (e.g. "AMPHO3" indicates Amphitrite Expedition, Leg 3). A few two-ship cruises have the ship abbreviation included as well (e.g. "NOVAO7AR" for Nova Expedition, Leg 7 on the R/V Argo). In several areas, the number of tracks prevents proper identification. For these regions, the reader is referred to the larger plots at a scale of 1.2"/degree longitude maintained by GDC.

5.0 NOTES ON COLLECTION AND PROCESSING METHODS, UNITS & APPLIED CORRECTIONS

5.1 Navigation - In general, celestial control was used on all cruises before 1968 and is still used on the smaller ships. Satellite control has been used on the R/V Washington since 1968 and on the R/V Melville since it was put into service in 1970. On the Washington and Melville, course and speed are logged automatically and significant course and speed points are extracted from a log of two minute averages. All other ships use the conventional method of establishing a point at an indicated change of course or speed. All tracks were smoothed by linear interpolation and correction of drift between fix pairs, assuming constant drift between the two fixes.

5.2 Time - Local time was used for all cruises prior to the introduction of satellite navigation on SIO ships, and for several cruises following, at which time the switch was made to Greenwich Mean Time (GMT). On the DSDP Glomar Challenger, data were recorded in local time up to leg 22 and in GMT thereafter.

5.3 Depth - All depths from Scripps cruises are recorded in units of fathoms with an assumed sound velocity of 800 fathoms per second.

Prior to leg 45 of Glomar Challenger (DSDP), depths were recorded in the same units. From leg 45 to the present, depths are in meters with an assumed velocity of 1500 m/second. No Matthews Table, tidal or transducer depth corrections have been applied (transducer depth on Scripps ships ranges from 2 to 4 fathoms). The digitizing interval ranges between 1 and 6 minutes of ship time. Prior to 1967, the interval was 3 or 6 minutes and has usually been 5 minutes since then.

5.4 Magnetics - All magnetic values are in units of gamma with no corrections for diurnal variations. Magnetic anomalies were calculated by removing the regional field using IGRF 1965.0 for cruises processed prior to mid-1977 (through INDOPAC expedition and DSDP leg 53). IGRF 1975.0 has been used subsequently. For data stored in the CDC 3600 computer system, the field is calculated at points no farther apart than 500 miles along the track or when the course changes by 50 degrees, and a linear interpolation applied to the points between. Before 1967, most magnetics were digitized at 6 minute intervals. Since then, the digitizing interval has been 5 minutes to match the depth interval. There has, however, been an intermittent and recurring problem of digitizing time offset from the even 5 minutes for magnetics logged through the automatic logging systems on the two ships, Washington and Melville (e.g. values were logged at 02, 07, 12 minutes, etc., instead of 00, 05, 10). This time offset should be taken into account by those wishing to merge the magnetics with the depths.

6.0 DATA DISTRIBUTION POLICY

The following is a summary of the data distribution policy established by the Geologic Data Center Steering Committee. Questions regarding these policies should be directed to the committee chairman, who may be contacted through the data center.

Underway data, except navigation, may be declared proprietary by a cruise leg chief scientist who may restrict its distribution for one year. After one year, the data will normally become available to others at Scripps, and at the end of two years will be sent to the national data center to be made available to anyone. Data not declared proprietary will be held for institution use for a total of two years. These are general guidelines only, and the steering committee considers exceptions on a case-by-case basis. Users who request data that is on "hold" will be referred to the steering committee or chief scientist by the data center staff, who maintain lists of current "hold" cruises.

Data from Glomar Challenger is declared proprietary by the Deep Sea Drilling Project for 12 months after each leg and is then sent to the national data center. Challenger records and plots are archived by DSDP (Barbara Long, Science Information Facility, Deep Sea Drilling Project, Scripps Institution of Oceanography, La Jolla, CA. 92093. Phone: (714) 452-3506).

Non-Scripps users requesting digital data will be referred to

the national data center if the data in question has previously been sent to that facility. (Contact Marine Geology and Geophysics Branch, National Geophysical and Solar-Terrestrial Data Center, Code D621, Boulder, CO. 80302. Phone: (303) 499-1000, ext. 6338).

7.0 STANDARD FORMS OF OUTPUT - PLOTS AND LISTINGS

Beginning in January 1972, the forms of output given below have been generated for each leg of major cruises on the two ships having shipboard computers (R/V Washington and Melville) and for geological/geophysical expeditions on smaller vessels. These data are normally processed within one or two months after the end of each cruise leg.

7.1 Standard Reports, Plotted Output and Listings - For information on the availability and costs of reproduction of data in the following forms, contact S.M. Smith, Curator, Geological Data Center, (A-023), Scripps Institution of Oceanography, La Jolla, California 92093 (Telephone (714) 452-2752).

- A) "Informal Cruise Report and Index of Navigation, Depth, and Subbottom Profile Data", which contains:
 - a) Index Chart - gives track of cruise leg and boundaries of depth compilation plots (see below).
 - b) Track Charts - annotated with dates and hour ticks (scale = 0.312"/degree longitude).
 - c) Profiles - depth and magnetic anomaly vs. distance. Dates and positions of major course changes (greater than 30 degrees) are annotated. Sections of track having subbottom profile (airgun) records have a solid black line along the bottom of the profile.
- B) Navigation Plots - Annotated with date and hour ticks. Scale is 1.2"/degree longitude.
- C) Navigation listing of times and positions of course and speed changes, fixes and drift velocity.
- D) Depth compilation plots - depths printed along the track in fathoms (assumed sound velocity of 800 fm./sec.) at approximately 1 mile spacing, plotted at 4"/degree with standard Defence Mapping Agency BC series boundaries. Depths from leg 45 and later of DSDP Challenger are plotted in meters (1500 m/sec. velocity).
- E) Plots of magnetic anomaly profiles along track - map scale = 1.2"/degree; anomaly scale between 15 N and 15 S latitude = 500 gamma/inch; anomaly scale north of 15 N and south of 15 S = 1000 gamma/inch, from values retrieved at approximately 1 mile spacing and regional field removed using the IGRF 1965.0 or IGRF 1975.0 (see section 5.4).

7.2 Special Plots - Mercator projection plots can be generated with chart scales and parameters for printing or profiling magnetic and

depth values different from those provided as standard output. A document, "User's Guide for Depth, Magnetic and Track Plotting Programs for the CDC 3600 Computer", which describes the detailed input specifications, is available from the GDC.

Track plots and compilation plots (depth, magnetic or gravity values printed, not profiled, along the track) can also be made from the non-SIO data in the NGDC "merge-merge" format.

7.3 S.I.O. Sample Index - The SIO Sample Index is a listing that contains the beginning and end times and positions of all underway records and other geological, biological and physical oceanographic samples collected on SIO cruises. The index contains no results, but a disposition code indicates who to contact for further information about a particular item. Contact the Geological Data Center for details.

8.0 DIGITAL DATA FORMATS

The tape format used for storing depth and magnetic data in the SIO underway data base is highly machine and installation dependent and was designed specifically for optimum storage and retrieval on the CDC 3600 computer located at the UCSD Computer Center. Over the past few years, several alternative formats have been devised to transmit data to government agencies and other institutions. Because it is not feasible to re-process all the data into a single exchange format, a given cruise may exist in one or more of the exchange formats, depending on the age of the cruise and when it was processed. These exchange formats are outlined below and described in the appendices. Contact GDC about which formats are available for a specific cruise.

8.1 Card Formats - in time series (not recommended for large volume data transfers).

8.1.1 Cruises prior to 1969 are in miscellaneous x-y digitizer formats.

8.1.2 Post-1969 Cruises

"SIO2 Navigation Format (see Appendix I)

"SIO2 Depth and Magnetics" Format (see Appendix II).

8.2 Tape Formats

8.2.1 Time Series - available for all cruises processed through 1975.

8.2.1.1 "Time in Accumulated minutes vs. Navigation" Format (see Appendix III).

8.2.1.2 "Time in Accumulated minutes vs. Depth or Magnetic Total Field" (see Appendix IV).

8.2.2 "NAS Navigation" Format - the standard National Geophysical Data Center format, with time in hour, minute, day, month and year. Available for cruises after 1972 (see Appendix V).

8.2.3 Merge Formats - time and position vs. depth and/or magnetics.

8.2.3.1 "NGDC Merge-Merge" Format. The standard NGDC merge format, combining time, position, course, speed, depth, magnetics and gravity. Available for cruises after 1972 (see Appendix VI).

8.2.3.2 "SIO Modified Merge" Format. Time, position and one of three variables of depth, magnetic total field or magnetic anomaly. Developed to send SIO "historical" (pre-1973) data to NGDC. Will not be maintained for post-1972 data (see Appendix VII).

Note: As of April 1978, the new exchange format sponsored by NGDC, identified as "MGD77" has not been implemented at Scripps.

9.0 ACKNOWLEDGMENTS

As in past years, we wish to thank the Shipboard Computer Group, headed by J.L. Abbott, for help in acquiring the navigation and magnetic data at sea. The Resident Marine Technician Group, under J.L. Coatsworth, coordinated the watchstanding and record keeping at sea with the chief scientists and saw that the data reached SIO safely at the end of each cruise leg. We also thank the chief scientists, many of whom had little direct interest in the underway data, and the many members of the scientific parties for keypunching the depths.

The operations of the Geological Data Center are funded principally by the Scripps Industrial Associates, a group of companies that provides continuing support for geological research. Support was also received from the Office of Naval Research for general data management (contract N-00014-75-C-0152) and through day rate charges for data center services from a number of ONR and National Science Foundation grants.

SIO2 NAVIGATION FORMAT

NAVIGATION TIME SERIES - GENERAL INFORMATION

1. FORMAT = SIO2(Scripps Designation)
2. TIME BASE = HOUR, MINUTE, MONTH, DAY, YEAR (GMT)
3. SIGN CONVENTION = (SEE FORMAT)
4. POSITION CONTROL = SATELLITE NAVIGATION
5. CRITERIA FOR TURNING POINT SELECTION = GYRO AND E-M LOG SAMPLED AT 2 SEC. INTERVALS, AVERAGED FOR 2 MIN. INTERVALS AND THIS VALUE STORED. A COURSE OR SPEED CHANGE IS DEFINED AS OCCURRING WHENEVER THE DR POSITION FROM A GIVEN 2 MIN. VALUE DIFFERS FROM THE POSITION DETERMINED FROM EXTENDING THE PREVIOUS 2 MIN. VALUE BY MORE THAN 0.01 MILE.
6. CURRENT VELOCITY DETERMINATION = (NOT SUPPLIED IN SIO2 FORMAT)
7. TRACK CORRECTION METHOD = STANDARD METHOD FOR TRACK BETWEEN PAIRS OF FIXES. DRIFT(CURRENT) VECTOR CALCULATED BY DIFFERENCE IN POSITION OF DR TRACK AND SECOND FIX. THIS VECTOR THEN ADDED PROPORTIONALLY TO ALL COURSE AND SPEED POINTS BETWEEN THE TWO FIXES.

* NAVIGATION FORMAT (SIO2) *

FORMAT(1X,2I2,1X,3I2,14,2X,I2,1X,F4.1,A1,1X,13,1X,F4.1,A1,2X,2A8,10X,2A8)

SIO Reference Report 78-15: Appendix II

SIO2 DEPTH/MAGNETICS FORMAT

DEPTH TIME SERIES - GENERAL INFORMATION

1. FORMAT = SIO2(Scripps Designation)
2. TIME BASE = HOUR,MINUTE,DAY,MONTH,YEAR(GMT)
3. FATHOMETER = GIFFT DEPTH RECORDER
4. TRANSDUCER DEPTH(R/V MELVILLE) = APPROX. 15 FEET (NO CORRECTION APPLIED)
5. DEPTHS IN FATHOMS(800FTM/SEC. ASSUMED SOUND VELOCITY)
6. NO SOUND VELOCITY CORRECTIONS APPLIED.
7. DIGITIZED FROM VALUES LOGGED MANUALLY FROM ANALOGUE RECORD AT 5 MINUTE INT.
8. ESTIMATED ACCURACY FROM TRACK CROSSINGS = 0.2 TO 2 MILE

MAGNETIC TIME SERIES - GENERAL INFORMATION

1. FORMAT = SIO2(Scripps Designation)
2. TIME BASE = HOUR,MINUTE,DAY,MONTH,YEAR(GMT)
3. INSTRUMENT USED = VARIAN MAGNETOMETER
4. READINGS IN GAMMA,TOTAL FIELD,NO REGIONAL FIELD OR DIURNAL VARIATION REMOVED
5. DIGITIZING INTERVAL = 5 MINUTES FROM DATA AUTO LOGGED AT 1 MINUTE INTERVAL
6. AVERAGE DISTANCE SENSOR TOWED BEHIND SHIP = 500 FEET
7. ESTIMATED ACCURACY FROM TRACK CROSSINGS = 0.2 TO 2 MILE

* DEPTH OR MAGNETIC TIME SERIES FORMAT(SIO2) *

TIME SERIES DECKS CONTAIN 2 FORMATS. ONE DAY-HEADER CARD PRECEDES THE DATA CARDS FOR EACH DAY. THE LAST CARD CONTAINING DATA(WHICH MAY BE PARTIALLY BLANK) FOR EACH DAY IS FOLLOWED BY A BLANK CARD. MORE THAN ONE DAY-HEADER CARD MAY BE REQUIRED PER DAY IF THE TIME ZONE CHANGES.

TAPE FORMAT (AS WRITTEN ON CDC 3600 AT UCSD COMPUTER CENTER)

TAPE IS 7 TRACK, EVEN(BCD) PARITY, NRZ MODE. DENSITY WILL BE 200,556, OR 800 BPI AS REQUESTED. EACH CRUISE LEG FORMS A FILE TERMINATED BY AN EOF MARK. THE 80 CHARACTER CARD IMAGES ARE BLOCKED INTO RECORDS OF 8000 CHARACTERS(100 CARDS). THE LAST RECORD OF EACH FILE WILL BE FILLED OUT WITH BLANKS(OR OTHER CHARACTER AS REQUESTED). THE HEADER CARD IMAGE IS IN THE FIRST 80 CHARACTERS OF THE FIRST RECORD OF EACH FILE. THE EOF MARK OF THE LAST FILE IS FOLLOWED BY A TERMINATION LABEL CONSISTING OF AN EOF MARK AND A 16 CHARACTER BCD RECORD#ENDREEL FINAL # (WHERE # IS EQUIVALENT TO 36 OCTAL EXTERNAL BCD CODE)

SIO Reference Report 78-15: Appendix V
(Page 1 of 2)

NAS NAVIGATION FORMAT

*** TAPE CHARACTERISTICS ***

Tape is 7 track, 556 bpi density, even parity mode.

*** PHYSICAL RECORD STRUCTURE ***

Physical records are fixed length of 5200 BCD characters containing 100 logical records of 52 characters each. The last physical record in each file is filled out to 8000 characters as necessary with blanks.

*** FILE STRUCTURE ***

Each file is terminated by an EOF mark and contains navigation points for one cruise leg (about one ship-month).

*** LOGICAL RECORD STRUCTURE ***

See sample given below and next page, reproduced from "Formats for Marine Geophysical Data Exchange", publication of the National Research Council, National Academy of Sciences, June 1972.

SIO Reference Report 78-15: Appendix V
 (Page 2 of 2)

NAS NAVIGATION FORMAT (continued)

Each point in the navigation time series should be represented by one record containing the following parameters:

| | | | |
|---------------------------------|---------------------|--|----------------------------|
| Ship and cruise identification | xxxxxxxx | V2108 | |
| Time zone | ±xx _A xx | -05.5 | |
| Year | xx | 69 | |
| Month | xx | 10 | |
| Day | xx | 23 | |
| Hour | xx | 12 | |
| Minute | xx _A x | 15.7 | |
| Latitude | ±xx.xxxx | -35.1234 | + for north - for south |
| Longitude | ±xxxx.xxxx | -178.1234 | + for east - for west |
| Navigation point identification | x | 1 (1 for fix, 2 for change of course and/or speed) | |
| Fix description * | x | 1 | |
| Azimuth of current | xxx | 320 degrees | following the |
| Velocity of current | xx.x | 2.7 knots | navigation point |

* Code for fix description

| | | | |
|---|-------------------------------|---|--------------|
| 0 | Unspecified | 6 | Loran A |
| 1 | Decca | 7 | Loran C |
| 2 | Visual | 8 | Omega or VLF |
| 3 | Radar | 9 | Satellite |
| 4 | Celestial - Star fix | | |
| 5 | Celestial - Advanced sun line | | |

NGDC MERGE-MLPGE FORMAT

*** TAPE CHARACTERISTICS ***

Tape is 7 track, 556 bpi density, even parity mode.

*** FILE STRUCTURE ***

Each file is terminated by an EOF mark and contains data for one cruise leg (about one ship-month).

*** PHYSICAL RECORD STRUCTURE ***

Physical records are fixed length of 8000 BCD characters containing 100 logical records of 80 characters each. The last physical record in each file is filled out to 8000 characters as necessary with blanks.

*** LOGICAL RECORD STRUCTURE ***

See sample below, reproduced from "Formats for Marine Geophysical Data Exchange", a publication of the National Research Council, National Academy of Sciences, June 1972.

* = Fields not present (filled with blanks) on tapes generated at SIO as of April 1976. Each logical record includes time-date; position; depth in fathoms (800 fm/sec.); magnetic total field; magnetic residual (anomaly, with field removed with IGRF1965), all interpolated to even 5 minute intervals of ship time. Depth and magnetics originally logged at non-five minute intervals are interpolated if break in data does not exceed 15 minutes. If gap is greater, then that field is blank filled.

Track Charts of Digitized Depth and Magnetic Data from Scripps Cruises
Processed Through December 1977

Four track charts on Mercator projection at a scale of 0.312 inches per degree longitude accompany SIO Reference Report 78-15.

Chart 1: North Pacific Ocean

Chart 2: South Pacific Ocean

Chart 3: North Atlantic/Indian Oceans

Chart 4: South Atlantic/Indian Oceans

To obtain ozalid copies of these charts, contact:
