**PROGRAM TO CONVERT NAVIGATION AND BATHYMETRIC  
DATA ON TAPE INTO GEODATA FORMAT**

**1.0 INTRODUCTION**

**1.1 Title**

Program to convert navigation and bathymetric data on tape into GEODATA format.

**1.2 Identification Name**

CONBATH.

**1.3 Classification Code**

None.

**1.4 NRL Research Computation Center Identification Number**

None.

**1.5 Entry Points**

CONBATH.

**1.6 Programming Language**

Language: 3600/3800 Fortran.  
Routine type: program.  
Operating System: Drum Scope 2.1.

**1.7 Computer and Configuration**

CDC 3800.

**1.8 Contributor or Programmer**

Marilyn L. Blodgett, Code 8122MB, Applied Ocean Acoustics Branch, Acoustics Division, written for the Environmental Sciences Group, Acoustics Division.

**1.9 Contributing Organization**

NRL — Naval Research Laboratory, Washington, DC 20375.

## BLODGETT

### 1.10 Program Availability

If supplied with a magnetic tape, the Environmental Sciences Group, Acoustics Division, will make a copy of this program available.

### 1.11 Verification

This program has been used and tested by the Environmental Sciences Group, Acoustics Division.

### 1.12 Date

April 1978.

## 2.0 PURPOSE

### 2.1 Description of the Routine

The program reads a data tape from an oceanographic or geophysical cruise and converts it into the GEODATA format. This is the format recommended by the National Research Council of the National Academy of Sciences with one slight modification for the navigational data. There is one logical record (of 80 characters) for each data point.

For navigation the program converts the Julian day to month and day and converts the latitude and longitude degree-and-minute values into their decimal equivalents.

For bathymetry the Julian day is converted into month and day, the minutes and seconds are combined into their decimal equivalents, depth in uncorrected meters is converted to uncorrected fathoms, and corrected depth in meters is calculated using the Matthews' table coefficients.

The converted data for both types of data is written on to a new tape and/or printed out on the standard printer (logical unit 61).

### 2.2 Problem Background

A program was needed to convert the navigation and bathymetric data into GEODATA formatted tapes, so that the data collected could be easily exchanged with other facilities and so that the scientist could use several other programs using GEODATA tapes for input.

### 3.0 USAGE

#### 3.1 Calling Sequence or Operational Procedure

Not applicable.

#### 3.2 Arguments, Parameters, and/or Initial Conditions

Not applicable.

#### 3.3 Space Required (Decimal and Octal)

##### 3.3.1 Unique Storage:

2740 octal (1504 decimal) locations exclusive of system library functions.

##### 3.3.2 Common Blocks:

None.

##### 3.3.3 Temporary Storage:

None.

#### 3.4 Messages and Instructions to the Operator

None.

#### 3.5 Error Returns, Messages, and Codes

None.

#### 3.6 Informative Messages to the User

None.

#### 3.7 Input

The program has a Navigation Parameter card which supplies the information needed for the GEODATA format, the number of files of navigational data and the type of output desired. The Bathymetry Parameter card serves the same purpose for the bathymetric data. This is followed by a Matthews' Zone Values card (or cards).

The navigation and bathymetric data is read in via magnetic tape. The formats for both types of data are given in Appendix A. Appendix B is a complete description of the input setup.

## BLODGETT

### 3.8 Output

The program will write a new tape in GEODATA format. Appendix C shows the GEODATA format for both navigation and bathymetry. There is also an option for listing the records on the standard printer (logical unit 61). Appendix D presents sample output listings.

### 3.9 Formats

Appendix B, which shows the program deck structure, describes the formats.

### 3.10 External Routines and Symbols

ABSF, ENDFILE, MOD.

### 3.11 Timing

The time required depends on the length of the input tape.

### 3.12 Accuracy

Not applicable.

### 3.13 Caution to User

None.

### 3.14 Program Deck Structure

Appendix B describes the program deck structure.

### 3.15 References — Literature

M.L. Blodgett and J.V. Massingill, "A Program for Storing Oceanographic Data on Magnetic Tape," NRL Report 7861, Mar. 1975.

M.L. Blodgett and J.V. Massingill, "Program to Plot an Annotated Track or a Track and Bathymetry or Magnetic Profile on a Mercator Projection," NRL Report 7930, Feb. 1976.

L. LaLumiere, "Program OCEANO" (not published).

## 4.0 METHOD OR ALGORITHM

Not applicable.

## 5.0 FLOW CHART AND/OR SOURCE LANGUAGE LISTING

The flow chart is given in Appendix E, and the listing is given in Appendix F.

## 6.0 COMPARISON

There are no other known programs available for comparison.

## 7.0 TEST METHODS AND RESULTS

Samples of the GEODATA format for both navigation and bathymetry are given in Appendix C. Sample output listings are given in Appendix D.

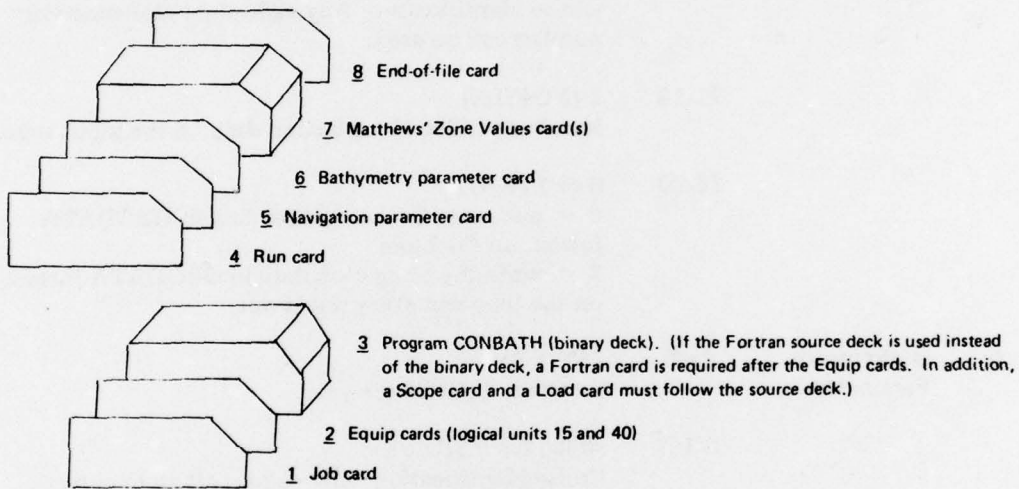

## 8.0 REMARKS

Program CONBATH, in order to convert the bathymetric data into the GEODATA format, requires the different Matthews' zones the ship passed through. One method to obtain this information is as follows:

- Run Program CONVNAV to convert the navigational data into GEODATA format.
- Using the GEODATA formatted tape, plot the navigational data with every fifth fix annotated on a Mercator projection.
  - Use Program OCEANO (see references) with a scale of 0.3966.
  - Use Program MERCATOR (NRL Report 7930, see references) if the required heights can be measured from an already existing chart.

**Appendix B**  
**DECK ASSEMBLY**

<u>Number</u>	<u>Card Title</u>	<u>Column Number</u>	<u>Description</u>
1	Job	1-21	7/9 JOB, Charge No., ID No., time. See page 2-2 of the 3600/3800 Computer System Drum Scope Manual.
2	Equip	1-18	7/9 EQUIP, 15 = **, RO, HI 7/9 EQUIP, 40 = **, WO, HI 15, 40 = logical unit number; RO = read only; WO = write only; HI = high density.
3	Program	Deck of CONBATH	This is the main program and associated subroutines in binary form.
4	Run	1-13	7/9 RUN, T, P, R, M, D T = time limit in minutes; P = maximum number of print or write operations; R, M, and D may be left blank. See page 2-15 of the 3600/3800 Computer System Drum Scope Manual.

BLODGETT

<u>Number</u>	<u>Card Title</u>	<u>Column Number</u>	<u>Description</u>
5	Navigation Parameter	1+2	75 (IYEAR) Last two digits of the year.
		3-10	A64-17-8 (CRUISE) Cruise identification. Any eight-digit alphanumeric number can be used.
		11-15	1 (NOFILE) Number of files of navigation data on the input tape.
		16-20	0 or 1 (IOUT) 0 = just write the navigation data in GEODATA format on the tape; 1 = write the navigation data in GEODATA format on the tape and also print it out.
6	Bathymetry Parameter	1+2	75 (IYR) Last two digits of the year.
		3-10	A64-17-8 (CRUISE) Cruise identification. Any eight-digit alphanumeric number can be used.
		11-15	1 (NOFILE) Number of files of bathymetric data on the input tape.
		16-20	8 (NOMZ) Number of Matthews' zone changes during the ship cruise.
7	Matthews' Zone Values	2-5	0705 (ITIME (1)) Time before or when the first data point was taken. The first two digits (CC 2+3) specify the hour and the last two digits (CC 4+5) specify the minutes.
		8-10	262 (JUL (1)) Julian day when the first data point was taken.

NRL REPORT 8306

<u>Number</u>	<u>Card Title</u>	<u>Column Number</u>	<u>Description</u>
		14+15	2 (MZ(1)) Matthews' zone the ship was in when the first data point was taken.
		17-20	1215 (ITIME (2)) Time when the ship passed into a different Matthews' zone.
		23-25	262 (JUL (2)) Julian day when the ship passed into a different Matthews' zone.
		29+30	3 (MZ (2)) New Matthews' zone.
		32-35	1956 (ITIME (3)) Time when the ship passed into a different Matthews' zone.
		38-40	263 (JUL (3)) Julian day when the ship passed into this Matthews' zone.
		44+45	4 (MZ (3)) New Matthews' zone.
		47-50	1000 Time when the ship passed into a different Matthews' zone.
		53-55	264 Julian day when the ship passed into this Matthews' zone.
		59+60	3 New Matthews' zone.
		62-65	1300 Time when the ship passed into a different Matthews' zone.
		68-70	264 Julian day when the ship passed into this Matthews' zone.

BLODGETT

<u>Number</u>	<u>Card Title</u>	<u>Column Number</u>	<u>Description</u>
		74+75	2 New Matthews' zone.  As many Matthews' Zone Value cards as required may be used. The number of change sets must equal columns 16-20 of the Bathymetry Parameter card. The last time, the Julian day and Matthews' zone stated must be on or after the time when the last datum was taken.
8	End-of-file		Terminates the run.

## Appendix C
