I. INTRODUCTION

Purpose

The purpose of this report is to update (with Fiscal 1978 data) the parametric model used to estimate Naval aircraft operating and support (O&S) costs. This update, used in conjunction with the previous report¹, acts as a handbook and guide for use as a training aid for OP-96D aircraft cost analysts as well as a model capable of generating O&S estimates for Naval aircraft.

The report is divided into four sections. Section II, the Executive Summary, provides a concise summarization of the contents of the report including a discussion of the new aspects of the model. Section III contains the revised equations and data. Section IV provides examples of the use of the model using five hypothetical aircraft. In addition, these same hypothetical aircraft will be run through the Fiscal 76 and 77 editions of the model.

Again, it is important to point out that this report is intended to be an addendum to ASC R-120 Naval Aircraft Operating and Support Cost-Estimating Model - FY77 Revision and the reader should refer to that document for much of the background and detailed discussion of aircraft O&S cost estimation.

¹Naval Aircraft Operating and Support Cost-Estimating Model - FY77 Revision, February 1979, Contract No. N00014-77-C-0130.

II. EXECUTIVE SUMMARY

This report provides the updated equations using fiscal 1978 data for the Administrative Sciences Corporation Aircraft Operating and Support (O&S) Cost-Estimating Model. It is intended to be used as an addendum to "Naval Aircraft Operating and Support Cost-Estimating Model - FY77 Revision", ASC-R-120, February 1979, which contains an extensive discussion of each cost element as well as other background material.

Several initiatives to improve the quality and accuracy of the cost-estimating relationships were incorporated into this version of the model. The most notable is the examination of Replenishment Spares consumption over a two-year period rather than a single year. As more data becomes available, the period will be lengthened even more. Substantial work was also done in the areas of Engine Rework and Modifications.

For engines, the recently implemented Engine Analytical Maintenance Plan which has changed the Navy's engine maintenance philosophy for most engines from one of scheduled overhaul to one without scheduled overhaul was investigated. This new policy provides for engine components to be replaced/overhauled periodically but not the entire engine. Although much useful data was obtained on engine removal rates and differentiation of maintenance costs for engines utilized in different aircraft (e.g., the J52-P8 in the A-4E and the A-6E); the data does not yet reflect the new maintenance policy. Indications are that costs may shift from the Engine Rework element to the Component Rework element but the extent of this is currently unknown. The FY1979 data should be more reflective of this shift in policy.

An effort was made to investigate the consistency of the cost-estimating model over the last three years. Using five hypothetical aircraft, estimates were made using this model, the FY77 model and the FY76 model. The results are contained in Section IV and show that there is fundamental consistency over the years. Elements such as Replenishment Spares which are more variable by nature, and for which the data sources are not entirely reliable, tend to vary more than the other elements. One notable change is that the FY78 indirect factors from the NARM produce estimates for the indirect cost elements (Base Operating Support, Training Support, Medical Support, and Personnel Support) that are much lower (all other things being equal) than in previous years. This is reflective of the constrained resources available for this type of support as programmed in the FY1981 budget.

The equations in this report are summarized in Exhibit II-1.

EXHIBIT II-1
SUMMARY OF COST-ESTIMATING RELATIONSHIPS

<u>Cost Elements</u>	<u>Definitions</u>	<u>CER</u>	<u>Reference</u>
<u>Deployed Unit Operations</u>			
1. Aircrew (Officers)	Officer Aircrewmembers	$OA = O \times CF \times OPR$	Based on program information
2. Aircrew (Enlisted)	Enlisted Aircrewmembers	$EA = E \times CF \times EPR$	Based on program information
3. Combat Command Staff	Non-flying Command/Admin. Pers.	$CCS = (OC \times OPR) + (EC \times EPR)$	Based on program and squadron size information
4. Aviation POL	Fuel & Petroleum Additives for A/C	$POL = (POLF \times FRY)/1000;$ $POLF = 0.1469NTW \times 0.5011 \times MS^{0.8766}$	Based on usage data from VAMOSC
5. Other Deployed Manpower	Various utility and miscellaneous personnel not previously counted	$ODMC = ODM \times EP;$ $ODM = -0.5030 + 0.2231SP$	Based on OPNAV policy
6. Air TAD	Travel and TAD expenses to obtain maintenance and other training	Throughput (See Table III-3)	Based on VAMOSC data
<u>Below Depot Maintenance</u>			
7. Aircraft Maintenance Manpower	Squadron O&I level maintenance personnel	$AMM = MO \times EPR;$ $MO = 1.6700 + 0.0180MMMO$	Based on 3-M data and OPNAV policy
8. Maintenance Material	Non-repairable O&I level maintenance material	$MMC = (MMKxPHY)/1000$ $MM = (6.9313 + 0.1028MMMO + 0.1450MS) \times 0.94$	Based on VAMOSC data
9. Personnel Support Supplies	Non-maintenance O&I level material	$PSS = (PSxPHY)/1000$ $PS = (6.9313 + 0.1028MMMO + 0.1450MS) \times 0.06$	Based on VAMOSC data
<u>Installation Support</u>			
10. Base Operating Support	Cost of base support services to the squadron	$BO = 0.0011 \times TDP; BE = 0.0165 \times TDP$ $BOM = 445.0187 \times TDP;$ $BOS = (BO \times OPR) + (BE \times EPR) + BOM$	NARM Methodology, Proxy-number of squadron pers.
<u>Depot Maintenance</u>			
11. Component Rework	Depot repair of repairables	$CR = (CRF \times FHY)/1000$ $CRF = 14.6847 + 6.9631MMHIF + 0.5060NTW$	Based on VAMOSC data
12. Airframe Rework	Depot repair/overhaul of airframe	$AR = (UAR \times I2)/I$ $UAR = -9.7977 + 5.2085MMHIF + 1.1902NTW$	Based on data from Naval Air Rework Facilities
13. Engine Rework	Depot repair/overhaul of engines	$ERT = (ORR \times ERO) + ERM \times EN \times FHY$ $(1+ORR) \times DAR$ $ERO = 5.5740 + 4.5270TH + 70.7100FD$ $ERM = 8.9434 + 1.2350TH + 11.3210FD$	Based on data from Naval Air Rework Facilities

EXHIBIT II-1 (cont'd.)

<u>Cost Elements</u>	<u>Definitions</u>	<u>CER</u>	<u>Reference</u>
<u>Depot Supply</u>			
14. Depot Supply Operations	Cost of supply depot support for A/C parts and squadron material	SDO = 0.0515DR	NARM Methodology, Proxy - all other costs
15. Technical Support	Cost of a large number of technical support programs	TS = 0.2396RS + 0.0980ACR + 0.1230ACO - SDO - SDT	NARM Methodology, Proxy - all other costs
<u>Second Destination Transportation</u>			
16. Second Destination Transportation	SDT costs of A/C and squadron material	SDT = 0.0379DR	NARM Methodology, Proxy - all other costs
<u>Personnel Support and Training</u>			
17. Individual Training	Training costs up to Readiness Squadron	TOM = 0.042DBE + 0.0520DBO + 0.1128DBT TO = 0.0643DBO + 0.0028DBT + 0.0001DBE TE = 0.1294DBE + 0.0232DBT + 0.0077DBO TI = TOM + (TO x OPR) + (TE x EPR)	NARM Methodology, Proxy - squadron and base operating enlisted, officer and total
18. Health Care	Cost of providing health care to squadron and BOS personnel	HO = 0.0038DBT; HE = 0.0060DBT HOM = 0.1853DBT; HIT = (HO x OPR) + (HE x EPR) + HOM	NARM Methodology, Proxy - squadron and BOS total personnel
19. Personnel Activities	Cost of a number of personnel programs	PCS = 1.5799DBO + 0.5446DBE; REOM = 0.0630DBE; REO = 0.009DBE; REE = 0.0075DBE; OII = 0.0005DBO; EH = 0.0100DBE; TOT = 0.0624DBO; TET = 0.0451DBE; TPA = REOM + (REO + OH + TOT) x OPR + (REE + EA + TET) x EPR + PCS	NARM Methodology, Proxy - squadron and BOS officer, enlisted and total pers.
<u>Sustaining Investments</u>			
20. Replenishment Spares	The cost of purchasing replenishment repairable material	RS = (RSF x FHY)/1000 RSF = (3.52) x 0.0852MHFH ^{1.2234} MS ^{0.2486}	Based on VAWOSC data - scaled to approximate budget
21. Modifications	The cost of safety mods for A/C and equipment	M = 0.0041FC ₁₀₀	Cost Factor or see Exhibit III-4 and III-5
22. Replenishment of Ground Support Equipment	The cost of replacing GSE	RGSF = 0.0025FC ₁₀₀	Cost Factor
23. Training Ordnance	The cost of all expendables used in training	Determined by A/C weaponry and training requirements	Refer to Exhibit III-6

III. FY78 COST-ESTIMATING RELATIONSHIPS

This section contains a definition of each cost element, a discussion to highlight changes since ASC R-120, a primary cost-estimating relationship (CER), a secondary cost-estimating relationship, and a brief description of the data. Costs are based on FY78 data and therefore in real FY78 dollars. Each parametric CER is described by t statistics (shown in parentheses under the appropriate coefficients), adjusted coefficients of determination (\bar{R}^2), the sample size (N), the F statistic and the standard error of the estimate (S.E.E.). The complete data base is also given for each parametric CER. This serves the dual purpose of providing the reader with a better understanding of what was done and gives the reader the ability to determine the relevant range of the CER by being able to examine the range of the variables in the data base. This enables the analyst to make judgement regarding the extent to which he can extrapolate.

All CER's, definitions and computed examples are for the cost of a single operating aircraft or unit of equipment (UE) operated in a squadron. To obtain the squadron cost or force cost, the analyst simply has to multiply the cost per UE by the number of operating aircraft.

1. AIRCREW (OFFICER)

la. Definition - This is the cost of pay for officer personnel who operate the squadron aircraft. Although all pilots perform other duties in the squadron, such as maintenance supervision or squadron staff functions, their primary duty is considered to be that of aircrew and their full cost is shown in this element.

lb. Discussion - This element is handled in the same manner as the previous update except that the FY78 manpower pay rates are used. The pay factors used in the NARM and FYDP for FY78 are \$24,390 for officers and \$10,138 for enlisted. The Navy Composite Standard Rates (CSR) effective 1 October 1977 are shown in Exhibit III-1. The CSR for FY79 are also available and contained in Exhibit III-2.

lc. Cost-Estimating Relationship

$$OA = O \times CF \times OPR$$

where,

OA = the cost per aircraft of paying officer aircrewmen

O = the number of officers per aircrew

CF = the crew factor or the number of aircrew contained in the squadron divided by the number of operating aircraft

OPR = the FYDP average officer pay rate (FY78\$K = 24.39)

Note: The variable OPR can be adjusted by the weighting factor found in the NARM for the relevant program element if so desired.

1d. Alternative CER

$$OA = \Sigma(O_i \times CSR_i) / NA$$

where,

OA = the cost per aircraft of paying officer aircrewmen

O_i = the number of officer aircrewmen in the squadron
in the i^{th} pay grade

CSR_i = the composite standard rate of pay for the i^{th} pay grade

NA = the number of operating aircraft in squadron

EXHIBIT III-1
(FY78)

NAVY COMPOSITE STANDARD MILITARY RATE TABLE
(Effective 1 October 1977)

<u>Pay Grade</u>	<u>Rank or Grade</u>	<u>Hourly Rate</u>	<u>Daily Rate</u>	<u>Monthly Rate</u>	<u>Annual Rate</u>
0-10	Admiral	\$26.41	\$211.24	\$4,577	\$54,923

Source: NAVCOMPT Notice 7041, 6 December 1978.

2. AIRCREW (ENLISTED)

2a. Definition - This is the cost of paying enlisted personnel who perform as crewmembers for the aircraft.

2b. Discussion - Enlisted crewmembers are costed in this element, although they perform other duties as well.

2c. Cost-Estimating Relationship:

$$EA = E \times CF \times EPR$$

where,

EA = the cost per aircraft of paying enlisted aircrewmen

E = the number of enlisted personnel per aircrew

CF = the crew factor

EPR = the enlisted pay rate (FY78\$K = 10.14)

2d. Alternative CER

$$EA = \Sigma(E_i \times CSR_i) / NA$$

where,

EA = the cost per aircraft of paying enlisted aircrewmen

E_i = the number of enlisted aircrewmen in the squadron in the i^{th} pay grade

CSR_i = the composite standard rate for the i^{th} pay grade

NA = the number of aircraft

3. COMBAT COMMAND STAFF

3a. Definition - This element represents the pay of manpower necessary for management and supervision of squadron operations.

3b. Discussion - Included in this category are:

- the Air Wing Commander and his staff allocated equally to each of the wing's aircraft deployed on the carrier,
- the squadron Administration Department¹,
- the squadron Operations Department¹,
- the squadron Executive and Executive Assistance Department¹,
- the squadron Safety Department¹,
- the squadron Photo Department (if any), and
- any other personnel whose primary function places them in this cost element.

This element is computed in the same manner as the previous update except that FY78 manpower pay rates are used. Practically speaking, the Navy usually excludes all non-squadron personnel from the direct costs of the aircraft. The analyst must determine the ground rules being used for each particular weapon system review.

3c. Cost-Estimating Relationship

$$CCS = (OC \times OPR) + (EC \times EPR)$$

where,

$$CCS = \text{the cost of combat command staff manpower}$$

¹Aircrew members are excluded.

OC = the number of combat command staff officers
divided by the number of squadron aircraft

OPR = the officer pay rate (FY78\$K = 24.39)

EC = the number of combat command staff enlisted
divided by the number of squadron aircraft

EPR = the enlisted pay rate (FY78\$K - 10.14)

3d. Alternative CER

$$CCS = \frac{\sum (OC_i \times CSR_i) + (\sum EC_i \times CSR_i)}{NA}$$

where,

CCS = the cost of combat staff manpower

OC_i = the number of combat command staff officers in the
 i^{th} pay grade

CSR_i = the composite standard rate for an officer in the
 i^{th} pay grade

EC_i = the number of combat command staff enlisted in the
 i^{th} pay grade

CSR_i = the composite standard rate for an enlisted person
in the i^{th} pay grade

NA = the number of aircraft in the squadron

4. AVIATION POL

4a. Definition - Aviation POL is the cost of petroleum, oil and lubricants (including fuel additives) consumed by aircraft in flight operations and maintenance.

4b. Discussion - POL is estimated in the same manner as in previous models. The instability of the price of petroleum products necessitates that the analyst adjust the POL estimate according to the current price levels. The CER's are based on a price per gallon of \$.483 for JP-5.

4c. Cost-Estimating Relationship

$$POL = \frac{POLF \times FHY}{1000}$$

$$POLF = 0.1469NTW^{0.5011} \times MS^{0.8766}$$

(4.26) (8.93)

$$\bar{R}^2 = 0.832$$

$$N = 15$$

$$F = 50.02$$

$$S.E.E. = 0.22$$

where,

POL = the annual cost (FY78\$K) of petroleum, oil and lubricants

POLF = the cost per flying hour of POL assuming a base price of \$0.483 per gallon of JP-5

FHY = the flying hours per year

NTW = the normal takeoff weight as defined by NAVAIR-53012 in OPNAV Notice C3100 (CONFIDENTIAL). This includes all fuel and weapon loads necessary for performance of the mission

MS = the maximum speed for level flight at altitude given in knots

DATA BASE

	<u>POLF</u>	<u>NTW*</u>	<u>MS</u>

*Deleted for security reasons.

5. OTHER DEPLOYED MANPOWER

5a. Definition - This is the cost of all squadron personnel who are of a support or administrative nature. It is essentially the remainder of the squadron personnel who are not costed in Elements 1. Aircrew (Officers), 2. Aircrew (Enlisted), 3. Combat Command Staff, or 7. Aircraft Maintenance Manpower.

5b. Discussion - Other Deployed Manpower consists primarily of the Integrated Services section of the squadron. The purpose of this section is to provide the commissarymen, food servicemen, laundrymen, stewards, supply clerks, pay clerks, medical technicians and other miscellaneous personnel to the support activities of the ship or air station to meet the incremental support requirements generated by the squadron.

5c. Cost-Estimating Relationship - Since the number of personnel required is principally determined by the total number in the squadron, this cost can be calculated with the following equation:

$$\text{ODMC} = \text{ODM} \times \text{EPR}$$

$$\text{ODM} = -0.5027 + 0.2231 \times (\text{SP})^{0.5} \\ (26.04)$$

$$\bar{R}^2 = 0.98$$

$$N = 13$$

$$F = 678.00$$

$$\text{S.E.E.} = 2.83$$

where,

- ODMC = the cost of other deployed manpower
 ODM = the number of other deployed manpower per aircraft
 EPR = the enlisted pay rate (FY78\$K = 10.14)
 SP = the total number of personnel in the squadron to be supported

SP can be computed with the following equation:

$$SP = ((O+E) \times CF + OC + EC + MO) \times NA$$

where,

- O = the number of officers per aircrew (from Element 1)
 E = the number of enlisted per aircrew (from Element 2)
 CF = the crew factor (from Element 1)
 OC = the number of combat command staff officers per aircraft (from Element 3)
 EC = the number of combat command staff enlisted per aircraft (from Element 3)
 MO = the number of maintenance and operating personnel per aircraft (from Element 7)
 NA = the number of aircraft per squadron

700	64

5d. Alternative CER - If the number and grade of the authorized billets is known the following CER can be used:

$$\text{ODMC} = \Sigma(E_i \times \text{CSR}_i) / \text{NA}$$

where,

ODMC = the cost of other deployed manpower

E_i = the number of enlisted personnel in the i^{th} pay grade

CSR_i = the composite standard rate of pay for the i^{th} pay grade

NA = the number of aircraft per squadron

6. AIR TEMPORARY ADDITIONAL DUTY

6a. Definition - Air Temporary Additional Duty (TAD) is the cost of travel, lodging and incidental expenses incurred so that squadron personnel can receive training (usually maintenance related).

6b. Discussion - This cost, which is usually small, is dependent on the size of the squadron, especially the Maintenance Department, and the complexity of the aircraft. The NARM has representative costs for TAD, but they are not particularly accurate. The VAMOSC-TSS is currently the best historical source for these costs. VAMOSC gets these data annually from the Navy Cost Information System (NCIS).

6c. Cost-Estimating Relationship - Exhibit III-3 provides a representative sample of Air Tad Costs for FY1978. Estimates can be obtained by analogy using current aircraft or by scaling.

Exhibit III-3
 Representative Air TAD Costs for FY78
 (\$ in thous.)

7. AIRCRAFT MAINTENANCE MANPOWER

7a. Definition - This element consists of the cost of all manpower necessary to support the total preventive and corrective maintenance actions performed on the aircraft and its installed systems and equipments. This includes the squadron personnel who are assigned TAD to the Aircraft Intermediate Maintenance Department.

7b. Discussion - This cost consists of the personnel in the Maintenance Department and the AIMD portion of the TAD requirements. Currently, there is no known data source which reports historical costs for this subset of the squadron contingent. The cost can be estimated, however, by identifying the appropriate personnel shown on an authorization document.

7c. Cost-Estimating Relationship - This cost can also be estimated with relative accuracy using the estimated maintainability (DDMH/FH) of the aircraft and the following equation:

$$AMM = MO \times EPR$$

$$MO = (1.670 + 0.018MMHMO)$$

$$\bar{R}^2 = 0.933$$

$$N = 11$$

$$F = 139$$

$$S.E.E. = 2.23$$

where,

AMM = the cost of aircraft maintenance manpower

MO = the number of maintenance and operating personnel required

EPR = the enlisted pay rate (FY78\$K = 10.1)

MMHMO = the total maintenance manhours per month (direct maintenance manhours per flying hour (DDMH/FH) times flying hours per month (FM))

DATA BASE

<u>Aircraft</u>	<u>MO</u>	<u>MMHMO¹</u>
A-4F	10.77	462
RA-6C	37.35	1,911
A-6A	19.98	1,084
A-7E	16.06	734
E-1B	12.25	512
E-2B	27.50	1,339
F-4J	18.88	1,981
F-8J	13.14	780
S-2E	11.43	346
P-3B	16.77	994
C-1A	7.32	468

It should be noted that the MO data previously quoted is taken from OPNAVINST C6311.3b which is dated April 12, 1971 and is obviously outdated. In fact, the concept of the MO factor is one which is no longer officially used in the Navy. However, the concept remains the same and each Navy squadron has a specific number of personnel concerned with the maintenance and operation of the aircraft whether they are referred to in terms of an MO factor or otherwise. This factor could have been updated, but was not, for two reasons. First, it would have been too time consuming for the scope of this work; and secondly, the current equation has proved accurate in a number of recent analyses and is believed to still be valid. Perhaps, at a later time, when the resources are available, this equation can be reconfirmed or revised.

¹Based on FY76 data.

8. MAINTENANCE MATERIAL

8a. Definition - This is the cost of all consumable maintenance supplies, whether acquired by the Navy Stock Fund (NSF) or any other method of funded purchase. The costs are incurred at both the organizational and intermediate levels.

8b. Discussion - This element was determined from data received from OP-51C.

8c. Cost-Estimating Relationship

$$MMC = \frac{MM \times FHY}{1000}$$

$$MM = (6.9313 + 0.1028MMHMO + 0.1450MS) \times 0.94$$

(3.413) (3.841)

$$R^2 = 0.66$$

$$N = 15$$

$$F = 14.82$$

$$S.E.E. = 59.18114$$

where,

MMC = the annual cost (FY78\$K) of maintenance material

MM = the cost per flying hour (FY78\$) of maintenance material

FHY = the flying hours per year

MS = the maximum speed for level flight at altitude given in knots

MMHMO = the total maintenance manhours per month (direct maintenance manhours per flying hour (DMMH/FH) times flying hours per month (FM))

Note: The CER for MM is based on aggregate data which also contains the cost of Personnel Support Supplies (Element 9). Based on the data received from OP-51C, MM comprises 94% of the total and PSS 6%.

DATA BASE

	<u>MM + PSS</u>	<u>MMHMO</u>	<u>MS</u>

C-130F	141.5	1,715	333

9. PERSONNEL SUPPORT SUPPLIES

9a. Definition - This is the cost of all non-maintenance items used by the squadron for aircraft operations. It relates primarily to the health, safety and welfare of the aircrew.

9b. Discussion - This element is 6% of the total cost of Operating Consumables (Maintenance Material + Personnel Support Supplies). The CER in Element 8 is therefore multiplied by .06 versus .94 (see note concerning Element 8 CER).

9c. Cost-Estimating Relationship

$$PSS = \frac{PS \times FHY}{1000}$$

$$PS = (6.93134 + 0.1028MMHMO + 0.14497MS) \times 0.06$$

(3.413) (3.841)

$$\bar{R}^2 = 0.66$$

$$N = 15$$

$$F = 14.82$$

$$S.E.E. = 59.18114$$

where,

PSS = the annual cost (FY78\$K) of personnel support supplies

PS = the cost per flying hour (FY78\$) of personnel support supplies

FHY = the flying hours per year

MS = the maximum speed for level flight at altitude given in knots

MMHMO = the total maintenance manhours per month (direct maintenance manhours per flying hour (DMMH/FH) times flying hours per month (FM))

10. BASE OPERATING SUPPORT

10a. Definition - This is the cost of base manpower and the operating funds necessary to provide the base services which support the squadron.

10b. Discussion - Included in this element are those personnel who are assigned to the base (not the squadron) and work in the laundry, mess, supply room and other areas. It also includes the base personnel who are permanently assigned to the AIMD of the air station. Since it is often difficult to determine the variable impacts on base operating support costs of the addition or deletion of a force unit such as an aircraft, the methodology used in the Navy Resource Model (NARM) Program Factors Manual was adopted to provide an estimate for Base Operating Support (BOS) costs as well as several other elements which are similarly indirect in nature. Please refer to ASC R-120 for a complete discussion of this methodology.

10c. Cost-Estimating Relationship - The computation for Base Operating Support using the NARM factors is as follows:

$$BO = 0.0011 \times TDP$$

$$BE = 0.0165 \times TDP$$

$$BOM = 445.0187 \times TDP$$

$$BOS = (BO \times OPR) + (BE \times EPR) + BOM$$

where,

BO = the number of base operating officers necessary to provide support to the aircraft system

TDP = the number of total direct personnel (officers and enlisted) involved in operating and supporting the aircraft system. This is the sum of the personnel identified in Element 1 - Aircrew, Officer; Element 2 - Aircrew, Enlisted; Element 3 - Combat Command Staff; Element 5 - Other Deployed Manpower; and Element 7 - Aircraft Maintenance Manpower

BE = The number of base operating enlisted personnel required to support the aircraft system

BOM = the O&M funds necessary to support the aircraft system

BOS = the total cost (O&MN and MPN) of base operating support services

OPR = the officers pay rate (FY78\$K = 24.39)

EPR = the enlisted pay rate (FY78\$K = 10.14)

It is important to make note of three variables - the number of direct enlisted ($E \times CF$) + EC + ODM + MO plus base operating enlisted (BE), hereafter referred to as direct plus base operating enlisted (DBE); the number of direct officers ($O \times CF$) + OC plus base operating officers (BO), hereafter referred to as direct plus base operating officers (DBO); and the total of the two, hereafter referred to as direct plus base operating total (DBT). These variables are required by the NARM methodology and are used to compute costs for Elements 17 - Individual Training, 18 - Health Care, and 19 - Personnel Support.

The equations are given below:

$$DBE = (E \times CF) + EC + ODM + MO + BE$$

$$DBO = (O \times CF) + OC + BO$$

$$DBT = DBE + DBO$$

where,

DBE = the total number of enlisted personnel, direct plus base operating, required to operate and provide base support to the aircraft system

E = the number of enlisted personnel per aircrew

CR = the crew factor

- EC = the number of combat command staff enlisted divided by the number of squadron aircraft
- ODM = the number of other deployed manpower per aircraft
- MO = the number of maintenance and operating personnel required
- BE = the number of base operating enlisted personnel required to support the aircraft system
- DBO = the total number of officer personnel, direct plus base operating, required to operate and provide base support to the aircraft system
- O = the number of officers per aircrew
- OC = the number of combat command staff officers divided by the number of squadron aircraft
- BO = the number of base operating officers necessary to provide support to the aircraft system
- DBT = the total number of personnel, direct plus base operating support, required to operate and provide base support to the aircraft system

11. COMPONENT REWORK

11a. Definition - This is the cost of reworking or repairing components of the aircraft and its associated support equipment. This maintenance, which generally involves greater technical capability and more extensive facilities than are available at base level, is usually performed at the Naval Air Rework Facilities (NARF) but can also be done by another service or by a contractor. When the work is done by another service or a contractor, the cost is usually shown as a fixed price amount. When it is done by the NARF, it consists of labor, material and overhead.

11b. Discussion - Since the Navy manages its supply system, including the repair of repairable items, on an item basis, it is difficult to obtain visibility of costs relating to a particular type/model/series aircraft. Despite this difficulty and problems concerned with the accuracy of the data, the VAMOSOC system is perhaps the only source which is based on fleet experience, and is therefore the best available data which is easily obtainable.

11c. Cost-Estimating Relationship

$$CR = \frac{CRF \times FHY}{1000}$$

$$CRF = 14.6847 + 6.9631MMHFH + 0.5060NTW$$

(5.802) (2.432)

$$\bar{R}^2 = 0.689$$

$$N = 17$$

$$F = 18.741$$

$$S.E.E. = 79.775$$

where,

$$CR = \text{the annual cost of component rework (FY78\$K)}$$

- CRF = the cost per flying hour of component rework (FY78\$K)
- FHY = the flying hours per year
- MMHFH = the number of direct maintenance manhours per flying hour as defined by the 3-M System
- NTW = the normal take-off weight as defined by NAVAIR-53012 in OPNAV Notice C3100 (CONFIDENTIAL). This includes all fuel and weapon loads necessary for performance of the mission.

12. AIRFRAME REWORK

12a. Definition - This is the cost, including labor, material and overhead, of making periodic inspections, repairs and overhaul of the airframe to assure its material condition.

12b. Discussion - Data concerning the depot repair of airframes is published quarterly in the Industrial Performance Summary of the Naval Air Rework Facilities by Code 2121B of the Naval Aviation Logistics Center (NALC), Patuxent River, Maryland. This is the source used in this model. For a more complete discussion of data sources refer to ASC R-120.

12c. Cost-Estimating Relationship

$$AR = \frac{UAR \times 12}{I}$$

$$UAR = -9.7977 + 5.2085MMHFH + 1.1902NTW$$

(5.64) (2.34)

$$\bar{R}^2 = 0.717$$

$$N = 15$$

$$F = 18.71$$

$$S.E.E. = 61.43$$

where,

AR = the annualized cost of an airframe rework (FY78\$K)

UAR = the unit cost of an airframe rework (FY78\$K)

I = the airframe rework interval in months

- MMHFH = the number of direct maintenance manhours per flying hour as defined by the 3-M System
- NTW = the normal take-off weight as defined by NAVAIR 53012 in OPNAV Notice C3100 (CONFIDENTIAL). This includes all fuel and weapon loads necessary for performance of the mission

$$F = 11.50$$

$$S.E.E. = 40.33$$

$$ERM = -43.3620 + 2.4004ED - 26.193MED$$

(3.83) (-2.10)

$$\bar{R}^2 = 0.694$$

$$N = 9$$

$$F = 10.07$$

$$S.E.E. = 17.64$$

where,

- ERT = the total cost of engine rework (FY78\$K)
- ORR = the overhaul/repair ratio, i.e., the number of a certain type engine overhauled in a year divided by the number repaired in a year
- ERO = the unit cost of overhauling an engine at the depot (FY78\$K)
- DAR = the depot arrival rate in operating hours, i.e., the total operating hours accumulated by the engines divided by the number of engines requiring depot repair
- ERM = the unit cost of repairing an engine at the depot (FY78\$K)
- EN = the number of engines mounted on the aircraft
- FHY = the flying hours per year
- TH = engine thrust in thousands of pounds
- FD = a dummy variable such that
- FD = 1 if the engine is a fan
- FD = 0 otherwise
- ED = the diameter of the engine measured in inches
- MED = multi-engine dummy such that:
- MED = 0 if the aircraft has only one engine
- MED = 1 if the aircraft has more than one engine

14. DEPOT SUPPLY OPERATIONS

14a. Definition - This is the cost of manpower and material needed to buy, store, package, manage and control supplies, spares and repair parts used in operating and maintaining aircraft, aircraft components and support equipment. When a new aircraft is introduced into the force, spare parts are procured to sustain operations. These parts are introduced into the supply system and resources are expended to manage, store, distribute, package and crate both the spares inventory and other common supply items which support aircraft system personnel.

14b. Discussion - This cost is computed from the Navy Resource Model Program Factors Manual by taking the costs contained in program element 71111N - Supply Depot Operations of the budget and allocating to force units on the basis of direct requirements of manpower and operating funds, i.e., MPN, O&MN, and APN.

14c. Cost-Estimating Relationship - The equation for estimating the cost of depot supply operations is:

$$SDO = 0.0515DR$$

where,

SDO = the annual cost of depot supply operations required to support a weapon system (FY78\$K)

DR = the direct requirements of manpower and operating funds represented by the total cost of Elements 1-5, 7-9, 11-13 (FY78\$K)

15. TECHNICAL SUPPORT

15a. Definition - This is the cost of a number of programs, usually managed centrally, which support aircraft operations. A partial list of these programs is given below:

- Contractor Engineering Technical Services (CETS)
- Navy Engineering Technical Services (NETS)
- Depot Rework of Ground Support Equipment (GSE)
- Installation and Calibration of GSE
- Depot Rework of Catapult and Arresting Gear
- Technical Publications Updates
- NAVAIRSYSCOM Representatives

15b. Discussion - Since these activities support many weapon systems, it is advantageous to use the methodology in the Navy Resource Model Program Factors Manual to estimate this cost. The NARM methodology includes both Depot Supply Operations (Element 14) and Second Destination Transportation (Element 16) in the computation of Technical Support. These costs must be subtracted.

15c. Cost-Estimating Relationship

$$TS = 0.2396RS + 0.0980ACR + 0.1230ACO - SDO - SDT$$

$$ACR = CR + AR + ERT$$

$$ACO = POL + MMC + PSS$$

where,

$$TS = \text{the annual cost of technical support (FY78\$K)}$$

- RS = the annual cost of Replenishment Spares - Element 20 (FY78\$K)
- ACR = the annual cost of aircraft rework, which is the sum of Component Rework - Element 11, Airframe Rework - Element 12, and Engine Rework - Element 13 (FY78\$K)
- ACO = the annual cost of aircraft operations, which is the sum of Aviation POL - Element 4, Maintenance Material - Element 8, and Personnel Support Supplies - Element 9.
- SDO = the annual cost of supply depot operations required to support a weapon system (FY78\$K)
- SDT = the annual cost of second destination transportation (FY78\$K)

16. SECOND DESTINATION TRANSPORTATION

16a. Definition - This is the cost of shipping material needed to support the aircraft unit. Material includes: (1) spare and repair parts that are shipped between the centralized repair depots and the aircraft unit; and (2) support items that are needed by aircraft unit personnel, such as food and administrative supplies.

16b. Discussion - The NARM Program Factors Manual estimates second destination transportation by allocating the costs contained in program element 78010N - Second Destination Transportation, on the basis of direct requirements of operating funds.

16c. Cost-Estimating Relationship

$$SDT = 0.0379DR$$

where

SDT = the annual cost of second destination transportation (FY78\$K)

DR = the direct requirements of manpower and operating funds represented by the total cost of Elements 1-5, 7-9, 11-13 (FY78\$K)

17. INDIVIDUAL TRAINING

17a. Definition - This is the cost of paying personnel in training who will replace unit personnel, the training staff and training operating funds. This includes all training from recruit training through undergraduate pilot and navigator training, as well as the operation and maintenance of trainers and simulators by the Fleet Aviation Specialized Operational Training Detachments (FASOTRADET's) and the Naval Air Maintenance Training Detachments (NAM-TRADET's). This element does not include any aspect of readiness training, which is costed as a separate squadron.

17b. Discussion - The NARM computes this cost by summing all of the costs of the students and two-thirds the cost of staff personnel and operating funds for the program elements shown below and allocating to the aircraft on the basis of personnel.

24633N Fleet Support Training
 84711N Recruit Training Units
 84722N Officer Candidate Schools
 84731N General Skill Training
 84751N Professional Military Education
 84752N Other Professional Education
 85796N Base Operations, Training
 86723N Other Health Acq. Programs
 86761N Education & Training, Health Care
 89731N Training Support to Units

17c. Cost-Estimating Relationship

TOM = 0.0042 DBE + 0.0520 DBO + 0.1128 DBT

TO = 0.0643 DBO + 0.0028 DBT + 0.0001 DBE

$$TE = 0.1294(DBE) + 0.0232(DBT) + 0.0077(DBO)$$

$$TT = TOM + (TO \times OPR) + (TE \times EPR)$$

where,

TOM = training O&M funds

DBE = the number of squadron enlisted personnel (from Elements 2,3,5 and 7) and base operating enlisted (from Element 10) as defined in Section 10c.

DBT = the number of squadron enlisted personnel and officers and base operating enlisted and officers as defined in Section 10c.

TO = the number of officer staff required for training duties

DBO = the number of squadron officers and base operating officers as defined in Section 10c.

TE = the number of enlisted personnel required for training duties

TT = total annual cost of individual training

OPR = officer pay rate (FY78\$K) = 24.39

EPR = enlisted pay rate (FY78\$K) = 10.14

18. HEALTH CARE

18a. Definition - Health care is the cost of medical personnel and materials needed to provide medical support to aircraft unit personnel and to base personnel who provide direct support to the aircraft.

18b. Discussion - The NARM estimates this cost by summing two-thirds (2/3) of the cost of medical operations. The program elements are:

81211N Hospitals
 87711N Care in Defense Facilities
 87714N Other Health Activities
 81213N Patients

18c. Cost-Estimating Relationship

HO = 0.0038DBT

HE = 0.0060DBT

HOM = 0.1853DBT

HT = (HO x OPR) + (HE x EPR) + HOM

where,

HO = the number of health care officers necessary to support the weapon system

DBT = the number of squadron enlisted personnel and officers (from Elements 1,2,3,5, and 7) and base operating enlisted and officers (from Element 10)

HE = the number of health care enlisted personnel

HOM = health care O&M funds (FY78\$K)

DBO = the number of squadron officers and base operating officers

DBE = the number of squadron enlisted personnel (from Elements 2,3,5, and 7) and base operating enlisted (from Element 10) as defined in Section 10c.

HT = the total cost of health care

OPR = officer pay rate (FY78\$K = 24.39)

EPR = enlisted pay rate (FY78\$K) = 10.14)

19. PERSONNEL SUPPORT

19a. Definition - Personnel support is comprised of two parts. The first part consists of the costs incident to the permanent change of station (PCS) of squadron and base operating personnel, either individually or as an organized unit. The second portion is the cost of recruiting and examining activities, the cost of transient personnel, and the cost of prisoners.

19b. Discussion - PCS rates are figured in the Navy Resource Model Program Factors Manual by dividing the total PCS cost by the number of personnel, producing an annual PCS cost per person (officer; enlisted). This is applied to the number of personnel operating and supporting the system to obtain an estimate. The other costs, recruiting and examining, transients and prisoners, are estimated by the NARM by summing two-thirds (2/3) of the cost of recruiting and examining activities and all of the costs associated with transients and prisoners and allocating these costs to the weapon system on the basis of the number of personnel. The program elements are given below:

81711N Recruiting Activities
 81713N Recruiting Activities
 88732 Transients
 8872IN Personnel Holding Account
 88731N Permanent Change of Station

19c. Cost-Estimating Relationship

PCS = 1.5799DBO + 0.5446DBE
 REOM = 0.0630DBE
 REO = 0.0009DBE
 REE = 0.0075DBE

OH = 0.0005DBO
 EH = 0.0100DBE
 TOT = 0.0624DBO
 TET = 0.0451DBE
 TPA = REOM + (REO + OH + TOT) x OPR + (REE + EH + TET) x EPR + PCS

where,

PCS = the annual cost (MPN funds) of PCS for weapon system direct and base operating personnel (FY78\$K)
 DBO = the number of squadron officers and base operating officers as defined in Section 10c.
 DBE = the number of squadron enlisted personnel (from Elements 2,3,5, and 7) and base operating enlisted (from Element 10) as defined in Section 10c.
 REOM = recruiting and examining O&M funds (FY78\$K)
 REO = the number of recruiting and examining officers necessary to support the weapon system
 REE = the number of recruiting and examining enlisted necessary to support the weapon system
 EH = the number of enlisted personnel in the holding account
 OH = the number of officer personnel in the holding account
 TOT = the number of officers in transit
 DBT = the number of squadron enlisted personnel and officers and base operating enlisted and officers as defined in Section 10c.
 TET = the number of enlisted personnel in transit
 TPA = the total cost of personnel support (FY78\$K)
 OPR = officer pay rate (FY78\$K = 24.39)
 EPR = enlisted pay rate (FY78\$K = 10.14)

20. REPLENISHMENT SPARES

20a. Definition - This is the cost of procuring aircraft assemblies, spares and repair parts which are normally repaired and returned to stock. In addition, it includes procurement of stock levels that are not provided by Initial Spares procurement.

20b. Discussion - ASC R-120 contains a detailed discussion of Replenishment Spares Cost, if more information is needed. Because of the nature of Replenishment Spares, it was felt that a better, more accurate CER could be developed if more than one year of data were used in the data base. For the CER's in 20c. and d. FY77 VAMOSC (adjusted to FY78\$) and FY78 data were combined. A three or four year average would probably be even better and will be done in subsequent years.

As discussed in ASC R-120, the VAMOSC methodology results in a rather substantial shortfall when compared to the actual Replenishment Spares funding for the year. The CER's are multiplied by a factor to correct for this shortfall.

	Replenishment Spares Total Costs (78\$M)		
	<u>77</u>	<u>78</u>	<u>Total</u>
VAMOSC	34.3	64.4	101.1
R. Spares Budget Tot.	154.7	190.6	355.8
Correction Factor			3.52

20c. Cost-Estimating Relationship

$$RS = \frac{RSF \times FHY}{1000}$$

$$RSF = (3.52) \times 0.0852 \text{ MMHFH} \begin{matrix} 1.2234 \\ (5.33) \end{matrix} \quad MS \begin{matrix} 0.2486 \\ (1.42) \end{matrix}$$

$$\begin{aligned}\bar{R}^2 &= 0.775 \\ N &= 17 \\ F &= 34.41 \\ \text{S.E.E.} &= 0.31\end{aligned}$$

where,

- RS = the annual cost of procuring APN-6 Replenishment Spares to support the aircraft system (FY78\$K)
- RSF = the cost per flying hour of procuring APN-6 Replenishment Spares to support the aircraft system (FY78\$K)
- FHY = the flying hours per year
- MMHFH = the number of direct maintenance manhours per flying hour as defined by the 3-M system
- MS = the maximum speed for level flight at altitude given in knots

21. MODIFICATIONS

21a. Definition - The cost of modifying aircraft, ground equipment, and training equipment to enable them to perform mission essential tasks (not new capability), and to improve reliability or reduce maintenance cost. This includes the cost of purchasing the modifications, including the requisite engineering plus the cost of depot installation. There are no installation costs incurred at the organizational and intermediate levels since those personnel are dedicated to the support of the aircraft and the cost of their time is included in the other cost elements.

21b. Discussion - The reader should refer to ASC R-120 for a complete discussion of modification of aircraft. Exhibit III-4 contains updated modification data from the FY80 budget back-up submitted to Congress. It provides total requested authorization for aircraft modifications as well as the O&MN to install the modifications. Exhibit III-5 contains both FY77 and 78 modification costs from VAMOSC. The VAMOSC data is based on a judgment of each modification to determine whether it is new capability or an O&S motivated modification. The FY78 VAMOSC total is less than half of the FY77 VAMOSC total and less than 16% of the budget total. Discussion with NAVAIR indicates that this figure should approximate 75%; therefore, this is an area that should be examined further.

21c. Cost-Estimating Relationship - The analyst can use the data in Exhibits III-4 and III-5 for analogs or can use the following relationship in which modification costs have been related to the flyaway costs.

$$M = 0.0041FC_{100}$$

where,

M = the annual cost of modifications (FY78\$K)

FC_{100} = the cumulative average flyaway cost of the first 100
production aircraft (FY78\$K)

VAMOSC Total 77 \$312.5M
 78 128.4M

22. REPLENISHMENT GROUND SUPPORT EQUIPMENT

22a. Definition - This is the cost of replacement of ground servicing equipment, maintenance and repair shop equipment, instruments and laboratory test equipment, and other miscellaneous items such as ground generators, jet engine test stands, test sets for radios, radars, and fire control systems, hand tools, compressors, and gauges. These equipment demands are generated by the need to replace common and peculiar support equipment that is worn out or destroyed.

22b. Discussion - Replacement peculiar ground support equipment (PGSE) for an aircraft system is budgeted by the aircraft program office and bought out of APN-7 funds. No distinction is made as to initial vs. replacement. Common GSE is budgeted by NAVAIR 534 and also funded by APN-7. These items are by nature not identifiable to a particular type/model/series aircraft. It is therefore extremely difficult to identify historical costs, as defined by the CAIG, for this element. A considerable effort would be required to obtain meaningful results.

22c. Cost-Estimating Relationship - This cost has been related to the flyaway cost of the aircraft.

$$RGSE = 0.0025FC_{100}$$

where,

RGSE = the annual cost of replenishment ground support equipment (FY78\$K)

FC₁₀₀ = the cumulative average flyaway cost of the first 100 production aircraft (FY78\$K)

23. TRAINING ORDNANCE

23a. Definition - This is the cost of all conventional expendables used in non-combat flight operations of squadron aircraft for the purpose of keeping aircrews proficient in weapons delivery techniques. It includes the cost of sonobuoys, pyrotechnics, ballistic and guided weapons, as well as all conventional ordnance. Since many of these items, most notably the guided missiles, are considered weapon systems by themselves, it is easy to become confused regarding the definition of this element. An air-launched missile, for instance, has a complete set of O&S cost elements which are analyzed during its acquisition phase. None of them are to be included in this definition - only the procurement cost of the expended missile.

23b. Discussion - Costs for training ordnance using representative annual loads are contained in Exhibit III-6. These costs are obtained by escalating costs shown in Table C-8 of ASC R-120 by 6.8%.

23c. Cost-Estimating Relationship - No CER is given since training ordnance costs are not related to the physical characteristics or reliability and maintainability parameters which have been used throughout the model. The analyst must determine the weaponry installed or carried by the aircraft and then refer to Exhibit III-6 for representative annual unit costs.

IV. SAMPLE RUNS FOR FY76, FY77 and FY78

This section provides some examples of the model's results - not only for the FY78 CER's contained in this report - but also for the FY76 and FY77 editions. Among other things, this comparison should provide insight into the stability of the equations over time, the accuracy of the supporting data, or the flux of operational concepts and/or the logistics support structure.

In order to accomplish this exercise, five hypothetical aircraft were created and run through each edition of the model. The five aircraft were as follows:

Heavy Fighter - an aircraft similar to the F-14A in reliability but heavier and slower;

Light Attack - an aircraft slightly heavier, slightly faster and slightly less reliable than the A-7E

Carrier-On-Board Delivery - an aircraft midway between the C-1A and C-2A in size, approximately equal in speed to the C-2A and in reliability to the C-1A

Light Weight Fighter - an aircraft similar in size but slower and less reliable than the F-18A.

Anti-Submarine Warfare - an aircraft larger, faster and less reliable than the S-3A.

The input variables for the five aircraft which are given in Exhibit IV-1 were held constant for each year except for the few instances where the

models required different inputs. The results are contained in Exhibits IV-2 through IV-16. Generally, the estimates were extremely consistent although the FY77 estimates appear to be low. The cause can be attributed to the Component Rework estimates and, further, to the Visibility and Management of Support Costs (VAMOSC) data on which they were based. The reader is left to make his own comparisons, but it should be pointed out that there are many reasons for the estimates to vary. First, the estimates are in different year dollars; secondly, the NARM indirect support methodology varies slightly from year to year. Thirdly, some methodologies differ from year to year and may not be exactly comparable.

Nevertheless, it is felt that the model runs provide good results which demonstrate the stability, sensitivity, and accuracy of the model.
